(5) The Secretary of State shall prior to issuing an order under this section in consultation with the Director General's office in Scotland, take into account the views of the Countryside Commission for Scotland, the Nature Conservancy Council, the Fisheries Committee, the Ancient Monuments Board for Scotland and the Historic Buildings Council for Scotland, and other persons it is reasonable to expect him to consult.

(6) A person who contravenes or fails to comply with an order issued under this section shall be liable—

(a) on summary conviction, to a fine not exceeding the statutory maximum;

(b) on conviction on indictment, to a fine.

(7) Any person shall be entitled to seek a finding that there has been a breach of any order under this section by summary application in the sheriff court.

(8) This section applies to Scotland only.'.

Mr. Speaker: With this it will be convenient to take the following: Government amendments Nos. 49, 50 and 90.

Amendment No. 155, in page 103, line 13, after 'fisheries', insert '(including fish farms)'.

Amendment No. 156, in page 103, line 17, at end add 'after consulting all relevant local authorities and such persons as appear to him to represent the interests of fishermen'.

Mr. Bruce: The thrust behind the amendment is self evident. It replaces the two paragraphs in schedule 9 with a much more strongly worded paragraph to ensure that the environmental commitment in the Bill is beefed up.

Effectively, schedule 9 sets out no more than the obligations imposed on the electricity supply industry in 1957. The Government should be able to do better than that when they are proposing to transfer that industry to the private sector more than 30 years later, especially when they claim to have a much higher commitment to environmental factors. Regrettably, the schedule is extremely weak. It uses phrases such as the industry

"shall have regard to the desirability of"

environmental factors and

"shall take into account any effect"

on the countryside. The amendment makes it a requirement on the industry "to further the conservation" of the countryside. The wording is much more positive and changes a weak, out-of-date statement of mild, good intent to a code of practice that specifically addresses environmental issues, particularly flora, fauna, buildings, fisheries and energy conservation. It takes into account the wider effect of the impact that the industry is now known to have on all aspects of the environment in a variety of radical ways.

The energy supply industry affects the health and welfare of every species on the planet, whether animals, birds, plants or human beings. It also affects buildings. You, Mr. Speaker, more than many may be aware of how much it affects buildings, considering the work done on this building in the past few years, why it cost much more than was originally estimated and why it required a much more radical programme of work than had been anticipated.

I understand that the contractors thought that the restoration of the building involved a cleaning process. I shall leave aside the much vaunted anecdote of the overspent parliamentary Committee of more than 100 years ago which toured the country at great expense looking for suitable stone. Its members may have been stoned more often than they sought stone because they came up with an unsatisfactory building material. The effects of acid rain on the atmosphere created by power stations in the London area led many statutes to fall apart when the contractors set to work on them. That is the sort of consideration that I hope we shall take into account in future. What is the point of cleaning buildings if we do not create the framework by which we prevent deterioration at the same rate in future generations?

The Minister may argue that that is a matter for broader regulations. Indeed, he has argued that it is not something that should be built into the industry's requirements but that the industry should simply respond to regulations imposed by the Government. I must take issue with him on that. The electricity supply industry has far too great an environmental impact not to be charged internally to promote the quality of the environment as a specific part of its brief under the licence which is, after all, issue to it by the director general and the Secretary of State. We should not pass a measure which does not make it absolutely clear that any licence holder who is generating electricity under the terms of the Bill must take specific account of the industry's impact on the environment.

I shall give some examples of the contribution of the electricity supply industry to some of our more significant environmental problems. It emits 233 million tonnes of carbon dioxide a year, accounting for 39 per cent. of the total output of carbon dioxide. That makes it a significant contributor to the greenhouse effect. It is perhaps also worth noting in passing that it does not make so much of a contribution that the replacement of fossil-fuelled power stations with a small number of nuclear power stations will significantly reduce that impact. Nevertheless, it seems reasonable to charge the industry with trying to improve that record.

6.45 pm

Seventy-three per cent. of the sulphur dioxide discharged into the atmosphere comes from the electricity supply industry in the United Kingdom, as does 35 per cent. of the nitrous oxides. The nuclear industry makes a significant contribution to environmental problems because to date we have one and a half teaspoonfuls of high-level, radioactive waste for every man, woman and

[Mr. Bruce]

child in the country—all directly produced by the electricity supply industry and having significant implications for the environment. That has been stated previously and will no doubt be discussed again.

We have several examples of where the discharges from the industry have an effect on the flora and fauna of certain areas. In particular, in Cumbria, cattle and, if there is any significance in the bits of evidence, the local population are affected. Nobody can suggest that the electricity supply industry does not have a major impact on the environment.

That makes the Government's twin-track position on their legislation strange. This Bill and the Water Bill are going through the House simultaneously and both are recognised to have significant importance to the environment. The Government have tried to turn the attack on the Water Bill into a defence as they have argued that they will use the legislation to promote environmental improvements. In addition, they have attached a substantial environmental schedule to the Bill. It seems strange that Ministers in one Department should recognise that one Bill requires a major environmental provision built into it while Ministers in a different Department argue that there is no such necessity, particularly as many environmental groups agree with me that the impact of the electricity supply industry on the environment is greater than that of the water industry. The requirement for stringent environmental controls and action to promote environmental improvements is probably greater for the electricity supply industry than the water industry. It seems extraordinary that the Government are taking such an opposing view on this legislation compared with the Water Bill.

If the amendment were adopted, electricity supply companies would almost certainly appoint a director with specific responsibility for promoting the environment. The Minister may say, "The companies may in any case do that of their own volition", and they may. Unless they have a specific statutory responsibility to promote environmental protection and improvements, that will be purely fortuitous. It is certainly unlikely to be a pattern followed by every company, if indeed it is followed by any.

It is worth suggesting that the companies appoint such a director. The oil companies do. I know that Shell and British Petroleum have board directors with specific responsibility for the environment because they recognise the substantial environmental impact of the activities in which they are engaged.

I acknowledge that the responsibility under this provision should apply to all types of electricity generation. Although I am sceptical that the legislation will achieve it, I hope that there will be an increase in the generation of electricity through new, renewable alternative sources. If that is the case, as the Minister is fond of telling us, that will have an environmental impact. It is a favoured expression of the Minister that there is no form of generating electricity that does not have an environmental impact. It is perhaps a matter of judgment as to how great any intrusive environmental impact is, but I am prepared for the purposes of this debate to acknowledge what the Minister has said.

If over the next few years we have a significant increase in the number of proposals for electricity generation by tidal or wave power, that will have clear implications for our estuaries, our fisheries and, indeed, for the visual amenity of certain areas around our coasts. It could have implications for tourism and recreation, such as sailing and other water sports. I do not dispute that some of the benefits may be positive ones. That, again, is a matter of judgment. It is important to ensure, however, that, if the industry moves into those areas, it has a responsibility to ensure that it takes fully into account the environmental impacts and, indeed, produces environmental impact studies for such significant proposals.

Mr. Hardy: One smaller aspect of the matter that the hon. Gentleman may wish to consider is that the public sector electricity organisations have been most helpful and have frequently been good neighbours of the conservation movement. In Yorkshire, the board has been extremely supportive of the Yorkshire Wildlife Trust. I believe that that sort of comment could be generally applied. There is some anxiety that, when the industry becomes privately owned, it may not take such a helpful or good neighbourly view as has been displayed by the CEGB and number of the area boards.

Mr. Bruce: I am grateful to the hon. Gentleman for his intervention, because he made an important point which I believe reinforces the purpose of my amendment. What is slightly worrying is that, in a sense, the Bill as it stands almost weakens the existing provisions for the industry. The hon. Gentleman has rightly said that the industry has over time started to do things over and above what is required of it and has built up a relationship with the conservation bodies. It would seem a wrong signal to go out from the House at this time to suggest that, at the very time when we are transferring the ownership to new generating companies—new licensees—that we should at the same time say that, if anything, the environmental restraints on those new companies are no greater, and may be marginally weaker, than has been the case since 1957. We are entitled to suggest that now is the time to build in all the existing best practice and make that the starting point of the environmental restraints that should be applied to the new licensees.

I make it clear that that is not what my amendment says. I am suggesting that that is what could be the result of the amendment if the provision for requiring a code of practice to be drawn up were written into the schedule. All that my amendment suggests is that there should be a code of practice. The Government's schedule, unamended, pretty well restates a rather weak, general statement of good intent without any real statutory force and without any requirement positively to promote environmental considerations. The intervention of the hon. Member for Wentworth (Mr. Hardy) was pertinent and reinforces my point.

In Committee we had a number of debates relating to the environmental impact of the industry on a smaller scale. We discussed, for example, the problem of overhead power lines. I believe that those should be taken into account in a number of different ways. We have perhaps over the past 30 or 40 years become slightly inured to the march of pylons across the countryside. They are very intrusive, and sometimes the line that is taken—partly because there may be no other option, but partly because it may be an easier and cheaper line—is especially intrusive. In certain parts of the country nobody can deny

that pylons have substantially spoiled the outlook and the amenity. Nobody could suggest that at this juncture we should suddenly say, "Right, under the new regime all power lines should be buried", but we should be raising the issue that it is desirable to bury them where appropriate and that it is desirable to consider even more strenuously routing them in a way that would minimise their impact. If we do not take a stand on this matter, the signal may be given that we are not changing the standards but are relaxing them.

Mr. Bill Walker (Tayside, North): Surely the hon. Gentleman is not seriously suggesting that in the Highlands of Scotland it would be practical, economical or wise to consider that one should continue to supply the remote hamlets and homes in any way other than with overhead lines. The alternative would prohibit that from happening.

Mr. Bruce: The hon. Gentleman's intervention was perhaps superfluous, because I made it clear that I was not suggesting that we should do away with pylons. I was suggesting that we should look still more sensitively at their routing and their degree of intrusion, and, where appropriate, we should consider the possibility of burial. Even in the Highlands of Scotland, there are areas where in the most sensitive parts it may be appropriate—for example, where they are over the skyline and in the communities—to find a way of burying them. In my home village of Torphins there is a positive cat's cradle of overhead power lines right through the village, which I question to some extent on safety grounds, never mind on the grounds of visual amenity. They certainly spoil the outlook.

To be fair, we deal with this problem far better than they do in America, where the general visual effect of their power lines is much more intrusive than ours. However, there is no doubt that there is considerable scope for more sensitive routing, more visual sensitivity about the location of overhead lines and for considering burying some of the existing lines, especially in the most sensitive areas.

I am outlining the kind of things that should and could be dealt with in a code of practice such as is required by my amendment. No such code of practice is proposed by the Government, who have effectively said that it is not a matter for the Bill, as it is not an environment Bill and there is no requirement for building in environmental restraints. I would take issue fundamentally with the Minister. I do not deny that the Government have an additional responsibility to provide the regulatory framework and the environmental controls on a general basis with which all industry, and, indeed, all organisations that have a physical impact on the environment, should have to conform. I hope that over the next few years the Government will introduce a series of measures designed to do just that.

I believe that the Government are fundamentally wrong if they do not recognise that, unless they are built into the obligations of the companies at the outset, the environmental standards that are promoted will inevitably be weaker. Companies will be required to conform to external regulations only as and when they are introduced. My amendment seeks to provide that we should say to the directors, the shareholders and the management of the new companies who will operate under the licence of the Bill, "You must know from the first day on which you take up your responsibility that you are charged with a positive duty to promote environmental improvement. You must, first, consider everything that you are doing in terms of its environmental impact and minimise that impact and, secondly, review all the assets that you have in place and see whether you can find ways of reducing the impact".

There is no doubt that people are not simply looking for no greater despoliation in future. If that is all the Government are offering them, that is a fairly restricted way of tackling the environmental problems about which the Government claim to be concerned. What people want is action to repair some of the damage done in the past. No one can deny that the electricity supply industry has made a significant contribution to damage to the environment —by its very nature it is an intrusive industry. We need a better code of practice for the future in order to repair some of the damage. Therefore, this amendment is necessary and desirable.

7 pm

We intend to make sure that as the Bill passes through the House the Government are made aware of pressures from outside and from the Opposition. When they talk about the environment, we intend to try to ensure that that is translated into action. So far they have resisted every attempt to convert the Bill into one that will promote positive environmental improvement. For that reason, it is a retrograde step and I remain unconvinced by the Government's arguments, even at this stage. I hope that they will recognise that my amendment is a way of giving the Bill a genuine green tinge and that they will therefore accept it.

Mr. Hardy: I merely want to endorse the call for a code of practice which the hon. Member for Gordon (Mr. Bruce) has proposed.

Although I recognise that damage has been done to the environment, there have been pluses to which I referred during my intervention in the hon. Gentleman's speech. However, one is fearful about the prospect of that sort of attitude being maintained. I am deeply worried about that, not least because of the intervention by the hon. Member for Tayside North (Mr. Walker). He seemed to suggest that those of us who are anxious about pylons may be seeking to bury all existing transmission lines, but that is not so. I endorse the reply that the hon. Member for Gordon made. He may recall that I tabled a similar amendment in Committee, which was not accepted. I am not at all optimistic that the Government will accept this amendment.

There is a difference between the present situation and that which will follow privatisation. The British people may say that we must consider the public interest and that we should not do this, that or the other. Once privatised, a substantial proportion of the electricity industry will be owned by those seeking to make profits from their homes in foreign parts—Japan, California, West Germany or wherever. Why should they make a profit from the despoliation of our environment? That argument could be used to counter chauvinism and it would also ensure that there was a code of practice. The amendment is commendable.

If the amendment is not carried I hope that the less-disciplined and more-sensitive members of the other place will insist on a code of practice before the Bill reaches the statute book.

Mr. Ieuan Wyn Jones (Ynys Môn): We are debating an important series of amendments to an important part of the Bill. As time goes on we are becoming more conscious of the relationship between industry and the environment. It astounds me to compare the kind of commitment to consider the environment contained in the Bill with the positive impact which would be derived from the imposition of a code of practice.

Currently we are hearing much about commitment to green issues. In fact, the Prime Minister and her Cabinet colleagues now believe that green issues will be the dominant ones in the future. At the weekend some people even suggested that if the Government are to succeed for a fourth term green issues will come to the forefront of politics. Yet the lip service paid by the Government to the environment in this Bill suggests all talk and no action.

Let us look at the words included in schedule 9 as it presently stands:

"shall have regard to the desirability of . . . shall take into account any effect which the proposals would have".

Those words are totally meaningless. Unless there is a positive code of practice obliging the industry to look upon environmental issues positively it will get off lightly.

Although general issues are involved, I should like to deal with a specific interest of great concern to me—the nuclear power station in my constituency and its environmental impact. The decommissioning of that nuclear power station and whether there will be a replacement have been discussed on another occasion. We are unaware of the full environmental impact of decommissioning a nuclear power station. A few days ago there was an announcement about the decommissioning of an existing nuclear power station. The industry must be made aware of the concern of my constituents and people in other parts of the United Kingdom about this matter.

We are now supposed to be in the green age, or should I say a greener age, because a lot of us have been green for a long time. Some people have taken this issue on board recently. I accept that I am green in more than one way.

The amendment can also be recommended because it gives a firm commitment and promise that a code of practice would deal with energy conservation. Energy conservation is central to our argument against the Bill. Unless industry understands that there is merit in energy conservation, our country will continue to waste energy. I know what I am talking about because, as a son of a minister of religion, for many years I lived in large rambling manses with doors which did not fit and windows which let in draughts day and night. I know what is meant by the lack of a proper energy conservation policy because I suffered from it in my early days. I am sure that we have moved on a great deal since those days. The Minister will no doubt point out that these days building regulations do not allow that to happen. I am sure that he is right, but I regularly visit a number of properties that are energy inefficient and unless there is a positive commitment to energy conservation in a code of practice there will be no improvement.

We should be telling people that there are simple ways in which they can be energy efficient. I am sure that many of our existing electrical appliances are inefficient. When people are considering buying a new electrical appliance they should be persuaded to buy the one that is the most energy efficient. I accept, as the hon. Member for Gordon (Mr Bruce) has said, that the code of practice is not written on tablets of stone. The Government must consider ways to deal with conflicting demands. I accept that greater thought must be given to this matter, but it is one on which we should put greater store. I urge the Government to accept the amendment.

Mr. John Maxton (Glasgow, Cathcart): I shall be brief in supporting the amendment and mention amendments Nos. 155 and 156 which relate to fishing and which, although minor, raise a couple of important points. First, when talking about fisheries, we should include fish farms. The way that a power station operates may affect a fish farm and it is not clear in schedule 9 whether fish farms are included. I hope that the Minister will make it clear. Before the Secretary of State for Scotland appoints the members of the fisheries committee he should consult the professional, commercial fishermen in the industry and fishermen's associations to ensure that the organisation truly represents them.

One reason why we shall support the amendment involves fisheries. Schedule 9 and the fisheries committee relate only to water—to hydro power and other forms of water power stations. I do not understand why that should be so. Nuclear stations are often—certainly Hunterston on the Clyde and Dounreay in Caithness are—placed beside water and may have an impact on fishing.

Mr. Ieuan Wyn Jones: They are all next to water.

Mr. Maxton: Such stations may affect fishing but the fisheries committee does not cover nuclear power stations, only hydro stations.

I say to the hon. Member for Tayside, North (Mr. Walker) that a major stretch of pylons—not in his constituency—will be replaced over the next couple of years. That is—he will well know the word from Committee—the interconnector between Scotland and England, which will be upgraded right the way through to the southern uplands of Scotland. Much of it is, at present, scenically intrusive, as anyone who drives along the A74 will know.

I assume that the replacement, which will mean taking down the present pylons and replacing them with better power lines, will take better account of the scenic desirability and environmental suitability of their position so that they do not intrude on the environment—even if they are not placed underground, although, in some cases we should prefer them to go underground. I hope that we shall receive such a commitment.

I once took my family to Aviemore for a short holiday. We set off to see Urquhart castle on Loch Ness, from where one is supposed to see the Loch Ness monster. Unfortunately, travelling out from Inverness I took the wrong road and went down the wrong side of the loch. We eventually turned off the main road and finished at one of the ugliest little pieces of industrial dereliction that I have ever seen. I never worked out what the place was—there was a lot of waste metal, derelict buildings and overgrown weeds. About a month ago I was taken back to that place by the chairman of the North of Scotland Hydro-Electric Board to see the Foyers generating station.

The point made by my hon. Friend the Member for Wentworth (Mr. Hardy) is important in this context. The environmental improvement carried out by the North of Scotland Hydro-Electric Board at Foyers power station was something of which the board should be proud. It had renovated the old buildings, which are now protected and a fish farm was being run there. As far as it could be, the

place was attractive. My hon. Friend the Member for Wentworth quite rightly said that that is what a public organisation can do. A private company will not have the same concern for the environment as a public board.

The hon. Member for Gordon (Mr. Bruce) rightly dealt at length with how various aspects of the environment will be affected—not merely by pollution, although that is important. Other aspects affected include the scenery and the fishing stocks of particular waters. In Scotland, the scenery is not merely nice to enjoy, but is a major tourist attraction. If we despoil it, we could destroy our tourist industry. Like the hon. Member for Gordon, I believe that schedule 9 is not strong enough. If the Government—or, as the Friends of the Earth recently described them, the "bags", which is an unfair description of the Prime Minister but stands for "born-again greens"—are seriously committed to the environment they should consider accepting the amendment. If not, they should at least introduce other amendments in the other place to make the Bill much stronger.

7.15 pm

Mr. Michael Spicer: The Government believe that amendment No. 155, which extends the fisheries provision to fish farms, may be valid. We shall consider introducing measures to that end in the other place. The hon. Member for Glasgow, Cathcart (Mr. Maxton) has caught a fish. Perhaps he did not expect to; he looks surprised. However, we think that the hon. Gentleman has a point and we shall certainly consider it.

The Government entirely agree with the hon. Member for Gordon (Mr. Bruce) who moved amendment No. 118. Some of the arguments in this debate will be circular. We agree about the importance of environmental considerations. Furthermore, we agree that the amenity obligation in schedule 9 can be further extended.

The purpose of the Government's amendments is to do precisely that. We have already ensured, within the terms of the Bill, something which was not there before, which is that the terms of the schedule should apply to private undertakings as well as to public utilities. We shall further extend it to ensure that it includes exempted suppliers, for instance people generating for their own use and various small generators.

However, we must take issue with the general proposition that the hon. Member for Gordon places before the House—that a code of practice should be included in the Bill. We do so for several reasons, to some of which the hon. Gentleman has already alluded. It is true that, under the Bill, the regulator already has a duty to promote energy efficiency. That is a substantial point of development. The Opposition have sneered at it from time to time, but this is the first time that such duties have been set out in a Bill.

We argue strongly that opening the industry to new forms of energy production and new players will ensure a more efficient use of energy. It will make sense in terms of the commercial decisions taken and the type of investment brought forward.

Above all, as the hon. Member for Gordon recognised, the Government believe that a panoply of regulations surround the industry, some of which are extremely tough. Several mentions have been made by us and others to sulphur dioxide emissions, the restrictions which those will impose on industry and the necessity for the industry to reduce such emissions by 60 per cent. by the year 2003.

The regulations are real and the industry will have to gear itself up to comply with them. There are signs that that message is sinking in fast in the industry. Some of the recent pronouncements of the chairman-designate of PowerGen, Mr. Malpas, clearly show that there is a new recognition of the industry's need to comply with the regulations and to bring in innovations to do so. The hon. Member for Gordon referred to the directors who are responsible for these matters and their concern about the environment; such concern may well spread in response to the need by companies to comply with the regulations.

By way of an example, the hon. Gentleman mentioned the need to reduce carbon dioxide emissions. Given the state of technology and the fact that our industry is so dependent on coal for producing electricity, there is a limit to what can be done directly about these emissions. Of course, we all want a breakthrough—one thinks of the application of the technologies at Grimethorpe, for instance. Opposition Members do not agree that nuclear power and other forms of non-fossil power fit well into a programme of cutting back on CO_2 emissions. We are surprised that the hon. Member for Gordon advances his code of practice, for which there are perfectly respectable arguments, and specifies the need to control CO_2 emissions at the same time as fervently opposing our proposals for the nuclear industry. I am sure he accepts what we are doing about renewables, but renewables technology is new.

I could go on at great length about what we are doing outside the scope of the Bill with the development of impact studies, and so on. In Committee, I said that even generating stations with a capacity of less than 300 MW might have to have environmental impact studies done on them. There is already a mass of regulations; the only point in dispute is our contention that this is not the Bill in which to introduce such measures. We must ensure—we have ensured—that the electricity industry after privatisation complies with these increasingly tough environmental regulations——

Mr. James Wallace (Orkney and Shetland): Perhaps the hon. Gentleman is aware that a code of environmental practice has been considered necessary in the water industry legislation. Will he provide us with an insight into why it is necessary in that legislation but not in this?

Mr. Spicer: Water is integral to the environment. Of course, electricity has an impact on it, but, unlike water, it is not part of the environment as it is usually defined. It is perfectly rational to include environmental considerations in the water measure, which, after all, is largely to do with improving the environment and increasing regulations. The regulations that affect electricity, and other industries, are growing in number. The Bill ensures that the industry meets the requirements of the regulations, which is why I hope that the hon. Member for Gordon will feel able to withdraw his amendment. We have had these arguments before, and he may well remain firm in his view, as we shall in ours.

Mr. Malcolm Bruce: The Minister is probably anticipating the inevitable. His reply was unsatisfactory in a number of ways. He said that the scope of the schedule was being extended to include additional people. I do not

[Mr. Malcolm Bruce]

deny that, but my amendment relates more to the coverage than to the scope of the schedule. The Minister is doing nothing to increase the positive requirements to take appropriate action.

Secondly, the Minister drew a rather lame distinction between the electricity supply industry and the water industry and their respective environmental impacts. I suggest that the Government start to consider including in Bills, in much the same way as they include money resolutions, a statement of their environmental implications. That would ensure that a significant statement was attached to this Bill. It is extraordinary that the Government resist a schedule that merely includes a code of practice with the positive requirement to promote and improve the environment. The Government have produced their own code of practice for the benefit of the Committee that is scrutinising the Water Bill. If they want to convince anyone that they are genuinely committed to the environment, they must recognise that environmental responsibility must be integral to the functioning of an industry such as the electricity industry which has a strong impact on the environment.

The Minister discussed the environmental impact of the greenhouse effect and CO_2. I do not intend to pursue that argument, except to say that a code of practice can deal with all these matters. It can determine what the balance of priorities should be, and the relative impacts of alternative and established technologies. It can determine the balance between the output from fossil-fuel power stations and the possibility of switching to the use of more gas or nuclear power stations. Nothing in my amendment charges the industry with a preconceived mix. It merely says that there should be a code of practice.

I am convinced that the Government have utterly failed to recognise this Bill's importance as an environmental measure. Their refusal to accept this amendment shows that they are prepared to go ahead and unleash an industry that has a massive impact on the environment without imposing adequate constraints on the private sector. I shall certainly divide the House on the amendment.

Question put, That the amendment be made:—

The House divided: Ayes 159, Noes 256.

Tellers for the Noes:
Mr. Tony Durant and
Mr. Tom Sackville.

Question accordingly negatived.

Amendments made: No. 49, in page 102, line 13, after 'generate', insert 'or supply'.

No. 50, in page 102, line 23, after 'generate', insert 'or supply'.

No. 90, in page 102, line 38, after 'generate', insert 'or supply'.—*[Mr. Lang.]*

Clause 38

Information with respect to levels of performance

Amendments made: No. 51, in page 31, line 1, leave out 'from time to time' and insert 'at least once in every year'.

No. 52, in page 31, line 5, leave out 'such' and insert 'public electricity'.—*[Mr. Lang.]*

Clause 40

Fixing of maximum charges for reselling electricity

Mr. Malcolm Bruce: I beg to move amendment No. 111, in page 32, line 35, leave out 'maximum prices' and insert 'a maximum price'.

Madam Deputy Speaker (Miss Betty Boothroyd): With this it will be convenient to take the following amendments: No. 112, in page 32, line 39, leave out subsection (3).

No. 113, in page 32, line 46, at end, insert—

'(4) Nothing in this section shall be used by private or other landlords to enable a profit to be made from reselling electricity to tenants.'.

Mr. Bruce: I shall speak only briefly because this matter was raised in Committee. We feel that the issue is worth raising again at this stage to see whether the Government are prepared to acknowledge the nature of the problem. The purpose of these amendments is to prevent landlords

[Mr. Bruce]

from making a profit out of the resale of electricity. In Committee, I said that the agreement between the landlord and tenant relates to rent, and that it is wrong that people who are given a rent that they accept as the basis on which they are to pay then have to pay a high rate for electricity as a means of the landlord supplementing the rent that he charges. This applies to a variety of accommodation, but particularly to furnished accommodation on both short and long-term lets and to holiday homes. I make no distinction; in all cases, the resale of electricity at a profit is a means of getting additional revenue from tenants, and we wish to prevent that.

In Committee, the Government raised practical objections to our proposal, saying that it was difficult to determine what was profit as opposed to genuine cost. The amendments make clear our intention to ensure that if a landlord incurs costs associated with the provision of electricity over and above the straight cost that he is paying to the supply company, he should be entitled to cover them. Nobody is suggesting that he should not. However, he should not be entitled to add a profit margin, particularly when such charging is inadequately controlled. There have been frequent rip-offs, and substantial premiums have been charged.

The purpose of these amendments is straightforward. It is to ensure that it would be made an offence to sell electricity on to a tenant at a profit over and above the cost of buying it. That is a reasonable proposition. When a landlord wants more money from a tenant, that should be incorporated in the rent. That is particularly true given the liberalisation of the rent laws promoted by the Government. In the past, over-charging on electricity was one way that landlords got round the Rent Acts. Those Acts no longer apply, so there is no justification for this practice continuing.

The only people who should be making a profit are the supply companies. Introduce a middleman and consumers are ripped off. Often, they are those who are the most disadvantaged and weak. I hope that the Minister will accept that that is undesirable. If he cannot agree to the amendments, perhaps he can tell us how such a provision could be incorporated into the codes of practice or how our aim could be achieved by some other method.

Mr. Eric Illsley (Barnsley, Central): As the hon. Member for Gordon (Mr. Bruce) has pointed out, the arguments on the resale of electricity by landlords were extensively rehearsed in Committee, but the Government appear to have chosen to ignore the points that were made then. I support the amendments, in particular as they relate to the ability of the landlord to profit from the resale of electricity through overcharging. The provisions of the Electricity Act 1957 have simply been restated in this Bill. They allow a maximum resale price for electricity, but there is an abuse of that and evidence of overcharging and profiteering by landlords.

The resale of electricity mainly affects people in the lower income brackets, people who may be less able to pay such profiteering prices. They are people who live in caravans and mobile homes, short-term accommodation or private rented accommodation. As a result of other recent legislation, tenancies have been altered, and we must bear in mind that a tenant who complains about being overcharged for electricity may be on an assured shorthold tenancy that lasts for six months. Naturally, he will be reluctant to upset his landlord by complaining that he is being overcharged for electricity.

7.45 pm

The methods by which electricity can be sold by a landlord to a tenant are extensive, and are set out in a document produced in 1985 by the Director General of Fair Trading. The document draws attention to the resale of electricity by landlords and points out that overcharging occurred to a great extent, but the Government have ignored that report. As the document says, these methods include:

> "(a) The rent may be inclusive of electricity, the actual amount charged for it not being stated.
> (b) There may be a separate charge made for electricity in addition to the rent, on the basis of an agreed fixed amount, which may however be subject to variations in electricity costs or consumption.
> (c) The landlord may supply two or more tenancies with electricity and apportion the total charge among them (eg two 'bed-sits' in one house).
> (d) The tenant may obtain electricity by inserting coins into a sub-meter which is either owned by the landlord or owned by the Electricity Board, but allocated to the landlord's account.
> (e) The tenant may pay for electricity in accordance with the amount used (which may be based on the readings on the landlord's credit meter)."

The basic point is that the tenant often does not have access to the meter to determine how much electricity he has used, although the landlord does have access to the meter. The tenant has no way of measuring the amount of electricity that he has used or of comparing that to the price that he is being charged.

As I pointed out, under the Electricity Act 1957, area boards set a maximum charge for the resale of electricity, but the Act did not set out powers to enforce the maximum charge. Again, the Bill has no clause to enable the enforcement of the maximum charge. All that there is in the Bill is a simple carry-over of the provisions of the 1957 Act, which the director general's report shows to be unsatisfactory.

For the tenant who feels that he is being overcharged for electricity, the only avenue for redress is to make an application in the county court. This can be a daunting task, particularly if the tenant is unsure of his tenancy or does not wish to embroil himself in a dispute with his landlord that would involve him in taking his landlord to court. He is also faced with the difficulty of finding out in the first instance whether he is being overcharged or whether the landlord is merely conforming to the maximum resale price. Without such information, it will be difficult to challenge the charges.

The sale of other fuels is subject to the criminal law, but it is not a criminal offence to overcharge for electricity when it is resold. The Government should have addressed themselves to this anomaly when drafting the Bill. The Weights and Measures Act 1963 makes it a criminal offence to overcharge for coal, smokeless fuel, petrol, paraffin and liquid gas. Unfortunately, that Act does not apply to the resale of electricity. That can be compared with what happens when a consumer is late in paying his bill or cannot pay because of financial difficulties. In that case, the law is imposed with some force, the supply is disconnected and the person is sued for that amount by the area board or the supplier.

The first recommendation should be that the resale of electricity for a profit be prohibited. Overcharging by

landlords should be made a criminal offence as that would act as a deterrent. There is the argument that charging for electricity should be brought into line with charging for other fuels and within the remit of the 1963 Act. It is important to note that within the next few days the Government will be supporting a private Member's Bill that seeks substantially to amend the 1963 Act.

The burden should be taken from the tenant when it comes to taking action. There are considerable difficulties facing a tenant when he tries to ascertain whether he has been overcharged. If he takes that course and finds that he has been overcharged, he faces further difficulties in trying to find a remedy. The recommendations of the director general should be accepted and implemented.

Mr. Barron: The Minister will probably remember the debate in Committee during which we discussed the issues to which my hon. Friend the Member for Barnsley, Central (Mr. Illsley) has referred. We discussed whether the reselling of electricity at rates that could be assumed to be higher than normal should be a criminal offence. The Minister said in reply that under the Consumer Protection Act 1987 the Department of Trade and Industry was about to issue new regulations for the metering of gas and electricity. That debate took place in February, and we should like to know whether the regulations to which the Minister referred are likely to be introduced before the Bill complete its passage through Parliament.

Will the regulations require a landlord to itemise electricity bills? If he is reselling electricity, will he have to itemise the bills that he submits to a tenant? We were told that it would be a criminal offence if a landlord did not set out the price of the electricity in the bill that he submitted to the tenant or in the rent book. We need to know exactly what the Department of Trade and Industry is proposing. We must see the regulations before the Bill completes its passage through the House. I hope that the House will excuse the pun when I say that we are in the dark.

Amendments have been tabled that seek to protect tenants from the criminal acts of some landlords who resell electricity. We do not know whether the DTI regulations will be as effective as the introduction of a criminal offence so that those who infringed the law could be taken before a court and punished. I hope that the Minister will tell us when we can expect the new regulations to be introduced. There must be protection from excessive charges for the reselling of electricity.

Mr. Lang: I understand the anxieties that led to the tabling of the amendment by the hon. Member for Gordon (Mr. Bruce). I understand also the anxieties expressed by the hon. Members for Barnsley, Central (Mr. Illsley) and for Rother Valley (Mr. Barron). However, I do not accept the implication behind the amendment that all landlords are rogues and exploiters. At the same time, I understand that the amendment refers to an area of sensitivity about which there are legitimate concerns. This group of amendments would have the effect of permitting the director to fix only one maximum price at which electricity might be resold. It would prohibit a landlord from making a profit when selling electricity to his tenants. There are practical reasons, apart from any others, that make it impossible to accept the amendments.

Amendments Nos. 111 and 112 would severely disadvantage many consumers. It is essential that the director's power to fix maximum prices at which electricity may be resold should enable him to fix different prices to suit different circumstances and types of supply. The area boards' current system of tariffs identifies a number of different classes of consumer. The prices charged to the different classes reflect the different characteristics of supply for each class and the cost incurred in providing different supplies. We expect the system to continue in future.

The power given to the director by clause 40 will enable him to set a different maximum resale price for each tariff class if he considers it necessary to do so. He will be able to set a maximum resale price that will apply for domestic supplies. He will be able also to set a maximum price for commercial and industrial consumers.

I thought that the hon. Member for Gordon might draw an analogy with British Gas. In the event, he did not. The Director General of Gas Supply can set only one maximum retail price for gas because there is only one gas tariff. To permit the director to set only one maximum resale price for electricity would mean that if he were adequately to cover all classes he would have to set the price at a level that corresponded to the highest tariff rate. That would clearly be inequitable for those purchasing electricity from a landlord who was supplied at a lower rate. Perhaps the hon. Gentleman identified this problem himself. Having tabled amendments Nos. 111 and 112, he tabled amendment No. 113, which would introduce a new subsection (4). That would prevent a landlord making a profit from reselling electricity. In a sense, amendment No. 113 is designed to counter the effect of amendments Nos. 111 and 112. As I think I have demonstrated, the first two amendments are unacceptable and the third would not be necessary. It is in the interests of consumers that the director should have the powers that are given to him under clause 40. I understand also, of course, the anxiety about possible exploitation of tenants by landlords.

It is fair to say that landlords incur costs in the supply of electricity. Those costs could include the provision, installation and maintenance of a meter, the installation and maintenance of electric wiring and meter reading, billing and collection. Some landlords may make a small loss in reselling electricity while others may make a profit. These are all factors that the director will need to take into account in setting the maximum retail price. It would be impossible to examine every landlord's costs. The complexities and subjectivity of identifying the costs would make enforcement extremely difficult.

I can offer the hon. Member for Gordon some consolation and respond to the issues raised by the hon. Members for Barnsley, Central and Rother Valley. We are concerned, as are hon. Members, with the need to protect consumers. We cannot prevent some landlords from making a small profit, but we have taken steps to ensure that a landlord cannot recover from a tenant more than he is entitled to charge.

The regulations which were mentioned in Committee and to which the hon. Member for Rother Valley referred are to be introduced by the Department of Trade and Industry later this year under the Consumer Protection Act 1987. They will relate specifically to the resale of gas and electricity and will require landlords who resell electricity or gas to tenants for domestic use other than through a fixed charge in the rent to provide itemised bills that show the number of units charged for, the rate at which the electricity has been supplied, and the statutory maximum rate. A landlord who fails to provide this

[Mr. Lang]

information adequately will be committing an offence and will be liable to prosecution by a trading standards officer. It will be an additional offence to that of giving a misleading indication of price, which is provided for already in the Consumer Protection Act.

The proposals, which have already been circulated in draft, have been welcomed by the Electricity Consumers Council, other consumer bodies and local authority trading standards organisations. We believe that they are the right way forward to deal with a possible abuse of the system. I hope that, in the light of my comments, the hon. Member for Gordon will withdraw the amendment.

Mr. Malcolm Bruce: I am grateful to the Minister for his comments. I accepted in my opening remarks that there are some practical difficulties. I am pleased that the Minister has acknowledged that the abuse that has existed should be removed from the system. It was never defensible when the industry was in the public sector and it would be even less defensible following the transfer of the industry to the private sector.

I am encouraged by what the Minister says about the regulations that are coming forward. I acknowledge that clause 40, even without the amendments, allows the director to fix maximum prices. In a sense, the purpose of tabling the amendments and initiating this short debate is to give to the director a clear sign of the feeling within the House and to highlight the abuses that we are anxious to have removed. I hope, therefore, that the Director General of Electricity Supply, reinforced by the regulations about which the Minister talked, will ensure that, apart from minor adjustments on a technical basis, the practice of selling electricity to sitting tenants at a substantial profit and as a means of supplementing the rent will not continue in any worthwhile commercial sense. That will not happen automatically because of the measures that have been tabled, but there is unanimity on both sides of the House about the desirability of ending that practice. In those circumstances, I beg to ask leave to withdraw the amendment.

Amendment, by leave, withdrawn.

8 pm

Clause 44

PUBLICATION OF INFORMATION AND ADVICE

Mr. Lang: I beg to move amendment No. 53, in page 34, line 46, at end insert—

'(3) The Director General of Fair Trading shall consult the Director before publishing under section 124 of the 1973 Act any information or advice which may be published by the Director under this section.'.

Madam Deputy Speaker: With this it will be convenient to take Government amendments Nos. 54 to 63.

Mr. Lang: This is a group of technical amendments. Amendments Nos. 53 and 55 relate to clauses 44 and 46 respectively and are aimed at preventing the wasteful duplication of effort. Amendment No. 54 relates to clause 45 and adds to the information held on the public register kept by the director general. Amendments Nos. 56 to 63 relate to clause 53 and provide additional disclosure gateways through which information may be disclosed to specified statutory or public bodies.

Amendment No. 63 arises from an undertaking that I gave in Committee to the hon. Member for Cardiff, West (Mr. Morgan) to consider whether it would be appropriate for environmental health departments to be included in the list of organisations to which information might be disclosed. He believed that councils should have access to information about excessive discharges of dirt and dust. I understand that the legislative plans of the Department of the Environment include giving local authorities greater power over air emissions so that operators will need local authority consent before plants can operate.

We do not think that it is necessary to include environmental health departments in the list now, but I have carefully considered the hon. Gentleman's point. Amendment No. 63 is designed to empower the Secretary of State to make orders creating gateways to such departments or other organisations as appropriate in the future. There is the possibility that not only could we meet the hon. Gentleman's point should the need arise, despite the further powers to be given to local authorities on air emissions, but we could go wider and include other organisations.

Mr. Doran: In introducing amendments Nos. 53 and 55 the Minister mentioned that one of the aims was to prevent the wasteful duplication of effort. I believe that by removing the obligation on the Monopolies and Mergers Commission to include references by the director general under the Bill, additional effort may be required to have an overview of the commission's work. Has the Minister considered that point?

Mr. Lang: The hon. Gentleman's suggestion goes further than the Bill's provisions. The director general will take a close interest in such matters anyway and has adequate powers to keep an eye on them. To suggest that there should be some further change in powers to oversee the activities of the Monopolies and Mergers Commission is to go further than the Bill's provisions.

Mr. Doran: There has been a misunderstanding. My understanding of the amendment is that the Monopolies and Mergers Commission and the Director General of Fair Trading are not required in their reports to mention referrals by the Director General of Electricity Supply under the Bill. I am concerned with the overview of the work of those two other bodies which these clauses affect. The legislation may create extra work.

Mr. Lang: That is not the intention, nor is it our expectation.

Mr. Morgan: The Minister said that the Secretary of State may wish to make orders following new legislation about clean air monitoring and the powers of local authorities, so surely the hon. Gentleman recognises that environmental health departments of borough and local authorities in England, Wales and Scotland already have clean air responsibilities. It is peculiar to leave this aspect out of the legislation. Is the hon. Gentleman considering tabling a further amendment in another place?

Mr. Lang: We are not contemplating that at the moment. It would not be sensible to reopen the debate that we had in Committee on clause 52 when we considered the

matter in detail and made clear the limited context in which the clause operated. It was clear that the various gateways provided in the Bill were adequate. I undertook to consider the point further both in the context of the specific point of dust and dirt to which the hon. Gentleman referred and in the general context. We have now come forward with a power to enable the Secretary of State to add names to the schedule by regulation, and I think that that is a desirable way forward. Hon. Members are at one in that purpose and we believe that our amendment meets the practical needs of the situation.

Amendment agreed to.

Clause 45

KEEPING OF REGISTER

Amendment made: No. 54 in page 35, line 6 after 'and', insert

'every exemption granted to a particular person;

(aa)'.—*[Mr. Lang.]*

Clause 46

ANNUAL AND OTHER REPORTS

Amendment made: No. 55, in page 36, line 16 at end insert—

'(6) Section 125(1) of the 1973 Act (annual and other reports) shall not apply to activities of the Monopolies Commission on which the Director is required to report by this section.'.—*[Mr. Lang.]*

Clause 52

GENERAL RESTRICTIONS ON DISCLOSURE OF INFORMATION

Amendments made: No. 56, in page 38, line 28, after 'Authority', insert—

'(viia) the Insolvency Practitioners Tribunal;'.

No. 57, in page 38, line 32, after 'enactments', insert 'or instruments'.

No. 58, in page 38, line 32, at end insert—

'(bb) for the purpose of enabling or assisting the Secretary of State to exercise any powers conferred on him by the Financial Services Act 1986 or by the enactments relating to companies, insurance companies or insolvency or for the purpose of enabling or assisting any inspector appointed by him under the enactments relating to companies to carry out his functions;

(bc) for the purpose of enabling or assisting an official receiver to carry out his functions under the enactments relating to insolvency or for the purpose of enabling or assisting a recognised professional body for the purpose of section 391 of the Insolvency Act 1986 to carry out its functions as such;'.

No. 59, in page 38, line 38, after 'enactments', insert 'or instruments'.

No. 60, in page 38, line 41, after 'enactments', insert 'and instruments'.

No. 61, in page 39, line 6, at end insert—

'(kk) the Insolvency Act 1986;'.

No. 62, in page 39, line 7, at end insert—

'(m) any subordinate legislation made for the purpose of securing compliance with the Directive of the Council of the European Communities dated 10th September 1984 (No. 84/450/EEC) on the approximation of the laws, regulations and administrative provisions of the member states concerning misleading advertising.'.

No. 63, in page 39, line 7, at end insert—

'(3A) The Secretary of State may by order provide that subsections (2) and (3) above shall have effect subject to such modifications as are specified in the order.'.—*[Mr. Lang.]*

Clause 59

INTERPRETATION ETC. OF PART I

Amendments made: No. 64, in page 43, line 41, at end insert—

'"generating station" in relation to a generating station wholly or mainly driven by water, includes all structures and works for holding or channelling water for a purpose directly related to the generation of electricity by that station;'.

No. 65, in page 44, line 13, leave out '7(2)' and insert '16(1)'—*[Mr. Lang.]*

Clause 60

TRANSFER OF PROPERTY ETC. OF AREA BOARDS

Mr. Michael Alison (Selby): I beg to move amendment No. 189, in page 44, line 40, after 'property' insert

'(except dwelling houses in the Board's ownership let or leased to Board employees, which such employees have registered a wish to purchase)'.

Madam Deputy Speaker: With this it will be convenient to take amendment No. 190, in clause 61, page 45, line 9, after 'property', insert

'(except dwelling houses in the Generating Board's ownership let or leased to Board employees which such employees have registered a wish to purchase)'.

Mr. Alison: This probing amendment is designed to elicit information and reassurances from my hon. Friend the Under-Secretary of State affecting the right-to-buy prospects of some CEGB tenants who live at Barlow near Drax in my constituency. Strictly speaking, the CEGB is not subject to the right-to-buy legislation in the Housing Act 1980, but there are a number of other public bodies which likewise are not subject to that legislation which still operate it in practice and in the spirit of the 1980 Act. For example, some police authorities sell surplus police houses to their officers at discounts equivalent to those obtaining under the right-to-buy policy. British Coal sells former National Coal Board houses to tenants at half their market value—at 50 per cent. discounts. I am advised that no less than three-quarters of all former NCB houses have already been sold to their tenants.

I am glad to say that, like the police authorities to which I referred and British Coal, the CEGB has accepted the spirit of the 1980 Act and has announced and, I believe, promulgated to some extent a policy of selling some of its rented properties to its tenants who wish to buy. Of course, nothing like as many houses are involved with the CEGB. I think that the generating board has only about 170 houses and flats in England and Wales. However, in respect of some of the CEGB rented properties at Barlow near Drax, I am not entirely happy that the generating board is measuring up fully to the spirit of the Housing Act 1980 or to the scale of generosity of discounts either as provided for local authority tenants under the Act or as voluntarily operated by, for example, British Coal. My hon. Friend the Under-Secretary of State may be able to reassure me. If so, I shall not press the amendment.

When I last met my Barlow constituents, a number of them had been waiting for an offer for sale for years, sometimes right back to 1981. That is a long time to wait, especially when one realises that the 1980 Act provides

[Mr. Alison]

time limits which local authorities must observe in disposing of houses to tenants who wish to buy. Moreover, all the potential Barlow buyers have been offered discounts only within the modest range of 20 to 30 per cent. When one considers how house prices have risen in Yorkshire recently, that leaves a large mortgage to be raised by a potential purchaser. I am hoping that my hon. Friend can say that better discounts may be forthcoming.

Let me remind my hon. Friend and the House of the going rate of discounts elsewhere. The present discount level for council houses starts at 32 per cent. after two years' occupation, with an additional 1 per cent. discount for each extra year of occupation, and the maximum discount is no less than 60 per cent. reached after 30 years' occupation. The discount for flats starts at 44 per cent. after two years' occupation and increases by 2 per cent. for each extra year of occupation, reaching a maximum of 70 per cent. after 15 years' occupation. One should compare that to the maximum discount offered by the CEGB. I was advised recently—although it may be flexible and my hon. Friend may be able to reassure me—that it is only 30 per cent. Police authorities sell houses surplus to requirements to police officers at discount rates equivalent to those I have I have cited for local authorities. I have already mentioned that British Coal disposes of its properties at a 50 per cent. discount.

Since constituents at Barlow first raised the matter of discounts with me, I have had some correspondence with the CEGB property services manager for the north of England, Mr. K. J. Howes, at Harrogate and with my right hon. Friend the Secretary of State. I am glad to say that Mr. Howes has taken an active interest in the satisfactory disposal of the Barlow houses to the tenants, but I am still not quite clear about the level of discounts that may be offered. That is relevant to the attitude I take towards the amendment. I hope that my hon. Friend can give me some encouragement and belief that discounts closer to those applying in local authorities, or as operated by British Coal or some police authorities, may be under consideration by the CEGB.

It would be of great interest if my hon. Friend could tell me what will become of the right-to-buy prospects of tenants who have not yet decided that they want to buy, but who may decide to buy in the next few years, when the properties move from the ownership of the CEGB to the ownership of the new, big trading body. Will there be any moral—obviously, not legislative—obligation on the new owners to do what the police, British Coal and the outgoing CEGB have all done, which is to accept a moral obligation to match in some respects the local authority rights under the Housing Act 1980? Perhaps my hon. Friend will be kind enough to advise us about those points.

8.15 pm

Mr. Michael Spicer: I must say first to my right hon. Friend, as a matter of generality, that clauses 60 and 61 provide for all property rights and liabilities of the area boards—and of the CEGB in the case of clause 61—to be transferred to the successor companies nominated for the purpose by the Secretary of State. We would not want to change that generality. Secondly, my information is that the Barlow example is the only large group of houses that raises the problem that he has, quite properly, brought before the House this evening. There are a handful of other similar properties for which the CEGB does not envisage any problem in negotiating the sale to the occupiers.

I can tell my right hon. Friend that the CEGB is seeking to reach a satisfactory conclusion with the Barlow tenants involved and hopes to be able to complete the sales before the end of 1989. In direct answer to the point raised, should it be impossible for any reason to do that, I would expect National Power, to which the houses in question are expected to be transferred, to honour the intention of the CEGB to sell on terms to be agreed with the incumbent tenants. Although I would not wish to intervene in the matter, should there be any unreasonable difficulties about the terms of the sales, I would want to make inquiries myself of the CEGB to discover what the problem was. However, I am hopeful, as is the CEGB, that the matter can be resolved before the transfer takes place. If that is not the case, I would expect the sale to take place under the successor companies.

Mr. Alison: My hon. Friend was kind enough to suggest that he would keep a watching brief on the matter. Will the watching brief extend specifically to the question of the ultimate discounts offered? I am not asking him to be specific about an acceptable level, although I have described what I feel is a lowish level of discount. If I complain to my hon. Friend that the discounts remain too ungenerous, will my hon. Friend agree to intervene or at least to have a look at the matter?

Mr. Spicer: As my right hon. Friend no doubt senses, I am extremely anxious not to become involved myself as it would not be appropriate. However, if I felt that any action taken was totally unreasonable or was a wrecking proposition, I would want to know about it. There is no compulsion on discount rates, but it is the board's intention that the houses should be sold. I would want to be reassured that there was nothing unreasonable in the proposals, but I cannot give my right hon. Friend any guarantees about the precise rate of discounts, nor would he expect me to do so.

Mr. Barron: This is a fascinating scenario. Will the Minister take into account that coal miners who supplied the old Drax power station and the new one have, since the mid-1970s, received a 50 per cent. discount on their public body houses from the former National Coal Board? It seems grossly unfair that another public body is thinking of selling its properties with lower discounts than that.

Mr. Spicer: That is a rather helpful intervention. It is interesting to know that the official Opposition support my right hon. Friend. I repeat that I would want to be sure that no unreasonable proposition had been made. It is helpful to have the Opposition's views on record in a positive and helpful way.

Mr. Lofthouse: The Minister mentioned that the purchase of the houses would take place before privatisation—if possible. Surely it must be possible. Those people to whom the right hon. Member for Selby (Mr. Alison) referred have been waiting for years and we are talking about only a small batch of houses. It should be possible to tie up such a deal before privatisation with the goodwill of the CEGB. The CEGB is morally obliged to give similar discounts to those given by local authorities.

Mr. Spicer: I shall ensure that as soon as *Hansard* comes off the presses tomorrow morning, we shall run hot foot to the CEGB and explain that the Opposition are now enthusiastic about the sale of public sector houses to the private sector with appropriate discounts. It is extremely good news and I shall ensure that the Opposition's views are drawn to the attention of the CEGB as soon as *Hansard* comes off the presses tomorrow.

Mr. Alison: On the basis of the assurance that my hon. Friend has kindly given—particularly in his commitment to the concept of reasonableness as a trigger, now also adumbrated by Opposition Members having regard to local authority and National Coal Board discounts—I beg to ask leave to withdraw the amendment.

Amendment, by leave, withdrawn.

Mr. Morgan: I beg to move amendment No. 223, in page 44, line 48, at end add—

'(2A)(1) Six months after the date of transfer of all property rights and liabilities of each Area Board, the company nominated in accordance with this section shall publish a valuation of

(a) Those capital assets of the Area Board utilised for the transmission of electricity; and

(b) Those capital assets of the Area Board not so utilised.

(2) Such valuations shall be based on the open market value of said assets at the date appointed by the Secretary of State under subsection (1) above.'

Mr. Deputy Speaker (Mr. Harold Walker): With this it will be convenient to take amendment No. 161, in clause 61, page 45, line 14, leave out '(b)' and insert—

'(bb) the Secretary of State shall make proper and reasonable provision for retention of the transmission system in public ownership.'.

Mr. Morgan: I read with interest in this morning's *Financial Times* that a double Olympic gold medal had been awarded to a Conservative Back Bencher, the hon. Member for Stamford and Spalding (Mr. Davies), and a junior Minister, the Under-Secretary of State for Industry and Consumer Affairs. They had been the hon. Members to vote most consistently in accordance with the views of the Adam Smith Institute and were deemed to be the most freedom-oriented hon. Members. I note that the hon. Member for Darlington (Mr. Fallon) is looking surprised that he did not win it. I understand that the Under-Secretary of State for Industry and Consumer Affairs had been taking steroids in an attempt to achieve an outright win, but he did not make it.

Hon. Members may be mystified as to the relevance of my remarks. It is that, given their views on the national grid, the Secretary of State and the Parliamentary Under-Secretary of State will not win such an award. They must have thought about selling the national grid as a private company, but they funked it. This is the appropriate stage at which to consider why they decided that the national grid should remain at one remove from the market. They have not kept it in the public sector, as we ask them to do in amendment No. 161, but they are not committing it to the furnace of the free market either. It will have semi-privatised status. Nobody will be able to touch it. Market forces will not be able to touch it and, although it will be owned by the 12 area boards, they will not be able to mess about with it much either. They cannot make a commercial asset out of it. It will be a separate plc with its own capital budget and non-executive directors and the area boards will not be able to determine what happens to it.

Why is that? Is it a curious omission of the Government, or is it a recognition by them that certain aspects of the electricity industry constitute public infrastructure rather than business? There are business aspects to all infrastructure provision and many businesses are also infrastructure. Part of the electricity industry is a heating business, as is British Gas, but only 25 per cent. or less of the electricity industry is a competitor for British Gas, which has already been part privatised, with 51 per cent. of the shares being sold. The Government seem to recognise that electricity and the national grid are part of the infrastructure. There are security of supply and national security arguments at stake, and the national grid thus falls clearly within the definition of infrastructure.

The importance of the Government's funking the issue and their willingness to give up their Adam Smith Institute gold medals for another year or so lies in the fact that they recognise that problems arise when one permits full risk-bearing equity participation in certain types of businesses. Those are businesses from which the public has a right to expect something. The fact that the demands of the Government and the public can be expected to weigh heavily on such businesses makes them totally inappropriate for full risk-bearing equity participation which allows a company to go bust or to make an absolute fortune. The Opposition believe that that is unacceptable for the electricity industry as a whole, and even the Government recognise that it is not acceptable to submit the national grid to those conditions—to the risk of going bust or to the opportunity of exploiting its monopoly position to make a fortune.

The Government are now telling us, "The industry is not that kind of industry". In that case, why not go the whole hog and leave it in the public sector, where we believe it belongs? We hope that we shall see a flicker of recognition—even if there is no cross-voting on the issue—of the fact that, although the Minister's American guru recommended that the national grid should become a private sector transmission company, the Government have had to concede that, although that may be possible in the United States, we cannot do it in Britain. If they concede that, amendment No. 161 represents the obvious solution.

Some other aspects of the national grid are worth thinking about. The Government have structured the National Grid Company so that it can transmit, and has the obligation to try to transmit, cheap electricity economically and efficiently to comply with security of supply regulations and facilitate competition in the generating industry. One thing that it cannot do is to buy and sell electricity. Why is that? Why are not the Government willing to make the national grid the wholesaler of electricity—as it is now for all practical purposes? Why have they removed that capability? The reason is that it would make it far more difficult for private generators to enter the industry if the nation grid could buy and retail on to the area boards or big industrial consumers.

The Government have made a serious mistake—which will cost the consumer hundreds of millions of pounds every year—by denying the national grid its natural role in the wholesale purchase and retail distribution of electricity to the area boards. The reason for that is simple. Under the

[Mr. Morgan]

new system, if a major supplier such as National Power suffers from a major technical problem, it will be more difficult to deal with it. Ludicrous though it may seem, large and small power stations at the edge of the sea sometimes suffer when sea water covers their cooling water intake screens. If that happens, the power station has to be knocked off and thousands of megawatts have to come off line.

Under the present system, the national grid says, "Drax cannot be used for the next hour, or until the sea water is cleaned off the screens. We shall use the next cheapest power station that we have in reserve and bring it on line". Will that happen in the future? It would happen if the Government agreed to making the national grid the wholesaler. But under the new system National Power will have the obligation to bring its next cheapest power station on line, and that power station may not be the cheapest power station that is off line and waiting in reserve.

We are given to understand by electricity industry experts that that could mean an additional cost of £200 million a year to the consumer, all because the contracting generator will have the obligation to provide the next best power station that he has available rather than the national grid's being able to use the lowest unit cost alternative generator in the event of a major generating station or major transmission line breakdown. The Government should seriously think about the penalty to the consumer of not allowing the national grid to buy and sell power but merely allowing it to act as an inert and passive common carrier.

The national grid should also carry the obligation to supply. It makes no sense for the area boards to have the obligation to supply to the consumer. The national grid will be a plc owned by the 12 area boards, but it will nevertheless be an entirely separate operation. If it had the obligation to supply, major savings to the consumer would accrue.

Look at the lawyers' paradise that will be created by placing the obligation to supply on the area boards. Suppose that a major customer—say the steel industry in Yorkshire—finds that as a result of a voltage fault its steel is solidifying in its electric arc furnaces. The problem has nothing to do with the industry, which may have provided all the necessary contracts and a 10 per cent. margin over and above the highest winter demand. A generating or national grid fault may result in a sudden loss of power sufficient to wreck the induction furnaces or electric arc furnaces. The customer sues the area board; he cannot sue anyone else. The area board then has to sue the national grid or the generating board for the failure. Two or possibly more legal actions could be taking place at the same time.

If the national grid had the obligation to supply, that would simplify the whole system because it would have the obligation to provide the power, the alternatives to the power and the insurance on the alternatives through the national grid system.

The Under-Secretary of State has already referred today to the fact that his aim in life is to stop decisions being made behind what he called the "baize doors" in Whitehall and to have them made in the market place. I imagine that he does not want to see all the decisions being made in the High Court. However, he has devised a system that will undoubtedly prove to be a lawyers' paradise. In our opinion, these problems will have to be solved in another place, if not in this place.

The national grid is the right body to have the obligation to supply, and it is the right body to have the obligation to buy and sell power at the minimum unit cost to the consumer.

8.30 pm

I turn now to the contract system that will be devised around which the national grid will have to operate and which refers to the area boards, as does amendment No. 223. The Government's rhetoric says that an area board will have the right to place a contract with a generating station that can provide it with the cheapest power. The south Wales area board will in future buy from whichever is the cheapest station, which could be Aberthaw, its local big station. Yorkshire will buy from Drax and the East Midlands will buy from High Marnham or Ratcliffe-on-Soar, and the southern area boards will buy mainly nuclear, with a bit of oil and a bit of Didcot or whatever coal-fired power stations are nearby. We can see the problem immediately. A southern area board does not have cheap fossil fuel nearby. The South Western area board has only nuclear power nearby at Didcot, Aberthaw and at Fawley, on the fringes. Therefore, the power is much more expensive than is the power for the area boards in south Wales or in the north.

What is the Government's solution? Is it the free market? I was going to use a non-parliamentary expression to answer that, but I shall not. It certainly is not the free market. It is a "Sir Humphrey" solution. The Government have devised the nuclear quota by which the South Western area board will buy, say, 15 or 20 per cent. of its power from nuclear sources instead of the 80 or 90 per cent. that one might have expected. Once one has allocated for the nuclear quota around the 12 area boards, those area boards can have a maximum of only 80 per cent. fossil power. The southern area boards must then buy fossil fuel long distance, a little bit from Didcot obviously, but mostly from Yorkshire and Nottinghamshire.

When that is replicated over the country, it has to be spread out so that the 12 area boards will be doing something remarkably like what they do today. Once one has redistributed the 15 to 20 per cent. nuclear quota around the 12 area boards, one must then redistribute around the 12 area boards the 80 or 85 per cent. fossil quota. Because of the nuclear quota, one cannot have a wonderful system of local identification between south Wales and Aberthaw, Yorkshire and Drax, and East Midlands and Ratcliffe-on-Soar. Therefore, there will not be any way of minimising one's transmission costs and identifying with the local generating station or of being able to get some real buzz in the business whereby everybody realises, "If we produce cheaper power, it will be good for our local industries" or anything like that because this is a "Sir Humphrey", a "Mad Hatter's tea party" system.

Finally, I remind the Minister that the new system of contracts is supposed to be operational by 1 October in shadow form and be in its full commercial form by 1 January 1990. The Minister already knows that that cannot be done either by 1 October or by 1 January next year, except in some attenuated, "weak tea" transitional form which is remarkably like the present bulk supply tariff system. The Minister will not admit it, but he knows

that that is what the area board chairmen are saying and that that is what those who are trying to devise the computer programme that will supply the despatch system and the settlement system for the contracts are saying. I am fairly sure that his own more local advisers are telling him, "If you want it by 1 January, you can have it, but it will look very much like the present system. If you want what it says in the rhetoric of the speech that you gave at last year's Tory party conference and more importantly what you want to say in the one that you hope to give at the next two Tory party conferences, you won't get it by 1 January." I hope that the Minister will be politically mature enough to admit that tonight.

Mr. Hardy: I shall be relatively brief because my hon. Friend the Member for Cardiff, West (Mr. Morgan) has already put forward exceedingly powerful arguments. Unfortunately, our experience of the Bill does not give us cause for great optimism that the Minister will respond to his entirely sensible views.

The Government are confused. The Minister dare not retreat from the market force attachment, or the medals from the Adam Smith Institute to which my hon. Friend referred will be at risk. However, the fact is that the Minister is in a preposterous position. He has said that the Government will retain the best elements of the merit order system. The best element—the only element—of the merit order system is that the consumer obtains the cheapest possible available electricity. If the Minister departs from that principle, he cannot retain elements of it.

My hon. Friend the Member for Cardiff, West spelt out in detail that if National Power's cheap power station goes off line, it will not be the next cheapest power station that will supply the supplier with electricity; it will be National Power's next cheapest or perhaps its next nomination. That is not satisfactory. Rather than act with good sense and serve the consumer well, the Government have clung to their dogma.

I cannot see any sensible reason why the national grid should not remain in public hands or as an impartial wholesaler. An impartial wholesaler could act with good sense to ensure that there is encouragement for proper, sensible and wise developments in electricity generation. It could deter the insidious trader who may well be eagerly cheering the Government in their preposterous position. An impartial wholesaler could discourage those who are more concerned with financial massaging and manipulation than about the generation of electricity. People who can see through this muddled hotch potch see an opportunity for profit from the "take or pay" principle.

I do not suppose that any words from Opposition Members will persuade the Minister that good sense is necessary, but they should at least be on the record and that is why I am making this brief speech. I want to make it clear that on 10 April 1989 when the Bill was in its final stages there were those who said that the national interest suggested that a different arrangement would be sensible.

The Government are putting an enormous obligation on the director general. When one looks at the relatively meagre resources that the director general and the regulator will enjoy, one can see that it may later be regretted that the national grid was not given a more powerful and independent role in the industry. If the national grid were to remain in the role that we have been urging, the job of the regulator would be more effective.

As I have said, we cannot expect the Minister to accept our suggestions, because he will not have been given permission to do so before the Secretary of State flew off to Red Square. However, at least the Minister should explain to the House the elements of the merit order system that he will retain. We need to know that. I also want to know what steps he will take to ensure that the national grid has a capacity to apply a little wisdom in differentiating between the nearly crooked and the commendable in terms of generation development.

Finally—I am sure that you, Mr. Deputy Speaker, will appreciate this brief point—while we are talking about transmission, does the Minister recognise that Yorkshire consumers, and perhaps east midlands consumers also, have, because of their acceptance of the national interest, borne the fact that they have been subsidising some of the wealthier areas of this country because they have been paying rather more for their electricity than they would have done if they had not been contributing to the loss in transmission of a significant amount of electricity?

Once we have gone to market forces—once the market force application, and so on, imbues the whole electricity industry, as the Government intend—what concession, what assistance, what recognition of past sacrifice will be afforded to the consumers, certainly the consumers of the Yorkshire area? I do not believe that the Government, having decided to pursue the course of selfishness, could then turn round and say to the Yorkshire electricity consumers, "You will carry on exactly as you have been doing." If they do, we will take a rather more serious and rather more caustic view.

I hope that the Minister will be able to answer those questions. In particular, I implore him to explain to me how he can retain anything like the merit order system in the muddled and foolish confusion that the Government have created by this route.

Dr. Kim Howells: How does the Minister think the grid will offer choice for the consumer? It will be one grid, after all, and, with the best will in the world—I am trying to be as generous as possible to the Minister, because I know that he has a very difficult task to explain this—there will be a national grid company. Consider Sunday lunch time. Will we plug in to "On the Record" from PowerGen, and, when we decide to cook the Sunday lunch, will we plug in to National Power? Of course not. Will we watch "The Big Match" via ICI's sales to the grid? Of course not. It will be a national grid company, controlled by the area boards, that controls prices. It will, of course, be a cartel manifested in a single company. As our industry becomes more and more dependent upon electricity—and it will —we will find that this most vital of supply grids is controlled by the very people who are selling the stuff. They will do as I imagine all commercial companies do —try to get from the British public the highest possible profit. Of course, they will favour long-term "sweetheart" agreements with generating companies.

Mr. Hardy: The French.

Dr. Howells: Of course they will be looking to the French. Incidentally, I hope that the next time there is a strong wind from the Channel—one that does not originate in this House—the Minister will not allow the French suppliers to switch off the juice before the wind hits

[Dr. Howells]

Britain. I hope that we will not be stuck trying to find 2,000 MW in the south of England because the French have decided to protect their own supplies.

The companies will favour comfortable long-term "sweetheart" agreements with generating companies. It will not be competition. It will not be a question of looking around for generators that are ready to supply the cheapest electricity. It will be a series of private monopolies. They will be looking for trouble-free supplies —and so they should—but there are so many inconsistencies in this Bill, and we will be so increasingly dependent upon electricity, that they will have to look around for trouble-free supplies and "sweetheart" agreements.

But what about price? What will happen to price? We will have a series of cartels and a company that is a mouthpiece for those cartels, and prices will be increased so that profit levels may be cranked up as much as possible.

Mr. Peter Rost (Erewash): I have been following very carefully the hon. Member's arguments and those of his colleagues. Can the hon. Member explain what motive there could possibly be for the new area boards and distribution companies not to shop around through the grid for the cheapest possible supply, but to do as he suggests—up the price? Surely the whole purpose of the structure that the Government propose is to give the new distribution companies the opportunity to buy in from the cheapest possible sources. What motive could they possibly have for doing otherwise?

8.45 pm

Dr. Howells: I thank the hon. Gentleman for his question. It is a good one because it affords me the opportunity to say that I believe that this Bill will allow the distribution companies to acquire power stations and, thereby, begin to control the local areas, not just in terms of the sale of electricity but in terms of its generation. It seems to me that in those circumstances the customer will be in very big trouble indeed. There will no longer be a chance to regulate supplies and costs. What we will have is an enfranchised monopoly, a private monopoly, over which we, as representatives of the customers in those areas, will have no control.

Mr. Michael Spicer: The hon. Member for Cardiff, West (Mr. Morgan) opened his speech by saying that we had kept the grid neither in the public sector nor fully in the private sector. He made that point as a matter of criticism of the Government. Another way of looking at it is through our eyes. We have given the industry the benefits of privatisation—for instance, employee involvement in shares, Companies Act accounts, and motivation to efficiency. That is why we cannot accept amendment No. 161, which would result in the grids being kept in the public sector.

Mr. Morgan: The Minister says that employees will be given shares. In the national grid?

Mr. Michael Spicer: There will be arrangements whereby employees of the grid company will be able to own shares in the industry. That will, of course, motivate them in the way that I have suggested—something that would be denied to them by the Labour party and, in particular, by this amendment.

On the other hand, we have provided for the benefits that undoubtedly accrue from an integrated network. The Opposition—this is a new one; as a matter of fact, it is one of the first new things to have come up tonight—apparently want us to provide for a market-making capacity, a monopolistic buying capacity. The hon. Member for Pontypridd (Dr. Howells) was particularly enthused about that. On the other hand, we are concerned to allow the grid company to be a common carrier. That is quite specifically what we wish it to be because it is central to our concept of competition amongst generators.

The hon. Member for Cardiff, West asked—I think he was asking, though perhaps he was just making a statement; in any case, I took it to be some sort of question —whether or not, and how, we would be retaining any aspects of the merit order despatch arrangement. Certainly the hon. Member for Wentworth (Mr. Hardy) raised this question. Quite manifestly, the answer is yes, and it will be done on the basis of bid prices into the generator pool. Of course, that will be done regardless of who owns the station. It will be a matter of encouraging those who are able to come forward with the best bid prices to do so and, as a result—subject to the stability of the system which, of course, will remain the responsibility of an integrated network company—they will be able to sell their wares through the common carriage arrangements that the network will provide. We do not see that there will be any problem about this, other than in the minds of those who wish to see some sort of monopolistic situation being returned—in this case, through the operations of the grid company.That is precisely what the whole thrust of this Bill is aimed at avoiding.

The hon. Member for Cardiff, West made a quite legitimate and proper point in saying that the non-fossil fuel obligation intervened and distorted, to an extent, the workings of this competitive regime to which I have alluded. We have never, in any way or at any point, disguised from the House, or from anybody else, the fact that the non-fossil fuel obligation is, of course, a distortion in the market place. We hope that that distortion will be temporary as the nuclear levy becomes unnecessary. On many occasions we have told the House why we wish to have part of the electricity in this country provided by nuclear power, and I do not intend to weary the House by going over the argument again. The reason why we want a nuclear industry is fully on the record. On that basis I defend the undoubted distortion which will exist in a minor way under the competitive regime that we are presenting to the House. There is no way that we wish to accept the amendments and on that fair, cogent exposition I hope that the hon. Gentleman will feel able to withdraw his amendment.

Mr. Morgan: I shall respond in like manner. The Minister is slightly wrong: regardless of his exposition I shall withdraw the amendment in the hope, possibly a vain one, that the other place will attend to these matters with its greater ability to think independently.

The Minister's reference to preserving the best aspects of the merit order system under the new contract system is phoney. Mr. Montague of Linklaters and Paines, one of

the leading solicitors firms in the City that are looking into this on behalf of the industry or the Government—I forget which—is one of many who has said:

"Profit is likely to be included in capacity charges rather than energy charges."

Mr. Montague said that at *The Economist* conference on electricity privatisation before Christmas. In other words, before any generator submits his generating station into the merit order pool, he has already made his money in the contract simply by being there. In that case there is no incentive for him to reduce his unit cost or for the national grid to buy from his generator because its unit cost is low.

Although we fully maintain our arguments and strongly reject the Government's arguments, I beg to ask leave to withdraw the amendment.

Amendment, by leave, withdrawn.

Clause 61

Transfer of property etc. of Generating Board and Electricity Council

Mr. Lang: I beg to move amendment No. 66, in page 45, line 44, after 'including', insert

'rights to receive any sums by way of repayment supplement and'.

Mr. Deputy Speaker: With this it will be convenient to take Government amendment Nos. 87 and 88.

Mr. Lang: Amendment No. 66 is a technical amendment. Its purpose is to ensure that any repayments of corporation tax which might turn out to be overpaid would also be accompanied by repayment supplement due as a result of those repayments.

Amendment No. 88 is a technical amendment to remove any doubt on the effect of paragraph 8 of schedule 11 which was inserted in Committee. It is designed to ensure that tax allowances transferred from one company to another can be utilised by the second company. Amendment No. 87 is a drafting amendment.

Amendment agreed to.

Schedule 10

Transfers under sections 61 and 62

Amendment made: No. 67, in page 108, line 1, leave out 'by' and insert 'in pursuance of'.—*[Mr. Michael Spicer.]*

Clause 73

Treasury guarantees for loans made to the Scottish companies

Amendment made: No. 68, in page 52, line 32, leave out 'in Scotland'.—*[Mr. Michael Spicer.]*

Clause 75

Financial limits on borrowings etc.

Amendments made: No. 69, in page 54, line 25, after 'of' insert '(a)'.

No. 70, in page 54, line 26, leave out from 'Wales' to end of line 28 and insert

'and

(b) sums issued under section 73 above in fulfilment of guarantees given in respect of loans made to such companies,

shall not exceed £2,000 million.'.

No. 71, in page 54, line 32, leave out

'in fulfilment of guarantees under section 73 above'

and insert

'under section 73 above in fulfilment of guarantees given in respect of loans made to successor companies in Scotland'.

No. 72 in page 54, line 34, leave out subsection (3).—*[Mr. Michael Spicer.]*

Clause 76

Responsibility for composite listing particulars

Mr. Michael Spicer: I beg to move amendment No. 73, in page 54, line 37, leave out subsections (1) and (2) and insert—

'.—(1) Where—

(a) the same document contains listing particulars for securities of two or more successor companies; and

(b) any person's responsibility for any information included in the document is stated in the document to be confined to its inclusion as part of the listing particulars for securities of any one of those companies,

that person shall not be treated as responsible for that information in so far as it is stated in the document to form part of the listing particulars for securities of any other of those companies.'.

Mr. Deputy Speaker: With this it will be convenient to take Government amendment No. 74.

Mr. Spicer: These are two technical amendments. They are designed to ensure that stock exchange rules are complied with in the drafting of prospectuses.

Amendment agreed to.

Amendment made: No. 74, in page 55, leave out lines 14 to 17 and insert—

'"responsible" means responsible for the purposes of Part IV of the 1986 Act and "responsibility" shall be construed accordingly.'.—*[Mr. Michael Spicerr.]*

Schedule 11

Taxation provisions

Amendments made: No. 87, in page 111, line 37, leave out 'may' and insert 'shall'.

No. 88, in page 112, line 6, at end insert—

'(5A) The trade carried on by a company whose liabilities are extinguished by virtue of section 74(1) of this Act shall, if the company's tax losses are aggregated and apportioned by virtue of sub-paragraph (2) above, be treated for the purposes of giving any relief under the Corporation Tax Acts in respect of the losses so apportioned as being, and having at all times been, the trade carried on by the successor companies to which the losses are apportioned.'.—*[Mr. Lang.]*

Clause 89

Directions for preserving security of electricity supplies etc

Mr. Malcolm Bruce: I beg to move amendment No. 173, in page 60, line 39, at end insert—

'((2)) (1) The Secretary of State shall lay before each House of Parliament additional directions for the purpose of—

(a) preserving the security of building or installations used for, or for purposes connected with, or arising from the generating of nuclear power;

(b) mitigating the effects of any civil emergency that may occur as a result of the generation of nuclear power or any matters connected with or arising from the generation of nuclear power.

(2) in setting the directions under ((2)) (1) above the Secretary of State shall consult with the relevant local

[Mr. Malcolm Bruce]

authority; with the corresponding health authority or board and with representatives of police, fire and ambulance services.

(3) "relevant local authority" in ((2)) (2) above means the local authority in whose area the building or installation is situated; the local authority through whose area radioactive material may be transported and the local authorities whose area is within 25 miles of the building or installation.

(4) personnel provided for the security of a building or installation under this subsection to prevent terrorist or other attack shall be the responsibility of the the Secretary of State and shall not be provided by firms providing private security services whether employed by the licence holder or any other body or person.'.

The amendment specifically relates to the issues of security and safety at nuclear installations following privatisation. That has been referred to in previous debates and is an important issue. The amendment addresses several specific points.

The first part of the amendment is concerned with the security of buildings and installations associated with the generation of nuclear power. It then deals with mitigating the effects of an emergency. It provides for the co-ordination of an emergency plan with the relevant local emergency services and the notification of local authorities within a 25-mile radius of the building or installation. The final part deals with the security services associated with protecting nuclear installations against terrorist attack and requires that the provision of such security shall be the responsibility of the Secretary of State and shall not be sub-contracted to private security firms.

United Kingdom provision for the security of installations and for nuclear emergencies is not nationally co-ordinated or agreed, or well publicised. Nor does it compare favourably with nuclear installations in other countries. The requirement on nuclear power station operators is concerned only with on-site security and an evacuation planning distance of 3·5 km. Clearly, that does not take account of the possible implications of a significant fall-out of radioactivity. I have been advised that the evacuation distance is 16 km in the United States, 20 km in Finland, 10 km in Germany and between 12 and 15 km in Sweden. Only Mexico operates a smaller radius than we do, at 3 km, and the British Government should not be particularly proud of being marginally better than Mexico.

The main problem is caused by the lack of overall guidelines. It is left to each individual installation. There is no general understanding among the emergency or neighbouring authorities of exactly what is required. I am advised that Somerset county council has taken steps to ensure that there is a well-publicised plan for emergency evacuation of its nuclear installations and that it is available to the public. That is a desirable example which could usefully become the basis for the norm. It has happened only because the county council has initiated such a proposal and because it has managed to secure the voluntary co-operation of the authorities at Hinkley Point. To be fair, they get a good deal of criticism. The fact that they have co-operated is welcome.

The amendment seeks to make it a statutory requirement for this type of plan to be in operation in every circumstance and to make specific proposals for the involvement of the relevant authorities.

It should go without saying not only that there should be a plan, but the emergency services, which are likely to be most immediately affected in the neighbourhood, should be consulted in the formulation of the plan and fully informed about what the plan is. The fact that that is not the case is a matter for considerable alarm and shows unjustified complacency. No matter how good we may feel the safety and performance record of British installations is, we cannot rule out human error and the fact that there could be an accident. Indeed, there have been sufficient minor incidents—fortunately, in most cases, minor—to make it clear that we must have much better provisions and contingency arrangements for preparing for the possibility of a major disaster.

I do not wish to detain the House longer than is necessary, because some of the arguments have been covered when discussing previous amendments. I believe, however, that the amendment is more specific than the previous ones and shows how we should deal with the problem.

9 pm

I make no secret of the fact that one reason why I have been a persistent and long-term critic of the nuclear power industry has been that, from the days of the previous Labour Government, it has been a requirement to provide armed police to guard nuclear power installations. That begins to bring into question civil liberties. Of course, I accept that those installations are targets for terrorism and need to be protected, but I believe that the House should consider how that protection will continue when the nuclear installations have been transferred to the private sector. That is not just idle speculation. A number of private security agencies are involved in the surveillance of people connected with or critical of the nuclear industry. It is a specific concern of mine that such a body as Zeus Security Consultants, now known as Securipol, could possibly be charged with actually carrying out the protection of those installations. If that were the case, it would effectively mean privatising not just a significant and important policing operation, but an armed policing operation. *[Interruption.]* The Government may want to privatise the police. However, I believe that we are in dangerous waters if we are suggesting that private nuclear power station operators should be free to contract with private security services to protect those installations. We could be faced with the possibility of a private company providing armed police and using security and surveillance methods that are more associated with counter-espionage than with normal policing operations.

It is no secret that this issue has been raised previously, but I do not apologise for mentioning it again. A couple of months ago my right hon. Friend the Member for Yeovil (Mr. Ashdown) and others tabled an early-day motion drawing attention to the involvement of Lord Chalfont in just one of those agencies. It remains the view of my right hon. Friend and my colleagues that being chairman of the Independent Broadcasting Authority is incompatible with being an active director of a company that carries out what I believe are rather unsavoury security and surveillance operations. Evidence—as recently as last week on Channel 4—has shown that the methods of operation of such companies are extremely dubious.

There have been a number of revelations in the House about our state security services and their failings, but the idea that we should be licensing and, indeed, providing a market for private organisations of this character to be able to develop and expand is unacceptable.

I hope that the Minister can assure us that the security of nuclear installations in the private sector will remain the responsibility of the Secretary of State. If any armed personnel are involved in the protection of those installations—which presumably will continue to be necessary, as that has been the case for at least the past 15 years—they should be employees of the state and not of any private organisation.

The amendment covers a number of different, although relevant and related matters. Do the Government propose to bring forward co-ordinated strategic plans for dealing with any emergency at a nuclear installation, dealing with appropriate evacuation procedures and informing the public and the relevant authorities, especially the emergency services and the local authorities?

If the Minister does not agree to the notification of a 25-mile radius, will he say what kind of evacuation radius the Government think appropriate and how far around it the relevant emergency services and authorities should be involved?

I am prepared to accept that the amendment is open to interpretation, but we need to know more than we have been able to discover so far from the Minister. We cannot simply allow the public to accept assurances from the industry—they will not accept them in any case—that we are much safer and better at operating nuclear power stations than are any of our competitors in any other countries and that we do not require further safety procedures. That is the current state of affairs.

Before the installations are transferred into the private sector we need a clearer statement on what the Government propose to do about emergency and evacuation procedures involving the relevant authorities. I hope the Minister can also give me an assurance that any armed security personnel involved at any nuclear installation will be directly accountable to the Secretary of State and through him to this House.

Mr. Hardy: Many of the security firms pay very poor wages and I am not suggesting that Lord Chalfont is subject to such wages. I have heard of people on £1·50 an hour—that is reason enough to suggest that Lord Chalfont is not included in that particular group. However, there are social dangers in giving people so little money. I am worried if such firms recruit people on a part-time, casual basis. It might be profitable for employers to leave us in a state of dependency on that sort of casual labour, but that is almost as questionable as some areas of the black economy that are causing concern. The Minister needs to give the House some assurances about that.

I know it is fashionable to talk about the modern bugging to which the hon. Member for Gordon (Mr. Bruce) referred a moment ago. Such bugging may provide massive profits for technologically advanced security firms. I am chiefly concerned about the people who will run the security of privatised nuclear power stations, perhaps for many years to come. For us to be dependent on such outfits gives us cause for concern and may well create a nasty taste in the mouth.

Mr. Michael Spicer: The nuclear installations inspectorate, through its licensing powers under the Nuclear Installations (Amendment) Act 1965, already requires that nuclear generators draw up emergency plans to deal with any nuclear accidents in full consultation with the relevant local authorities and emergency services.

The lack of formal responsibility on local authorities to produce emergency plans for nuclear installations of the kind that exist under the Control of Industrial Major Accidents Hazards Regulations for hazardous chemical sites has been noted by my Department. It has been decided to deal with this by making use of powers available to the Health and Safety Commission and by placing a legal requirement on local authorities to prepare the kind of integrated off-site plans for licensed nuclear sites for which the hon. Gentleman has properly called.

The House may like to note that the intention is to go beyond the normal requirements for reference accidents, which is the basis for the existing CIMAH regulations. In the case of nuclear sites, the off-site plans will be required to address the availability of contingency plans to provide for a capability to deal with nuclear accidents which have more widespread effects than the detailed site and off-site plans are designed to cater for. I hope that the hon. Gentleman will be reassured on that point, to which his amendment is appropriately addressed. Legislative help is on the way regarding the integration of plans.

The power proposed in paragraph (1A) of the amendment is already covered by clause 89(1)(a) which enables the Secretary of State to give directions about the security of nuclear power stations. That is a recurring theme of my response to the hon. Member for Gordon (Mr. Bruce). However, it would be quite inappropriate for the Secretary of State to undertake wide consultations on matters involving counter-terrorist measures because it would be impossible to preserve the confidentiality of the proposed measures. For that reason, the Secretary of State will have the discretion not to lay directions before Parliament if that would be against the interests of national security. The hon. Member for Gordon conceded the vital importance of preserving power stations from any potential attack by terrorists.

I shall turn to the point made by the hon. Member for Gordon—addressed by the hon. Member for Wentworth (Mr. Hardy)—that in his view, and this was mentioned in the amendment, there should be no role for private security companies. We cannot accept that. Security matters are the responsibility of those running the power stations, with the proviso that the Secretary of State has the capability to make directions. That fall-back exists throughout the clause; in fact the purpose of the clause is to give him ultimate responsibility to make directions. We do not see why it should not be possible for those with responsibility for security of power stations to use private security contractors should they wish to do so.

The hon. Member for Wentworth mentioned low wages. The headquarters of one of the largest security companies in the country—Group 4 Total Security—is in my constituency. Therefore, I am aware of the industry's structure, benefits and problems. However, I cannot give the assurances about low levels within the industry which he seemed to seek. Those are a matter for negotiation between the companies and their employees. However, I agree that it is extremely important to maintain the highest standards within those companies, particularly when vetting personnel.

Mr. Hardy: Does not the Minister recognise that if a security company seeks to behave responsibly, pay reasonable wages, vet and insure its employees properly and do all that a model employer should, it is likely to be outbid by a firm that sticks up notices—of the sort that I

[Mr. Hardy]

have seen in jobcentres—offering part-time employment for wretchedly low wages, has no capacity for the proper supervision of its workers, and does nothing more than bank its own large profits?

Mr. Spicer: If that is the case, such companies would be extremely short sighted, because they will put the security of their businesses at risk by employing cowboy operators of the kind suggested by the hon. Member for Wentworth (Mr. Hardy). Therefore, it is sensible for anyone employing contractors for security to ensure they employ those of the highest quality. No doubt, as a result, they will pay them properly for their services.

I concede the point made by the hon. Member for Wentworth that it is extremely important that companies should operate properly. However, we do not want to pass legislation to prevent nuclear power operators from using private contractors should they wish to do so. However, I stress the proviso that the Secretary of State retains—through the operations of the clause—powers of direction and therefore of ultimate responsibility for security.

On the basis of that explanation, I hope that the hon. Member for Gordon will withdraw the amendment.

Mr. Malcolm Bruce: I am still worried about the Minister's failure to reply to one or two points. Those who are involved with or concerned about the safety of nuclear installations—local authorities, for example—are less than happy about the lack of a clear agreed national guideline, and they are still pressing the Department for one. I can genuinely understand—although I do not share this view—that the Government may believe that negotiating with the local authorities and emergency services and notifying the public who live near nuclear installations about evacuation and emergency procedures might create alarm. Against that, however, too many people who live near the installations have no idea of what they are supposed to do in an emergency and no chance of finding out if there is one. Given that a major disaster occurred a few years ago—admittedly, and for this we are grateful, not in this country—I believe that the public would prefer the Government to be more honest and to encourage more discussion of this matter. They would regard it as a greater reassurance——

9.15 pm

Mr. Michael Spicer: The hon. Gentleman is right to pull me up for not answering the point about the 3 km evacuation areas. That distance is not a hard and fast standard. The authorities frequently engage in much wider areas for evacuation exercises. I have taken part in an exercise that covered a much wider area. I can offer the hon. Gentleman that assurance.

Mr. Bruce: I am grateful for that assurance. Although I specifically referred to the involvement of local services in an area up to 25 miles away, that is not the point at issue. I accept that there may be reasons for variations in all sorts of circumstances. The lack of a national agreed scheme, however, gives rise to concern. Each installation must make its own plans; those plans are variable, and I am less and less convinced from the evidence made available to me that they are all good and that local authorities and the people living in these areas are adequately informed and involved in the planning process.

I do not want to tempt providence, but if there were a serious accident in a British nuclear installation, the Government would be found wanting for not having ensured that enough information was given to the public who live in these areas.

The final point to which the Minister did not respond was my request for an assurance that any armed surveillance that might be required in these installations would be carried out by personnel who were accountable to the Secretary of State. Personal preferences apart, I can accept a legitimate role for private security companies in the security of nuclear installations, but I cannot readily accept the deployment of armed personnel who work in the private sector. It is most unfortunate that the Minister could not give me the assurance that I sought.

I cannot claim to be particularly happy with the Minister's response. If he cannot give me any firmer assurances, I shall withdraw the amendment, but only on the understanding that the issue will be raised again in another place——

Mr. Michael Spicer: I understand—if I am wrong, I shall publicly correct myself—that at present only the Atomic Energy Authority police in nuclear installations have the right to carry arms. That right was given them by legislation and will not apply to private companies.

Mr. Bruce: That was a helpful intervention and I shall not pursue the point further. I have made my point forcefully and clearly. I still believe that the Government should do more, and this matter will come up again in another place. In the meantime, I beg to ask leave to withdraw the amendment.

Amendment, by leave, withdrawn.

Schedule 12

Nuclear Liabilities: Financial Assistance

Mr. Alan W. Williams: I beg to move amendment No. 162, in page 113, line 19 at end insert—

'(4) There shall be no grants payable under this Schedule save for expenditure in respect of extra costs that could not have been foreseen by the person concerned as at the date the Act takes effect.'.

Schedule 12 allows the Secretary of State to make grants or loans to the privatised industry for reprocessing nuclear waste, for storage or disposal of waste or for decommissioning nuclear power stations. The schedule seems to be open-ended in that all the bills for waste and decommissioning could be passed to the Government by the privatised industry. The critical phrase in the amendment is

"extra costs that could not have been foreseen by the person concerned"

We are talking about grants and loans up to £2·5 billion and those could be renewed by order up to £1 billion at a time. We know that the costs at the end of the nuclear cycle could be quite heavy. The CEGB has reserves of about £3 billion set aside to meet those costs. The thermal oxide reprocessing plant project will cost £1·5 billion and the decommissioning cost for British Nuclear Fuels installations is about £4·5 billion. That has increased tenfold in the past year.

The decommissioning costs of nuclear power stations are guesswork at the moment. The Government's guess of the cost is about £300 million. This year is the 10th anniversary of the disaster at Three Mile Island and

already over $1 billion have been spent trying to clean up that mess. The £300 million that I have mentioned is a minimum figure, but the true cost could be as high as £2 billion per nuclear reactor. There are nine Magnox reactors and seven advanced gas-cooled reactors. That means that 16 nuclear power stations have to be decommissioned. The minimum bill for that is £5 billion, but it could be as high as £30 billion.

The cost of disposing of waste is also the subject of guesswork. We do not know the cost of disposing of intermediate-level waste, and the technologies for disposing of high-level waste have not yet been developed. In Committee we talked about a figure of £4 billion, but the Government did not provide any figure.

As I have said, it is clear that the schedule is open ended and all the bills could be passed to the taxpayer. We could have the intolerable situation of the privatised industry being allowed to make a profit and passing the big bills at the end of the nuclear cycle to the taxpayer. In Committee the Minister told us that the provisions referred to unforeseen costs. I have gone minutely through the schedule and can find no mention of unforeseen costs.

The Government need to specify exactly what costs they expect at the end of the cycle. They should specify the foreseen costs and the unforeseen costs. That should be done in the interests of would-be shareholders in the privatised industry and in the interests of taxpayers, the electorate, whose industry is being privatised.

We know that there is terrific concern about these issues in the City and the industry. In a newspaper article a month ago, it was pointed out that the electricity sell-off could flop over the nuclear waste issue. The article said that John Bates, the managing director-designate of National Power, which will have responsibility for nuclear power, had suggested that a public chest should be set up to carry the costs of decommissioning. The CBI is so concerned about the problems at the back end of the cycle that it does not want nuclear power to be privatised.

The purpose of our amendment is to make the Government pin down what costs will be covered by the schedule. We feel that it would be only costs that are not foreseen by the directors of the privatised industry. That was the spirit of the discussion that we had in Committee, and we are asking the Government to put into words the spirit of their reply in Committee. The Government cannot but accept the amendment. They gave us the message that the schedule was meant to cover unforeseen costs. Therefore, not only my hon. Friends but the Government must accept the amendment.

Mr. Hardy: I shall not make a long speech, although this is a serious matter. It is a pity that only two Conservative Back Benchers are here to listen to the essential contribution made by my hon. Friend the Member for Carmarthen (Mr. Williams). I shall repeat a little more briefly the arguments that I advanced in Committee. Conservative Members do not seem to understand that change is accelerating. For example, in the last decade we have seen an intensification of terror in many parts of the world. In the past 15 years, the arrangements and procedures of this building have changed dramatically in response to terror and violence. In 1979, violent crime reached its then highest recorded level. In the decade since then, although the Government have made combating crime their priority, that level has at least doubled.

With this acceleration, with all the other problems that we face, with the sheer encouragement of greed and the infliction of hopelessness on young people—in this country and in others—how a sensible Government can embark on a 100-year policy with an overwhelming commitment to greed and private ownership, a diminution of state responsibility and disregard of the realities of change, I do not know. In due course, our generation will be accused of having taken leave of its senses. I am pleased that some Conservative Members are here for the debate, but it is of such an enormous and historic dimension that this matter should be debated more fully and freely rather than being witnessed by a few silent Members.

My hon. Friend has done us a great service. He has pointed to the economic realities, but the Government should consider the social realities as well. They should ask whether the growing levels of inflation and the increasing gravity of our economic condition make it possible for us to enter into a 100-year agreement. We may find ourselves unable to afford that agreement in less than half that time.

9.30 pm

Dr. Kim Howells: There are many unknowns about decommissioning, such as those of technology. Another unknown is insurance. I understand that £20 million is talked about for that, but that is infinitesimal in terms of the effect on a community which experiences any signs of nuclear activity. Near my constituency a pressurised water reactor is to be built at Hinkley Point. If something happens at Hinkley Point, we shall be in big trouble economically and domestically. Besides the fact that we shall all have to run for it, such an incident will have a dreadful effect upon the local economy. Who will pay for that?

One of the most critical moments in the life of any reactor—this is the result of any analysis—is when it becomes decommissioned. That is the moment when we start moving radioactive material from a controlled point, from a nuclear reactor. We have all seen the glossy publications that have been produced by the CEGB, which set out the three stages of nuclear decommissioning. The drawings of the first stage show a nuclear station. In the second set of drawings there are fewer buildings around the nuclear station. In the third stage, pictures are drawn of cows grazing on the site of the former nuclear reactor. That is nonsense.

As I understand it, we are talking of a time scale of between 100 and 500 years. I am assuming that cows will still be supplying our milk 500 years on. There is no talk, however, of economics. What happens if there is even a minor accident at a nuclear station during the decommissioning process? My hon. Friend the Member for Carmarthen (Mr. Williams) has drawn attention to the article which appeared in the colour magazine of *The Observer* on Sunday. It informed us that the decommissioning or rescue process for Three Mile Island has already cost four times the amount that it cost to construct. Who will pay when it comes to an accident? Will it be the Government or the private owner of the nuclear power station? I will tell the House who will pay. The Government will pay in the end, which means that the customer will pay. The Government are ghettoising the nuclear sector. They are trying to pretend that it will become part of a great new privatised industry. In fact, they are ringfencing it. If anything goes wrong, the public

[Dr. Kim Howells]

will have to pick up the tab, and it will be a considerable tab. The damage to the economy will be irreversible in any area where something goes wrong.

Mr. Keith Mans (Wyre): Does the hon. Member agree that under the present system, in which everything is nationalised, all decommissioning costs will automatically be picked up by the public? Within the system are stations that were ordered by the Labour Government.

Dr. Howells: I am grateful to the hon. Gentleman for that intervention. It allows me to say that if there is a benefit to be derived from the nuclear generation of electricity, as the Government say there is, we pick up the profit. However, if something goes wrong in future, we shall not pick up a profit. In addition, we shall have to pay for the damage. Where is the sense in that? I hope that the Minister will be comprehensive in his reply.

Mr. Michael Spicer: It seems that the hon. Member for Wentworth (Mr. Hardy) does not like the 100-year idea. He thinks that it is a long time.

Mr. Hardy: I do not like it within a privatised context.

Mr. Spicer: In any event, the hon. Gentleman does not like the 100-year idea.

Were the third stage of decommissioning to be changed by regulation in such a way that meant that it could not be anticipated, that would be cause for public expenditures to be incurred. We had a long debate in Committee on this issue, during which we made clear our policy. We do not think it necessary to put into the Bill the provision that has been suggested by the hon. Member for Carmarthen (Mr. Williams). That would be unnecessary. It would provide a tremendous bonanza for lawyers. Everyone would come forward to argue that a particular proposal did not fit within the legislation. We are clear about the policy. The industry, and therefore the consumer, will pay for decommissioning unless something happens that was not capable of being foreseen—such as the regulations concerning the environment being changed—and proper provision could not therefore have been made in the accounts.

The hon. Member for Pontypridd (Dr. Howells) had some fun at the end of his speech about who pays. Either the taxpayer or the consumer pays. We make no bones about the fact that the consumer will pay for decommissioning and it is correct that he should. He will pay in the way that is appropriate, through proper provisions in the accounts and with the appropriate charging being made against those provisions.

In answer to the comment made by my hon. Friend the Member for Wyre (Mr. Mans), the hon. Member for Pontypridd was less than fair in saying that the shareholder would benefit from the industry's profits but the taxpayer would pick up the costs. Because we do not want that to persist, we are making it clear that the schedule will be activated only if there is a change in environmental policies that the industry could not have foreseen. To overcome the reservations that the hon. Gentleman put to the House, I give the assurance that we shall use these powers for England and Wales where the environmental conditions and regulations are changed.

I hope that the hon. Member for Carmarthen will not feel it necessary to press the amendment. I give him the assurance that that is the Government's policy and we intend to stick to it.

Mr. Alan W. Williams: Where is it said in the schedule that the measure will be activated only in unforeseen circumstances? I understand from my reading of the Bill that the schedule can be activated at any stage by any Secretary of State whenever the industry asks for the money, and in that way it could be used to pay for the whole thing.

Mr. Spicer: I am setting out the Government's policy. The Government would not activate the schedule unless there were unforeseen changes. Therefore, the hon. Gentleman's amendment is not necessary.

Mr. Morgan: The Under-Secretary of State asked my hon. Friend the Member for Carmarthen (Mr. Williams) not to press the amendment to the vote. I assure the hon. Gentleman that I will press it.

We are reaching the closing stages of the Report stage and we are still wondering about its purpose. It is not to keep hon. Members from their dinners. It is certainly not to keep the Secretary of State from his—nothing keeps him from his dinner, either here or in Moscow. All of us who have had to work through the Committee and Report stages are interested in what the Government mean when they give an undertaking in Committee. Do they meet it on Report?

We have tabled amendment No. 162 in precise words to meet the exact requirements set out in Committee by the Under-Secretary of State. We originally tabled an amendment which included the word "foreseeable", but the hon. Gentleman said that he was not happy with it and that it was a little unfair, but he thought that the word "foreseen" was fair. We took out the word "foreseeable" and inserted "foreseen".

The Under-Secretary of State had another objection in Committee. He said that the amendment was not precise in terms of who would be covered by it. We made it precise and inserted "by the person concerned", which is legal language for National Power, the successor company to the nuclear part of the CEGB.

If a Report stage means anything, and if the word of a Minister in Committee means anything, I hope that the Minister will say that amendment No. 162 is satisfactory. However, from his remarks, I understand that he will not take that view. I do not know what that says about the Minister's attitude to undertakings he has given. What does he think is the purpose of Report, and does he realise that this Chamber is a Parliament of the British people?

If the Minister does not agree to the amendment, it means that, having put on a little show of bravado in Committee, he is now saying that he wants some form of riskless private capitalism because one cannot privatise the industry with the nuclear component intact on any other terms. What other industry would have the cheek to ask for all of its unforeseen risks to be covered by the taxpayer? What other industry would say that, although it has capital and reserves, they must not be touched if one of its major waste processors should suddenly increase its charges? Can the Minister name any other industry that exists in the private sector on the terms that if it has any problems with waste disposal the Government will ensure that the share capital owners and the people who have

gone in for great risk taking in equity investment or the excitement of buying shares will have no problems because the taxpayer will pick up the tab?

There is another peculiar aspect, similar to the peculiarity of the nuclear levy. The Government have said that it is wise to have insurance against the Organisation of Petroleum Exporting Countries or another miners' strike. The Government say that the insurance of a second source of fuel is needed as cover against any sudden eventualities and that that makes sense. But what other industry can the Minister name which has instructions to spend more than £6 billion on a second source of fuel to cover it against an eventuality such as the possibility of another OPEC monopoly trebling the price of oil or another miners' industrial dispute? Other industries believe that if one owns shares, those shares and reserves are at risk to cover eventualities such as that. The merchant bankers have told the Government that they must realise that they cannot sell nuclear power on such terms. They have also told them that, knowing the problems of waste disposal with nuclear power, there is no possibility of selling the industry with its nuclear power component intact because the risks are far too great.

For the past 30 years, the nuclear power industry has existed as a big lie. We were told in 1957 that it knew how to solve the problem of its nuclear waste disposal or that, if it did not know this year, it would know next year. Thirty years later, the industry still does not know how to dispose of its nuclear waste. At the Hinkley Point public inquiry the CEGB was asked how it would dispose of the spent fuel rods from Hinkley Point, but it could not give an answer—32 years after the beginning of civil nuclear power in this country.

The Government have the cheek to tell us that the nuclear power industry is clean relative to coal because it does not cause the problems of the greenhouse effect. The coal industry has serious environmental problems, but they are soluble. For the nuclear power industry, we have been waiting 32 years to find out what they are. The difference can be summarised as follows. When one installs an admittedly very expensive but known technology, which has been in use in Japan for more than 15 years, in which limestone scrubbers are put in the chimneys of coal-fired power stations, one produces a useful building product—plaster—for which there is an immediate sale. I cannot think of any comparable product in the nuclear industry. Nuclear waste has to be buried under the ground and the sites of old power stations have to be covered with hundreds of feet of concrete for more than 100 years. I shall summarise it briefly. The back end of the nuclear power fuel cycle gives us Nirex; the coal cycle gives us artex.

The real problem that is causing the Government to insist that the nuclear power station component remains alive is that the Prime Minister has a talismanic faith in the nuclear power industry. She wears her talisman around her neck. After General Galtieri there came Arthur Scargill and she believes that she conquered him. I am told that following a couple of Johnnie Walkers in the evening she sometimes believes that she won back the Falklands by dropping a nuclear power station on Buenos Aires.

The right hon. Lady's simple belief must be brought to an end. The economics of nuclear power have run their generational cycle and the time has come for us to return to a sensible policy to meet our energy and electricity requirements. The private sector has plainly told the Department of Energy that it will not undertake the risks of nuclear power, so poor old muggins, the taxpayer, will have to do the job again.

Question put, That the amendment be made:—

The House divided: Ayes 191, Noes 249.

Clause 92

COMPETITION AND RESTRICTIVE TRADE PRACTICES

Mr. Morgan: I beg to move amendment No. 166, in page 62, line 39, leave out paragraph (b).

Mr. Speaker: With this it will be convenient to consider the following amendments:

No. 163, in page 62, line 42, leave out subsection (3).

No. 167, in page 63, line 4, leave out paragraph (b).

No. 157, in schedule 13, page 115, line 21, leave out sub-paragraph (3).

Government amendments Nos. 91 and 75 to 78.

Mr. Morgan: This group of amendments relates, in the main, to restrictive trade practices. They raise the question of just how deeply the Government have thought about whether they have produced a competitive regime, and, if they have produced a competitive regime, whether it will be up to them to regulate it or whether it might be up to the European Community as well. Obviously, there is a fairly fluid boundary between the two jurisdictions on matters relating to competition. It certainly occurs to us, having read the comments made by bodies such as the CBI, that there may well be problems for the Government arising from the regulation, by the EEC, of some of the little peculiarities of this Bill. We are thinking particularly of the nuclear levy. Would the Government have a leg to stand on if someone challenged them on that at the European Court of Justice because they were in breach of article 85 by compelling people to buy more expensive power than they wanted? The CBI made that point and we entirely agree that the Government need to persuade us that if the large industries with the resources——

It being Ten o'clock, further consideration of the Bill stood adjourned.

BUSINESS OF THE HOUSE

Ordered,

That, at this day's sitting, the Electricity Bill may be proceeded with, though opposed, until any hour.—*[Mr. Durant.]*

As amended, further considered.

Mr. Morgan: The CBI spoke of "the nuclear millstone". It wants to be free of that and the Government must address the matter. Consumers, particularly in the north and in south Wales, could well take the Government to the European Court and challenge them that the north subsidises the south on electricity prices and will do so even more under the Bill because of the increasing burden of the nuclear millstone. Have the Government thought about that?

We wonder how the Government will handle a proposed foreign takeover of any of the area boards or generating boards. Will not the EEC disallow the Government from keeping the essential sinews of the electricity industry, which we believe must remain in British hands? The water industry is in a similar position. If France or any other European country suddenly took a fancy to a British area board, as happened with the water boards, could the Government stop such a foreign takeover, given the strictures on restrictive trade in articles 85 and 92 of the treaty of Rome?

Mr. Michael Spicer: I assure the hon. Gentleman that we have thought about the competitive regime implied in the Bill. That is, indeed, when we introduced the Bill. It will have a dramatic effect in ensuring competition in the industry in future.

The amendments seek to remove all exemptions to restrictive agreements. We cannot agree to that because there must be some such agreements. The industry could not exist without, for example, agreements on emergency planning or pooling arrangements.

We have had discussions with the Commission on the hon. Gentleman's question about the EEC. We have absolutely no reason to believe that there should be any problems. We are in the forefront of all European countries in providing a competitive regime for the electricity industry. We shall keep the EEC informed about any future developments. On that basis I hope that the hon. Gentleman will withdraw his amendment and that the House will accept the Government amendments in this group.

Mr. Morgan: I shall accept the Government amendments, but not because we are satisfied with the Minister's reply.

In the EEC, if one calls something public infrastructure and treats it as such, one is allowed all manner of exclusions from the impact of articles 85 and 92. However, if one calls something a straight commercial business and says that one wishes to return all EEC loans because one wants to be on a complete commercial footing, as the Government do, one is in trouble. Therefore, many questions must be answered before we can be assured that the EEC will not find it necessary to interfere on a large scale with the industry. The Government have not thought this through.

Amendment, by leave, withdrawn.

Schedule 14

MINOR AND CONSEQUENTIAL AMENDMENTS

Amendments made: No. 91, in page 117, line 32, leave out sub-paragraph (1)(iv).

No. 75, in page 128, leave out lines 11 to 14.—*[Mr. Michael Spicer.]*

Schedule 15

TRANSITIONAL PROVISIONS AND SAVINGS

Amendments made: No. 76, in page 129, line 22, leave out sub-paragraph (1) and insert—

'(1) Where any application made under section 2 of the Electric Lighting Act 1909 or section 35 of the Electricity (Scotland) Act 1979 is effective on the day appointed for the coming into force of section 33 of this Act—

(a) the application shall have effect as if made under the said section 33 modified for that purpose by the omission of subsections (2) and (2A);

(b) anything done before that day in relation to the application (whether under the said section 2 or 35 or under section 33 or 34 of the Electricity Act 1957) shall have effect as if done under the corresponding provisions of Schedule 8 to this Act, and

(c) the provisions of Part I of this Act shall apply accordingly.'.

No. 77, in page 129, line 43, leave out sub-paragraph (1) and insert—

'(1) Where any application made under section 10(b) of the Schedule to the Electric Lighting (Clauses) Act 1899 is effective on the day appointed for the coming into force of section 34 of this Act—

(a) the application shall have effect as if made under the said section 34 modified for that purpose by the omission of subsection (2);
(b) anything done before that day in relation to the application (whether under the said section 10(b) or under section 32 or 34 of the Electricity Act 1957) shall have effect as if done under the corresponding provisions of Schedule 8 to this Act; and
(c) the provisions of Part I of this Act shall apply accordingly.'.—*[Mr. Michael Spicer.]*

Schedule 16

REPEALS

Amendment made: No. 78, in page 144, line 45, column 3, leave out lines 45 and 46 and insert 'Section 44.'.—*[Mr. Michael Spicer.]*

Order for Third Reading read—Queen's and Prince of Wales's consent signified.

10.6 pm

The Secretary of State for Scotland (Mr. Malcolm Rifkind): I beg to move, That the Bill be now read the Third time.

It is probably impossible to present new considerations for the deliberations of the House that have not already been exhaustively discussed at Second Reading, in Committee or on Report. However, I would wish briefly, in order not to detain the House, to emphasise that the Government believe that the deliberations on the Bill have clearly and firmly established the basic propositions on which the Bill was originally commended to the House.

First, we believe that the Bill is in the interests of the electricity industry. It is significant that the industry agrees with our observation. Perhaps the most important consideration from the industry's point of view is that in future the investment needs and other crucial decisions affecting the electricity industry will not be subject to Government or to politicians of any party. That will place the electricity industry in the same position as other industries throughout the United Kingdom. It can only be beneficial that those aspects of investment and other matters are determined by the industry. I believe that that explains the enthusiasm of the people who work in the electricity industry for the prospects that privatisation will bring about.

Secondly, I believe that the Bill has clearly been shown to be in the interests of the consumer. That is central to the difference between the two sides of the House. Whereas the Labour party, and those who support its point of view, believe that if one cannot have perfect competition, one should be satisfied with perfect monopoly, the Government believe that it is possible to introduce substantial elements of competition within the electricity industry, that it is in the interests of the consumer to do so and that the Bill will bring that about.

There will, therefore, be competition in generation, there will be choice for bulk purchasers of electricity and there will be opportunities for exporters, especially for the Scottish electricity industry, which I believe have justified the support for the Bill.

The Bill is especially important for Scotland where the nationalisation of the electricity industry some 40 years ago meant—as do all other forms of nationalisation in Scotland—the loss of control in Scotland to the Government of the day, whichever Government that might be. One never ceases to be amused, as well as unsurprised, at the inability of the Opposition to understand that argument.

In future the needs of the Scottish electricity industry will be decided by the management of that industry in Scotland, which I believe is of significance. In addition, by the privatisation of the SSEB and the hydro board, we will create two of the largest Scottish companies, which will give a major boost to the development of the Scottish private sector. We will see also exciting opportunities for consumers, employees and financial institutions in Scotland to acquire a significant stake in the industry.

There are fundamental differences between the Government and the Opposition. The Opposition stand for monopoly. They stand for continuing monopoly that they express themselves content with and anxious to preserve. The Opposition also appear to believe that there is a need not for simply a regulatory structure to protect the public interest, but for politicians and for Governments to have a continuing right to interfere in the fundamental decisions affecting this industry, although they have no comparable right in other industries that are crucial to our national economy.

These are crucial issues of principle and I believe that during the debate my right hon. and hon. Friends, who have been concerned with the detail of the Bill, have manifestly shown the desirability of the Bill and, indeed, the benefits that it will bring to the public throughout the United Kingdom. It is on that basis that I happily commend the Bill to the House.

10.8 pm

Mr. Blair: As we are preparing to vote on the Third Reading of the Electricity Bill it is instructive to remember the words of the Secretary of State for Industry who, six years ago, moved the Telecommunications Bill to privatise British Telecom. The Secretary of State for Industry then is the Secretary of State for Energy now, the peripatetic right hon. Member for Hertsmere (Mr. Parkinson). I gather he is now occupied as a travelling salesman somewhere in the Soviet Union. At that time he set up what he believed would be the guiding principle in the privatisation of British Telecom. He promised:

"It will give customers the choice between different suppliers of apparatus, different suppliers of services and, increasingly, different networks."

It did not do any of those things. He said of British Telecom:

"I am convinced that to change British Telecom ownership will bring about a major improvement in BT's accountability."

It has not. Finally, he said:

"We offer the millions of BT customers a newly enshrined set of rights"—[*Official Report*, 18 July 1983; Vol. 46, c. 27-38.]

Tell that to the thousands more who, each year, complain about the standards of service that they receive.

The truth is that every promise that has been made tonight for the Electricity Bill was made in 1983 for the British Telecom Bill. The Government were wrong then and they are wrong now. We have established that for the consumer, contrary to what the right hon. Gentleman has said, there will be no choice of area board, no choice at point of service. There will be little competition ever in this industry and no competition for at least 10 years.

We have shown that the basic security of supply is at risk because, as Mr. Baker said and the Secretary of State

could not deny, it will not be the duty of National Power or PowerGen to keep the lights on after privatisation, although they are the only people who will be able to fulfill that duty of supply.

We have learnt that the area boards with a high proportion of industrial customers will be vulnerable to takeover and bankruptcy if they lose major customers from the system.

We have revealed that the nuclear industry, quite apart from any other section of the fuel industry, will be ring fenced, given special protection against risk and underwritten by a special tax paid for by the consumer and the taxpayer who will still be liable for the costs of decommissioning even after losing the profit from the industry.

We know that the national grid, the transmission system, itself a monopoly to be owned by the area boards, will be privatised although no rational case has been made for its privatisation at any time during our deliberations.

We have exposed the fact that the costs of flotation will be huge and that they may amount to as much as £25 for every household in this country. All that for a privatisation that the people do not want, the nation does not need and that is now incomprehensible in any terms except as a doctrine driven by prejudice.

Mr. Alfred Morris (Manchester, Wythenshawe): Is not the Government's whole stance in relation to this Bill reminiscent of Oscar Wilde who said, after the first night of one of his plays, "The play is a great success, but the audience a failure"? Although the Government are convinced by their own propaganda, has not the Bill been overwhelmingly rejected by the electorate and therefore by the consumers?

Mr. Blair: My right hon. Friend is entirely right.

The Government may get their majority tonight in the House, but they have failed miserably to persuade the majority of people in this country that the proposal is good. At the next election they shall pay the penalty for that misjudgment.

10.13 pm

Mr. Rost: I congratulate my right hon. and hon. Friends on the courageous manner in which they have introduced this radical Bill and on the skilful manner in which they have handled this complicated and technical reform.

I welcome the opportunity for competition. Evidence already exists of area boards shopping around and contracting or arranging to contract for cheaper electricity than they now pay the CEGB to supply. The east midlands board, for example, is already offered cheaper power than it now buys from the CEGB. I welcome the change of heart on the part of the CEGB, which is already having to rethink its energy strategy and abandon its traditional plans of electricity only large coal-fired stations in favour of lower-cost electricity production. It has had to turn to combined cycle gas turbines and it has realised that, in future, it will have to sell electricity in a competitive market.

I welcome the nuclear clause because for the first time, by ring fencing the real cost of nuclear energy, it will concentrate the minds of the nuclear industry, which will have to become competitive if it wishes to have a future unprotected by a subsidy which I regard as transitional. I welcome the effect that it will have on the coal industry, which will also have to realise that it must improve its competitiveness if it wishes to sell its products. The country will no longer be handicapped by high-cost coal and the high-cost electricity which results from it.

I welcome the opportunities of wider share ownership, particularly employees shareholding, that will result from the legislation. I welcome the opportunities that will come to the new technologies for electricity production, which the CEGB has preferred to ignore and which will produce cheaper power—the clean coal technologies, the combined-cycle gas turbine. Those will exert downward pressure on prices, as distributors have the competitive incentive to source their supplies from lower-cost electricity. I welcome the incentives particularly for the combustion of municipal refuse, which can be used for fuel instead of land fill and causing pollution.

I have only one regret, and one reservation, which is that I hope that my right hon. Friends will look again at the need to increase the powers to oblige privatised production companies to sell off their surplus power stations, of which they are hoarding more than 100 at the moment—most of them near urban areas. These redundant power station sites are ideal for the private producers, who want to provide competition. It is important that those sites should be made available on a competitive basis.

My regret is that the Government have rejected amendments—including my own—that would have strengthened the obligation to produce electricity more efficiently and less wastefully. That is a missed opportunity, which would have encouraged more efficient electricity production, more city combined heat and power district heating, reduced the emissions of greenhouse gas CO_2 whilst, at the same time, improving energy efficiency and reducing fossil fuel burn.

The United Kingdom has the highest CO_2 release of fossil fuel from energy production per head of population in Europe. We burn more coal and, at the same time, we use only one third of what we put into power stations to convert into electricity. We throw away, in the form of hot water, the other two thirds of the fuel—which other countries increasingly use for space heating, so displacing fossil fuel burn. We should also do that.

The Government could have given a lead—I hope that they will reconsider this—in promoting more energy efficiency by reducing the greenhouse gases and, at the same time,. reducing the threat of global warming. I predict that within two or three years, because of international and EEC pressure, and the need to reach agreement to reduce CO_2 emissions globally, amendments will be made to the Bill in the form that some of us have suggested. I hope that hon. Members of the other place will look again and attend to this most important matter to strengthen the Bill in a way that will give credit to the Government in the longer term.

I hope that the regulator, when appointed, will prove to be as effective as the regulator of British Gas—the director general of Ofgas. He must be a person of such calibre because his responsibilities will be immense and he will determine whether the Government's proposals for competition succeed or fail.

The Bill offers a long overdue restructuring of the industry. It will offer the opportunities that are desperately needed for competition and innovation. It will provide a better deal for consumers and for industry, which has

[Mr. Rost]

complained for far too long about too-high energy costs. It will therefore benefit the economy as a whole. That is why I regard this legislation as far more important than any other privatisation measure that we have introduced over the past decade. Indeed, I regard it as the most significant and radical measure of this Parliament.

In the longer term, this reform will benefit the whole economy and its competitiveness far more than any other measure that we have introduced.

10.20 pm

Mr. Eadie: I intend to be brief.

As we have debated the Bill it has emerged that the consumer has been conned by the idea of the privatisation of the electricity supply industry. On any objective analysis of our discussions, it is certain that the consumer will pay more because of the measure. But that is not the end of it: the taxpayer will pay a price too.

It has also emerged in the course of our debates that private capital is not interested in building thermonuclear power stations unless the Government are prepared to give some guarantees. So the Government are presenting private capital with a cheque to try to induce it to build thermonuclear power stations. Only time will tell whether the cheque is blank.

The Secretary of State for Scotland talked of the great freedom that the Bill would bring about—freedom from interference by the Government. He said that private capital and private industry would determine events. The Bill needs another title—it is not only about the privatisation of electricity; the right hon. and learned Gentleman spoke of the abolition of the Department of Energy. That means the abolition of the pursuit of an energy policy. I predicted six months ago that it was planned to abolish that Department. Ministers and civil servants will become redundant as a result of this Bill. It is a pity that the Under-Secretary of State, who has worked so hard on the Bill, may be one of its casualties.

The Conservative party was responsible for setting up the Department of Energy. Someone told me the other day that the Conservatives are so busy changing the policies and structures of previous Governments that they are now turning in on themselves and beginning to change policies and programmes that they instituted.

The abolition of the Department of Energy would be a tragedy for the country. The Government do not even pretend that there should be an energy policy. The signal to abolish the Department of Energy is the signal that energy policy will be left to free market forces.

It has been clear throughout the passage of the Bill that the people reject it. We heard earlier that as many as 70 per cent. of the electorate opposed the Bill. The Government are ignoring the wishes of the people. They are using their majority to drive through their dogma.

The Bill is being speeded to the other place. The Government are not sure how it will work and to some extent it is a stab in the dark. The Government are passing the Bill with a prayer in their heart. Let us hope that lights do not go out as a consequence of the Bill. I hope that the other place will look closely at it because it is not in the interests of the British people.

10.25 pm

Mr. Malcolm Bruce: As the hon. Member for Midlothian (Mr. Eadie) has said, we are now speeding the Bill to the other place. The other House will make amendments that we have failed to have accepted. Even though the Bill is ill-thought out, the Government have accepted virtually no modifications even after 156 hours in Committee and three days of debate in the House. Opposition Members are extremely frustrated that Ministers are not prepared to acknowledge that they have lost many of the arguments and have had to force their will by way of the votes.

I have made it clear from the start that for many years I have not supported the prevailing status quo in the electricity supply industry. The one area in which I have had some possibility of agreement with the Government is in the analysis that restructuring is necessary. It is much more sensible to liberalise before privatising. That is better than creating a duopoly that will not provide effective competition and assuming that an untested carve-up will produce good results for the consumer, although all the evidence suggests that it will not.

The Government have resisted attempts to ensure that the Bill will give high priority to the promotion of energy conservation and reduce the impact of the energy supply industry on the environment. In spite of their protestations outside the House, the Government have resisted every amendment on those subjects. The industry is about to be given to a private sector that has no responsibility to increase energy conservation or to reduce the impact of the industry on the environment. That is a damning indictment of the so-called environmental commitment of the Government. Such a commitment does not exist and to them the pursuit of profit is far more important than concern for the environment and the industry's impact on it.

The way in which the Government have been forced to fix the nuclear component of the Bill has made a mockery of effective competition. The nuclear industry will have to accept that at some time in future it and every other sector of the industry will have to stand up and be counted within a competitive environment. The Government know, because otherwise they would not have structured the Bill in the way that they have, that if that sector of the industry were made to do that it would fall flat on its face. Nobody wishes to invest in that sector. In spite of all the distortions and the fixes that the Government have put into the Bill, all the signs are that the City is still not interested in putting money into the nuclear industry.

The Government have the audacity to lecture people inside and outside the House about free enterprise and the market economy. Yet they are effectively saying to the City of London and the public at large that the nuclear industry will be offered on the basis that the private investor will take the profits and the taxpayer will underwrite the risk. How can the Government continue to claim that they believe in a free market when they are creating an industry more featherbedded than any other sector of the economy? That is the most absurd component in the Bill.

In a rare contribution to the debate on the Bill, the Secretary of State for Scotland said that privatisation will be good for Scotland. Apparently the first good thing that Scotland has got out of it is an increase in electricity prices higher than anywhere else in the United Kingdom.

In Committee we told Ministers that the two specific requirements in the Bill that tariffs should be based on average United Kingdom prices and that, effectively, prices should operate on the basis of return on capital will mean that prices in Scotland will increase faster than anywhere else in the United Kingdom. Ministers were not able to deny that. That will be particularly true if the Scottish supply industry is not able to dispose of its substantial surplus activity, which it will have difficulty in doing. In those circumstances, the people of Scotland will experience the opposite effect over the next few years as their electricity bills rise well above the United Kingdom average, with consequent increases in hardship.

The Government have neither succeeded in persuading the House of the virtues of their argument nor, more offensively, even attempted to do so. They have laid back on the size of their parliamentary majority and treated the Opposition with contempt. We can take that because we have become used to it, but, far more important, the Government have treated the British people with contempt. They have shown not the slightest interest in the representations that have been made by a wide variety of interest groups. They have not won any of the arguments, although they will win the vote tonight. They have taken a step that will have to be corrected at a later date by a future Government.

I hope that the prospectus will contain a notification that if there is a change of Government, there will be a change of environment, the regulator will effectively regulate, and real competition will be brought into the industry, rather than the measures that the Government are proposing.

10.30 pm

Mr. Tom Cox (Tooting): The Third Reading of the Bill will see the end of a policy for the electricity industry, the overriding priority of which was to keep the supply going. We have heard a great many statements about how wonderful a private electricity industry will be. No one ever writes to me saying that. On the contrary, I have received an enormous number of letters from constituents who are extremely concerned, as have hon. Members who have spoken in the debate. I am sure that even Conservative Members have received such letters.

We should always remember that, since the formation of the state-run electricity industry, it has met the needs not only of the great cities but of the rural areas. When there were privately run companies, the needs of many of those rural areas were not met. Electricity was not supplied to many of them not because they did not want it but because the companies were not prepared to pay the costs of bringing the supply to them. Now the criterion of profit will be put first.

Even at this late stage, it is wise to comment on the remarks made by Mr. John Baker, the designated head of National Power. He said:

"The job isn't about shouldering national responsibilities but about meeting contracts, improving profitability, about seeking opportunities, but only exploiting them if it pays to do so. . .We need to define ways of running our power stations so that we can exploit our power contracts profitably. Our task will not be to keep the lights on whatever the cost".

That should be made known to the public.

I have read the *Official Report* of the Committee sittings, and have listened to some of the debates in the House. We have heard much about "consumer interests" and "competition". It all sounds wonderful, but there is nothing in the Bill to ensure that there is competition. Prices will not even stabilise, let alone go down. They will increase. The Government imposed increases in 1988 and 1989, and they will be the criteria that the private companies use.

What is most tragic is that, although we are a rich nation, we cannot use our resources without planning over the whole range of electricity policy. But where is any long-term planning provided for in the Bill? Where is real public accountability or consultation enshrined in the Bill? Despite what the Minister has said, nothing of the sort is to be found in it.

I have raised only some of the vital issues that should have been discussed. As those who were members of the Committee that considered the Bill have said, long-term planning, public accountability and consultation were not really discussed in Committee. The great tragedy is that in the long term it will be the British people who will pay for the folly of the privatisation of our great electricity industry. It was highly profitable when it was state run and it met real needs, whether in large cities or small rural areas. The industry met the needs of the British people. They will not be met when the Bill is enacted.

10.35 pm

Mr. Hardy: I hesitated before I decided to speak once again on the Bill. It was the contribution of the Secretary of State for Scotland that persuaded me that I should make some brief comments. The right hon. and learned Gentleman said that the electricity industry wanted privatisation. Those who are at the top of the industry, who may see substantial increases in their salaries, may want it. With the contacts that I have in the power industry, I have not detected any wish to embrace privatisation.

The Government may feel that they can persuade those who work in the industry to accept privatisation when they are offered shares, but more and more of them have come to the conclusion that the offer will leave them with less than 1 per cent. of the equity. Relatively shortly after the shares have been allotted, we shall find that there are larger shareholdings in Tokyo, Bonn, Ottawa, New York and all the other financial centres of the world than among those who work in the industry who do not want privatisation.

As Conservative Members have boasted, this is the largest privatisation that the Government have proposed. Conservative Members to a man have trooped through the Government Lobby in support of it. Not one of them has ever asked how much the country will get for the privatisation. The Minister knows that the net asset value of the industry is well over £14 billion. He may be able to reduce that figure by writing down capital, but when the industry is sold it will be lucky if the price is half of its real value.

It was said earlier today that we have already sold the family silver and that now we are selling the family gold. Unfortunately, when the gold is sold it will be at the going rate for silver, not for gold. The interests of the nation will be gravely disregarded. The value of Britain, in terms of the worth of the electricity industry, will be dramatically reduced. The bargain for the consumer will be a bad one. Indeed, the consumer is already paying far more than he should as a result of the sweetening exercise that has taken place since last year.

[Mr. Hardy]

The Government will secure the Bill's passage through Parliament, but over the next two years the British people will realise that they have been robbed. They will realise that their assets have been disposed of cheaply. They will understand that to a large extent profits will accrue for only a small minority. The guarantee of supply, which has been the proud boast of the industry in public hands, will not be guaranteed or sustained in the years ahead. The Government will regret the enactment of the Bill, and from that point of view I suppose that we have some cause for rejoicing. The people have begun to understand that what the Government are about is not in the long-term interests of the nation.

10.38 pm

Mr. Ieuan Wyn Jones: I, too, do not wish to detain the House for long, but the Opposition have an obligation to puncture the utter complacency of the Secretary of State for Scotland, who sought to commend the Third Reading. He trotted out the usual slogans that we have heard from the Government on this and other measures. I thought to myself that one slogan was missing because the Government's slogans came in threes. The right hon. and learned Gentleman used two, talking about choice and consumers. What about value for money? He did not mention it once.

We have heard that we are to have thumping big electricity price rises as a sweetener for the industry. Even the slogans that the right hon. and learned Gentleman used are false. We have heard much about competition. What competition? It is impossible to see any way in which the consumer can make an effective choice about the company from which he gets his electricity. The only option is for him to pay the bill, which will be higher than it has been.

The Secretary of State for Scotland and his colleagues would do well to look again at the recent report of the Select Committee on Energy, of which my hon. Friend the Member for Banff and Buchan (Mr. Salmond) was a member. Two telling comments will haunt the Government following privatisation. The Committee said:

"Electricity is too important an industry for the country to gamble that everything will come out right";

and

"The Government has singled out only two factors to justify its decision; security of supply and party manifesto commitment to a continuing nuclear programme. It has glossed over the industry's economics, ignored the industry's external costs, and still cannot be sure that the favoured PWR technology is the best available."

Mr. Rost: Will the hon. Gentleman give way?

Mr. Jones: I am not prepared to give way because my contribution must be short.

The public and the consumer have been conned, but the voting public at the next election will not be conned.

10.41 pm

Mr. Jack Thompson: I am not an economist or accountant. My background is in engineering and my discussion on the Bill has been with engineers in the industry. The engineers—not the management—are critical of the privatisation propositions. One engineer commented, "It is like a bicycle. If the pedals and the cranks are taken off the chain and the sprockets on the wheel., the bicycle will not work." That is what is happening with the industry.

The implication is that the CEGB and the area boards have not been efficient. Having spent some time with the good officers of the North Western electricity board, I refute that suggestion. That board was very efficient. My experience was that it was exceptional. I have links with the electricity board in my area which is aware of the consumers' needs and problems.

If a problem is to arise with the industry, it will be a technical one. If there is an argument to restore the industry to state control, it will be a technical one which will be irrefutable. The industry started with a municipal electricity supply and links with private electricity suppliers. There was no choice between the wars other than to have a nationalised industry. That argument will be made again, and we shall have to restore the industry to public ownership not for political but for technical reasons.

10.34 pm

Mr. Alan W. Williams: As I said in Committee and on Report, the Government have been on the defensive throughout the Bill's proceedings. That has been symbolised by the fact that only one Conservative Back Bencher has spoken on Third Reading. Often in Standing Committee the Secretary of State and Ministers were not just on the defensive but on the ropes—indeed, they were punch drunk at the end of several sittings from trying to defend some of the clauses.

I find no merit in the Bill. It will create a private monopoly because there will be no competition. Earlier, we challenged the Minister directly about what competition there would be for the individual householder. I think of people such as my mother, who is a widow and a pensioner. Apparently she can opt out and I suppose that she could devise her own supply, but in reality there will be no competition. The Bill also brings threats of price rises—6 per cent., 9 per cent. and much more to come when the shareholders want their cut.

The Bill provided an opportunity for measures on the environment and conservation, but the Government have pushed all such opportunities to one side. We have seen clearly that their commitment to the environment and green issues is non-existent. The Bill shows clearly the double standards for coal and the nuclear industry. The Government are carrying out a clear vendetta against the coal industry, which dates from the 1970s or even earlier than that. The Government are the descendants of the coal owners. [HON. MEMBERS: "Back to 1926."] That is right. The vendetta goes back to 1926 and before, and it has returned with a vengeance in the 1970s and 1980s and as a result of the miners' strike. I come from a part of the country that used to have many coal mines, but there are none left now. When I was elected, there were three just outside my constituency, but the number is down to one. Throughout our debates, we have seen the terrific pressure that will be put on the coal industry by privatisation and the free range of market forces—coal imports and the like. There will be no ring fencing or defence for the coal industry.

The nuclear industry will be completely ring-fenced under the Bill, with the nuclear quota, the nuclear tax and the pressurised water reactors that nobody wants. There

will be problems of waste and decommissioning, yet the Government volunteer to take back those problems and to pay the bills. That is an appalling double standard. The public have noticed that fact through the reports of our debates and we shall carry on explaining that to them. They have noticed that one set of principles is applied to coal, whereas the nuclear industry is to be protected.

Dr. Kim Howells: I want to reinforce my hon. Friend's point. It is curious that the Government have chosen to ring-fence the nuclear industry as a reliable source of energy and electricity, yet they have refused to ring-fence the Nottingham coalfield, which in their books has been a marvellous and reliable source of electricity and energy. It is curious. We own the coal underground in Nottinghamshire, yet we do not own the uranium that we send to our nuclear power stations.

Mr. Williams: The Government's logic is strange. However, the public have seen what is happening and they do not like the Bill or the privatisation of water. Public opinion is overwhelmingly on our side. We have tried to reflect the views of the consumers, the taxpayers and the electorate. Unfortunately, the Government have not accepted any of our clauses or amendments and they will suffer for that at the hour of reckoning.

10.48 pm

Mr. Maxton: I shall be brief, but it is essential to make several points before this obnoxious piece of legislation leaves the Commons, especially in view of the case put by the Secretary of State for Scotland, who is deputising for the Secretary of State for Energy who is yet again swanning round the world.

Nothing in Committee or on Report has convinced me that I was wrong to argue that we should never have had Scottish legislation dealt with in an English and Welsh Bill. It has made it difficult to put the Scottish case and the Scottish people have not had the opportunity to consider it fully. Of course, it has exposed cruelly the Tory party's total failure to persuade the Scottish people of their case and their inability to conform to the normal constitutional conventions on Scottish legislation in this House because of their disastrous defeat in Scotland in 1987.

The Bill, like the Tory party itself, has little support in Scotland. Despite what the Secretary of State said, few employees at any level believe that the Bill will do anything for Scotland. Among the consumer organisations, political parties and churches in Scotland, it is difficult to find anyone who is not opposed to the Bill. Its opponents, I may add, include the Scottish CBI. The people of Scotland want their electricity supply industry to remain in public hands, and the Government have a responsibility, which they never fulfil, to listen to their voices.

My hon. Friends have shown that the Bill will create no real competition in England and Wales. The vertically integrated nature of the new companies in Scotland, with generation, transmission and supply all carried out by one company in clearly delineated geographical areas of Scotland, will deprive Scottish consumers of even a phoney facade of competition. The Bill creates private monopolies which, despite the so-called controls that the licences and regulation are supposed to impose on them, will be able to exploit their position to maximise profit at the expense of Scottish consumers.

Yet again the Secretary of State for Scotland abdicated his responsibility for the electricity supply industry in Scotland. The headquarters of the South of Scotland electricity board are in my constituency, and most of the board members live in or near my constituency. The headquarters of the North of Scotland Hydro-Electric Board are in Edinburgh. If the Secretary of State had read his own press release or had bothered to attend our debates last week, during which I quoted him, he would know that it said that he had issued an instruction to the boards in connection with their financial limits. It was not the Treasury that did that; it was the Secretary of State for Scotland.

At present, control of the electricity supply industry in Scotland rests in Scotland. The Government have not given us a single guarantee that after privatisation that control will lie anywhere other than outside Scotland—perhaps even outside the United Kingdom.

The price of electricity has already been increased by 8 per cent. to fatten up the industry to make it attractive to the new shareholders, as Mr. Joughin, the chairman of the North of Scotland Hydro-Electric Board said. If that can happen before privatisation, how much worse will it be afterwards? The Bill will mean higher prices, poorer services for consumers, probably the end of the coal industry in Scotland, a deterioration in the environment and hardship for the poorest members of society. The Bill is unwanted and unnecessary. Its sole purpose is to give fast bucks to the Government's friends in the City, and I ask my hon. Friends to join me in voting against its Third Reading.

10.52 pm

Mr. Michael Spicer: Rather to the Opposition's surprise, we have been happy to join them on what they thought was their chosen ground—the issue of prices—because we know that it must exert a downward pressure on prices if we replace the present structure of the industry under which a monopoly generates its own costs and supplies the industry on the basis of those costs, without intervention.

The hon. Member for Sedgefield (Mr. Blair) designated today consumer day. I told the House that, once the Bill has been passed, every day will be consumer day because every aspect of the Bill is devoted to ensuring that the consumer gets a better deal. That is not only true in relation to prices; there will be a panoply of consumer rights and competitive pressure not only on generation, which accounts for 70 per cent. of the industry's costs, but on the public electricity supply industries. New duties will be placed on the regulator to ensure that the consumer is well cared for. In particular—something that the Opposition have not been willing to concede as a great new benefit—consumer committees will in future be part of the regulatory body rather than merely shouting their views from the touch line.

In this short debate the hon. Member for Wentworth (Mr. Hardy) rightly said that this will be the largest privatisation of all time. Added to the 9 million shareholders—three times the number when we took office—will no doubt be considerably more private shareholders, and many will no doubt be the employees of the industry to whom we shall give special terms.

[Mr. Michael Spicer]

One enormous advantage of privatisation will be that the massive investment programme that is due to take place in the industry will be determined not on the basis of decisions——

Mr. Dick Douglas (Dunfermline, West) *rose*——

Mr. Spicer: No, I shall not give way. The hon. Gentleman has not been here——

Mr. Douglas *rose*——

Mr. Spicer: No, I shall not give way. It is too late. I am not giving way to the hon Gentleman or to anybody else at this stage because I have promised to be brief.

Massive investment decisions are ahead. The decisions to invest will be made not on the basis of political infighting in Whitehall or behind beige doors in Whitehall, but on the basis of market conditions, and will be determined by the market place.

Our reforms of the electricity supply industry, which are undoubtedly radical, are aimed at making Britain's electricity supply industry one of the most efficient in the world. We believe that as the European market opens up in 1992 and transnational common carriage becomes a real possibility, Britain will have the opportunity to become the power house of Europe.

What we are proposing to do is what some people have argued is impossible—to turn a massive producer-driven public sector monopoly into a series of customer-oriented private companies, many with shares that are owned by their employees and many of which will be competing with one another for business. In future the customer will call the tune, which is something that, despite all the protestations to the contrary, all the rhetoric and all the press releases, is not and never will be central to the beliefs of the Socialist party, the Opposition.

Question put, That the Bill be now read the Third time:—

The House divided: Ayes 251, Noes 193.

Lord Chancellor (Salary)

11.10 pm

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham): I beg to move,

That the draft Lord Chancellor's Salary Order 1989, which was laid before this House on 14th March, be approved.

The need for this order arises out of the link between the salaries of the Lord Chancellor and the Lord Chief Justice. The independent Top Salaries Review Body recommended in 1983 that the Lord Chancellor should be paid more than the Lord Chief Justice in recognition of his position as the head of the judiciary and of his wider responsibilities. The House accepted the principle of the TSRB recommendation, and has successively reaffirmed that with the approval of the Lord Chancellor's salary orders for the years 1984 to 1988.

An annual Lord Chancellor's salary order is necessary because the Lord Chief Justice's salary is set annually following the recommendations of the Top Salaries Review Body. This year the TSRB recommended a salary of £89,500 for the Lord Chief Justice—a 5 per cent. increase. The Government accepted that that figure be paid from the due date of 1 April 1989.

Mr. Dennis Skinner (Bolsover): Is the Leader of the House quite sure that he has got all his Tory Back Benchers into line on this issue?

Dame Elaine Kellett-Bowman (Lancaster): No.

Mr. Skinner: Already, we have heard the first cuckoo.

Is the right hon. Gentleman aware that there has been a lot of talk in the corridors from Tory Members of Parliament, barristers and others in the legal profession, who are fuming with the current Lord Chancellor—on his big fat salary of £91,500 a year—for trying to introduce those new measures and upsetting their cosy little existence? How many votes does the right hon. Gentleman expect to get tonight if there is a Division?

Mr. Wakeham: I have been here long enough to know not to count the votes before a Division. I attended the debate in the House of Lords on Friday and I did not see the hon. Gentleman there.

Mr. Skinner: I was in here.

Mr. Wakeham: I was in here, too, earlier on. The debate was a much more balanced affair than the hon. Gentleman might have thought.

The Lord Chancellor has a salary lead of £2,000. The House accepted this figure in 1983 and it has remained at that level since. Its real value has eroded since it was first established, but that is of little significance in itself and is not a valid reason for changing it. The lead exists because the Lord Chancellor is head of the judiciary, and that makes it right that an appropriate differential should exist between him and the Lord Chief Justice.

The order establishes the Lord Chancellor's salary at £91,500 from the day it comes into force. It cannot be made retrospective. The salary level derives directly from a TSRB report and embodies a principle established six years ago, which has been accepted by the House on six previous occasions. I hope that once again it will commend itself to the House this year.

I commend the order to the House.

11.13 pm

Sir Nicholas Fairbairn (Perth and Kinross): It may be appropriate for me to comment, as a member of the Scots Bar, about the salary of a Lord Chancellor who appears determined to make alterations to the structure of the law of England that I regard as devastatingly improper in relation to the benefit of the client in England. I feel that I can say so for two reasons. First, as it is not my Bar and it will not affect me, nobody can say, "He would say that, wouldn't he?" [HON. MEMBERS: "He would say that wouldn't he?"] Those hon. Members may know that there is a consultation paper in Scotland that does not make the proposals which have been made by the Lord Chancellor for the law in England.

I know that the Leader of the House listened to parts of the debate in the other place on Friday. Some of us also heard large parts of that debate, including the remarks of the Lord Chief Justice and the Master of the Rolls. Whatever their language, it was clear to those of us who listened that they did not take the view that the Scottish Lord Chancellor, as head of the English judiciary, had consulted them. From the language of the Lord Chief Justice's speech I should have thought that the order, which provides for the Lord Chancellor to receive a £2,000 lead over the Lord Chief Justice, might have been irked in the circumstances.

There are three matters that I will put before the House for its consideration. The first is the allegation in the proposals in the Green Paper entitled

"The Work and Organisation of the Legal Profession."

that the changes will make it cheaper for the client.

When the Lord Chancellor was dean of the Faculty of Advocates in Scotland it was suggested that the costs of divorce would be reduced if divorce were transferred from the exclusive right of audience in the Court of Session to the sheriff court. Costs have doubled.

The Green Paper says that barristers in England face the extraordinary difficulty of being unable to find chambers in the crowded facilities of the Inns of Court. The Lord Chancellor has a flat in the Inns of Court as well as a tithe cottage at the other end of this House.

Most important of all, if one removes from the people who have to go to law the right to choose a specialist one will not only remove the service that they should receive, but increase the price of that service. In addition, it will destroy what is most special about the difference between specialist advocates and general solicitors. The general solicitor has a symbolic relationship with his client whereas the relationship between the advocate and his client is singular and provides a service of excellence that is infinitely cheaper than would be the case were the system destroyed by the current proposals which have been poorly thought out. They are in contradistinction of the recommendations made by the Lord Chancellor when he was dean of the Faculty of Advocates which spoke of the essential requirement to keep the Bar intact and separate. I say that as a Scotsman. It is an ill-service to the law of England.

Opposition Members on the funny Benches frequently say that Scotland is being used as a guinea pig for the community charge. I do not like England being used as a guinea pig by a Scottish Lord Chancellor. If he wants freedom of choice and a legal profession that we can all afford, what about if he forgoes his salary until his case is proven?

11.20 pm

Mr. Ivan Lawrence (Burton): The question is: is the Lord Chancellor doing such a fine job that he deserves a salary increase? What a pity that we have only one and a half hours in which to discuss this extremely important matter, because I have enough to say on the subject to make the four and a half hour speech that I dedicated to trying to stop the poisoning of our drinking water by the addition of fluoride seem like the twinkling of an eye. It is also a pity that we have only this golden one and a half hours once a year to exercise any control—or at any rate, any influence—over the Lord Chancellor's discharge of his political duties.

By what criteria should we presume to judge whether the work of so eminent a legal luminary, so highly regarded a judicial figure, so well-admired and well-liked a political person, is worthy of the accolade that we are asked to give him tonight, expressed in the sordid terminology of money? May I have the temerity to suggest a test? Is the Lord Chancellor going to improve the legal system of the United Kingdom so that it will better serve the people—not the lawyers—of Britain? Is he making the legal system cheaper and more accessible for the consumer? Will it be a service of higher quality for the consumer?

By these criteria, sadly I have to conclude that many people who know and understand these matters are by no means convinced that—however good, honourable and well-intentioned a man, however brilliant a Scottish lawyer and judge he may have been, however eminent and well loved he undoubtedly is to anyone who has been privileged to know him personally in his work—the Lord Chancellor is the wrong man for this salary at this time.

No other Lord Chancellor in living memory, perhaps in our history, has succeeded in antagonising almost the entire legal profession throughout the land. Has there ever been a debate in the House of Lords, on a Friday of all days, in which 56 of their Lordships rose—nearly all of them in anger—at his well-meaning but destructive proposals? They will pull up by the roots the legal profession as we know it, which—for all its faults—still works reasonably well and is the envy of the civilised world.

Are all the greatest legal minds of the land incensed for no reason? These include the Lord Chief Justice of England, two former Lord Chancellors, the Master of the Rolls, all nine Law Lords and a most distinguished former Attorney-General who threatened to resign the Conservative Whip. There is also an impressive list of non-lawyer luminaries—many from the Opposition side—including Lord Benson, chairman of the recent royal commission on legal services, Lord Rees-Mogg, the former editor of *The Times*, who felt so strongly that he used his maiden speech to speak against the proposals, Lord Murray of Epping Forest and Lord Longford. That is a long list of unquestioned authority and influence from Opposition as well as Conservative Benches and outside Parliament are the——

Mr. Robert N. Wareing (Liverpool, West Derby) *rose*——

Mr. Lawrence: I shall give way in a moment. Outside Parliament are the High Court and circuit judges, and most of the Bar.

None of the people in the House of Lords have the slightest financial interest in seeing the proposals defeated and cannot conceivably be said to be speaking in self-interest. It is a great achievement for the Lord Chancellor to have set so many of the people in the land who are best qualified through experience and judgment to assess the likely effects of the proposals against the Government and against their proposals for legal reform.

Mr. Wareing: Does the hon. and learned Gentleman agree that what distinguishes the Lord Chancellor from all the other people he has mentioned is that the Lord Chancellor was chosen by the Prime Minister, and that none of the present Government of yes men and women would defy her? If the hon. and learned Gentleman is suggesting that the Lord Chancellor's salary should be decreased, at least in real terms, should not the same be done to the Prime Minister's salary? Should not the hon. and learned Gentleman direct his wrath against the Prime Minister and the Government, who consult no one?

Mr. Lawrence: If I raised my wrath against the Prime Minister, I would be called out of order—would I not, Madam Deputy Speaker?—as this is a debate about the Lord Chancellor's salary. Since I have no complaint to make about our excellent Prime Minister, who, in every field of her endeavour as leader of the——

Madam Deputy Speaker (Miss Betty Boothroyd): Order. The hon. and learned Gentleman is now being called to order. He is straying from the point.

Mr. Lawrence: It is only out of deference to your ruling, Madam Deputy Speaker, that I forbear from dwelling even longer on the achievements of our Prime Minister, the great leader of the country, who, in the——

Madam Deputy Speaker: Order. I have called the hon. and learned Gentleman to order. I am sure that he will contain himself now and speak to the order before us.

Mr. Lawrence: In the matter of the Lord Chancellor's salary, my right hon. Friend is making her first-ever error.

There are many reasons why the three Green Papers have been so angrily attacked. There are constitutional reasons and reasons of principle. I want to mention one particular sort of harm that will be done—the harm to the ordinary consumer of legal services. The claim that these proposals will be consumer-friendly is about as absurd as the claim that the salmonella scare will boost the sale of eggs.

Let us consider the cost of legal services under the proposals. If a young man or woman wants to leave university and go into the legal profession now, he or she has the choice of going to the Bar, which will be slow in yielding its returns but which in due course will give the right of audience to the higher courts, the right to become a Queen's Counsel, and the right to become a High Court judge. If the proposals go through, the graduate wanting to enter the legal profession will find all those advantages in becoming a solicitor, because the solicitor will have the right of audience in the higher courts, the right to become a Queen's Counsel and the right to become a High Court judge.

On top of that, the graduate will be able, if he joins a solicitor's firm, to be guaranteed a pension, holidays with pay, a car, steady work and a roof over his head—the kind of attractions which the Bar does not offer. In those

[Mr. Lawrence]

circumstances, who in his right mind would choose the risks of the Bar in preference to the absence of risk involved in joining a solicitors' firm? Almost every graduate in his right mind will choose to become a solicitor, and very few—there may be some—will prefer the misery of going to the Bar to the luxury of becoming a solicitor. If such people want to become advocates, they will become solicitor advocates, and the supply of barristers of the independent Bar will dry up.

At the other end of the profession, there are people at the Bar who have spent 20 or 30 years running around Britain. They are the people who have to wait for two, three or four weeks for another case to come on stream after the case in which they were involved has collapsed. They would leap at the offer of an advocate solicitorship with a leading firm in the City with all the luxuries and the assurance of the steady income that would accrue. At that end of the profession the Bar would be depleted.

At the end of the day fewer people will come to the Bar, there will be fewer people at the top and a much smaller independent Bar. Anyone who wants to be represented by a Marshall Hall or by my hon. and learned Friend the Member for Perth and Kinross (Sir N. Fairbairn) can go to the cab rank. People can go to the wonderful firm of solicitors of my hon. Friend the Member for Dorset, North (Mr. Baker). Someone seeking legal services can instruct my hon. and learned Friend the Member for Perth and Kinross and will get the best barrister in the land instructed by the best solicitor in the land.

But if my hon. and learned Friend the Member for Perth and Kinross decided to join the firm of my hon. Friend the Member for Dorset, North, people who need the services of a barrister would have to go to that firm in London to get his specific representation in court. The cab rank principle will disappear, one of the achievements of the British Bar and the British legal system will be diminished, and the consumer will suffer.

If there is a smaller cab rank and the number of independent barristers is reduced, what will happen to the provincial solicitor? I am talking about the small two or three-man firm in the country areas—most of the areas of Britain. Most of our constituents employ small country solicitors who cannot afford to have an advocate partner but instruct barristers to represent the interests of their clients in the most effective and efficient way. If there is no cab rank and those solicitors cannot make a living because their conveyancing work has all gone to estate agents, building societies and finance houses in the high street, they will close down and go to the big towns and cities to make a living.

The smaller consumer who wants to seek legal advice from a solicitor in a small town will not be able to find one and will have to go to the big towns and cities and pay big city prices. If that is one of the likely results of the Green Papers, who will suffer because of the lack of legal advice and legal services, not just from the Bar but from solicitors? The ordinary consumer, the person who sends us to this House and expects us to vote for salary increases for Lord Chancellors who will improve legal services, will suffer.

There is also the matter of quality. I accept that solicitors are inherently as capable as barristers. However, they are not specialists and they are not trained in court work in the way that barristers are. They are unlikely to do the job as efficiently as barristers. Most of our solicitors deal with divorces, wills and conveyancing and with many kinds of problems, some of which are referred to us in our surgeries. Now and again they go to court and are expected to conduct an adequate defence of someone charged with rape, with running someone down or with killing a citizen through dangerous driving. If they are not doing that kind of work all the time, of course they are not as skilled.

I understand the points about monopoly and restrictive practices. We have a parallel in the medical profession. We would not expect the general practitioner who is advising Mrs. Bloggins about her cold, her varicose veins, her limp, her tiredness—a thousand different ills—to turn up and do a heart-lung transplant. We would, however, expect a surgeon who does heart-lung transplants, hip operations or lip operations day in, day out to be a skilled operator.

We do not say, "Let us abolish the rank of consultant" or "Let us abolish the rank of surgeon" because the general practitioner is as able as any surgeon or consultant to operate or give detailed advice. That would be nonsense, and we should adopt the same approach to solicitors and barristers. The barrister is the surgeon who operates in court; the barrister is the consultant. The solicitor is the general practitioner. That is the system which the Lord Chancellor is seeking to overthrow, and that is the reason why we should seriously consider whether his salary ought to be paid at all, let alone increased.

Mr. David Martin (Portsmouth, South): Can my hon. and learned Friend explain why in Truro and Barnstaple rights of audience are already equal for solicitors and barristers? Are people in those areas getting a poor service from solicitors?

Madam Deputy Speaker: Order. I should be obliged if the hon. and learned Gentleman would not go down that path. The scope of the debate is very narrow. May I remind the House that it should be addressed to the merits of the increased salary levels specified in the draft order?

Mr. Lawrence: Solicitors do not operate the same code as barristers. Solicitors take statements from——

Madam Deputy Speaker: Order. I have called the attention of the hon. and learned Gentleman to the scope of the debate. I am sure that he will not ignore guidelines from the Chair.

Mr. Lawrence: I have those guidelines constantly in mind, Madam Deputy Speaker, but to save time I will not repeat them every time I start a new sentence. I am saying that any changes in the visiting system whereby solicitors can take statements from witnesses and barristers cannot —which means that the present way of conducting criminal trials in particular is the best way of achieving high quality and high representation—should not be changed by the Lord Chancellor. When we decide whether his salary is appropriate, we must give that matter consideration.

Barristers are forbidden to take statements directly from witnesses. If a solicitor were able to appear in the higher court and take statements directly from witnesses, the temptation to tarnish the purity of a legal system,

which means that the integrity with which we conduct our criminal trials is of the highest, is a risk simply not worth taking.

A ruthless professional code maintains the integrity of our Bar. The barrister is watched by the solicitor, and by the judge; he dare not do anything wrong. But no one will know whether the high street solicitor who is taking a statement from the witness is doing wrong or right.

The integrity of that aspect of the system has nothing to do with the inherent integrity of a barrister and that of a solicitor, but everything to do with a system that encourages the right approach; and that system is under threat. The professionals—the judges in their Lordships' House—know the dangers of the proposed changes.

Many things are wrong with the legal system. Much could be done to improve it, but tearing the legal profession up by the roots will not solve any of the problems that face our constituents as consumers. They want greater access to legal aid, and to be able to go to a court on a particular day for a particular case and be sure that it will come on. If we want to achieve that, we need computers everywhere, and we need to make sure that the Lord Chancellor's office improves the administration of our courts. Those are the solutions to the problems that concern our people.

Nothing that is suggested in the Green Papers—whether it is replacing the system of payment by a win at all costs proposal, or stripping conveyancing away from the country solicitors so that they are no longer available, or taking away the independence of the Bar by shrinking it so that it is not available or is available only at increased costs, because those costs have to include pensions, overheads, holidays with pay and a car—will set right what is wrong with our legal system.

Because the Lord Chancellor is proposing destructive measures rather than such constructive measures as the extension of the legal aid system to those who need it or the improvement of the administration of our courts, I invite my colleagues on both sides of the House to consider carefully whether this is not the moment to show the Lord Chancellor that we are not as enthusiastic about his Green Papers as he appears to be. He is so enthusiastic that precious little time is being given for consultation——

Madam Deputy Speaker: Order. This is the third time that I have got to my feet to remind the hon. and learned Gentleman that this is not a debate on the Green Papers. For the third time, I am telling him that he must contain himself and speak to the order before us, and not stray from it.

Mr. Lawrence: The order concerns an increase in the salary of the Lord Chancellor. If he is making proposals that will make legal services less available to the consumers and at a higher cost and lower quality, surely we are able to say that he ought not to be entitled to this increase in salary, and so I say.

Madam Deputy Speaker: Order. Not in this debate. The hon. and learned Gentleman has made an extensive speech, and covered a great deal of ground. Other hon. Members wish to speak, so I should be glad if he would refer to the order.

Mr. Lawrence: I said, "and so I say" and that was the end of my speech.

11.42 pm

Mr. Bob Cryer (Bradford, South): The hon. and learned Member for Burton (Mr. Lawrence) will have an opportunity to vote against the order, and it will be interesting to see what action he and other barristers in the House take.

I am not opposed to the order on the ground that the activities of the Lord Chancellor are necessarily wrong. I do not share the view of the vested interest expressed by the hon. and learned Gentleman. I am opposed to it because it proposes a salary of £91,500 for an individual, which is far too much. It demonstrates the massive inequality in our society when one bears in mind that, about 12 months ago, the House passed orders cutting housing benefit and income support, and that child benefit has been frozen for two years. Someone who has the patronage of the Prime Minister, who has been endorsed and appointed by the Prime Minister, is to be given such a salary because there must be a differential of £2,000 over the salary of the Lord Chief Justice. What a load of nonsense it is to the millions of people who are suffering under this Government because of cuts in a wide range of supplementary benefits, and because pensioners were so badly hit by the cuts——

Dame Elaine Kellett-Bowman: Is this in order?

Madam Deputy Speaker: Order. I shall call any hon. Member to order, whether he speaks from the Government or the Opposition Benches, if he or she strays. I ask the hon. Member for Bradford, South (Mr. Cryer) to confine himself to the order that is before the House, which concerns the merits of the proposed increase for the Lord Chancellor.

Mr. Cryer: I endorse your view, Madam Deputy Speaker. If I make a comparison between the poverty-stricken levels of benefit that the Government are paying——

Dame Elaine Kellett-Bowman: Oi!

Mr. Cryer: I am getting back my breath after hearing the rude noises that have come from the hon. Member for Lancaster (Dame E. Kellett-Bowman), who has been shouting at you, Madam Deputy Speaker, in what I would describe as an undignified way. I would like to defend you against these incursions, Madam Deputy Speaker.

Dame Elaine Kellett-Bowman: May I say with respect, Madam Deputy Speaker, that, while you were quite properly speaking to the Clerk, I was seeking to draw attention to the fact that the hon. Member for Bradford, South (Mr. Cryer) was straying vastly from the point? That is what I was seeking to bring to your notice, Madam Deputy Speaker.

Mr. Cryer: I was seeking to clarify your useful ruling, Madam Deputy Speaker, by referring to the massive inequalities that are imposed on the poorest of our people by the Government. That can be referred to in passing by way of explanation. Having done so, I wish only to say that the Lord Chancellor is not worth £91,500. It is an outrage and a disgrace that anyone who secured his job through patronage should be paid such a sum. The Lord Chancellor's job was not advertised and he did not go through the interview process to which ordinary people have to subject themselves. It is because he happens to

[Mr. Cryer]

have the beneficial eye of the Prime Minister upon him that it is proposed to pay a massive sum to keep him ahead of the salary of the Lord Chief Justice. That shows to ordinary people that we are engaged in the economics of the mad house.

I propose to divide the House on the order when the Question is put. All those, including the hon. and learned Member for Burton, who wish to vote against it will have that opportunity. We shall see what the outcome is.

11.48 pm

Mr. Ivor Stanbrook (Orpington): It would be wrong and deplorable if it were thought by the public that the sentiments of the Bar were adequately conveyed by the remarks of my hon. and learned Friend the Member for Burton (Mr. Lawrence). Many members of the Bar support what the Lord Chancellor is attempting to do.

I have been a member of the English Bar for nearly 30 years during which time there have been five or six Lord Chancellors. Every one of them until the present one has sat on proposals for reform. The Bar knows that reform is urgent and that its privileges rather than its excellence sustain its position and status in society. As time has passed that has become increasingly the position. The only thing that should guarantee the status of the independent Bar of England is its quality and its excellence. It does not need the artificial privileges which it has secured over the years because of the way in which it has been able to persuade Lord Chancellors and other judges.

It is said by those such as my hon. and learned Friend the Member for Burton that the Bar is opposed to the Lord Chancellor and what he wishes to do by way of reform. The present Lord Chancellor came to us like a breath of fresh air in a fetid atmosphere. He is proposing to do something which previous Lord Chancellors have not had the courage to do. He is worth every penny of the proposed increase.

11.50 pm

Mr. Alex Carlile (Montgomery): Before the Lord Chancellor can be worth an increase in salary, he should put his house in order. I am speaking not about anything to do with the legal profession but about the processes of the courts and of the Lord Chancellor's Department.

The legal profession is sometimes accused, rightly—usually the blame falls on solicitors—of holding up the process of justice. However, many of the most worrying delays in that process are caused in the courts administered by the Lord Chancellor. For example, a constituent of mine, a boy with no previous convictions aged about 19, was convicted of an offence of arson. He applied for leave to appeal against his sentence, which was 15 months youth custody. By the time his application for leave to appeal had been rejected in what is not much more than a paper procedure carried out by a single judge, he was one month from his parole. It is unforgiveable that such delays should exist in the administration of justice.

I shall give another example of why, before tearing the profession apart, the Lord Chancellor should rip up some of his procedures in his Department and the courts and start again. In most magistrates courts, because of the blockage of work, both an accused person who chooses, as is his right, to have contested committal proceedings in a criminal case, and the prosecution—they are affected equally—will have to wait months for the proceedings to take place.

What are the consequences? Every case that comes before a jury depends on a question something like, "Who killed Cock Robin?" Who was standing at the bus stop at half-past five on the afternoon in question? Who signed the document in question? What was in his mind at that time? It all depends on the credibility of witnesses. If these cases have to linger before they are heard, how can juries be expected to make reliable judgments on the credibility of witnesses?

The Lord Chancellor's salary, like, apparently, the salaries of everyone else at which the Government look closely, should be related in some way to his Department's efficiency and performance. Despite the considerable efforts of the Lord Chief Justice, the Master of the Rolls, Lord Justice Watkins and the judge in charge of the civil lists to hasten proceedings, the efficiency of the Lord Chancellor's Department as expressed through the speed of the courts is not very good and certainly does not justify such a large increase in salary.

The Lord Chancellor's aim, and presumably the justification for increasing his salary, on the ground that he is becoming more effective, is to make the law more accessible to the consumer. The hon. and learned Member for Burton (Mr. Lawrence) started on an interesting little list when he was talking about the provincial solicitor. He said that the provincial solicitor advises the consumer on all sorts of matters—I think that the hon. and learned Gentleman mentioned probate, matrimonial law, conveyancing——

Mr. Lawrence: Divorce.

Mr. Carlile: Matrimonial law includes divorce. It is a long time since the hon. and learned Gentleman did a divorce case.

Then the hon. and learned Gentleman ran out of subjects. He did so because the Lord Chancellor in his Government is failing in the most obvious method of bringing the law closer to the consumer. The consumer should be able to obtain a solicitor's advice if he is sacked from his job and wants to go to an industrial tribunal. The consumer should be able to obtain a solicitor's advice freely if he has problems with the Department of Social Security. Those are just two examples.

The consumer should be entitled to legal aid if he has been defamed. We can test the Lord Chancellor's efficiency by the accessibility to the courts that he is giving the ordinary consumer. An obvious way of achieving that, which would earn him a much bigger increase in salary, would be to change the mingy legal regulations that the Government are imposing, rather than tearing up the professions.

Sir Nicholas Fairbairn: I do not wish to stray from the matter, but I must point out that legal aid provisions are nothing to do with the Lord Chancellor's Department. Matrimonial law is to do with the law of marriage and children and the law of divorce is called consistorial law.

Mr. Carlile: The Lord Chancellor's efficiency is apparently being judged by his own lights, in the accessibility to the law that he gives to the consumer.

Now let us assume for a moment that the Green Papers are turned into legislation in some way in the next Session.

Despite what I have said so far, in that event it seems that the Lord Chancellor will be given far too small a salary increase. If the Green Papers become law, he should be given far more; for look at the extra burden that he is taking upon himself. He is taking control of the ethics of the legal profession. No Government in the history of the country—apart for the Government of Oliver Cromwell, if they merit the name Government—have sought to take control of the ethics of the legal profession. If the Lord Chancellor is to take that responsibility on himself and if the Government intend to destroy the independence of the Bar and other advocates by telling the profession what its professional ethics should be, he probably merits £10,000 more a year in his salary for the extra responsibility involved.

I venture to suggest that when there has been mature reflection, the Government and the Lord Chancellor—who is a thoughtful man—will decide that it would be a dangerous step for the Government to dictate to lawyers whether, for example, they can cross-examine police officers, or whether they will be able to exercise the independence shown in the constituency of the hon. Member for Bolsover (Mr. Skinner) during the miners' strike, as independence that barristers exercised so effectively in cases concerning miners. The hon. Gentleman knows that well.

Mr. Skinner: Name one.

Mr. Carlile: I can name barristers who stood for the independence of the people whom his union supported in the miners' strike—such as Ms. Lang, a member of my chambers—and who supported by their independent advocacy the miners of his constituency. If the Government take over the professional ethical code of lawyers——

Mr. Skinner: Will the hon. and learned Gentleman give way?

Mr. Carlile: No, because the hon. Gentleman has had his shout. *[Interruption.]*

Madam Deputy Speaker: Order.

Mr. Carlile: If the Government take over the professional ethical code of barristers——

Mr. Skinner: Will the hon. and learned Gentleman give way?

Mr. Carlile: I may give way to the hon. Gentleman if he shows some evidence of listening. If the Government take over the professional ethics of barristers, that is one step down the road of tyranny. It may be a tyranny that the hon. Gentleman's brand of Socialism will welcome. I am very suspicious about it and I am surprised that real Tories are willing to go down that road.

Mr. Skinner: There used to be a story, which the hon. and learned Gentleman destroyed tonight, if it had not already been destroyed, that members of the old Liberal party were radicals, or "wadicals" as "Woy" used to call them. The hon. and learned Gentleman now says that it is all right to hammer the dockers and every working class group in England but that the lawyers must be left alone.

Dame Elaine Kellett-Bowman: On a point of order, Madam Deputy Speaker. What have the dockers to do with the Lord Chancellor's salary?

Mr. Carlile: I do not think that I mentioned the dockers, but let me clarify what I am saying to the hon. Member for Bolsover. It is important to leave the independence of lawyers alone and not to take them under Government control.

There is another reason why the Lord Chancellor may need an increase in salary. His job as a judge will be that much more difficult. The proposals in the Green Paper would entitle lawyers to full advocacy certificates not on the basis of their competence—there would be no test of competence—but because they had stood up in court and done a given number of a particular type of case, however, badly. That is what the Green Paper amounts to: there is no quality control whatever. Judges in this country—the Lord Chancellor earns his salary as a judge, the head of the judiciary—depend upon receiving guidance as to the applicable law from those appearing in front of them. If the quality of those appearing in front of them is not as rigorously controlled, both by competence and the market, as it is at the moment, we shall have a judiciary that is embattled, oversized and probably therefore less competent. The Lord Chancellor's budget will increase exponentially and that, I suppose, will force us to recognise, on that cynical basis, that he will have to be given an increase in salary.

I trust in what we heard from the Lord Chancellor in the other place last Friday, that if there is to be legislation in the next Session, careful consideration will be given to all the points put before him. If he is to be worth the salary that will, no doubt, be voted to him tonight, he must pay careful attention to those points and, above all other things, to the independence of the law.

12.3 am

Mr. Tim Devlin (Stockton, South): I feel compelled to speak because of what I have heard from other barristers on both sides of the House.

I shall support the order increasing the Lord Chancellor's salary, although I fully agree with the hon. and learned Member for Montgomery (Mr. Carlile) that there are failings in the Lord Chancellor's Department. I shall support the increase because the present Lord Chancellor is the first since the 1980s to make the people and the legal profession respectively sit up and think about what they want from the profession and how consumers' needs can best be met.

One important point seems to have been overlooked in the debate. The Lord Chancellor merits his salary because he has written three excellent Green Papers. I hasten to add that they are all green, which means that they are all being consulted upon. It can only be a welcome development for this country to discuss what we expect from our lawyers and how they ought to deliver their services.

There are many ways in which the present legal system is inadequate. Access to the Bar is at present pitifully small. When I was a young barrister—no, I am still a young barrister. When I was training there were 113 people on my course, but a mere 23 got pupillage. Of those, only four got chambers and those four were sons of judges or barristers who were already in Chambers. We must look at the way in which access to the Bar is awarded. It would be most welcome if people could become solicitors more easily and compete with those whom the

[Mr. Tim Devlin]

Bar has selected as being the most appropriate people, so that those who are the best advocates can represent the public.

Much has been said about the Lord Chancellor not meriting his salary because of the effect of the Green Papers on the Bar. But why is it expected that the Bar will disappear? Have we no confidence in our Bar and in its containing the finest legal professionals available?

About 80 per cent. of solicitors in this country are in partnerships of fewer than four people. All those solicitors, throughout the country, will need specialists on whom they can call, so there will be a market for the Bar. Why, therefore, is it assumed that all the barristers will be snapped up by big firms in the City? Large firms such as Coward Chance have already said that they are not interested in entertaining the prima donnas of the Bar. They are not interested in paying the sort of salaries that those at the top of the specialist Bar want to command and they are not interested in recruiting those who are not specialists.

The most important thing about the proposals in the Lord Chancellor's Green Papers has been the welcome fact that for the first time we are talking about the legal system meeting the needs of the consumer. Until recently the word "consumer" never appeared in the legal profession, but surely the whole system should be pointed towards the consumer. Many consumers who come to my surgeries seem to think that the legal process in this country is a lottery in which only the rich or the most determined take part, and I think that they are absolutely right. I hear nothing from my constituents about the legal system, apart from the fact that it is uncertain and that it takes a long time.

Most ordinary people do not think that the present legal system with its two tiers of solicitors and barristers is meeting their real needs in the best and most appropriate way. We all know that at the junior end of the Bar the consumer is being asked to pay for a two-tier system but is taking delivery of only one tier. When we are instructed to appear in the market towns of England we are given a piece of paper with perhaps little more on it than a chap's name, and we are expected to do what used to be called a "dock brief"—in other words, to find out what the case is about, do the necessary and send the brief back with a suitable fee on it. That is not what the consumer deserves and it is not what the consumer should have. That is why the Lord Chancellor's Green Papers are welcome.

Sir Nicholas Fairbairn: I am horrified that the law of England still has barristers who, without proper instructions, nevertheless appear for clients, which is in contradiction of their duty. I trust that my hon. Friend never has.

I am interested to know whether my hon. Friend receives complaints about the legal profession at his surgery, as I frequently do at mine, and how many he has had from people who feel that they have been let down by a member of the Bar and how many from people who think that they have been let down by solicitors, who will be all that they have if the reforms are passed.

Mr. Devlin: With the greatest respect, the cases that I have seen are roughly half and half, which is sad.

Mr. Cryer: It is a yawning chasm.

Mr. Devlin: It may be unbelievable to hon. Members in various parts of the House, but the fact is that there are complaints about barristers and complaints about solicitors—perhaps more about solicitors. People do not see the present system as delivering the services that they need.

The Lord Chancellor deserves his salary because he sat down and thought carefully about the future of the Bar. He has made the barristers respond. He has made them think out some good reasons for carrying on in the way that they do. It is very interesting to note, in the Bar's response to the Green Papers, that it is now putting forward a plan for a wonderful new scheme under which a barrister will have to take the next brief, regardless of whether it is a legal aid case, provided that it is within his area of speciality. One Left-wing barrister wrote to me saying how welcome that was. When I was at Bar school —not many years ago—I was told that that rule existed already; it was called the cab-rank rule.

It is about time that we looked carefully at our legal profession. The Green Papers have opened a welcome debate, and in that respect by itself the Lord Chancellor merits his salary.

12.12 am

Mr. Alan Williams (Swansea, West): May I say to the hon. Member for Stockton, South (Mr. Devlin) that, after 25 years of dealing with constituency cases, I do not pretend to have a statistical breakdown of the grievances against solicitors and the grievances against barristers. However—and in this respect the hon. Gentleman is right —a point of difference occurs to me immediately: most people making complaints against solicitors turn up at my surgery, whereas those making complaints against barristers normally correspond by letter, by courtesy of Her Majesty.

The first two speeches in the debate—those of the hon. and learned Member for Perth and Kinross (Sir N. Fairbairn) and of the hon. and learned Member for Burton (Mr. Lawrence)—gave very different perceptions of the Bar. The hon. and learned Member for Perth and Kinross gave the perspective north of the border. We recognise his particular knowledge and experience there. All that I as a Welshman can say is that I am overjoyed at the thought that a fellow Celt will do a bit better out of the system than perhaps his predecessor managed to do, though both of them seem to be doing pretty well.

I know that the speech of the hon. and learned Member for Burton was intended to be dispassionate and objective. That is why he did not declare an interest. Perhaps it is well that we have a special exemption for lawyers during the next couple of months, because it would take up too much of the time of this House if every lawyer speaking had to declare his interest before getting down to what he wanted to say. There is quite a substantial built-in lobby in the House. However, I watched the departures, and, having heard the hon. and learned Gentleman make his case, and having watched that case gradually disappear, I became increasingly convinced of the irrelevance of barristers in a successful court case. I started off far more sympathetic to the cause that I think the hon. and learned Gentleman was advocating than I was by the time he had finished his advocacy. Indeed, he put forward some rather novel propositions. I had to pass a tissue to my hon. Friend the Member for Bolsover (Mr. Skinner) when the hon. and

learned Gentleman was talking about all the poor barristers who will be homeless. The solicitors will have roofs over their heads, and they can have cars, but the poor barristers will be under the arches.

Mr. Skinner: Yes, in those cardboard boxes.

Mr. Williams: That is right, under the arches, in cardboard boxes.

Mr. Lawrence: The hon. Gentleman has missed the point. The point is that, under these Green Paper proposals, the cost of a barrister will rise to pay for overheads—cars, pensions, holidays with pay—so that the cost to consumers will rise. The barristers will be in clover because they will be working for firms of solicitors, with steady, substantial incomes guaranteed against inflation. That is the point. It is much more in our personal interests to have the Green Papers than not to have them, but it is in the interests of the country not to have them.

Mr. Williams: I congratulate the hon. and learned Gentleman on the fact that he managed to convey, in his second presentation of his case, a degree of clarity that he failed to achieve in his first presentation. Indeed, on the first occasion he became so preposterous that he could even envisage a situation in which someone would ask for the assistance of the hon. and learned Member for Perth and Kinross before the courts. I should have thought that that was self-evidently irrelevant, in that such a person could get off on the grounds of diminished responsibility.

The basic proposition of the hon. and learned Member for Burton was strange. He said that the Lord Chancellor should not have an increase in salary because he was upsetting the legal profession. I hope that tomorrow when my hon. Friends the Members for Bolsover and for Bradford, South (Mr. Cryer), always aware of the mood of the House, table a motion that the Secretary of State for Health should have a reduction in salary because he is upsetting the doctors and a motion that the Secretary of State for Education and Science should have a reduction in salary because he is upsetting the teachers the hon. and learned Gentleman will be the third person to sign them.

There will not be an official Division on this issue, but we are an independent-minded party. The Lord Chancellor has been berated by his honourable colleagues because he is trying to attack the restrictive practices in his profession. In the 1970s a commission was set up to look into restrictive practices in the legal profession. It is recorded in the minutes that the secretary of the Law Society came before it and said that all the restrictive practices were in the public interest. Imagine if the National Union of Mineworkers or the Transport and General Workers Union put forward such an outrageous proposition.

The Lord Chancellor deserves some credit for opening up issues that need to be discussed. At least he has opened a public debate, not one in a closed group or for a small select commission. We all have a right and an opportunity to take part. We shall be convinced even further of his genuineness if he now gets rid of another restrictive practice, the strange one that we are debating here tonight.

There seems to be no logic whatever to defend the principle that the Lord Chancellor should have £2,000 more than the head of the judiciary, the Lord Chief Justice. The argument is that it is necessary because he is the head of the legal system. The Prime Minister is head of the Civil Service, yet she receives £21,000 less than the permanent secretary, or the official head of the Civil Service. The Secretary of State for Defence is the ultimate decision-taker for the military services, yet he receives £34,000 less than the Chief of the Defence Staff. Any Secretary of State receives far less than his permanent secretary. Where, then, is the logic?

I remember when I was Minister of State at the Department of Prices and Consumer Protection and the head of my private office was leaving. The morning he was leaving he said, "I have not dared tell you previously, but tomorrow, when I take up my new job as a senior principal, I will be receiving £600 a year more than you are receiving as Minister of State."

Mr. David Ashby (Leicestershire, North-West): The hon. Gentleman is right. The Secretary of State for Defence does not lead the troops in battle, but the Lord Chancellor sits as a judge. Is the hon. Gentleman aware of that? He is a judge and assists as a judge in the House of Lords.

Mr. Williams: I do not remember—perhaps the hon. Gentleman will remind me—when the Chief of the Defence Staff has led any troops into battle. The moment that the hon. Gentleman can convince me that that is the case I will concede that he has made a point. It is absurd that the Lord Chancellor receives £37,000 more than the Speaker of the House, who also has responsibilities—within his salary payment—as a Member of Parliament.

Mr. Cryer: Our usual experience of defence chiefs of staff is that they lead their cronies into the board rooms of companies that supply the Ministry of Defence with very large contracts.

Mr. Williams: The fringe benefits are considerable, but one can do even better if one is a failed Chancellor of the Exchequer.

Mr. Cryer: There is one coming up now.

Mr. Williams: That is right. There is another one in line. The City of London pays them very well and, indeed, ex-Secretaries of Defence. Lazards could not get its hands on one quickly enough.

Sir Nicholas Fairbairn: As the hon. Gentleman probably wants an answer to his question, I can tell him that I believe that the last Chief of the Defence Staff to lead his troops into battle was Butcher Cumberland, who did us such harm in Scotland.

Mr. Williams: In that case, I think that the hon. and learned Gentleman will concede that the argument put forward by his hon. Friend the Member for Leicestershire, North-West (Mr. Ashby) hardly has much relevance in today's circumstances.

Several hon. Members have referred to the question of relating the pay to productivity and performance. No one will pretend that there is an easy measure, but let us look at the simple fact that in the past five years—since December 1983—the Lord Chancellor, with this increase, will have received increases in his salary of 56 per cent., 11 per cent. a year. We all know that throughout that time the conditions in our prisons, especially of remand prisoners, have been getting worse and the delays in having cases dealt with have been getting longer.

[Mr. Williams]

Until last year the explanatory note used to contain the following sentence:

"The salary quoted represents a maximum and may not be the actual salary claimed."

In other words, some previous Lord Chancellors did not claim their full salary. I believe that, in the mood of the Lord Chancellor's proposals for a complete review of the restrictive practices within the legal profession, it would be suitable for this Lord Chancellor to say that he, too, would not accept, even though it has been granted—as his predecessors reserved the right to say—the increase until the waiting lists have been eliminated.

Question put:—

Question accordingly agreed to.

Resolved,

That the draft Lord Chancellor's Salary Order 1989, which was laid before this House on 14th March, be approved.

Medicines (Fees and Charges)

12.33 am

The Parliamentary Under-Secretary of State for Health (Mr. Roger Freeman): I beg to move,

That the draft Medicines (Fixing of Fees Relating to Medicinal Products for Human Use) Order 1989, which was laid before this House on 20th March, be approved.

The order is made under section 102 of the Finance (No. 2) Act 1987. Its purpose is to provide the legal basis for making regulations to enable the full costs of the licensing agency to be charged out to the industry through licence and other fees.

To that end the order lists in schedule 1 the functions of Ministers to be taken into account in fixing fees. The schedule refers to the relevant parts of the Medicines Act 1968 that set out the powers and duties in question. Broadly speaking, they cover the licensing functions, including pre-licensing clinical trials, and also post-marketing surveillance, inspection, enforcement, the regulation of advertising and labelling, and the classification of medicines—that is, whether a drug is available only on prescription.

Schedule 2 to the order sets out the matters which can be taken into account in setting fees. The objective is to secure that all the costs of discharging the functions in schedule I can be taken into account in fixing fees. This includes the power to take account of deficits in fee income against expenditure so that a deficit in one year can be recouped in a subsequent year. It is intended that Ministers should also be able to take into account surpluses, so that any excess income can be offset by lower fee income in a subsequent period.

The fees regulations—the Medicines (Fixing of Fees Relating to Medicinal Products for Human Use) Regulations 1989—were laid before the House on 10 March 1989, and are not the subject of debate tonight. They set out the definitions of the various types of licence applications and inspections and the levels of fees which are prescribed. The new fee structure is considerably more complex than the one it replaces. The new range of fees is very wide, from £40,000 for a major new drug application through to £50 for administrative modifications to licences involving no professional assessment. Some new fees have been introduced and some existing fees have been split so as to reflect the different workloads involved in assessing the different types of application.

One major change in the new structure is the abolition of the requirement on companies to pay an annual fee related to turnover. The annual fees have in recent years amounted to about 85 per cent. of the total fee income. We argue that their abolition is necessary because of the Government's view that self-funding public bodies should charge fees that broadly reflect the costs of the services or other activities for which the fee is charged. In the case of annual fees related to turnover, any correlation is regarded as insufficient in a timely sense. That is because the fees are paid over a number of years.

Abolition of the annual fees necessarily means that there has to be a very considerable increase in the application fees to make up the shortfall as well as provide the extra resources necessary to cover the whole rather than two thirds of the costs of the agency. The fee levels proposed are intended also to strengthen the staffing of the agency to enable it better to tackle the heavy workload, including the very considerable backlog in the handling of product licence applications that has built up. The total costs of the agency in 1989-90 are expected to be about £11·5 million.

The new fees set out in the regulations have been the subject of statutory consultations with the industry. The increases in fees proposed are not welcome to some parts of the industry and particularly to the smaller firms. I recognise fully their concerns and understand them. However, I ask them to remember that the increase in application fees is partly the result of the abolition of the annual turnover fees. Looking to the longer term, I believe that the decision that the funding of medicines control should be met by the industry through fees will prove to be strategically the right choice. It provides a basis on which this work can be resourced separately from the rest of the work of the Department.

Mr. Roger Gale (Thanet, North): Can my hon. Friend give the House an assurance that the increase in fees will be met by a commensurate reduction in the waiting time for the processing of applications?

Mr. Freeman: I cannot give that assurance in as direct a form as my hon. Friend would want, simply because there was a substantial increase in the number of applications before the end of the last financial year by companies seeking to take advantage of the lower fees that then prevailed. It will take some time to work through that case load. However, because those applications were being brought forward from this financial year, we anticipate that the level of applications this year will be slightly lower than anticipated, so we shall clear the backlog fast.

I can assure my hon. Friend that the principle of increasing fees to cover the costs involved and increasing fees to cover the costs of a 10 per cent. increase in staff in the Medicines Control Agency should eat into the backlog, about which I am as concerned as he is.

Achieving real improvements in the time taken to deal with licence applications will represent a good investment for the industry. While it inevitably has to put the money up front before better performance can be attained, the new arrangements certainly hold out better prospects than hitherto for delivering improvements. I commend the order to the House.

12.39 am

Ms. Harriet Harman (Peckham): I should like to ask the Minister six questions and the first is about the openness in practice. Obviously we welcome the fact that the scale of payments will be made public. Will the accounts of such payments be made available every year in sufficient detail to allow public and parliamentary scrutiny? That would give us the assurance that the new scheme is effective and that the funding is sufficient to allow the proper implementation of the appropriate regulations.

My second question is about what will happen in 1992. If payments fall drastically in that year, following the introduction of unified EEC drug licensing arrangements, and payments go to Brussels rather than to the Medicines Control Agency, will money still be directed to the agency so that it can carry out the essential policing duties that the Minister has mentioned?

Thirdly, it is clearly the intention that the phamaceutical industry will pay for the order and that the changes will

[Ms. Harriet Harman]

save public money. How much does the Minister anticipate will be saved and to what ends will the savings be put? Will they be used for research or will they simply drift back to the Treasury?

Fourthly, it has been said that, because the regulatory agency will be directly financed by the pharmaceutical industry, he who pays the piper will be able to call the tune. Is the Minister satisfied that the agency will be sufficiently independent even though it will be entirely financed by the industry that it is regulating?

Fifthly, will the industry be able to set against profits the payments that it makes to the agency for the purposes of the industry's returns under the pharmaceutical price regulations scheme? The Government are asking the industry to give money to the agency and if they then subsidise the industry for that payment through the mechanism of the pharmaceutical price regulation scheme, I am not sure where that leaves us in terms of saving public money.

My sixth question is about the pharmaceutical price regulation scheme and the savings that the Government intend to make under the indicative drugs budget. As the House will know, there has been much concern among GPs about the savings that the Government intend to make in the indicative drugs budget. Will not whatever marginal savings are made by GPs by paring at the edges of their drugs budget be clawed back by the drug companies through the pharmaceutical price regulation scheme and will not the companies be able to show that their guaranteed level of profit has not been met? Will the Minister say how much he expects to save in the indicative drugs budget? Will there be a net saving or will the saving be clawed back under the pharmaceutical price regulation scheme?

12.43 am

Mr. Peter Rost (Erewash): I speak on behalf of the manufacturers of herbal medicines represented by the Natural Medicines Group to which I am a consultant. I also speak as joint chairman of the parliamentary group for alternative and complementary medicine. My hon. Friend the Member for Stafford (Mr. Cash) apologises for not being present for the debate. He is in Europe on parliamentary business and has asked me to say that he supports what I shall say.

The manufacturers of herbal medicines are mostly small companies. They each have many thousands of licensed products which they bring to market, but most of them have a modest turnover. Even the largest herbal manufacturer in the United Kingdom, Weleda (UK) Ltd., employs about 200 people even though it has been growing very fast. Again I declare an interest because that company is in my constituency. Nevertheless, it markets some 5,000 different medical products. It says that the proposed fees are intolerable, and unfair to the smaller manufacturers.

The regulations, as proposed, are not opposed by any responsible manufacturer of herbal products. Such manufacturers support regulation on safety and all other grounds: that is not at stake. They say, however, that the basis of the fixing of fees must be fairer than is at present proposed. One manufacturer says that MLX 175—the proposed scale of fees—represents an increase of between five and eight times the present fee. That is completely unacceptable.

Let me quote from a desperate letter sent by Potter's (Herbal Supplies) Ltd. of Wigan to my hon. Friend the Minister, dated 31 March. It is not the first letter that that company has sent to him.

"your Department has placed before Parliament two vital documents, S.I. 418 and Fees and Charges, both of which will undoubtedly have unprecedented and detrimental effects on smaller pharmaceutical firms—a rise in fees of between five and eight times those paid today proposed in MLX 175 will destroy small businesses . . . It would seem then that as a company that has made safe herbal medicines for over 176 years, the most serious threat to our existence comes from the Department of Health. The effect of these fees on top of the hugely exaggerated requirements of review to new E.C. standards will result in job losses and lack of competitiveness —leaving the U.K. market place for 'green' natural medicines to our European partners.

We hope that as Minister responsible, you will make time to understand our problems by seeing members of our trade organisations before enacting these statutory instruments."

I expressed concern to my hon. Friend on 25 February. He replied most courteously, confirming that a joint consultative group had been set up to administer the proposals. The members of the manufacturing group of the Natural Medicines Group, however, say that they have not been consulted, although the Minister has confirmed that their pleas have been taken into account—or so we are told. If "taking their pleas into account" means imposing increased fees of between five and eight times their existing fees, that is a form of consultation that they do not regard as entirely satisfactory, and I think that the House will agree with them.

The chairman of the largest manufacturer of herbal products in my constituency, Weleda, also wrote to my hon. Friend, on 30 March. The letter reads:

"Whilst I note that in your letter you state that 'the Agency has no wish to close down small companies', I am gravely concerned that the implementation of Statutory Instrument No. 418 will indeed have that effect on Weleda (UK) Ltd. This is because we, as a small company, will be required to pay a greatly increased level of fees for the specialised products we manufacture, which do not have large turnovers.

Closure of Weleda (UK) Ltd. would not only mean the loss of over 100 jobs in a area which has suffered high unemployment, but also, because Weleda is the sole manufacturer in the U.K. of anthroposophical medicines, it would mean that there would no longer be any source of supply of these medicines for doctors, hospitals, clinics, pharmacies and the general public.

I therefore write to ask for your assurance that the regulations as laid down in Statutory Instrument No. 418 are not implemented until there has been further consultation with small, specialised pharmaceutical manufacturing companies such as Weleda (UK) Ltd."

My hon. Friend the Minister has yet to reply to that letter. That is understandable—it is dated 30 March.

The proposed structure of fees is unacceptably unfair. We hope that the quango that has been set up to administer the fees will be properly regulated by my hon. Friend the Minister. I was not re-elected to the House to support a radical Government, whose policies have, on the whole, been aimed at reducing red tape and encouraging enterprise and small business, to find now that we are moving in a reverse direction with these smaller entrepreneurial companies. They appear to be setting up a bureaucratic structure, which perhaps my hon. Friend has not had the time to investigate fully to assure himself that we are doing this the right way. I urge him to have another look at this to make sure that there is not a better way to

organise this that would be fairer to the small manufacturers. They should be consulted and I hope that my hon. Friend will allow me to help with those consultations.

It is easy enough for the larger pharmaceutical groups to face these fees. Proportionately, the fees are much smaller for them, so they are quite happy. No doubt they were consulted. They have huge resources, huge profits, far bigger sales and fewer products. The scale of fees is not being based on turnover, as we were originally assured that they would be, so the larger pharmaceutical groups will come out better off than they were. Smaller manufacturers —I am speaking only of the herbal manufacturers, as I do not know about the others—are coming out far worse.

I have a final quote from the Natural Medicines Group, which represents the herbal manufacturers. This letter asks me to make representations on the group's behalf. It says:

"we need to modify this S.I., failure to do so will cause more harm to the herbal industry than almost any other requirement so far. It is of course even more dramatic because many small companies now being asked to increase their payments have also had their most expensive last couple of years, trying to satisfy the unrealistic requirements of review.

As you know, the Natural Medicines Group and its members are dedicated to a sensible licence structure and the public protection that this gives. The result of this 'last straw' in increased fees will result in many products being taken out of licensing and what then for consumer protection?!!"

I urge my hon. Friend to allow further time for consultation, particularly on the way that the fees are to be implemented and their allocations, so that we can devise a fairer system that will allow the smaller manufacturers of pharmaceutical products—again I speak only about those I know—to survive without being so unfairly penalised.

12.53 am

Mr. Ronnie Fearn (Southport): The order relates to the "Fixing of Fees Relating the Medicinal Products for Human Uses".

Following the questions asked by the hon. Member for Peckham (Ms. Harman), I have several questions. What human reaction has there been from manufacturers and from the Pharmaceutical Society of Great Britain? It seems that this is a cost-efficiency exercise, which shows that fees have increased greatly above the rate of inflation. How can that be justified?

I realise that there was some sort of ploy in producing first a licence fee for a new product of £50,000, which was then reduced to £40,000. Was there a reason for taking that course, which was a doubling of the present rate? Surely that is inflationary and something that will add to the drugs budget of the National Health Service.

Perhaps the Minister will explain what is meant by a "variation of licence", which will cost much more than hitherto. I believe that he talked of £50. Will the alteration of a label be classed as a variation? What is meant by a "complex variation licence", which will now cost £1,250? If a product's colour is changed, is that classed as a complex variation? The parent Act and the order are far from clear on these matters and perhaps there should be clarification now.

Is the order not a restraint on innovation? Will a producer stop marketing or not bother to market a product which has only a relatively small sale? I shall be grateful if the Minister will give assurances to meet the issues which I have raised.

Finally, can the Minister not envisage that in the end the losers must again be consumers, to whom the increased licence fee costs will undoubtedly be passed by the manufacturers?

12.56 am

Mr. Freeman: This has been a brief but well-informed debate. The hon. Member for Peckham (Ms. Harman) asked me six questions and I shall try to answer them as briefly as I can. The hon. Lady asked whether reports and accounts would be published. The answer is that they will be published annually. They will cover the fees, costs and performance of the Medicines Control Agency.

The hon. Lady asked what will happen in 1992. Additional responsibilities have been placed on the licensing authority through our membership of the European Community. Under Community rules, there is now provision for companies to apply for product licences under the so-called multi-state procedure. In essence, it requires the member states of the Community to reach a common view on licence applications, though, as yet, any such consensus is not binding on member states which remain sovereign in licensing matters. Participation in European Community work is a growing aspect of the work of the licensing authority and will continue to be so, especially as 1992 approaches. The EEC Commission has not yet published its proposals for the completion of internal markets and medicinal products. Proposals could involve national authorities continuing some licensing activities, and these would continue to be financed by fees. If the EEC proposes taking over licensing on a supranational basis, the Commission will have to include some method of financing. Possibly companies would have to pay fees to new supranational agencies for EEC licences as well as some payment to national authorities.

The hon. Member for Peckham asked me about savings being ploughed back. Income in the past financial year went to the Treasury, and the Department of Health bore on its own votes the expenses of the licensing authority. In this financial year the revenue will come to the Department of Health and offset the expenses of the agency. We expect these sums broadly to match each other. As the fees being charged will be greater than hitherto, because we are increasing the charges to reflect more accurately the costs involved, additional fees will be raised from the pharmaceutical industry. These will amount to about £5 million per annum. This sum will go back into the NHS and improve services for patients and, more broadly, for all those who are provided with some form of service by the NHS.

The hon. Member for Peckham asked me whether the piper would call the tune. The new agency, whose new director—Dr. Keith Jones—was appointed today, will be answerable ultimately to Ministers in the Department of Health and in the Ministry of Agriculture, Fisheries and Food. It is Ministers who determine levels of fees and control the agency.

The hon. Lady asked me whether the licence payments could be set against the profits for pharmaceutical price regulation scheme purposes. The answer is yes; it is a perfectly appropriate revenue expense.

The hon. Lady also asked me about indicative drug budgets. The purpose of our White Paper proposal for indicative drug budgets, which will apply to all general practitioners, is to bring downward pressure to bear on

[Mr. Freeman]

prescribing. It is undoubtedly true that some doctors overprescribe, measured simply against the average rates of prescription for patients. I cannot give the hon. Lady an estimate because we have made none. We aim to eliminate wasteful prescribing; the objective is not to save a specific sum of money.

I appreciate the role that my hon. Friend the Member for Erewash (Mr. Rost) plays in the Natural Medicines Group in his constituency. He raised points about consultation. The order that we are debating is different from the one that sets the fees, and my hon. Friend will have noted that that order was laid before Parliament on 10 March. In December, the Department of Health wrote to every licence holder and we received a substantial number of representations. The fees are being set for one year only and I give my hon. Friend the assurance that we will take into account the experience in the first year. I am not sure that I agree with his estimate of the fees being some five to eight times more than would have applied under the old regime. We are abolishing the annual fee related to turnover and collapsing that fee into the initial up-front fee. In looking at an increase in fees, one must compare apples with apples. There is certainly not a five to eight times increase. There is a joint consultative group which will take representations into account.

I listened to my hon. Friend the Member for Erewash with great interest and care. I am prepared at a time convenient to him to meet him and representatives of the Natural Medicines Group to take into account their concerns and fears. I shall get in touch promptly with my hon. Friend to arrange such a meeting, which I hope will be timely.

The hon. Member for Southport (Mr. Fearn) asked me about representations received from the industry. We have received 78 replies to our letters which were sent out last December, making 121 apparently representative points. We took them into account in setting the fees laid down in the draft order.

The hon. Gentleman asked me about the increases in the rates. Last year and in previous years we were charging or recovering two thirds of the costs of the licensing agency. We now propose to increase that to 100 per cent. and to include in the costs to be recovered a much broader category of costs. We think that that is economic. We shall provide also for recovery of an increase in staff of about 10 per cent. to deal with more applications. The hon. Gentleman asked me a number of other detailed points. I shall read them tomorrow in the *Official Report* and write to him.

I commend the order to the House.

Question put and agreed to.

Resolved,

That the draft Medicines (Fixing of Fees Relating to Medicinal Products for Human Use) Order 1989, which was laid before this House on 20th March, be approved.

Housing and Planning Act 1986

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Dorrell.]*

1.3 am

Mr. Peter Thurnham (Bolton, North-East): I apologise for keeping you, Mr. Deputy Speaker, and my hon. Friend the Minister up so late tonight, but the subject of the debate arises from a serious problem in my constituency which I understand occurs elsewhere and requires stronger action by Government and local authorities. I have been fortunate in the results achieved by my previous Adjournment debates, and I hope that this debate will prove to be successful in drawing attention to and doing something about this problem. It is ironic that, at a time when everyone is so concerned about amenity and the environment, I should have to raise a matter of deliberate dereliction.

A constituent of mine, Mr. Robert Horrocks, is a property developer. The filed accounts for his companies are not all up to date, but there is no doubt that he must be one of the wealthiest property developers in the country. Through one of his companies, Metrolands Investments Ltd., he controls a shopping precinct in Harwood, which is in most other respects a very pleasant part of my constituency. The precinct was developed 25 years ago by Metrolands, the freehold being owned by the Liverpool Victoria Friendly Society. Development approval was given by the then Ministry of Housing and Local Government in 1963 to provide what Metrolands called

"much needed shopping facilities, where these facilities are virtually non-existent."

The precinct opened in 1965, when it was described as "a housewife's dream". At the time of my election in 1983, it contained about 30 different shops as well as a library. Deficiencies in the structure of the building led to disputes between the tenants and the developer. Those disputes became worse after the freehold was sold in January 1984 by the Liverpool Victoria Friendly Society to Metrolands, accompanied by rumours of redevelopment as the new landlord acted in anything but a friendly way to the tenants.

Later that year, residents in the adjacent Lynwood grove came to see me about the rapidly deteriorating state of the precinct and the provocative and high-handed way in which they were being treated about rights of way at the back of their properties, where boards with sticky black paint had been erected.

On 10 August, I sent the first of many letters and telephone calls to Metrolands. I also wrote to the council and the police. I received a reply from the police, but not from Metrolands.

The following year, the condition of the precinct continued to deteriorate. The traders were refused extension of leases, despite the acknowledged lack of alternative premises. Mr. Horrocks ignored my repeated requests for a meeting. I asked the council for its help in setting up a meeting, again with no response from Mr. Horrocks. I wrote to Mr. Horrocks again in May 1986, referring to compulsory purchase of the precinct. He did not reply, but called without notice here at the House on 21 May, when I was in Bolton for mayor making. I wrote yet again to him on 1 October asking to meet, again with

no reply. Later that month, the council granted an application for outline planning permission for redevelopment, with an additional 2,300 sq ft supermarket.

Early in 1987, I received further complaints from shopkeepers who were concerned about the increasingly neglected state of the area. They were also especially concerned about efforts to obtain vacant possession of the shops by the landlord. Notices to quit were being served on traders whose leases had expired. I endeavoured to obtain a meeting with Mr. Horrocks, but yet again with no success. I then arranged a public meeting in April 1987. Over 200 people attended—but not Mr. Horrocks.

As my hon. Friend knows, following that public meeting, I wrote to my right hon. Friend the Secretary of State on 14 May, and I quote from that letter:

"Metroland Developments have put in a planning application to redevelop part of the site, but are not prepared to give any assurances to the existing tenants that they can have continuity of trading in the new development, nor are the owners prepared to give any assurances to the community at large that the provision of services such as a post office and a chemist will be able to continue.

Please find enclosed copies of newspaper articles from the Bolton Evening News for the 15th and 16th April which indicate the concern expressed by the people of the town.

I should be grateful if you would see a delegation of Councillors and traders in order to discuss the need for some change in legislation or other assistance in order that the traders themselves can have some assurance for their future livelihood, and the residents some equal assurance about the provision of future services.

Unfortunately, Mr. Horrocks has not been prepared to meet anyone to discuss this issue which has led to demands for a change in the law".

After the general election on 11 June I received a reply from my hon. Friend the Member for Surbiton (Mr. Tracey) in his capacity as Minister responsible for planning. He declined to see a delegation, maintaining that these were commercial matters rather than land use planning matters and that his Department could not, therefore, intervene.

I was disappointed by his reply, since the commercial arrangements between landlord and tenant in the scheme are clearly not satisfactory. I have a copy of a lease dated 13 August 1968 between Metrolands Investments Ltd. and a tenant of a shop in the scheme. The lease is full of legal obligations binding the tenants. Any transgression threatens retribution. On the other hand, there is no specific obligation on the landlord to maintain the area, only a provision under clause 1 for the tenant to pay an annual service charge towards

"the costs and expenses of maintaining, cleaning and lighting the service roads and pedestrian ways, yards, garden areas and common space included in the Harwood shopping centre."

It is patent that the arrangements for maintenance are implied, but it is equally obvious for all to see that they are not being complied with. For a shopkeeper to take action to prove that the landlord has a legal obligation would be slow and costly, with no certainty of success.

The possibilities of legal and commercial action by the occupiers are tenuous. For neighbouring residents they would seem to be non-existent. Since Metrolands obtained the freehold of the land five years ago, there is now no superior interest to which an appeal could be considered. We have to consider whether any avenues for action are available through the current planning Acts, despite the Minister's claim that land use planning matters are not involved.

A section in the Housing and Planning Act 1986 may be relevant to this case. Section 46 of that Act expands section 65 of the Town and Country Planning Act 1971. Section 65(1) gives the local planning authority powers to serve a notice on owners and occupiers of land and buildings where it appears that the amenity of an adjoining area is adversely affected by the condition of land in their area.

Such a notice should set out steps for remedying the situation and a time scale for complying with the requirement. I would welcome the Minister's clarification of whether the clause applies to all land within a local authority's overall area or only to land that it owns. If local authorities have power to take action under that legislation, they should do so. If the powers in that section are not wide enough, as Bolton council has previously feared, I urge the Minister to extend them to cover these appalling and unacceptable circumstances. Could he ascertain whether that can be done by order or, if not, by inclusion in the earliest relevant Bill?

If not, can he legislate for improved rights for tenants whenever planning permission for a redevelopment is granted? Should compulsory improvement and purchase powers be extended? Twenty-one years ago, in April 1968, the then Bolton Conservative councillor, Robert Horrocks, said:

"If the voluntary system fails, improvements should be enforced by the making of compulsory improvement orders. This would prevent areas being spoiled by odd houses being allowed to decay."

Late last year, I succeeded in meeting Mr. Horrocks. I appealed to him not to underestimate the strength of local feeling about the state of the precinct, and to pay proper regard to the wishes of tenants and residents. He told me that he was doing all that he could to make progress on the matter.

Unfortunately, my constituents still do not see any sign of progress. After a lone shopper, Mr. Norman Lockton, suffered a severe injury after falling into a large hole which put him off work for seven weeks, the editor of the *Bolton Evening News* published an open letter to Mr. Horrocks, entitled "Precinct Disgrace". He said:

"Derelict, dilapidated and defaced, it is a scandalous monstrosity in one of Bolton's prettiest districts."

In 20 years, the housewife's dream has turned sour. The editor went on to say in his open letter:

"Harwood Precinct these days is a desolate deserted ruin. Premises are boarded up, windows are covered with graffiti. It is gaining an unwanted reputation as a haven for glue sniffers and people are afraid to walk through it at night. If a district such as Harwood is to retain its identity, shops and business must be allowed to prosper. People should be encouraged to shop locally rather than be forced into Bolton. Harwood precinct is at the heart of the community and should be thriving, yet it is being slowly strangled to death."

Constituents gathered to meet me at the precinct last Friday. They impressed on me their disgust that one man could so flout the wishes of the community by preventing shopkeepers from trading in premises for which planning permission had been granted. The most seriously inconvenienced are the elderly and the handicapped, who chose to live near the shops, never dreaming that they would then be forced to shut, leaving no immediate facilities.

I should like to know what Mr. Horrocks would have to say to three of my constituents—Mrs. Cummings, Mrs. Styles and Mrs. Fairbairn. Those three mothers have severely handicapped children and went to live near the shops but they are now in considerable difficulties because

[Mr. Peter Thurnham]

of the lack of shops. What has Mr. Horrocks to say to the 30, 40 or more people who have lost their jobs as a result of the traders being evicted?

Bolton metropolitan college sends parties of building students to see how a building should not be put up. Perhaps students of psychology should go to ponder over why one wealthy man should so wish to hold the community in which he lives to ransom, and students of politics go to see such a glaring example of failure of public policy.

I call on the Government to do all in their power to end this scandalous dereliction, to seek new powers if necessary, and to give local authorities the strongest possible directions.

I call on Mr. Horrocks to end this war of attrition in which he is using his wealth as a battering ram. I appeal to him to remember his own words as a councillor 20 years ago which I have just quoted, and to heed the words of the Prime Minister in May 1979:

"The Britain I want is a land which cares for the weak, the old and the sick."

Perhaps he might then gain the respect which he fought for, and lost, in the House of Lords 15 years ago.

Must the Government stand by while developers taint their gains with the suffering of the weak, and say that it is just a private matter between landlord and tenants? Is this what the Government gave approval for in 1963? The Minister may say that this is just a little local problem, but that is not how my constituents see it.

1.16 am

The Parliamentary Under-Secretary of State for the Environment (Mr. Christopher Chope): My hon. Friend the Member for Bolton, North-East (Mr. Thurnham) is an assiduous campaigner on behalf of his constituents and I am aware that his success in securing Adjournment debates and action as a result of those debates has been the subject of recent well-deserved favourable comment in the *Bolton Evening News*. In that context, I congratulate him on once again achieving an Adjournment debate and on raising a subject that is of concern to many of his constituents.

For reasons which I know my hon. Friend appreciates, I am unable to discuss the details of this particular case. But what I can do is to set out generally the powers which exist under both section 46 of the Housing and Planning Act 1986 and the Landlord and Tenant Act 1954, part II.

Section 46 of the 1986 Act is the subject of the debate. Section 46 was merely a vehicle for substituting a new version of section 65 of the Town and Country Planning Act 1971. The latter is the substantive provision and I shall therefore refer to that, rather than to section 46.

Section 65 of the 1971 Act enables local planning authorities to secure the tidying-up of land which is adversely affecting the amenity of a neighbourhood by serving a notice on the owner and occupier obliging them to

"remedy the condition of the land".

Such provisions have their origin in Acts of local application and have been incorporated in general legislation since the Town and Country Planning Act 1947. The intention has always been to enable authorities to deal with unsightly, small plots of open land—seriously overgrown gardens, vacant plots, fly tips and perhaps sprawling scrap yards and the like.

The wording of the provision was widened in 1986 to overcome difficulties in enforcement, but this did not affect the basic intention that the provisions were to be used in respect of small, untidy plots of land and a circular on the 1986 Act explained that the changes had been made in response to difficulties experienced in enforcing notices served under the previous powers; and expressed confidence that authorities would continue to use the powers with discretion, as a means of dealing with relatively isolated, severe cases of neglected or unsightly land.

There are two particular features of section 65 and its supplementary provisions which I should mention. First, the law requires notices to be served on both the owner and the occupier of the land; and secondly there are grounds for appeal to a magistrate's court against a section 65 notice, including the ground that the condition of the land is attributable to, and such as results in the ordinary course of events from, the carrying on of operations or use of land which is not in contravention of planning control. In other words, it provides a protection for the reasonable effects of activities or land uses which have planning permission, whether expressly granted or deemed. That is in accord with the respect which planning law generally accords to existing and established users.

Central Government have never monitored the extent to which local authorities have used these provisions. Given the limited scope of the provisions, there has been no need to do so. We are not talking about large sites of strategic importance, and the tidying up of gardens or small vacant plots has properly been considered a matter of purely local significance.

It is entirely for local authorities to decide where and when to use the powers of section 65. It is not for me to say whether those powers have any relevance to the situation which my hon. Friend has described. If my hon. Friend wishes to pursue the possible use of section 65 powers he should approach the local authority.

Representations made in the context of a current departmental review of derelict land policy have suggested that a new power might be introduced to allow local authorities to improve or reclaim derelict land themselves and to charge the owner. Such a change would amount to a strengthening and wider use of authorities' existing powers to take action themselves in default of compliance with a section 65 order. The idea will be considered, along with other ideas which have come forward, in the derelict land review.

We will need to bear in mind, however, that a power limited to clearing up situations other than those reasonably resulting from activities covered by planning permission would be little different from authorities' existing default powers in relation to section 65 orders; and a power which extended to clearing up the reasonable incidential effects of activities with planning permission would obviously impinge on the long-held respect of planning law for existing users. Such a power would therefore need very strong justification.

It may also assist my hon. Friend if I explain that my Department is responsible for the policy on landlord and tenant business lettings. The main legislation concerning the rights and obligations of business landlords and tenants is set out in part II of the Landlord and Tenant Act

1954. Under the 1954 Act, business tenants have security of tenure and a right to apply for a new tenancy. Unless the tenant has failed to pay the rent, or broken some other condition of tenancy, the landlord can bring the tenancy to an end at or after the end of the current tenancy only if he is entitled to possession of the property. The Act specifies a limited number of grounds for entitlement to possession; these include demolition, reconstruction and redevelopment.

In addition, under the Act, special forms and strict time limits apply if the landlord wishes to seek to end the tenancy. The tenant has the right to request a new tenancy from the landlord and, thereafter, to apply to the court, using special forms and following the time limits laid down by the Act. If the landlord can satisfy the court that he is entitled to possession on one or more of the specified grounds under that Act, the court must grant him possession. If he cannot do so, the court must order a new tenancy for the tenant.

Having listened to my hon. Friend's comments, I have the impression that it is around enforcement and implementation of the provisions of the Landlord and Tenant Act that much of this dispute arises. The landlord wishes to obtain possession so that he can undertake redevelopment. From what my hon. Friend says, it appears that some, or all, of the tenants either are holding out for new tenancies, because they do not believe that there will be development, or wish to remain where they are for other reasons. In the meantime, with some of the tenancies terminated, there are a number of boarded-up properties and general deterioration in the environment.

But I have to say to my hon. Friend that that happens when a large number of tenancies are reaching the end of their period, and the landlord seeks repossession for purposes of redevelopment. It happens in particular when tenancies do not all expire on the same day so that the landlord takes possession over a period.

My hon. Friend may be familiar with what is happening in Horseferry road at present. I refer to Great Westminster house, where a number of shops have been closing down over a period of several months. That is an example of the effect of the Landlord and Tenant Act in practice. If my hon. Friend is asking us to change that Act to provide a different balance between tenants' interests and landlords' interests, I have to disappoint him. As recently as 1985 we carried out a review of the working of the Act, with particular reference to small business men—both landlords and tenants—and we concluded, after wide consultation, that the Act continues to work well, protecting both tenant interests and landlord interests, and maintaining the balance between landlord rights and tenant rights enshrined in the Act.

If, as it appears from what my hon. Friend is saying, this is largely a dispute over the terms and conditions of tenancies, that must be a matter between the landlord and his tenants. If the tenancy agreement does not contain sufficient provision to protect the quality of the environment until the expiry of the tenancy, that is unsatisfactory. It is not something that the Government can become involved in. It is for the individual landlord and the tenant to negotiate.

I hear what my hon. Friend says about the state of affairs that pertain in this particular part of Bolton. I sympathise with him and his constituents, but I cannot offer any Government solution. I know that my hon. Friend believes that, if there is a problem, the Government should be able to solve it, but I must disappoint him. This is a private contractual problem, not one which the Government can solve.

I am sure that my hon. Friend's speech will have brought this issue to the attention of a larger audience in Bolton. If Mr. Horrocks is not listening to the debate today, he will certainly hear of it. It may well result in pressure being put on him, as my hon. Friend wishes. I congratulate my hon. Friend on raising this issue, but I have to disappoint him in saying that the Government cannot solve this problem.

Question put and agreed to.

Adjourned accordingly at twenty-six minutes past One o'clock.

House of Commons

Tuesday 11 April 1989

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

PRIVATE BUSINESS

Tees (Newport) Bridge Bill *[Lords]*
Read a Second time and committed.

Oral Answers to Questions

DEFENCE

Gulf Operations

1. **Miss Lestor:** To ask the Secretary of State for Defence how many Royal Navy vessels are currently deployed in the Gulf; and what impact this has on their availability for other duties.

5. **Mr. Ted Garrett:** To ask the Secretary of State for Defence how many Royal Navy vessels are currently deployed in the Gulf; and what impact this has on their availability for other duties.

The Minister of State for the Armed Forces (Mr. Archie Hamilton): There are currently three Royal Navy ships and one Royal Fleet Auxiliary vessel deployed in the area of the Gulf. The Royal Navy's commitment in the Gulf inevitably limits the availability of ships for other tasks. All the vessels could, however, be recalled in support of NATO in the event of an emergency.

Miss Lestor: Does the Minister agree that the time is approaching when we should consider reducing our military presence in the Gulf? As the Iran-Iraq war is over and the risks to commercial shipping have been considerably lessened, the reduction would not simply be a goodwill gesture—which I believe is needed—but would release Royal Navy vessels for other areas where they might be required.

Mr. Hamilton: I remind the hon. Lady that no treaty has been signed to end that war. We believe that it would be inappropriate to begin to withdraw our commitment before that happens. However, these matters are constantly kept under review.

Mr. Garrett: Will the Minister convey my thanks to all the personnel who served in the Gulf during that extremely difficult period? Will he assure the House that the vessels will be fully repaired and maintained when they are pulled back to the United Kingdom? Some of the Fleet Auxiliaries will be ready for major refits. When will the contract for HMS Southampton be announced?

Mr. Hamilton: I cannot tell the hon. Gentleman when the contract for HMS Southampton will be announced. However, my hon. Friend the Under-Secretary of State for Defence Procurement is looking at that matter very closely. I thank the hon. Gentleman for his kind remarks about the role of the Royal Navy in the Gulf. The Royal Navy did sterling work, which was much appreciated by everyone. We must bear in mind that the Royal Navy escorted more ships than all the other navies in the area put together.

Mr. Mates: Contrary to what the hon. Member for Eccles (Miss Lestor) suggested, will my hon. Friend the Minister please ensure that our presence in the Gulf—it has been in the area now for nine years, it has been unobtrusive and highly professional and it has acted well in the cause of preserving the peace—is not allowed to fall below the level which my hon. Friend considers necessary?

Mr. Hamilton: I can give my hon. Friend that commitment. It is very important that we maintain a presence in the Gulf for the foreseeable future.

Mr. Bill Walker: Does my hon. Friend agree that we should maintain a presence there because we owe it to all those who gave their lives in north Africa and in the middle east in the defence of the oil supplies so that the United Kingdom could continue the war against Hitler? Our presence in the Gulf and in north Africa was necessary then and it would be quite wrong now, just because there happens to be a temporary cessation of hostilities in the area, to reduce that essential presence which safeguards the traffic routes.

Mr. Hamilton: My hon. Friend is absolutely right. We want to see significantly greater reductions in the tension in the area. It would be good if a peace treaty could be arrived at between Iran and Iraq and the area made more secure than it is today. I understand my hon. Friend's point about the sacrifices that people made in the past to ensure that the oil flowed.

Mr. Tony Banks: What information has the Minister about the number of ships which have re-flagged to take advantage of the protection provided by the Armilla patrol? Is it not now time to ask the owners or nations from which those ships originally re-flagged to pay a contribution? Why should the British taxpayer have to pay for other ships to be escorted through the Gulf?

Mr. Hamilton: In general terms, we believe that the patrol has made a valuable contribution to the security of the area. Although there was a degree of re-flagging, we cannot ask for contributions from nations. We have made an important contribution to the security of the area.

Chemical Weapons

2. **Mr. Moss:** To ask the Secretary of State for Defence what contribution his Department is making to the Geneva negotiations on a chemical weapons convention.

The Secretary of State for Defence (Mr. George Younger): The negotiation of a comprehensive, global and effectively verifiable ban on chemical weapons is a major Government and NATO arms control priority. As the House knows, my right hon. and learned Friend the Foreign Secretary takes the lead on this and other arms control negotiations. However, my Department contributes in a number of ways to the Geneva negotiations.

particularly through the provision of military, technical and scientific advice both in Geneva and, by close liaison with the Foreign Office in London.

Mr. Moss: Is not my right hon. Friend as puzzled as I am that in all the time that the Russians recently spent in Britain they never once sought to refute the allegations, widely carried in the British press, that their stockpile of chemical weapons is some 10 times the size that they claim? Does my right hon. Friend agree that it is about time that there was a little more glasnost from the Soviet Union with regard to its chemical weapon capability?

Mr. Younger: I agree entirely with my hon. Friend. As I think my hon. Friend will know, my right hon. Friend the Prime Minister raised that issue last week with Mr. Gorbachev and took the opportunity to emphasise our commitment to a global and verifiable ban. However, Mr. Gorbachev produced no further information on that matter.

Mr. Robertson: Does the Secretary of State think that the Government's position is helped by the fact that increasing evidence—some of which has been verified by his Department—of the use of chemical weapons by Iraq against its own Kurdish civilian population is being greeted in the United Kingdom not by proper condemnation but by a doubling of trade credit to Iraq?

Mr. Younger: I cannot confirm what the hon. Gentleman says, but some evidence has been put about of the use of chemical weapons on the Kurdish minority by Iraq. We would regard that as a serious matter because chemical weapons are undesirable in all circumstances.

Mr. Brazier: Did Mr. Gorbachev, in his welcome discussions here, offer to open up to international inspection those parts of the Soviet Union's chemical weapons supply which were not opened up to us as promised during our last visit to the Soviet Union?

Mr. Younger: I appreciate my hon. Friend's point but I am afraid that no such offer has been made. As it is a long time since Britain possessed any chemical weapons, it is disappointing that in the new climate of openness which is supposed to exist there does not yet seem to be openness on the subject of chemical weapons, which we believe should be banned on a world-wide basis.

Fylingdales Early Warning Station

3. **Mr. Andrew F. Bennett:** To ask the Secretary of State for Defence what agreement there is with the United States of America about sharing early warning information from Fylingdales early warning station and ensuring it can be used independently by the United Kingdom Government.

Mr. Archie Hamilton: The ballistic missile early warning system at Fylingdales is under RAF command and control. Early warning information from the system is disseminated in parallel to the United Kingdom and United States authorities for their own use without restriction.

Mr. Bennett: Does the Minister accept that the United States has done all the modernisation? Is he confident that the United States would pass on information to the British Government if the British Government were contemplating using Trident in some way of which the United States did not approve? Surely if we are to have a credible deterrent of our own we should have our own early warning system and not be dependent on the Americans who might not pass on the information. Or is all that now irrelevant? Have we a guarantee from the Soviet Union that if it intends to launch any missiles at us it will ring up and tell us?

Mr. Hamilton: The hon. Gentleman is working on the wrong assumption. We share the information that comes from Fylingdales. We receive it in parallel, so there is no question of one nation having it and giving it to the other, or vice versa. The costs of modernisation are also being shared. The United States will be paying for the radar and we shall be paying for the infrastructure that goes with it. I remind the hon. Gentleman that the RAF operates Fylingdales early warning station, so we can ensure that we obtain information from it—and we do.

Mr. Andrew Mitchell: Does my hon. Friend accept that the question is flawed because the international early warning system, in which Fylingdales plays so important a part, is based on the principle of mutual corroboration? Will he take this opportunity to send to the men and women who have worked throughout the past 25 years at RAF Fylingdales, which I had the pleasure of visiting recently, his congratulations on the expertise and professionalism with which they conduct their task?

Mr. Hamilton: I am extremely grateful to my hon. Friend and I will pass on his message of congratulation on a job extremely well done.

Belgian Defence Minister

4. **Mrs. Fyfe:** To ask the Secretary of State for Defence what plans he has to meet the Belgian Defence Minister; and what matters will be discussed.

9. **Ms. Short:** To ask the Secretary of State for Defence what plans he has to meet the Belgian Defence Minister; and what matters will be discussed.

Mr. Younger: I met Mr. Coeme yesterday. We discussed a range of subjects of mutual defence interest.

Mrs. Fyfe: As the Belgian Government do not share the British Government's obsession with modernising nuclear weapons, can the Secretary of State tell us whether they are starry-eyed idealists or dupes of Moscow?

Mr. Younger: The hon. Lady is not correct in her assumption. It was made perfectly clear to me that the Belgian Government entirely subscribe to NATO's deterrent strategy. They also fully agree that weapons systems must be kept up to date. They are also strongly against any idea of a third zero in shorter-range weapons.

Mr. Wilkinson: Can my right hon. Friend give an assurance that when he next meets his Belgian counterpart he will be able to say that the United Kingdom—in concert, one hopes, with the other NORTHAG partner, the Dutch—has either agreed a defined specification for a new light attack helicopter or has procured the Apache AH64, as NORTHAG badly needs improved anti-armour capability and as the Belgians have recently procured about 50 Agusta 109 utility helicopters?

Mr. Younger: I appreciate my hon. Friend's point, but that subject was not raised either by me or by Mr. Coeme

in our discussions yesterday. The Belgian air force has a number of collaborative projects with NATO, particularly in respect of training.

Mr. Menzies Campbell: In view of the Belgian Government's well-publicised attitude, is not a consequence of enforced modernisation of short-range nuclear weapons at this time likely to be a weakening of the North Atlantic Alliance which may possibly result in Federal Germany being driven towards neutralism? What account of those risks do the Government take in their policy on that issue?

Mr. Younger: Those matters must all be carefully discussed and taken into account before any decisions are reached on keeping up to date the weapons that NATO has. It is worth remembering that the Soviet Union has itself modernised at least 95 per cent. of its shorter-range weapons in recent years. We must be careful not to leave it with an incovenanted advantage.

Sir Geoffrey Finsberg: As the Belgians are taking over the presidency of the Council of Ministers of the Western European Union from us, when my right hon. Friend next meets the Belgian Defence Minister will he try to build on the excellent out-of-area co-operation that we saw in the Gulf so that we have some sort of set plan if anything similar occurs in the future?

Mr. Younger: Yes, that matter was covered in the Western European Union ministerial meeting last week, when it was decided that the operations jointly undertaken in the Gulf were extremely successful and a good example of the way in which European nations can co-operate. We shall bear in mind that a similar form of organisation might be available in future needs for out-of-area activities.

Mr. O'Neill: Will the Secretary of State confirm that at the forthcoming NATO summit, the Belgian Government will not support the early modernisation of short-range weapons and will not contribute to any process by which a signal could be given to the American Congress that a replacement for Lance would be the unanimous wish of NATO?

Mr. Younger: That matter was certainly not covered in my discussions yesterday. It is for the Belgian Government to explain their own attitude. I understand that the Belgian Prime Minister is doing that in the Belgian Parliament today. I think that he had better do that himself, in his own language. As to Belgium's position in the Alliance, the hon. Gentleman will know that Belgium has been a very sound ally in NATO and totally subscribes to NATO's policy of nuclear deterrence based on nuclear weapons.

Anti-armour Weapon Systems

6. **Mr. Greg Knight:** To ask the Secretary of State for Defence what anti-armour weapon systems are available to the British Army of the Rhine.

The Parliamentary Under-Secretary of State for Defence Procurement (Mr. Tim Sainsbury): The British Army of the Rhine has a balance of anti-armour systems which includes Challenger and Chieftain main battle tanks; Lynx helicopters armed with TOW missiles; Swingfire and Milan missiles; infantry anti-tank weapons; and mines.

Mr. Knight: Does my hon. Friend agree that, despite the proposed cuts in Warsaw pact conventional forces, its capability for sudden, large-scale offensive operations remains strong? That being so, are not the British Government absolutely right in maintaining a mix of anti-armour weapons systems, including tanks and helicopters, to meet this ever-present threat?

Mr. Sainsbury: My hon. Friend is right. It has long been a feature of the Warsaw pact forces that they have a large predominance of assault and rapid attack forces, particularly main battle tanks. My hon. Friend is right to say that our assessments conclude that the right way to counter tanks is with a balance of anti-armour weapons.

Mr. Duffy: Will the Minister confirm that there is concern in the British Army of the Rhine about its ability to defend itself against Warsaw pact tanks? Will he also confirm that there are even greater symmetries on both sides in anti-tank weapons than in tanks, and that there is an impressive improvement in Soviet tank technology? Does he agree that the answer may lie not so much in more weapons in any of the categories that he mentioned but in smarter ones? What is the present position on Trigat development?

Mr. Sainsbury: The hon. Gentleman will be aware that not only are the latest Soviet battle tanks highly capable, and have explosive-reactive armour, but there has been a pattern over the years of new and improved Soviet main battle tanks arriving at regular intervals. At the moment we assess that our current equipment can match the present threat, and we have invested in a number of improvements which are under way, including—as the hon. Gentleman rightly identifies—medium-range and long-range Trigat, which will play an important part in future anti-tank battle.

Sir Jim Spicer: Will my hon. Friend explain why both the United States and the German armed forces give a much higher priority to the use of helicopters in an anti-tank role than we do within our Rhine army?

Mr. Sainsbury: My hon. Friend will be aware that we are currently assessing and keeping closely under review the role of the helicopter in anti-tank battle. Some of our NATO allies, for reasons of their own, decide to give more predominance to helicopters. This is an important subject and one that we are keeping closely under review.

Conventional Forces

7. **Mr. Tredinnick:** To ask the Secretary of State for Defence how much more in real terms his Department has spent on conventional forces since 1978-79.

Mr. Younger: Up to the end of the financial year 1987-88, some £20 billion more had been spent, in real terms, on conventional forces than if spending had continued at 1978-79 levels. This figure takes into account GDP inflation during the intervening period and excludes the costs of both the Falklands garrison and nuclear strategic forces.

Mr. Tredinnick: Will my right hon. Friend confirm that 95 per cent. of the increase in defence spending since 1978-79 has gone towards conventional forces? Will he give some examples of how this additional money for conventional forces has been spent?

Mr. Younger: I agree with my hon. Friend that the figure represents an enormous increase in the resources provided by the Government for conventional weapons, and has enabled us to provide resources, including 64 new ships, seven regiments of Challenger tanks and more than 500 new aircraft for the RAF.

Mr. Benn: Is it not a plain fact that the present level of defence expenditure in this country, the United States and the Soviet Union is far beyond that which is either necessary or possible for those countries to bear? Is it not clear that when Mr. Gorbachev says he wants to disarm, the reason why people believe him is because he also says that he wants to raise the standard of living of the Soviet people, which is what they want? There is now a much greater awareness in Britain that the present level of defence expenditure is starving the Health Service, education, the housing programme and other public services of the funds that they so urgently need.

Mr. Younger: There cannot be anything more urgent than ensuring that the country is safe and the people protected. However, as the right hon. Member for Chesterfield (Mr. Benn) will fully realise, if he thinks about it, thanks to the Government's policies and NATO, we are now able to negotiate reductions in weapons with the Soviet Union from a position of safety without imperilling our own security. The right hon. Gentleman should be pleased about that.

Sir Antony Buck: Does my right hon. Friend agree that the figures that he announced should put an end to suggestions that conventional armed forces have been starved of funds because of our deployment of Trident and other nuclear weapons?

Mr. Younger: My hon. and learned Friend is correct. As I have said all along, the Trident programme is not only necessary but extremely good value for money. We have managed not only to achieve that but to make an enormous increase in the provision of conventional weapons at the same time.

Mr. James Lamond: Surely the Secretary of State heard President Gorbachev spell out once again at the Guildhall last Friday the unilateral reductions that Russia is making in conventional forces and call on the rest of the world to do the same. As an excellent opportunity arose in the talks following the Vienna agreement, should not the Secretary of State, instead of boasting about excessive expenditure, be taking positive initiatives to ensure that we help the world to achieve lasting peace?

Mr. Younger: I am afraid that the hon. Gentleman is a little behind the times. Mr. Gorbachev spelt out some of his proposed reductions, which we warmly welcome, but he did not mention that while he has been talking about reductions we have been making them. We have reduced our nuclear warheads in Europe by over one third in the past 10 years, which is the other side of the equation that the hon. Gentleman should ponder.

Sir Dudley Smith: Despite what has been said recently, does my right hon. Friend agree that there is a big difference between the conventional forces of the Warsaw pact and those of NATO and a total imbalance in chemical weapons?

Mr. Younger: Yes, I agree with my hon. Friend that there is a large difference. Even supposing that the Soviet Union had completed all the reductions that it has proposed but not yet effected, there would still be an enormous disparity against the West in tanks, guns and aircraft. None of the figures produced last week were able to counter that.

Mr. Rogers: The Secretary of State wants the penny and the bun. First, he boasted of how much more the Government were spending on defence, but then he said "Look how much we have reduced expenditure." He cannot have it both ways. Without boasting of the achievements of the Labour Government, is it not true that many of the decisions that resulted in the present level of conventional spending were taken in 1978 by Lord Mulley and that, contrary to what the Secretary of State would have the House believe, spending on conventional defence expressed as a percentage of gross domestic product is declining and is forecast to do so in the White Paper?

Mr. Younger: The hon. Gentleman will know better than I precisely what decisions the previous Labour Government took, but it is clear that they did not provide the resources to carry them through. This Government, because of a much increased gross domestic product, have been able to provide extra money, which has enabled our forces not only to be properly paid but to have modern, new equipment, which they were denied by the cuts made by the Labour Administration.

Territorial Army Volunteer Reserve

10. **Dr. Goodson-Wickes:** To ask the Secretary of State for Defence when he last had discussions with the chief of general staff regarding recruiting levels in the Territorial Army Volunteer Reserve, and the co-operation of employers in releasing employees for training.

The Parliamentary Under-Secretary of State for the Armed Forces (Mr. Michael Neubert): Consultation on recruitment and employer support, as with other matters relating to the Territorial Army, is a continuous process through the formal Ministry of Defence committee structure and normal official channels. As regards employer support, we launched a major campaign last year, recommended by the national employer liaison committee, and I am pleased to say that the response thus far has been very encouraging, with more than 500 companies pledging their firm support to the reserve forces.

Dr. Goodson-Wickes: Is my hon. Friend satisfied that the Territorial associations are being allocated adequate resources to support and sustain the successful campaign that he mentioned? Does he agree that the so-called demographic trough makes it especially important to maintain effective follow-up with employers for volunteers?

Mr. Neubert: Yes, I can confirm that there is full Government commitment to the financing of our present Territorial strength and, in particular, the number of man training days planned. As I said, we are very encouraged at the response from employers, because the 500 companies already signed up represent 30 per cent. of the national private sector work force, and when this is

combined with the home Civil Service and the Scottish Office, it represents a substantial sector of employment. We intend to pursue this policy and to tackle smaller firms and professional partnerships as well.

Mr. Ron Brown: Will the Minister agree that, if money is to be spent effectively, members of the Territorial Army have a right to form trade unions, or is that extending democracy too far?

Mr. Neubert: I have to respond that that is not part of our tradition, and long may it remain so.

Mr. Conway: Does my hon. Friend agree that important aspects of retention in the Territorial Army include not just the very generous level of bounty and payment, but the opportunities to train with Regular units and to partake in exercises which, more often than not, are with the British Army of the Rhine rather than Salisbury plain or Otterburn training area?

Mr. Neubert: My hon. Friend experiences that opportunity and takes full advantage of it. It is a fact that the Territorials are equipped, as are the Regulars, for their role, and this means that they have the most modern equipment and are constantly kept in the forefront of our battle plans.

RAF Bruggen

11. **Mr. Illsley:** To ask the Secretary of State for Defence what plans he has to visit Royal Air Force Bruggen.

Mr. Younger: I last visited RAF Bruggen in 1986 and I have no plans to visit the station again in the near future.

Mr. Illsley: Is the Minister seeking to replace the free-fall nuclear WE177 bomb, which is used on Tornado aircraft from RAF Bruggen, and will the replacement be capable of use in areas of central Europe, where the use of nuclear weapons is now restricted by the INF agreement?

Mr. Younger: The hon. Gentleman is slightly misconceiving the INF agreement, which outlaws a certain type of missile—a land-based missile with a range of over 500 km—anywhere in the world. It does not, unfortunately, control where such missiles, should they exist, would land. The replacement of the free-fall bombs will be necessary by the mid-1990s, because the present weapons systems will have become out of date and unsuitable for use.

Mr. Mans: Will my right hon. Friend agree with me that it is necessary to replace these free-fall weapons not only because the present generation will have become out of date, but because the Russians have a similar weapon and we need one to maintain our deterrent effect into the next century with the Tornado aircraft?

Mr. Younger: My hon. Friend is absolutely correct. The Soviet Union is equipping itself with air-launched air-to-ground missiles. It is also worth reminding the House that over the past five years the Russians have modernised 95 per cent. of their shorter-range missiles, including SS21s, Scud launchers and Frog 7 launchers. They have all been modernised in the Warsaw pact, and that is something we must therefore take account of.

Deep Battle Concept

12. **Mr. Hague:** To ask the Secretary of State for Defence what assessment he has made as to whether the Soviet Union is abandoning its concept of the deep battle.

Mr. Archie Hamilton: In the last two years Soviet statements have claimed that its military doctrine is now of an exclusively defensive nature. Although we welcome such statements, it should not be forgotten that the Soviets still retain the capability to conduct operations deep into NATO territory and to launch a surprise attack.

Mr. Hague: Will my hon. Friend agree that the conclusion to be drawn from his answer is that, however welcome the latest proposed reductions in Soviet armed forces may be, the forces of NATO must continue to be fully prepared and fully modernised? Can he tell us anything of how radical the changes in Warsaw pact organisation, doctrine and equipment would have to be for it to be said that the pact had changed from an offensive to a defensive military posture?

Mr. Hamilton: There would of course have to be major structural changes in the deployment of Soviet forces and their training would have to change as well. So it would mean a complete change throughout the whole of the Soviet military structure.

Mr. Cryer: Is this word "modernisation" not jargon for cheating on the INF agreement? Will not the 133 non-nuclear nations who were signatories to the United Nations nuclear non-proliferation treaty change their minds about not deploying or manufacturing nuclear weapons if the United Kingdom starts to cheat in an atmosphere of mutual peace and force reductions generated by the Soviet Union? Would that not be a very dangerous step, and will the Government stop cheating and think again?

Mr. Hamilton: There is no question of the United Kingdom cheating on the INF treaty. The problems of the non-proliferation treaty have been with us for some time. We suspect that there are countries that are deploying the nuclear capability. That is regrettable.

Mr. Ian Bruce: Does my hon. Friend agree that the Russian forces, particularly the naval forces, are changing their tactics and that the British armed forces need to respond? Has there been a major review of Royal Navy equipment and tactics, particularly as the Soviet Union has decided to keep its naval forces deployed in a defensive rather than in a blue sea role?

Mr. Hamilton: My hon. Friend must be careful. The fact that the Soviets may be exercising their naval forces rather less than they did in the past may be for reasons of economy. It does not mean that they are reducing their capability, which is what we must judge them by.

Mr. Sean Hughes: In view of the Minister's answers, will he do the House the courtesy of answering the question that the Secretary of State refused to answer at the last defence Question Time? Do the Government take seriously the threat of a Warsaw pact short-range nuclear attack on NATO's fixed assets in Germany?

Mr. Hamilton: The Government take seriously and place importance on a flexible response. We believe that we should have modern and up-to-date weapons to respond over a whole range of different capabilities.

US Defence Secretary

13. **Mr. Douglas:** To ask the Secretary of State for Defence when he intends to meet the Secretary of Defence of the United States of America to discuss matters of mutual interest.

16. **Mr. Patnick:** To ask the Secretary of State for Defence when he expects to meet his new United States of America counterpart; and what matters will be discussed.

Mr. Younger: I hope to meet Mr. Cheney at the meeting of NATO's nuclear planning group in Brussels next week to discuss a range of matters of mutual interest.

Mr. Douglas: May I respectfully ask the Secretary of State to raise with Mr. Cheney the incident relating to the Soviet submarine at the weekend? Is there not a need to reach an international agreement and understanding, particularly among those powers that have nuclear weapons and nuclear-powered submarines, that there should be disclosure about what happens to such vessels when an accident or an incident takes place? Is it not essential that vessels of this type should not fall into the hands of people like Gaddafi? Is it not essential that no power should sell to such people vessels of that type, which could be extremely dangerous to the peace of the world?

Mr. Younger: The hon. Gentleman makes some valid points. Any accident of that kind, whoever is the owner of the ship in question, must cause us all the gravest concern. I note what the hon. Gentleman has said and I shall discuss the matter with Mr. Cheney when I meet him.

Mr. Patnick: Will my right hon. Friend discuss with the United States Defence Secretary the United States commitment to and support of NATO?

Mr. Younger: In a general review of NATO's affairs with Mr. Cheney, I expect to cover these matters generally. I am sure that Mr. Cheney will be able to confirm that the new Administration—like, indeed, all previous Administrations—are firm believers in the effectiveness of NATO as an organisation that is entirely defensive and aims to reduce armaments from a position of strength.

Mr. Cohen: Does the Secretary of State recall telling the House last July that no decisions had been made on NATO force modernisation? Why is it, then, that six weeks previously the United States started work on its new design facilities at RAF Upper Heyford to take new F111s? Will the Secretary of State discuss with the United States Defence Secretary why he is misleading the House?

Mr. Younger: The hon. Gentleman is not correct. No decisions have been taken on the modernisation of any NATO facilities of that kind. Any alternations or improvements that the United States wishes to make to its bases in this country will first have to receive the British Government's permission. Therefore, I deny both the hon. Gentleman's points.

Sir Peter Emery: When my right hon. Friend meets Mr. Cheney and the other Defence Ministers, will he refer them to the speech made by Mr. Tindemans, the Belgian Foreign Minister, at the joint NATO meeting organised by ambassador Abshire, at which a number of hon. Members were present when Mr. Tindemans made it absolutely clear that the Belgian Government would want to support the modernisation of all weapons, nuclear and otherwise, within the NATO armoury?

Mr. Younger: I thank my hon. Friend for reminding the House about that. The Belgian Government, like all the other members of the Western European Union, have subscribed to the platform of the Western European Union, which clearly commits the whole Alliance to a strategy based on nuclear deterrence.

Mr. O'Neill: Will the Secretary of State reflect on his answer to my hon. Friend the Member for Leyton (Mr. Cohen) about the construction changes which are to take place at Upper Heyford? Will he look at the military construction appropriations report for 1990 which was presented to the House of Representatives of the United States, because it contains references to major constructions at Upper Heyford as a consequence of a decision to deploy additional aircraft to that site? Will he consider that question and put his reply on record in the Library or write to me or my hon. Friend and correct us, because we seem to be going wrong? It appears that the United States Congress is spending money on something which the Secretary of State seems to know nothing about.

Mr. Younger: Of course I shall consider what the hon. Gentleman has said and write to him, but I stress that the question is whether works are taking place as a result of NATO decisions on modernisation. There have been no such decisions; therefore, that is a clear answer to a clear question.

Mr. Rathbone: On a different aspect of possible co-operation, will my right hon. Friend find out in his discussions whether there is room for initiatives by Britain and the United States in offering military assistance to countries in south America which have to fight the war against the drug barons, to help them restore law and order to their own countries?

Mr. Younger: I note what my hon. Friend says. It is not our policy to detach any forces for operations in south America, but we would always be prepared to discuss with our allies any way we could help in the battle against drugs.

NATO

14. **Mr. Wallace:** To ask the Secretary of State for Defence when he next expects to meet the Secretary General of the North Atlantic Treaty Organisation; and what subjects he intends to discuss.

Mr. Younger: I expect to see Dr. Woerner at next week's meeting of NATO's nuclear planning group in Brussels. We shall discuss a range of subjects of mutual interest.

Mr. Wallace: I am grateful to the Secretary of State for his informative reply. Will he be discussing the SRAM-T missile and whether the Government intend to fit it to NATO aircraft and ultimately to the European fighter aircraft? Is he aware that General Ronald Yates in evidence to a congressional sub-committee indicated that the missile was designed to restore capability lost by the

INF treaty? Do the Government accept that restoration is necessary and will Britain play its part in that? Does he consider it justified, given the credit that the Government have tried to take for being party to the INF treaty?

Mr. Younger: I do not expect to discuss that issue with Dr. Woerner when I meet him next week, but I should make it absolutely clear once again that the INF treaty applies to ground-based intermediate-range missiles. We fully support that treaty which adopted NATO's proposals. There is no question of our wishing to go back on that treaty in any respect, but we have to maintain for our future defence a range of options that we could use if we were threatened with an attack which we could contain by no other means, and in that we are supported by the entire NATO Alliance.

Mr. Nicholas Bennett: As the proportion of Soviet GDP spent on defence has increased in recent years, does my right hon. Friend agree that NATO's defence policy must be predicated on what the Soviets do and not what they say?

Mr. Younger: My hon. Friend is absolutely correct. We must look quite realistically at the capabilities of the countries concerned, and we must equip ourselves to defend ourselves in all foreseeable circumstances. Expressions of increase or decrease on the Soviet defence budget are not worth very much until we know the level of that budget.

Mr. Wilson: When the Secretary of State meets the Secretary General of NATO will he discuss the targeting policy for nuclear weapons for the duration of the Queen's visit to Moscow? Does he agree that there would be a certain irony in extending the hand of friendship on one side and, on the other side, threatening the use, implied or real, of nuclear weapons?

Mr. Younger: I do not think there is any likelihood of my discussing with Dr. Woerner any aspects of nuclear targeting during the Queen's visit to Moscow.

Defence Policy (Scottish Representations)

15. **Mr. David Porter:** To ask the Secretary of State for Defence what representations he has received from Scotland on defence policy since 11 March; and if he will make a statement.

Mr. Younger: I have received no representations from Scotland specifically on defence policy, although I do, of course, receive a large volume of correspondence on various defence issues from all parts of the United Kingdom.

Mr. Porter: Does my right hon. Friend realise that on that day, at the Labour party conference in Scotland, pronouncements were made advocating unilateralism?

Mr. Younger: Yes, I did observe that at a Labour party conference in Perth on that date—[HON. MEMBERS: "It was Inverness."]—resolutions were passed urging that the review of policy—*[Interruption.]*

Mr. Speaker: Order. Let us hear the answer.

Mr. Younger: At that conference, resolutions were passed urging that following the review of policy that has taken place in the party, it adhere to unilateralism in all its features. It occurred to me to wonder whether the right hon. Member for Islwyn (Mr. Kinnock) supported that, or agreed with it.

PRIME MINISTER

Engagements

Q1. **Mr. Maxton:** To ask the Prime Minister if she will list her official engagements for Tuesday 11 April.

The Prime Minister (Mrs. Margaret Thatcher): This morning I had meetings with ministerial colleagues and others. In addition to my duties in the House, I shall be having further meetings today.

Mr. Maxton: Will the Prime Minister tell my 79-year-old, blind constituent, Mr. William Bradley, whether she thinks that it is fair that on 1 April 1988 his income was £52·55, that on 1 April 1989 it was £52·55, and that on 1 April 1990 and 1 April 1991 it will be £52·55? If she thinks that that is fair, would she care to justify it?

The Prime Minister: The hon. Member is taking a particular case which, I assume from what he says, was the subject of transitional protection, so that when the whole system was simplified and improved, and a lot more money was spent on it, people were protected from having a reduction in their cash. The hon. Gentleman takes a particular case in which there will be no real increase. May I, therefore, take credit for the fact that 98 per cent. of all pensioners will receive a cash increase with the coming uprating?

Q2. **Mr. Arbuthnot:** To ask the Prime Minister if she will list her official engagements for Tuesday 11 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Arbuthnot: Will my right hon. Friend find time today to comment on the National Health Service White Paper proposals on doctors' budgets? Will she confirm that the proposals are entirely voluntary, helpful guidelines to be available to those who want them, rather than cash limits imposed on those who do not?

The Prime Minister: Yes, whether or not a doctor wishes to hold his own budget, provided that he is within the eligible group, is a decision for him to take. The fact that some doctors do not wish to do it should not deny others the right to do it if they want. I noticed in a recent article in the *New Statesman and Society* a report of one doctor from the Royal College of General Practitioners saying:

> "Why should general practitioners resign over a plan which embodies so much of what the Royal College has been working for over the years?"

Mr. Kinnock: Does the Prime Minister think that all senior civil servants who make Government leaks should be prosecuted?

The Prime Minister: Prosecution is not a matter for me, as the right hon. Gentleman knows.

Mr. Kinnock: From that answer by the Head of Government may I take it that she has decided to give a public interest defence to Mr. Powell and Mr. Ingham?

The Prime Minister: No I have nothing further to add —*[Interruption.]*—nothing further to add to the many answers given in statements, speeches and replies to questions. I notice that the right hon. Gentleman has nothing real to complain about.

Mr. Andrew MacKay: During her busy day will my right hon. Friend find time to join me in congratulating my distinguished constituent, Nick Faldo, on his outstanding achievement on winning the American Masters? That, together with the equally important result achieved by Sandy Lyle last year, has illustrated that this country leads the world in golf.

The Prime Minister: I gladly congratulate Nick Faldo on this year's result. It was a very exciting tournament and a very exciting play-off. It was one of the best things that we have seen on television for a long time.

Dr. Owen: Given that the leader of the Transport and General Workers Union wants to renegotiate the terms and conditions under which the abolition of the dock labour scheme could go ahead, will the Prime Minister confirm that she would be ready—if such negotiations produced changes in the terms and given that the mineworkers' redundancy terms are much more generous —to amend the legislation as it goes through the House?

The Prime Minister: No. We believe that the restrictive practices contained in the present dock labour scheme are highly damaging to the prosperity of ports and highly damaging of the prospects of this country in 1992. There is only one thing to do and that is to abolish the scheme; then those ports that suffer under it at present will have the chance to become as prosperous as those ports that do not belong to it. The redundancy terms, at up to £35,000 for redundant dockers, are generous.

Mr. Michael Morris: Is my right hon. Friend aware of the grave concern among family practitioners about some of the proposals regarding the new way in which they would work under their contracts? Will she listen to their representations and recognise that for family practitioners the key dimension in the end is care for the sick?

The Prime Minister: Obviously the changes in the National Health Service White Paper and in the accompanying detailed documents are meant to improve the service to the patient. I notice again from an article in the *New Statesman and Society* that it says:

"The white paper is neither anti-socialist nor anti-NHS . . . the gain for patients will be immeasurable".

I believe that my hon. Friend is referring to the contract arrangements which pre-dated the White Paper. With regard to the matters in the detailed consultation papers they are, of course, for consultation. They are not meant to be a specific blueprint and we will, of course, consider representations.

Q3. **Mr. Terry Fields:** To ask the Prime Minister if she will list her official engagements for Tuesday 11 April.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Fields: Will the Prime Minister tell the House whether it was she who gave permission to MI5 and mercenaries to bug telephones, private and public, in Scotland, to bug meetings of Labour politicians and to bug their telephones in Liverpool, to infiltrate and bug meetings of opponents to nuclear power in other parts of the country and to tap the telephones of foreign politicians? If she did not do it, who gave permission? What is her link with David Coughlan and when can we expect criminal proceedings to commence against those people engaged in illegal activities?

The Prime Minister: Perhaps the hon. Gentleman would care to look up the legislation passed in this House which governs telephone interception. That legislation is followed meticulously and an annual report is made upon it.

Sir William Shelton: Is my right hon. Friend aware that on Good Friday seven of my Conservative councillors in Lambeth found their houses daubed with death threats? On Sunday last three of those seven received threats by telephone to kill them and to burn down their, expletive deleted, houses. Will she condemn such outrageous extremist political action and urge the police to increase surveillance and activity so as to apprehend those wretches as soon as they can?

The Prime Minister: The events which my hon. Friend describes are utterly disgraceful and totally contrary to democracy. I shall, of course, do as my hon. Friend says, and I hope that anyone who has information will not hesitate to give it to the police to see that such behaviour is stopped and, if need be, the people who perpetrated it are brought before the courts.

Q4. **Mr. Maclennan:** To ask the Prime Minister if she will list her official engagements for Tuesday 11 April.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Maclennan: Would the Prime Minister be prepared to consider the proposal made by Nobel prize winner Professor Abdus Salam at the Edinburgh science festival on Saturday that an international science centre should be established in Caithness drawing on the resources of that community to provide facilities for advanced scientists coming from the Third world to developed countries?

The Prime Minister: I saw a proposal for an international science centre in Edinburgh. I did not see one for Caithness. For a feasibility study to be conducted into any proposal for an international science centre—I think that such a proposal has been put forward by Edinburgh district council—an application for money should be made to the Scottish Development Agency for its consideration. No such formal request has yet been made to that agency. The hon. Gentleman—or anybody from Edinburgh—should first go to the SDA.

Q5. **Mr. Baldry:** To ask the Prime Minister if she will list her official engagements for Tuesday 11 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Baldry: Is my right hon. Friend aware that the whole House welcomes the progress that was made in Anglo-Soviet relations last week, not least those of us who were fortunate enough to be among the last Inter-Parliamentary Union delegation to the Soviet Union? But does my right hon. Friend agree that Mr. Gorbachev's comments about modernising NATO's short-range nuclear weapons were somewhat cynical having regard to

what the Soviet Union has been doing with its short-range nuclear weapons in the last five years? Does she agree that the concession on uranium and plutonium could better be put into context?

The Prime Minister: I agree with my hon. Friend. We estimate that about 95 per cent. of Soviet short-range nuclear missile systems in the forward area have been modernised or replaced in the last five years and that some 200 SS21 missiles have been introduced since 1981. By contrast, NATO's Lance missile was introduced in 1972 and therefore needs modernisation. As for uranium and plutonium, as I have said, the Soviet Union has very substantial stockpiles and of course weapons grade uranium and plutonium do not deteriorate. The closure of three plutonium production reactors would leave four others still in operation.

Mr. Loyden: Will the Prime Minister say why, following a most peaceful period in the docks industry, with ports such as Liverpool being in profit, she should cause a political strike? Is it because we have a bloody-minded Minister, a bloody-minded Cabinet and a bloody-minded Prime Minister who are prepared to take political action to achieve an industrial end?

The Prime Minister: No. The Minister, Ministers, the Government and the Prime Minister are concerned that all our docks should be working at maximum efficiency and prosperity and that those who are in the hinterlands to docks should have the chance of attracting inward investment, just as have those who are in the hinterlands to non-scheme docks. It will be much better and we should be able, when all the ports are working well and economically, to attract a lot of business from the European docklands to this country. Many fishermen who are having difficulty getting their fish landed will welcome our decision.

Q6. **Mr. Aitken:** To ask the Prime Minister if she will list her official engagements for Tuesday 11 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Aitken: Will my right hon. Friend soon find time to introduce some major improvements to the highly unsatisfactory methods by which the House continues to scrutinise EEC legislation? Does she agree that it is wrong that an important EC directive such as the one on broadcasting which will be ratified next week, could not be debated in the House? However, perhaps because of lack of scrutiny, that directive has been supported by Home Office Ministers who agreed even to a statutory right of reply being introduced for the European media. Can my right hon. Friend confirm that her Government will now support the same principle by giving a fair wind to the private Member's Right of Reply Bill when it comes back to the House on Friday?

The Prime Minister: I shall attempt to answer the multiple parts of my hon. Friend's question. It is important to have the best possible scrutiny of draft directives before they are debated in the House, especially with the number of them now coming forward, the effect that they will have on our lives and the tendency of the Commission to put far too much detail in them. I understand that my right hon. Friend the Lord President has put some suggestions to the Chairman of the Scrutiny Committee for improving the scrutiny that should take place. I understand my hon. Friend's concern about the broadcasting directive. He asked about the private Member's Right of Reply Bill. Of course that is a matter for private Members. Whatever view is taken, it indicates that there is great concern about some of the things that we see in the press today. We may not have the right answer, but we cannot ignore the concern.

North Cormorant Platform

3.33 pm

Mr. James Wallace (Orkney and Shetland) *(by private notice)*: To ask the Secretary of State for Scotland what assessment he has made of the environmental impact of the leak of 50,000 gallons of drilling mud from Shell's North Cormorant platform 100 miles north east of Shetland?

The Parliamentary Under-Secretary of State for Scotland (Lord James Douglas-Hamilton): I understand from inquiries made by the Department of Agriculture and Fisheries for Scotland that about 1,140 barrels of oil-based drilling mud were accidentally discharged into the sea yesterday afternoon from the North Cormorant oil and gas production platform. The accident occurred during transfer of the mud from a supply vessel to a holding tank on board the platform. It is believed that there was a mechanical failure in a drainage pipe from one of the holding tanks which led to the leakage of mud about 100 m below the surface of the sea.

The drilling mud contained about 60 per cent. of refined oil. It is expected that the released mud has fallen to the sea bed close to the installation. The spilled mud contained about 680 barrels of oil. The tanks on board the platform were emptied yesterday afternoon, immediately following discovery of the leakage. No further spillage has occurred.

The information received as a result of inquiries indicated that the effect on the environment is minimal. My right hon. Friend the Minister of State, Department of Energy and I will be seeking a report on the source and impact of the spillage from the responsible authorities and the operators as soon as possible. Furthermore, we have asked Shell to report to us immediately if there is any evidence at all of any adverse environmental impact.

Mr. Wallace: I am grateful to the Minister for his detailed reply. I am sure that he will reassure the House that if Shell report, any sightings of adverse environmental impact immediate action will be taken. Does he agree that, given the present sensitivity about pollution, not least from oil-related installations, merely to look at incidents individually is to miss the whole point that further consideration should be given to an overall examination of the environmental implications of North sea oil developments?

Lord James Douglas-Hamilton: The answer to the first part of the hon. Gentleman's question is yes. In answer to the second part, I should make it clear to the hon. Gentleman that in the wake of the Alaska episode my right hon. Friend the Minister of State, Department of Energy asked for an update on how we deal with oil spillages in United Kingdom continental waters. That process is already under way, and if improvements are needed they will be made. Exercises on a considerable scale take place annually and are carried out by the marine pollution control unit of the Department of Transport. The last major one was on 4 July last year, and a smaller exercise was carried out in Humberside on 7 March.

Mr. Alick Buchanan-Smith (Kincardine and Deeside): First, will my hon. Friend confirm that Shell acts very responsibly in relation to matters such as pollution, and indeed safety and other matters? Will he assure the House that he is getting all possible co-operation from the company, as I am sure he is? Secondly, will he confirm that, if a major pollution problem should arise, there are adequate resources in the area to deal with it, as evidenced by the fact that companies in Aberdeen have been called upon to assist in clearing up pollution in Alaska?

Lord James Douglas-Hamilton: With regard to my right hon. Friend's first point, I have had a meeting with a representative from Shell, and I agree with what my right hon. Friend said. The other matter will certainly be followed up with the relevant Departments and we shall do everything in our power to ensure inter-departmental co-operation to effect this very important purpose.

Mr. Robert Hughes (Aberdeen, North): The Minister is being characteristically vague about who is to provide this very important information. When he refers to responsible authorities in the company, does he mean that the Government will be relying almost entirely on the company for further information? Ought he not to be insisting that all Government resources be commanded immediately to inspect the area, continue to monitor and to take positive action with urgency to prevent the pollution having any effect on the marine environment?

Lord James Douglas-Hamilton: We received information from Shell in the first instance, but I assure the hon. Member that we will check monitoring and that under surveys are carried out by the Department of Agriculture and Fisheries scientists in this matter. It is the responsibility of the operator—in this case Shell—to monitor the oil content of discharges of mud or cuttings around each platform under the powers exercised by the Secretary of State for Energy.

Mr. Bill Walker (Tayside, North): Does my hon. Friend agree that it is impossible to eliminate either human or mechanical accidents in any sphere whatsoever and that therefore, as long as we extract oil from the sea and transport it in ships, there will be a risk? The important thing is that we have the resources available to deal with the possible results of that risk. It would seem certain that we do in this case.

Lord James Douglas-Hamilton: We want to reduce risk to an absolute minimum and do everything humanly possible to achieve that purpose. As for safety issues generally, which my hon. Friend touched on indirectly, my right hon. Friend the Secretary of State for Energy is responsible. As my hon. Friend knows, Lord Cullen is now conducting the Piper Alpha public inquiry and my right hon. Friend the Secretary of State for Energy has made it clear that if he makes any recommendations for improvement of the safety regime they will be adopted.

Mr. Alex Salmond (Banff and Buchan): Following the point made by the hon. Member for Aberdeen, North (Mr. Hughes), does not the Minister consider that there is a difficulty in that all the information that he has given us today has come from the company? When will the independent investigation take place? Does he not consider that there is a real difficulty in that we do not have a system of regulation in the North sea; we have in effect a system of self-regulation?

Lord James Douglas-Hamilton: Preliminary investigations indicated that isolation of the mud storage tank on the platform failed and that involved the valve and cement plug, we believe, allowing the mud to discharge into the sea

through one of the platform legs about 100 m below sea level. The mud contained approximately 680 barrels of oil out of 1,140 barrels and this sank to the sea bed. There is no visible sign of a slick on the surface. Admittedly, conditions are not particularly good, but I can give the hon. Member the assurance that there will be monitoring as necessary by the appropriate authorities.

Mr. Barry Field (Isle of Wight): Can my hon. Friend reassure the House that in the review dependence on dispersants will be looked into very carefully, as much of that technology comes from the oil companies which manufacture the dispersants and there are serious misgivings that that means of dealing with a major oil spill will fail, as it has failed in Alaska?

Lord James Douglas-Hamilton: My right hon. Friend the Minister of State, Department of Energy has asked for an update on how to deal with oil spillages so as to get the most up-to-date advanced technical and technological information to enable us to deal with these matters appropriately in all circumstances.

Mr. John Home Robertson (East Lothian): Will the Minister stop muttering platitudes about monitoring and updates and acknowledge that it is fairly common practice for unwanted material to find its way over the sides of oil rigs? Is there not an urgent need for effective action by Government Departments to control this practice?

Lord James Douglas-Hamilton: Strong penalties exist. If it is shown, for example, that a discharge is due to want of reasonable care, the operator is liable to penalties under the Prevention of Oil Pollution Act 1986 of up to £50,000 on summary conviction or an unlimited amount or imprisonment on indictment. If the hon. Gentleman has evidence of misdeeds in the sea outside his constituency he should report them as appropriate.

Mr. Donald Dewar (Glasgow, Garscadden): I note what the Minister has said, and I recognise that there is no surface slick and that the mud has sunk to the sea bed within the 500 m exclusion zone, but surely he accepts that any unintended discharge of as much as 50,000 United States gallons of oil-based mud—even if it is of low toxicity—is a matter for genuine concern, and that the House and the country would expect monitoring to be very tight and extended.

The Minister referred to the circumstances of the discharge. Perhaps the Minister can confirm that the supply vessel, the Edda Fram, started pumping into the storage tank at 1130 hrs yesterday and it was only at 1500 hours, a considerable time later, that someone noticed that the contents of the storage tank were dropping and not rising. That suggests that at least there was something wrong with the surveillance system. In effect, they were pumping through an empty discharge drain straight into the sea for three to four hours before those operating the system became aware that something was wrong. Does not that suggest that there was something wrong with the inspection system and that there is food for thought for the Department?

Lord James Douglas-Hamilton: Yes. The hon. Gentleman touches on a relevant point. It was at 11.30 am that the supply vessel commenced pumping and it was at 3 pm that those responsible became concerned that stocks were not building up as expected, exactly as the hon. Gentleman has said. It is important that we should find out exactly why the isolation system failed. Shell is making immediate inquiries and both the Scottish Office and the Department of Energy expect to be kept closely informed. I agree with the points that the hon. Gentleman made.

Points of Order

3.41 pm

Mr. Tom Dalyell (Linlithgow): On a point of order, Mr. Speaker. Arising out of the Prime Minister's answer to the Leader of the Opposition, can you give us guidance about ministerial responsibility? Of course, the Prime Minister is quite right in saying that she is not responsible for prosecutions. But is she not head of the Civil Service? Therefore, are not questions about the behaviour not only of the most senior civil servants but her own intimate personal civil servants, working for her, like Mr. Charles Powell, matters for the Prime Minister?

Mr. Speaker: It is certain that they are not matters for me.

Mr. Eric Martlew (Carlisle): On a point of order, Mr. Speaker. It is about the contempt in which the House is being held by the Secretary of State for Transport. I understand that at this very moment he is making an announcement at the Department of Transport about the Carlisle-Settle railway line. I welcome the decision to keep the line open, under the control of British Rail, which proves to be a defeat for British Rail who wanted to close the line, and a defeat for the Government, who wanted to privatise it. If we look at *Hansard,* we see that announcements about the Carlisle-Settle line have been made on the Floor of the House and hon. Members could question the Minister on them. Will you, Mr. Speaker, adjourn the House and bring the Minister from his press conference to the Despatch Box to answer the questions that many of us would like to put to him?

Mr. Bob Cryer (Bradford, South): Further to that point of order, Mr. Speaker. The matter is worse than has been outlined by my hon. Friend the Member for Carlisle (Mr. Martlew) because there appears to have been a deliberate conspiracy to avoid accountability to the House.

The question on page 3084 of today's Order Paper for written answer was handed in only yesterday. I understand that the hon. Member for Christchurch (Mr. Adley) issued a statement this morning commenting on the reply to that question. That suggests that some information has been circulated exclusively among Conservative Members about a matter which has been the subject of several debates and more than 30 petitions from all parts of the United Kingdom and from hon. Members on both sides of the House.

When the Secretary of State for Transport said last year that he was minded to close the line, he made a statement to the House following Transport Questions. He deliberately picked out two questions which he could refer to at the end of Question Time through the usual arrangement. This railway is of great interest to many people and many hon. Members have referred to it in oral and written questions. It is monstrously outrageous that we should be denied the right to question the arrangements which the Secretary of State has entered into. I hope that you, Mr. Speaker, deprecate such a shoddy conspiracy by the Government.

Mr. Speaker: I was unaware that any statement was being made outside the House. The House well knows that I feel very strongly that statements should first be made in the House.

Mr. Peter Snape (West Bromwich, East): Further to that point of order, Mr. Speaker.

Mr. Speaker: No. I am still speaking.

Today is an Opposition day and it could well be—although I have no knowledge of this—that arrangements have been discussed through the usual channels about this matter to protect the day's business.

Mr. Snape: Further to that point of order, Mr. Speaker. Having listened to the exchanges, and bearing in mind your ruling, it seems that two points arise directly. First, the Secretary of State for Transport held a press conference that was scheduled to start at 3.30 pm. Perhaps you can look into this, Mr. Speaker. Is it not unprecedented, that the Secretary of State is so punch-drunk that he is too terrified to come to the House to announce good news, let alone bad news?

Mr. Speaker: I have never travelled on the line, but I hope that it is good news. I have heard a lot about it.

Mr. D. N. Campbell-Savours (Workington): Further to the point of order, Mr. Speaker. This morning the Select Committee on Procedure held a press conference at 11 o'clock and precisely this abuse of the House was raised in justification of those who seek to frustrate our procedures. If you were to rule that this practice was improper, Ministers would act accordingly and change their practices. When we were asked at the press conference to justify what has been happening, this type of example was raised. The matter is in your hands, Mr. Speaker, and you can resolve it.

Mr. Speaker: It is not in my hands. The House is aware that I am not responsible for organising the business. However, it may well be that an Opposition day is not considered to be an appropriate day to make a statement. I frequently receive representations from hon. Members who complain about not being called because a statement was made on a day when the Opposition had chosen the subject for debate. It is a question of balance. I do not organise the business.

Mr. David Winnick (Walsall, North): Further to that point of order, Mr. Speaker. I think that you would agree that one of the roles of the House of Commons, certainly a role of the Opposition, is to identify where abuse and misconduct have occurred and to raise such matters on the Floor of the House. Yesterday I raised a question with the Attorney-General. I do not question your decision, Mr. Speaker, because you must decide these matters. However, yesterday, with regard to his role in the Westland affair, you said that the Attorney-General should not reply because it was not relevant to the question on the Order Paper. As you know, Mr. Speaker, the Prime Minister gave a very evasive reply.

If we know that there was deception, lying and dishonesty over the Westland affair, certainly by Mr. Ingham and Mr. Powell, how can we raise the issue on the Floor of the House? When such deception, dishonesty and outright lies occurred in January 1986 over the Westland affair, why are we silenced and not allowed to raise the matter?

Mr. Speaker: The hon. Gentleman will be the first to appreciate, because he has been a Member for a long time

and is very experienced, that if he looks at yesterday's *Hansard* his question had no relevance to the main question on the Order Paper.

Mr. Alan Williams (Swansea, West): Further to those points of order, Mr. Speaker. The two points of order relate to each other. You must have gathered by now the profound frustration that is beginning to be felt in the House at the way in which Ministers feel able to ignore the normal conventions and responsibilities. My hon. Friends the Members for Carlisle (Mr. Martlew) and for Bradford, South (Mr. Cryer) have just outlined one matter which, on previous occasions, has led you to say that Ministers should make statements in the House rather than outside. However, your advice is continually ignored. In that respect, Mr. Speaker, what do you intend to do to assert the rights of the House?

That matter relates to the first point of order that was made by my hon. Friend the Member for Linlithgow (Mr. Dalyell). When does the House have the right to investigate and question the Executive? That power can be operated only if Ministers are not allowed to stand at the Dispatch Box and blatantly say that a matter is not their responsibility when clearly it is. As protector of the rights of the House of Commons, Mr. Speaker, how do you intend in future to ensure that where officials of the Prime Minister, the Head of the Civil Service, have created a major constitutional abuse, the House has the right of interrogation that the Prime Minister and her Ministers are attempting to deny it?

Mr. Speaker: I am surprised that the deputy shadow Leader of the House should put a question in those terms to the Chair. He knows perfectly well that it is not the role of the Chair to organise the business. Furthermore, he is part of the management, through the usual channels of the House. Today is a Supply day and he could have chosen that topic for debate had he wished. It is for the Opposition to choose the subject for debate—he has those opportunities. I am not responsible for what is said from the Dispatch Box, provided that it is in order.

I have deprecated more than enough the fact that statements are made outside the House. I should always prefer statements to be made in the House before they are made to the press, but, equally, the right hon. Gentleman should bear in mind that that is likely to impinge on Opposition time. That would undoubtedly have been the case today if there had been a statement. These are not matters for me but for the management of the House.

Mr. Neil Hamilton (Tatton): Further to that point of order, Mr. Speaker. Some of us in the Chamber this afternoon are hoping to listen to the debate on pensions. I am becoming concerned that the Labour party intends to continue making bogus points of order until 10 pm in order to disguise its appalling record on that subject when in government and to disguise the weakness of its policies today. I hope that you, Mr. Speaker, will put a stop to all this nonsense and let us get on with the debate.

Mr. Gerald Bermingham (St. Helens, South): On a point of order, Mr. Speaker. As one of the privileges of the House is that we can attend and vote safely, will you use your good offices to ensure that hon. Members who are hurrying from Norman Shaw and crossing Palace Yard do not suffer the fate that almost befell me of being mowed down by a Government car speeding in through the narrow entrances, a matter which I raised with the relevant Minister at the Department of the Environment last night? When the Division bell goes, one accepts that Ministers and Government cars have to come in, but someone should tell them about speed limits because there is a serious danger to hon. Members and the staff of the House who could well be injured by motor cars whose drivers do not know how to drive and who appear to be in an unnecessary hurry.

Mr. Speaker: If the hon. Gentleman gives me further details of that incident, I shall have it looked into.

European Community Documents

Ordered,

That European Community Document No. 4092/89 relating to pesticide residues be referred to a Standing Committee on European Community Documents—*[Mr. Heathcoat-Amory.]*

STATUTORY INSTRUMENTS, &c.

Ordered,

That the draft Building Societies (Money Transmission Services) Order 1989 be referred to a Standing Committee on Statutory Instruments, &c.—*[Mr. Heathcoat-Amory.]*

Counting Women's Unremunerated Work

3.54 pm

Ms. Mildred Gordon (Bow and Poplar): I beg to move,

That leave be given to bring in a Bill to require Government departments and other public bodies to include in the production of statistics relating to the gross domestic product and other accounts a calculation of the unremunerated contribution of women; and to include this calculation in the gross national product.

The Bill requires the Government to quantify the unremunerated work of women and to include that quantification in the gross national product. In order to explain the need for the Bill and the gross injustices that it will redress, I shall put before the House facts about the economy that women—particularly the poorest women —have been wanting to give right hon. and hon. Members for many a day.

When I was 16 my parents sent me to secretarial college to learn shorthand, typewriting, bookkeeping and business studies. All over the walls of that building, in large letters, was the slogan "Time is money". Although that time is money is an accepted and obvious economic fact, everywhere in society women's time is squandered as if it were worthless. Today few shops will even say whether goods will be delivered in the morning or the afternoon. The same is true when equipment needs repairing and of meter readings and gas, electric and telephone connections or disconnections. Women's waiting time is expected to be at everyone's disposal.

The daily queues at supermarket checkouts grow on Saturday when women, many of whom have been out to waged work all week, have to plough through their housework on their so-called day off. Of course, those time-wasting queues lower staff costs. Clearly time is money—but it seems that it is women's time that ensures that other people, especially the captains of commerce and industry, make money.

Much of the work that women do is unremunerated and never enters the GNP, as that quantifies only goods and services exchanged for money. However, that unremunerated work, while it is not counted, is certainly counted on. The Government, in closing hospitals and many institutions that provided health care and other services, claim that they will be replaced by community care. However, it is not the community in general that does the caring but women who shoulder the extra burden of time-consuming, back-breaking and emotionally exhausting work for which the Government are refusing to pay. That shift from waged to unwaged caring is not quantified in official statistics, so no one knows just how much money women are saving the Government by picking up the pieces of the shattered welfare state. Again, women's unpaid work is counted upon but not counted.

Most women in waged jobs find themselves at the bottom of the pyramid. They are particularly exploited when they take on part-time work in order to have time for family responsibilities. Even those few women who secure well-paid jobs find that, once they become mothers, their lives too are shaped by the task of bringing up their children—the future labour force—and of caring for others whose work is considered more important than almost everything that women do, whether the women are professionals, cardboard box makers, or are fully occupied at home.

The work of women that is included in the GNP is based on a pedestal of unremunerated, uncounted work. Imagine how much work and responsibility falls on the women in the families of British Rail employees who in a recent accident inquiry revealed that they work a 12-hour day, seven days a week. There is not much chance of those men helping with the housework; all the burden falls on their wives.

It is almost always women who care for those who are ill or who have disabilities. As so-called farmers' wives, they tend kitchen gardens and livestock. They are market traders, shop attendants and bookkeepers in family businesses. They are often secretaries, typists and hostesses, as well as being wives and a status symbol for their professional husbands. It is women who ensure that the flowers are on the church altar and that schools have parent-teacher associations as well as volunteers to make up for education cuts by running jumble sales, mixing paints and coaching young readers.

Women visit ailing relatives and neighbours, especially when meals-on-wheels no longer roll up. Women work overtime to shield families and whole communities from the effects of racism and racist immigration controls, class prejudice, polluted food, water and air, and the economic, physical and emotional devastation of unemployment. None of this skilled, time-consuming life-giving but unwaged work of women is counted in the GNP.

The fact that women are statistically invisible as producers and service providers means that some economists have the cheek to label as marginal these workers without whose vital work society would grind to a halt. The failure to count women's unremunerated work in the gross national product results in a distorted picture of the economy and leads to faulty economic planning, which does not meet the needs of working people. The very same work enters national statistics when performed by those who are paid for their work, such as nannies, nurses, bookkeepers, housekeepers, agricultural workers, physiotherapists, chauffeurs, chefs, interior decorators—the list is almost endless. Endless too are the damaging effects of the monetary and statistical invisibility of the work of housewives. The fact that this work is unwaged and uncounted devalues women's waged work, too.

The many organisational, technical and other practical skills that women develop as housewives gain them little in the waged labour market. One exception to that involves the National Union of Teachers, which was my union for many years. The NUT gained one year's increment for every three years that women spent at home with their own children. This was recognition for some of the work of mothers who return to teaching. However, most of the time the housework women do either full or part-time—before they go to work work in the morning, after they return home at night and at weekends—is not considered work. Only when this unwaged work of women is officially quantified by widening the compass of the GNP will we even begin to know how much time and skill goes into the economy and the production of specific commodities.

I therefore present this Bill, which requires Government Departments and other public bodies to include in the statistics relating to the gross domestic product and other accounts the quantification of the unremunerated work of women—in both the formal and informal sectors of the economy—and to include that calculation in the gross national product.

There is growing international awareness of the need for recognition of the totality of women's contribution to the economy. According to the United Nations, women carry out two thirds of the world's work for 10 per cent. of the income, and own only 1 per cent. of the assets. In July 1985, the United Kingdom Government were represented at the United Nations world conference in Nairobi, Kenya and agreed "Forward Looking Strategies for the Advancement of Women", the final document of the Decade for Women. Paragraph 120—amended by delegates from Sierra Leone, Jordan and Uganda, along the lines put forward by the international wages for housework campaign—committed Governments to include women's unremunerated work in the GNP. The following November, paragraph 120 was singled out as one of the most important decisions of the Decade for Women and ratified by the United Nations General Assembly. My Bill would implement that decision.

Despite their enormous contribution, women are undervalued because so much of their work is unvalued and economically invisible. That has enabled the Government to get away with cutting maternity grants and freezing child benefit—the only money which many women can call their own. Adding up this work makes the unanswerable case that these benefits are rights for work done, not charities.

Economic invisibility keeps older women dependent on their husband's goodwill because, despite a lifetime of serving family and community, there are no pension contributions for unwaged housework. Many a divorced wife lives to see her ex-husband retire from the position which she helped him to obtain on a good pension, while her income is reduced to a bare minimum. The economic invisibility of most women's work has allowed the Government to inch nearer to workfare—the American version of the workhouse—which forces claimants into dead-end jobs to earn their entitlement to income support.

Mr. Speaker: Order. The hon. Lady has now been speaking for 10 minutes and should begin to draw her remarks to a close.

Ms. Gordon: Counting women's work would prove that every mother is a working mother and that some of them have two or even three jobs. Counting women's work would make women count by making clear that every woman, whether or not she does waged work, is nevertheless a working woman.

Perhaps the most unjust policy that economic invisibility has permitted is the poll tax, which is levelled at women who have no income. Despite women's enormous contribution, the Government are demanding more. These women will become institutionalised and further dependent on the goodwill of the wage earner. They will be institutionalised into an inferior, vulnerable and archaic position which will invite domestic violence. Women on income support, including mothers, will have 20 per cent. of the poll tax deducted from the household's survival money.

When all the work that women do is finally made visible in the GNP and other official statistics, no one will be able to continue to ignore the extent of dependence of the mighty institutions of the state, industry, commerce and every social organisation throughout the United Kingdom on women's voluntary and involuntary unwaged work.

Question put and agreed to.

Bill ordered to be brought in by Ms. Mildred Gordon, Mr. Tony Banks, Mr. John Battle, Mr. Tony Benn, Mr. Jimmy Dunnachie, Mr. Eric S. Heffer, Mr. John Hughes, Mrs. Alice Mahon, Ms. Marjorie Mowlam, Ms. Joyce Quin, Mr. Dennis Skinner and Mr. Nigel Spearing.

Counting Women's Unremunerated Work

Ms. Mildred Gordon accordingly presented a Bill to require Government departments and other public bodies to include in the production of statistics relating to the gross domestic product and other accounts a calculation of the unremunerated contribution of women; and to include this calculation in the gross national product: And the same was read the First time; and ordered to be read a Second time upon Friday 14 April and to be printed. [Bill 114.]

Opposition Day

[6TH ALLOTTED DAY])

Uprating of Pensions and Other Benefits

Mr. Speaker: We now come to the first Opposition motion, on the uprating of pensions and other benefits. I have selected the amendment in the name of the Prime Minister. Given that we are starting rather later than I had hoped, I ask Front-Bench spokesmen and Back Benchers to make short contributions.

4.7 pm

Mr. Robin Cook (Livingston): I beg to move,

That this House notes that this week pensions and other benefits are increased by 5·9 per cent. at a time when prices are rising by 7·9 per cent. and earnings by 9 per cent.; further notes that if the pension had been uprated since 1979 in line with earnings, under the formula introduced by the Labour Government, a married couple would this week be receiving an additional £17·55 p; records its deep concern at the plight of over half a million pensioners and other claimants who this week do not receive a single penny in uprating; and calls upon Her Majesty's Government to extend the full uprating to all pensioners and claimants.

I read daily that preparations are under way to commemorate in May the 10th anniversary of the Prime Minister's election, when she will exceed the time limit that Mr. Gorbachev has thought it prudent to impose as a maximum period for which any elected official can hold senior office in the Soviet Union—a prudent measure to prevent the abuse of power.

Six weeks later, on 13 June, we shall celebrate another 10th anniversary. On that date in 1979, the then Secretary of State for Social Security, who has now been translated to another place, announced to the House that pensions would no longer rise in line with earnings but would be pegged only to prices. That is not quite how he put it. He said that that was the minimum that the Government would do to the pension. If the right hon. Gentleman had been mean with the money, he was generous with the promises. He said:

"I should like to make it clear, however, that it remains the Government's firm intention that pensioners and other long-term beneficiaries can confidently look forward to sharing in the increased standards of living of the country as a whole."—[*Official Report*, 13 June 1979; Vol. 968, c.439.]

Mr. Dennis Skinner (Bolsover): A pack of lies.

Mr. Cook: My hon. Friend the Member for Bolsover (Mr. Skinner) characteristically commits the Government to rigorous scrutiny. I hope that he will forgive my saying that I am sure that the then Secretary of State meant every word he said. The sad thing is that the Government of which he was a member did not keep a single word of that pledge. Not once in the past decade have pensioners on the basic pension shared in the increased standards of living of the country as a whole. Every year under this Government they have been short-changed.

I wish to be scrupulously fair: it is not the case that pensioners have had no share in the increased living standards of the country. That would be unfair; they have been given a 2 per cent. share. That is the precise amount by which the basic pension has gone up in real terms under this Government, while over the same period average earnings have gone up by 24 per cent.

I heard the Minister for Social Security interviewed on the radio on Sunday, when he entertained me by saying that he was looking forward to this debate with relish in order to contrast the record of his Government with the record of the last Labour Government. There certainly is a contrast. In 10 years this Government have increased the basic pension by 2 per cent.; in five years the last Labour Government increased the basic pension by 20 per cent. in real terms. If that is the contrast the Minister relishes, I give him 10 out of 10 for bravado but one out of 10 for prudence.

Of course, the Secretary of State and the Minister have a well-worn alibi. I have not the slightest doubt that they have been rehearsing it all morning at the Department in front of the mirror to make it sound more convincing. The alibi runs thus: the basic pension does not matter all that much; what matters is the growth in pensioners' total income.

What makes that alibi so breathtaking, so bald that it would take away the breath of any honest jury, is that it rests on a system which this Government inherited from the last Labour Government. On 13 December the Under-Secretary of State, in a reply to a parliamentary question from me, confirmed that the largest single contribution to the growth in real incomes of pensioners was from the state earnings-related pension, designed by the last Labour Government, which has provided two fifths of the increase for which the Government claim credit. The irony is, of course, that the Government have spent the last four years doing the best they can to undermine SERPS and to make sure it does not make the same contribution in the next decade.

It is possible to measure how much the pensioner has been short-changed over the past decade by supposing that the statement made 10 years ago had not been made and that the pension had been uprated in line with earnings, as it would have been under the formula inherited from Labour. A married couple would this week have been receiving £17·55 more than they will get in their pension book this Friday. That is big money. It is very big money to those living on a pension. Yesterday I unveiled what a pensioner might get in a shopping basket for that money. It included a fresh chicken for a Sunday roast; half a dozen oranges, a source of fresh fruit; a packet of tea bags; a jar of instant coffee—even that is now a luxury to many pensioners; a pair of tights; a couple of bars of soap; a cheap brand of talcum powder; two stamps towards the TV licence. The really depressing feature about every item on that list is that nothing there is not likely to disappear within a week in a household of two. Without that extra income, all those items disappear from the weekly budget of that couple.

Mr. John Redwood (Wokingham) *rose*——

Mr. Cook: If I can just finish this point I will certainly give way to the hon. Gentleman.

The result is that that couple is left with a constant conjuring trick to make ends meet. This was perfectly expressed with complete understatement by Age Concern, Scotland, which said:

"Age Concern Scotland staff know of one elderly man who budgets by buying one big item every week. One week the big item is the washing up liquid, the next week toilet rolls. A loss of a couple of pounds per week for someone with this kind of budget is drastic."

Mr. Redwood: I am grateful to the hon. Gentleman. Does he not agree that pensioners have also benefited under this Government from income from savings, which has gone up dramatically; from the real increases in occupational pensions; and, for the poorest one fifth, from the substantial increase in income support and related payments, particularly for the elderly pensioner, which Conservative Members welcome and which far outstrips anything done in the 1970s?

Mr. Cook: Of course there have been increases. There have been increases in occupational pensions and, given that the Social Security Pensions Act 1975 was passed by the last Labour Government, we would expect that increase. If the hon. Gentleman looks up the figures, he will find that the bottom quarter of pensioners receive an average of £3·50 a week in occupational pensions. The second bottom quarter received an average of £10·50 a week in occupational pensions. Most of the income of the great majority of pensioners in Britain comes from their basic pension.

Mr. Robert Hughes (Aberdeen, North): Does my hon. Friend agree that if pensioners had received this week the pension increases that they ought to have received they would even have been able to afford a pair of the special long johns from Harrods that the hon. Member for Derbyshire, South (Mrs. Currie) suggested, when she was a Minister, they ought to wear to keep warm in winter?

Mr. Cook: My hon. Friend will have to wait until we receive the Department of Trade and Industry report to find out whether it will be possible for pensioners to obtain access to Harrods.

It is possible to measure the short change and the extent to which the Secretary of State had the money to provide extra for pensioners. If he had wanted to do so this year, he certainly had the money. Any doubt that he had the money is removed by a glance at the Government Actuary's report on the national insurance fund. In the financial year that ended last week, the Government expect to make a surplus of contributions over benefits of £2·5 billion. That, alone, is enough to treble this week's increase in the state pension. Nor is that an aberration under this Government. It is an inevitable consequence of benefits increasing in line with prices, although national insurance contributions increase in line with earnings. The Government have become so accustomed to running a surplus on the national insurance fund that the cumulative surplus has almost doubled during the last three years. By April 1990 it will stand at over £10 billion.

To put that staggering sum in terms to which Conservative Members can relate, it is big enough to pay for the Trident submarine programme. There is some reason to fear that that is probably what it is doing. Rather than pass on the benefit of the surpluses to pensioners by way of increased benefits, the Treasury is siphoning them out of the fund for its own use by reducing the Treasury supplement. This financial year—for the first time, I believe, since 1948—not a penny will be paid into the national insurance fund by the Treasury. Contributors are being conned, by accepting deductions from their wages in good faith, that they are paying for benefits to pensioners and other claimants, when in reality what they are paying for is to let the Treasury pocket money that used to be paid into the fund.

The reason why pensions have not increased faster than prices is not because the Government lack the money but because they lack the will. It would take some convincing to persuade most pensioners that this week's increase keeps pace with prices. The increase that pensioners will receive this week is 5·9 per cent., at a time when prices are rising at 7·8 per cent. Some of those prices, most of which are under Government control, are rising even faster. I refer to the increases in the price of gas, fares and water. All those increases have a direct impact on pensioners.

Mr. John Butterfill (Bournemouth, West): Will the hon. Gentleman give way?

Mr. Cook: I shall give way on this occasion, but as I am mindful of Mr. Speaker's injunction, it will be the last occasion on which I shall give way.

Mr. Butterfill: Does the hon. Gentleman accept that the underlying rate of inflation, if we exclude mortgage interest payments which most pensioners do not pay, is only 5·5 per cent. and that therefore the increase in pensions is above the cost of living of most pensioners? On top of that, most pensioners have some investment income, which has improved as a result of high interest rates.

Mr. Cook: We look forward with interest to the Social Security Bill 1990 in which we shall no doubt see the new re-rating of pensions to take account of the increased income from interest on savings. Many pensioners do not pay mortgage interest—that is reflected in the retail prices index—but they spend a much higher proportion of their income on food, fuel and the basic necessities of life. If we look at the increase in the price of those items in the retail prices index, we find that they are rising faster for pensioners than for anybody else.

Another measure that the Government have introduced which will have a direct impact on pensioners took effect only this week.

The introduction of charges for eye tests will hit pensioners harder than anyone else. Boots, which has a quarter of the market, is now charging £10·50 a test. Boots is the market leader, but some opticians are charging up to £15. The optician nearest to the House of Commons is charging £17·50 for an eye test. Even if we confine ourselves to a charge of £10·50, a pensioner would need to club together this year's uprating for four weeks to afford an eye check. There is one clear, inescapable consequence. Many pensioners will now not go for a regular check-up on their eyes, and as a result some of them will put their sight seriously at risk.

It is entirely fair for me to remind the Secretary of State for Social Security that eye-test charges were introduced this month, as he thought them up before his transfer to his present post. He was also in charge of last April's social security changes. I note that the Secretary of State's amendment to the motion invites the House to congratulate the Government on the

"simpler, fairer, more flexible system".

It is curious to describe the system as more flexible when it has resulted in all the extra allowances for special needs being abolished. The new, flexible scheme takes no account of claimants' needs, although it still makes rigorous searching scrutiny of individual claimants' means. It is curious to describe the system as fairer when the people who have been hit hardest are the most disabled, frail and invalid people who received the

[Mr. Cook]

allowances. They received heating allowance because they are housebound, they received diet allowance because they are chronically sick, and they received laundry allowance because they are incontinent. By definition, those who got most had the most to lose. Tens of thousands of them have already lost it all because the slightest change in circumstances triggers a review whereby they lose all the transitional protection they had last April.

Some people lost transitional protection because they were unwise enough to fall sick. One of the most distressing letters I have received in the past couple of months was from a resident of Midlothian who fell sick in October and transferred to sickness benefit. In February she came off sickness benefit because she was well again and she discovered that because she had been on sickness benefit she had lost transitional protection. Why had she received transitional protection? She had been receiving an extra allowance to pay the bus fare from Midlothian to Edinburgh to visit her elderly mother twice a week. Her mother is in a geriatric hospital where she will be confined until she dies. There is simply no way in which my correspondent can afford to make that trip on her new reduced benefit of £34·90 a week. Because she made the mistake of being sick, she is unable to visit her mother in hospital. Is that fairer? Is that more flexible?

Other people have lost transitional protection because, under the party of the family, they were unwise enough to take on increased family responsibility. In previous debates, I have drawn the attention of the House to the way in which a couple who have an extra child are entitled to an extra £10·75 addition in income support, but if they are on transitional protection that money is included in the transitional protection.

Since our last debate on the subject, an even worse case has been drawn to my attention. It relates to a single girl in Cheshire. Last April she was receiving £7 a week in allowances for her diet and health needs. At the end of April she gave birth to a child. She was given an additional £10·75 which wiped out the £7 in transitional protection but left her just a little better off as she was given an extra £3·75 a week net to feed the infant. In October the child died, her benefit was reassessed and the £10·75 was taken away, including the £7 she used to receive in transitional protection. She is now on a flat rate of £26·05. This girl has suffered an appalling personal tragedy. The grief and distress that she must experience should be understood by every Member of this House. The understanding that the Government have shown of her personal tragedy is to tell her that it has cost her her benefit. Is that a fairer system? Is that a more flexible system?

There is another example that I should like to share with the House. This very month the Secretary of State hopes to complete the proceedings on the Social Security Bill, which will force the unemployed into even more desperate efforts to find work. Under the Tory party, of course, some claimants have lost their transitional protection because they were unfortunate enough to succeed in their search for work. One case was brought to me by a citizens' advice bureau in north London.

Mr. Tony Favell (Stockport): What is unfortunate about finding a job?

Mr. Cook: If the hon. Gentleman waits, he will discover what is unfortunate about finding a job.

One claimant in north London—a person confined to a wheelchair—through great personal effort, was successful in finding a temporary job, for four weeks. What support did the Government give that disabled person as a demonstration of the virtues of independence and self-reliance? The support they gave him was that when he ceased his four weeks' employment and came back on to benefit he discovered that he had lost his transitional protection because he had been temporarily employed. That is what is unfortunate about his experience. If I may say so, it is a question not of misfortune but of deliberate Government policy. That person is now £4 a week worse off than he would have been if he had never bothered to seek work.

But perhaps the most remarkable contradiction between this Government's rhetoric and the reality of their benefits policy is that, under the party of the owner-occupier, some claimants have lost all, or nearly all, their transitional protection as a result of the rise in the mortgage interest rates, which is the Government's chosen way of fighting inflation. Disability Alliance has drawn my attention to the case of one of its members who was receiving attendance allowance—indicating, as the House will know, that he was severely disabled. Last April he was receiving £17 a week in transitional protection. As a result of the increase in the mortgage interest rate, his interest payments have gone up by £13 a week. His entitlement, of course, has been adjusted to reflect that addition, but every single penny of the £13 comes out of his transitional protection. He is left with additional mortgage expenditure but not an additional penny in benefit.

An interesting feature of that case is that last April a then Under-Secretary of State at the Department of Health and Social Security wrote to the Member of Parliament for this claimant, and ended his letter reassuring the MP by saying:

"I do hope that you will now be in a position to reassure Mr. F . . . that he will not be any worse off in April as a result of the changes."

Here we come to the greatest irony of all. The House will recall that when we debated the April changes we were assured repeatedly that 88 per cent. of claimants would be either better off or no worse off. I should like the Secretary of State to confirm that in calculating that 88 per cent., every one of the cases that I have drawn to the attention of the House in the last 10 minutes was counted. I should like to hear the Secretary of State try to explain to any one of those people that he or she was not a loser as a result of last April's changes. I invite the Secretary of State, or the Minister for Social Security—whichever one of them has the greater brass neck—to repeat to the House now that those people were not losers as a result of the "fairer, more flexible" system that was introduced last April. I cannot hear it from them; I am willing to hear it from any Conservative Back Bencher who voted for the measures that were introduced last April. I am bound to say that if no Conservative Member is prepared to argue that these people were not losers, we can conclude only that the 88 per cent. figure was a mischievous deceit practised upon this House and upon the public.

Not all the people who are on transitional protection have yet lost it. At the end of this week there will still be a minority drawing transitional protection. That is something of a mixed blessing particularly as this week

those who have managed to retain the transitional protection do not get a penny extra in benefit—that is 570,000 claimants, one tenth of all those on income support. By definition none of them got a penny last year either. For two successive years they have experienced a freeze in their income—two years in which prices have gone up by 12 per cent.

Many of those affected have written to me and my right hon. Friend the Leader of the Opposition. There is a common theme to the letters that they send us: disbelief that even this Government could treat them so badly. They demonstrate a touching and misplaced faith in the belief that the Government cannot let them suffer so badly. I have in front of me one such letter and I shall share only this one with the House. It says:

"I have been waiting desperately for this £2·50 rise as my money runs out on a Friday and I have to wait till Tuesday comes round again before I get my pension . . . as I have angina, kidney complaint and rheumatoid arthritis I am so cold all the time and gas is so dear, on top of all this I am also a diabetic . . . I cannot afford a proper diet as I never have enough money left and for some time I have been losing weight".

During the radio interview when I heard the Minister perform I was astonished to hear him describe the situation in which that correspondent finds himself as a "soft landing". That suggests that he does not have the remotest grasp of the bleak despair of those half a million people on transitional protection. He is not alone in his incomprehension. The last time we had social security questions one Conservative Member asked of the Parliamentary Under-Secretary whether he was really satisfied that claimants had been warned sufficiently far in advance in order to make other arrangements once their benefit went down. The Under-Secretary replied that all those who were not having their benefit uprated and who were on transitional protection:

"will have been informed well in advance."—[*Official Report*, 6 March 1989; Vol. 148, c. 588.]

Perhaps the Secretary of State can tell us how on earth those claimants are supposed to make other arrangements. What are they supposed to do? How are they supposed to cease to be retired or cease to be disabled? How are they supposed to cease to suffer from arthritis or from angina?

One reason why it is inexcusable for Conservative Members not to understand the plight of those claimants is the letter which I just read to the House, which was sent from a Conservative constituency. I have received many such letters from Conservative constituencies, such as Harlow, Torquay, Romford and Brentwood. Every Tory Member of Parliament represents at least 1,000 claimants who, this week, will receive not a penny in uprating.

Are those Conservative Members going to leave it to Opposition Members alone to speak for their constituents? Are none of them prepared to speak for those who find themselves in that trap? Are none of them—I appeal to what motivates them most when they vote—more afraid of what their constituents might do to them than what their Whips might do to them? If there are any such people on the Conservative Benches I appeal to them to join us in the Lobby tonight and to vote for a simple act of justice for those bewildered and desperate pensioners who, once again, this week are cheated by their own Government.

4.33 pm

The Secretary of State for Social Security (Mr. John Moore): I beg to move, to leave out from "House" to the end of the Question and add instead thereof:

'notes that it is now one year since the Government introduced a simpler, fairer, more flexible system of income-related benefits and that the uprating which took effect yesterday added a further £2·2 billion to spending on social security, now running at £51 billiion a year; and congratulates the Government on the success of its economic policies which have enabled it not only to fulfil the pledge to maintain the value of the basic retirement pension in line with price movements but also to use the new system of income-related benefits to direct additional help this year of over a quarter of a billion pounds beyond the normal uprating to those in greatest need.'.

The Opposition have produced a motion that I fully understand in the sense that it seeks to challenge fundamentally the adequacy and the methods of the benefit provisions that were introduced a year ago. They are to be debated in part today. I have vivid memories going back beyond the past 10 years to the period when the Labour party had the misfortune to seek to govern our country.

Mrs. Margaret Beckett (Derby, South): What about the pensioners?

Mr. Moore: I shall come to the pensioners later in considerable detail.

That the Opposition should table this motion despite their record of incompetence means that I must start my speech by reminding the House of why I am able, as Secretary of State, to spend record sums of money in our country's history on social security—the increases this month attest to that—and how miserably Socialism's record compares with our success.

We were, and will continue to be, re-elected to office because of the absolute inability of Labour Members to understand the reasons for our success. *[Interruption.]* I will take my time and make the points I wish to make. Opposition Members have tabled the motion and if we have the usual vulgar and irrelevant sedentary interruptions that we get from them, that will only take time out of the time available to them in the debate.

Social security needs, above all—I should have thought that this view was shared by Members in all parts of the House—wealth to be able to care. Without economic success, none of our achievements, or the understandable ambitions and aspirations of the hon. Member for Livingston (Mr. Cook), would be possible.

The uprating this year increases our spending on social security to £51 billion That is not simply an increase of £2 billion over the previous year, for it conceals additional increases because of the happy reduction in unemployment. That adds about £1·6 billion to the overall increase in my spending.

That record is not just for this one year. It reflects a decade of achievement in which we have seen increases in social security spending go up by 33 per cent.—*[Interruption.]* I think I know the point that the hon. Member for Newcastle-under-Lyme (Mrs. Golding) is making, albeit from a sedentary position. Would she care to rise and interrupt and make it in more detail? I should be happy to let her do so, and I would point out in reply that, even taking unemployment out of the data, the increase would still have been 27 per cent.

[Mr. Moore

In that decade of achievement, the priorities of the Government have been clearly shown by their spending on social security. We have seen a pattern of increase as a proportion of our overall public expenditure from 25 per cent. in 1978-79 to 31 per cent. this year. That is a sign of the added significance that we place on social security spending compared with Labour Members when they were in office, and the contrast in that improved position within that increased expenditure is telling in terms of social security priorities.

Mr. Ted Rowlands (Merthyr Tydfil and Rhymney): If there has been such tremendous economic success and the Chancellor has a surplus of £14 billion, why will pensioners on £47·90, many of whom live in my constituency, not receive a penny increase in the next financial year because the Government are clawing back the whole of the transitional allowance? The same will apply the following year in relation to the £1·80. Surely the Government could have afforded to ensure that such pensioners got a real increase.

Mr. Moore: I shall come to the question of pensioners and to the transitional point to which the hon. Gentleman refers. It is an important issue which I shall cover in detail. I wish first to contrast the relative impoverishment of the areas that Labour Members considered, rightly, to be important when they were last in office with the decade of achievement under the Conservatives. To do that I will take only two issues, the disabled and families with children.

The achievements of the last Labour Government on behalf of the disabled were considerable. They increased spending in real terms by 29 per cent.—they increased spending each year in real terms on the disabled by £220 million—and I recognise that achievement. But that was as nothing compared with the achievement of the last decade, during which expenditure on the disabled has increased in real terms by 90 per cent., or an annual average increase of £390 million.

That is the first contrast that I think the House will acknowledge. The second is about families with children, and I am talking about spending in real terms.

Mr. Robert Hughes: Will the right hon. Gentleman confirm that one change that the Government have made applies to people who apply for attendance or mobility allowance? Does he agree that when such an application is granted the money will now be paid not from the date of the claim, if it takes time to process through appeal, but from the time it is granted? Why are people being cheated out of this money, out of disablement help that they need desperately?

Mr. Moore: The position on claimants is unchanged from that under the previous Government. I shall shortly go into more detail about the disabled.

I should like to look at the second area of major social security expenditure because the motion refers to all benefits. That second area is expenditure on families with children. When Britain last had the misfortune to have a Labour Government expenditure was reduced in real terms over five years by 7 per cent. I am sure that the then Labour Government had no intention of doing that, but they were not able to govern with economic success.

In the last decade we have seen an increase in expenditure on families with children of 27 per cent. In addition to this year's uprating, our economic success has allowed us to spend an extra £200 million on a poorer pensioner package which is welcomed by all hon. Members. I shall deal with that later. Again because of our economic success, my right hon. Friend the Chancellor was able to announce in his Budget the abolition of the earnings rule for pensioners at a gross public expenditure cost of £375 million. Everybody welcomed that. He was also able to announce because of our economic success the completion of our national insurance contribution changes. That will especially help the lower paid and will cost £2·8 billion in a full year. I could continue to deal with our record, but I think that I should answer the first Opposition charge.

Mr. Dennis Turner (Wolverhampton, South-East): People outside will treat the Secretary of State's contribution with absolute incredulity. Thousands of my constituents are finding it impossible to live through the week. How can the Secretary of State say that the Government have been kind and generous when people know that they cannot live from week to week? This week a lady in my constituency threatened suicide because of water bills pouring through her letter box. She has no possibility of paying them. The Secretary of State's speech is no answer to the real struggle that our people face day by day, in Conservative as well as in Labour constituencies.

Mr. Moore: I must try to proceed. I have taken more interventions than did the Opposition Front-Bench spokesman. I have heard statements and not questions.

Mr. Geoffrey Lofthouse (Pontefract and Castleford): Will the Minister give way?

Mr. Moore: No, because, as I have said, I have given way more than the Opposition spokesman.

I have tackled the Opposition's first basic charge about the adequacy of provision. I shall now consider the challenge in the motion to the methods of the new system and our transition to it. Will the Opposition seek to argue for a return to the old, unloved supplementary benefit and single payments system? As they well know, it had flaws which they recognised. It was complex, difficult to understand, extremely intrusive, and absolutely inflexible. Hon. Members did not like the fact that, for example, a family earning £140 a week could be worse off than a family earning half that amount. None of my hon. Friends —I am not certain about Opposition Members—would welcome the return of the abused single payments system under which 80 per cent. of the money went to about 10 per cent. of the claimants.

This is the first anniversary of improvements that are already in. The first of those is income support. Nobody would deny that there is now a simpler system that is faster for claimants. That is important for those who claim and those who advise claimants because it means that they can understand the advice. Those who sought to try to help people through the old supplementary benefit system were not impressed by the complexities of the structure.

The new system is much faster. We are handling claims within five days, rather than nine days, as in March 1988. That is important for those who seek help. The system is also producing—again, I should have thought that this

would be welcomed by Opposition Members if they were in a more serious mood—an 80 per cent. success rate for the claimants compared with 73 per cent. previously.

The error rate—another important feature of a system designed to help people—has improved from 12 per cent. to 8·3 per cent. Furthermore, as I illustrated last year and in this week's benefits improvements with regard to child premiums, it is easier to target help more accurately as a consequence of the new income support system.

Family credit, again, is infinitely better than family income support. A total of £422 million has been spent in the first year in comparison with £180 million on family income supplement. I should have thought that that would be welcomed by hon. Members on both sides of the House. I should also have thought that the House would be welcoming the fact that payments are averaging £25 a week. The expenditure percentage take-up so far is too low; it is 65 per cent. and I am launching a major new campaign to increase it. But the expenditure is more than double the FIS of a year ago.

I should have thought also that the House would wish to support the changes in the disablement arrangements. Last year, under the old scheme, 70 per cent. of long-term sick and disabled claimants were getting additional payments averaging £5·34 per week. I will not lay too much stress on the fact that under Labour the figure was not 70 per cent. but 38 per cent. Now all 270,000 are getting the disability premium, which is running at £13·70. I should have thought that that would be welcomed by hon. Members on both sides of the House.

I should have expected the House to welcome also the fact that, while under the old system 4,500 severely disabled people were getting domestic assistance additions averaging £6·35 per week, now 7,000 are getting severe disability premiums at £26·20. Again, I should have thought that that was something to be welcomed by all hon. Members.

Beyond that, the new system is much more flexible. My hon. Friend the Minister for Social Security and I said that we would monitor the system and seek to change it if necessary, and we have been able to do so, as all hon. Members know, not just last year but three times this year.

Mr. Martin Redmond (Don Valley): I am grateful to the Secretary of State for giving way. Will he accept the simple truth that there are many elderly disabled people worse off under his regulations? What steps will he take to ensure that those people are brought back up to standard?

Mr. Moore: I always listen to the hon. Gentleman. I was trying to illustrate that in terms of the new versus the old system there have been enormous improvements for the disabled. I said, as did my hon. Friend the Minister for Social Security, that we would watch, monitor and seek to improve the system. We have already made major changes in a relatively short period and I will continue to watch the area to which the hon. Gentleman particularly draws my attention.

I will come in a moment to pensioners, but I think it right first to address the point made by the hon. Member for Livingston about transitional protection. As he well knows, one cannot change any system in such a way that most will gain or be unaffected without some doing relatively less well. The Government promised in 1986—we have the economic success to fulfil our promises—that we would protect income support recipients from cash losses during the changes. Clearly, that protection reduces as entitlement rises with each uprating. If it did not, that would mean keeping the old system for ever with all its inequities. The hon. Member for Livingston has mentioned quite a lot in the media, and in the House briefly today, the nature of the old system of additions. Hon. Members should remember—sometimes people forget—that something like 40 per cent. of income support recipients were not in receipt, under that incredibly complex system, of additions of any kind. Furthermore, the average addition was running at £3·57 and, although this is not mentioned very often, the whole of expenditure on the heating addition of more than £400 million was put into the income support rate.

However, I recognise the point which the hon. Gentleman has made and I can confirm to the House, because I think it right to do so, that 3·25 million income support recipients will receive their uprating in full, over half a million will receive partial increases and, as he rightly said, nearly 600,000 will receive no increase at all. But the vast majority of claimants on income support——

Mr. Favell: A great deal has been said about the transitional provisions. However, but for the transitional provisions, would there not have been a two-tier system for people living in identical circumstances, old claimants and new claimants? That would be unfair and wholly unacceptable to many hon. Members and certainly to new claimants.

Mr. Moore: My hon. Friend is right. I was trying desperately to be non-political and helpful to the Opposition.

I remind the Opposition of what happened when they last attempted to make changes in the social security system; I think it was in 1976 when they were going through another process with the International Monetary Fund. Memories of those days are clear. *[Interruption.]* I will take plenty of time to make the point. Obviously the Opposition have memories of that time when they were trying to change the system from family allowances and child tax allowances to child benefit. I am not now talking about the £1·4 billion of which they cheated families with children in one year. In the face of economic failure they also had to reduce provision in cash terms by £300 million.

I have been led astray and I shall go back to the point that I was seeking to make, which was that the vast majority of claimants on income support—87 per cent. —will have an increase. As my right hon. Friend the Prime Minister said today in the Chamber, 98 per cent. of pensioners will get an increase, as will practically all couples with children.

Mr. Robin Cook: Before the Secretary of State leaves that passage, will he answer the question that I put to him in my speech and confirm that every single one of the cases that I described, who have lost transitional protection in the past year, would have been counted in the 88 per cent. that he claimed last April would be no worse off as a result of the changes?

Mr. Moore: I said then, and I say again, that it is impossible without detailed notice of all the cases concerned to answer precisely. I am assuming, of course, that they were included. I will look at the individual cases; I always do. Of course, I will come back to the hon.

[Mr. Moore]

Gentleman, as I always do, but I will not go into a detailed commitment on those cases now. I cannot possibly do so without examining the details.

I shall go on to deal with pensioners, on whom the hon. Member for Livingston based most of his speech. I thought that the hon. Gentleman classically fell into the Socialist trap. It was a perfect illustration of the way in which the Opposition seek to argue the issue. They are obsessed with only one part of the pension equation—the level of the state retirement pension. I shall give sufficient illustrations for the House to understand the comparisons. For pensioners the true measure of economic well-being —no doubt the hon. Gentleman thought I might say this —is their total income. That is why the Government's approach throughout this decade contains two vital elements, not one.

The first is our pledge to increase pensions in line with prices to provide a secure foundation for income in retirement. The second is to pursue policies to keep inflation under control to safeguard the pensioner's income from other sources. *[Interruption.]* I shall illustrate the success in a moment. The comparisons should shock Opposition Members. The success of our policy versus the failure of Labour's promise is a fact of history that I shall illustrate. *[Interruption.]* If Opposition Members think that Labour Governments are utterly irrelevant, I cannot say that I disagree with that concept. But they have to learn to live with the reality of what they sought to do when in office.

I want to consider first the relative record of the way in which pensioners lived under two Governments, Labour and Conservative, remembering that we have been happy to look after 1 million more pensioners, but still our record is outstanding. Throughout our period of office the growth in net income has averaged 3 per cent. per year to produce a total increase in net income of 23 per cent. versus a miserable 3 per cent. in total throughout the whole Labour period of office. Secondly, my hon. Friends the Members for Bournemouth, West (Mr. Butterfill) and Wokingham (Mr. Redwood) were very conscious of the role of savings.

What an appalling record there was under Labour. Throughout their period of office savings lost their value. *[Interruption.]* Those who are denying the role of savings for the pensioner will get a bigger shock at the next election. Under Labour, savings went down by 3·4 per cent. per year. In all they lost 16 per cent. of their value throughout the Labour period in office. For the eight years to 1986—we only have figures until then—savings increased by 7 per cent. per year, or 64 per cent. in all.

I saw the hon. Member for Livingston on television yesterday with wonderful charts, talking very properly about how pensioners should share in our prosperity. Let me remind him of the reality of sharing under Labour and what happened to the pensioner then. The hon. Gentleman talked on television yesterday about the pensioner needing to share in a successful growth of earnings and the economy. Let me tell him what happened. I shall give him exact comparisons.

In comparison to the average earnings of all manual workers in 1974 the pensioner was receiving 63 per cent. —*[Interruption.]* I will come to the Conservative figures in a second. Hon. Members will not like them. Between 1974 and 1979 the pensioner saw his percentage of the average manual worker's income go down, not up, from 63 per cent. to 60 per cent. Was that sharing in the national earnings and prosperity? That was the price of Labour's failure.

Since then, the pensioner's share has gone up, not from 60 per cent. to 63 per cent., but to 66 per cent. I can see Opposition Members on the Front Bench nodding and chatting. No doubt they are saying, "Of course, he is now arguing about the average pensioner." Let me give them other figures that they have not heard—the figures for those who have no income other than state benefits and their state pension income. What happened to them under the five years of Labour government? Their income went from 32 per cent. of the average earnings of all manual workers, not down happily, but up by 1 per cent. That was the achievement of Labour. Under the Conservative Government their income has gone up, not by 1 per cent., but from 33 per cent. to 37 per cent. That is what is called sharing in the prosperity of the rest of the community.

Mr. Robin Cook *rose*——

Mr. Moore: No; I have already given way. This is an abuse. If the hon. Gentleman will sit down, I shall give him the figures.

Mr. Cook: Those figures are wrong. They are fabricated.

Mr. Moore: I object. I shall now repeat carefully and precisely the figures that I have obtained from my officials. There are two groups of figures. First, would the hon. Gentleman like me to repeat the figures for the average pensioner, which he seemed to accept, or does he just want me to give him the figures for the pensioner who has no income other than state benefits? I shall repeat the figures, which are the figures obtained from my Department—[AN HON. MEMBER: "For what years?"] I will give the precise years. They are the latest family expenditure survey data because, of course, that is what I bring to the House. I repeat that a pensioner with no private income, whose only income is from the state, through his state pension and benefits, in 1974 would have received in comparison to the average of all manual workers 32 per cent. I acknowledge that by 1979 that had gone up to 33 per cent. By 1986, the latest figures I have from the FES data, it was up to 37 per cent.

Mr. Cook: No.

Mr. Moore: It is no good the hon. Gentleman saying no.

Mr. Cook: I am grateful to the Secretary of State for giving way. I have before me a table prepared by the Library's statistical section which I believe is accepted by hon. Members on both sides of the House to be a source of impeccable objectivity and reliability. I have a copy of the table of figures from which the Secretary of State is quoting. The figures show that the Secretary of State was correct with regard to a married pensioner between 1974 and 1979. However, the figures do not rise between 1979 and 1989. They actually drop from 32·6 to 26·1 per cent. between 1979 and 1989. Those are figures produced by the House of Commons Library. I invite hon. Members to question whether the statisticians who advise hon. Members on both sides of the House can be relied upon better than the Secretary of State.

Mr. Moore: These figures come from my Department. They were obtained from the economic advisers office. The hon. Member for Livingston knows full well that I do not use data other than that which has been placed in the House of Commons Library. I will consider the figures to which the hon. Gentleman referred. However, I repeat that the figures in my possession to 1986, the latest figures available from the latest thorough FES data, take the figure up to 37 per cent.

Mr. Max Madden (Bradford, West): On a point of order, Mr. Deputy Speaker. The figures given by the Secretary of State have been challenged by my hon. Friend the Member for Livingston (Mr. Cook). The Secretary of State says that he will reconsider the figures. Will the Secretary of State give a clear commitment that the Minister for Social Security, when he replies, will try to clarify the position so that the House and pensioners outside this place, who know very well what——

Mr. Deputy Speaker (Mr. Harold Walker): Order. Mr. Moore.

Mr. Moore: Of course that was not a point of order. I did not retract one iota of what I had said. The hon. Member for Livingston was talking about Library data. I have not seen those figures—*[Interruption.]* I hope that the hon. Member for Livingston will contain himself. The figures to which he referred relate to 1989. The hon. Member for Livingston may not be aware that the latest full FES data relate to 1986 and it was on the basis of those figures that I was giving the full, accurate data. I stand by that data because it reflects the latest full data which show an accurate comparison.

I want to illustrate the improving position in society. The hon. Member for Livingston quite rightly drew attention, as did my hon. Friend the Member for Wokingham, to the position of pensioners in relation to the poorest in society. The hon. Member for Livingston neglected to draw the attention of the House to the fact that in 1979 a total of 38 per cent. of pensioners comprised the bottom one fifth of the population. Happily today, only 24 per cent. of pensioners occupy that position. There has been a significant improvement in their relative position.

I agree with my hon. Friends and with Opposition Members that that is not enough. I am not satisfied and that is why I have brought forward a poorer pensioner package which will increase considerably the position of many pensioners in the autumn. *[Interruption.]* I wonder whether the hon. Member for Livingston could possibly pay attention to me for a moment because I want to correct what I know he would want me to correct, which are one or two unfortunate inaccuracies which he made in a radio interview on 10 April in the "Today" programme.

I fully understand that it is not always easy to keep all kinds of figures in mind at any one moment, but the hon. Member for Livingston referred to the increase as a token increase, going only to those on income support, only to those who are over 75. I must remind the House that it is not a token increase. It goes to 2·6 million people including approximately 1·4 million who are above income support level who will receive help in the form of housing benefit. It also includes 340,000 disabled people and, within the income support group, it includes 1·22 million pensioners on income support. That is not an insignificant number, as I am sure hon. Members on both sides of the House will appreciate. Therefore, many couples over 75 can see increases this year of more than 11 per cent.

Mr. Lofthouse: Will the Secretary of State give way?

Mr. Moore: Mr. Speaker invited us to be brief and I have answered many interventions. I want to finish my remarks now.

The date 11 April is an anniversary of which the Government can be proud. Our system for delivering benefits to the most needy had fallen into sad disarray. It was outdated, inflexible, unfair and bewildering in its complexity. We tackled that problem and overcame the nonsenses of the past. But Britain's prosperity, which the Government's policies have fostered, has given us the resources to do far more.

Mr. Lofthouse: Will the Secretary of State give way now?

Mr. Moore: I am trying to finish, as the hon. Gentleman is aware.

We have been able to protect the poorest against the impact of change without cash loss and we are using the improved system to direct still further help, flexibly and surely, to where it is most needed. We are doing all that on top of a massive commitment of resources to social security which is higher now, as all hon. Members have acknowledged, than ever before in our history. That is the surest testament to our economic success, based on capitalist principles of market enterprise. Economic success is at the heart of our more generous provision. It is a heart with the strength to care. I urge the House to support the Government's amendment.

5.5 pm

Mr. Jack Ashley (Stoke-on-Trent, South): The difference between the Secretary of State's speech and reality shows that he lives on a different planet. It was unbelievable to hear the right hon. Gentleman make such claims. First, he said that he was trying to be non-political and then he peppered his speech with a series of party political points, not many of which were valid. He also failed to respond to the challenges of my hon. Friend the Member for Livingston (Mr. Cook), in particular the challenge about the 88 per cent. of people who will be better off or no worse off. The Secretary of State fell at that fence. That was his Becher's Brook.

The Secretary of State also made the mistake of claiming that the Tory party will be re-elected because of its policies on social security. That is the last thing that the Tories would be re-elected for. Social security is one of the Government's many Achilles heels. They have failed abysmally.

The truth underlying this debate is that Ministers have deliberately tried to change people's perceptions of social security. To those in desperate need, social security used to be a reassurance that our civilised society would not desert them. That was very important for them. They thought that it would ease their poverty, edge them away from disaster and lend a friendly and dependable hand in times of need. That does not apply any more.

The Government have turned social security into dirty words. They have sullied compassion and scoffed at what they call the "dependency culture". If anything makes me sick, it is the sight of well-heeled politicians complaining

[Mr. Jack Ashley]

about the poor. The miserly uprating of a miserable system of benefits is one of the disgraceful aspects of that despicable attitude.

One would expect the Government's aggressive and parsimonious approach to be softened when they dealt with disabled people. However, that does not apply with this Government. Disabled people cannot stand on their own feet and their problems cannot be attributed to lack of will or enterprise. However, they have also become the targets of Government marksmen, the Ministers who are picking off the poor. Those same Ministers are boasting to the country that the Government have a £14 billion Budget surplus.

Disabled people were not included in the social security review. The Secretary of State promised them a review of their own when the Office of Population Censuses and Surveys studies are completed later this year. However, although they were not included in the review, they were greatly affected by the social security changes as no fewer than 75 per cent. of disabled people rely on social security.

The Government have boasted of their generous increase in money for disabled people, but individual disabled people are little better off. The main change has been that more disabled people are claiming their benefits. When the Minister makes his grandiose claims, he is misleading the House because individual disabled people are not better off. More disabled people are applying for benefits which they badly need because of the squalor into which they have been plunged by the Government.

The Prime Minister and the Secretary of State claim that there have been significant increases in the mobility allowance. However, increases in petrol and other costs for cars have been even greater. Therefore, that is a bogus claim. The basic fact is that many disabled people have lost out as a direct consequence of Government policies.

When the Secretary of State talks about flexibility, he is talking nonsense. Disabled people have lost flexibility as a result of changes imposed by the Government. They have lost individual help. The most severely disabled people now have to turn to the independent Disabled Living Foundation, which provides handouts, not payments as of right. It is outside the state system. There is no right of appeal. People must accept the decisions that are made. Where else does one have such a system in a civilised society? Moreover, the system receives inadequate publicity.

My hon. Friend the Member for Livingston mentioned transitional payments in his eloquent and splendid speech, and he was right to do so. The Secretary of State was wrong to dismiss worries about transitional payments. Ministers made a clever move when they introduced transitional payments because they promised that there would be no immediate loss of benefit. Some innocent disabled people believed that assurance, which gagged the protests and held back an avalanche of complaints when the changes were first made.

It is only now that transitional payments are being understood. Prices are soaring and those on transitional payments have no overall increase in income. There will not be any such increase until income falls to the level that the Government deem appropriate, when it will be much less than it was in the first place. That is the check of the transitional payments. My hon. Friend was right to attack that. The scheme is a fundamental error. The real hurt will come later this year. Incomes will be frozen while inflation soars. What kind of Government can hit the disabled in that way while at the same time boasting of their great economic success? The Secretary of State referred to "economic success" at least four times. How can he boast about that and at the same time hit the severely disabled in this way? It is disgraceful.

What hope do disabled people have for the future? They did have hope for the future, but they were told to wait for the completion of the OPCS survey when the Government would respond to their plight—and some plight it is. When people become disabled before retirement, they have a fearful time under the present Government, as Labour Members recognise. They have only a one-in-three chance of getting a job. On average, their income is only half that of an able-bodied person, and that was before the social security changes which the Disability Alliance, accurately quoted by my hon. Friend, estimates has made 1 million disabled people worse off. They are the people we are speaking about today.

When the Minister for Social Security replies, he should tell us what has happened to the long-awaited promised review for disabled people. It is a punctured balloon. In a letter to Ian Bruce, the director general of the Royal National Institute for the Blind, on 27 February 1989, the Minister said:

"However, it would be wrong to assume at this stage that we will proceed to a review on the same lines as the social security reviews in 1984-85; that might well delay things unnecessarily. For that reason, I don't see much purpose in our discussing the terms of reference and composition of a review team."

Some letter that.

We do not know what will happen. Disabled people have been waiting for the review, but it may not be a full one. I do not usually make forecasts in the House because they are difficult things to make, but I shall make a forecast now of what will happen. There will be a snappy Civil Service investigation, done by people who are not disabled and have no experience of disabled living. The Minister will make minimal and inexpensive changes. The long-awaited additional costs allowance will not be forthcoming even though the Social Security Advisory Committee, agreeing with all disability organisations, recommended that the first step should be help with additional costs. I am putting down these markers for the Minister to answer tonight. If the review does not confirm my forecast I shall stand up and withdraw it.

I forecast that Government energy will be devoted not to helping all disabled people but to encouraging occupational and private schemes for the better off and the privileged. Will the Minister intervene now and deny that? If he does not, he should do so when he replies.

Contrary to what was said a few moments ago, we shall have a two-tier Britain. That will be the Government's epitaph. They have already achieved that in many areas. The Health Service will be the next immediate target, and a quick Bill on disability will finish off the process before the next election. The message to the people of Britain is: "Do not be disabled if you are also poor, at least while the present Government are in office."

5.18 pm

Mrs. Marion Roe (Broxbourne): From experience gained in my constituency through contact with many elderly people, there is no doubt that the 1980s have

witnessed a sustained and substantial improvement in the living standards of most pensioners. Sound economic policies and a realistic social policy have been the key to that important change. The essential safeguard for pensioners' living standards will always be a growing economy, able to pay for the services and benefits that the elderly need, coupled with the firm control of inflation to protect pensioners' savings. The policies of the past 10 years have helped pensioners on both counts, spreading greater prosperity to more pensioners *than ever before.*

Opposition Members are eloquent in their commitment to pensioners but as the history of the Labour Government shows—and as was confirmed last night in the speech on economic policy by the right hon. Member for Islwyn (Mr. Kinnock)—their policies could never deliver the sustained and vigorous growth needed to fulfil all their grandiose pledges. In short, there was plenty of commitment, but no cash.

The present Government, by contrast, are determined to help pensioners and have the policies to do so. Today, Britain spends £23 billion on caring for our elderly people, which is more than is spent on either defence or education. The revival of the British economy has enabled the Government to raise spending on all forms of benefits for the elderly by almost one quarter in real terms since 1979. Despite all the nonsense that we hear from members of the Labour party about Britain lagging behind our European partners, it is instructive to note that the United Kingdom spends 9·6 per cent. of its gross domestic product on care for the elderly—a proportion exceeded in the European community only by France and Denmark.

It is not sufficient to measure any Government's record on care for pensioners solely in terms of overall expenditure levels. The system of support for the elderly should also be fair, simple, and easy for claimants to understand. Above all, it should get the help to those who need it most. The social security system which we inherited from the Labour Government—and which had developed piecemeal over almost half a century—failed on all those counts. The reforms that came into effect last year dramatically simplified and modernised the social security system. The service to the public has improved and both the time taken to process claims and the error rate in assessment of entitlement are down.

It was inevitable and necessary that the reforms would create some net losers. The alternative was to perpetuate many of the manifest weaknesses and inconsistencies of the old system, at huge cost to the taxpayer and to the most needy. No meaningful reform that is affordable, fair and brings extra help to those who need it can make all claimants better off. However, transitional payments ensure that no one loses out in cash terms.

If one accepts the logic of the 1986 reforms, one must also acknowledge that as benefit levels rise transitional relief should disappear. Only a tiny proportion of pensioners—about one in 50—will see no increase in income support levels after yesterday's upratings, due to withdrawal of transitional support. Similarly, more than one in nine claimants in the other groups targeted for extra help by the 1986 reforms—the sick and disabled, lone parents, and couples with children—will receive increases. The vast majority will receive the full uprating. Following last year's reforms, the social security system is providing more help to those who need it most more quickly than ever before. Crucially, it is doing that far more efficiently and with far fewer damaging consequences for the rest of the economy now that we have done away with benefit withdrawal rates of more than 100 per cent.

Current preoccupations with the first anniversary of implementation of the reforms should not obscure a remarkable development in the last few years—the way in which a growing number of pensioners rely only to a limited extent on the state for their pensions and benefits. Thanks to the spread of personal and occupational pensions, savings and home ownership, eight out of 10 pensioners receive income from savings or from their own pensions. Thanks to the revitalisation of the economy and to policies which have reduced inflation to less than one third of the peak that it reached under the Labour Government, pensioners' private incomes have risen well ahead of the growth in earnings. In the seven years to 1986, for example, pensioners' real incomes from savings and occupational pensions rose by a massive 60 per cent. Opposition Members find it difficult to grasp that what matters to pensioners is the growth of their total incomes, as was mentioned by my right hon. Friend the Secretary of State, not merely benefits and the state pension but earnings and income from savings and private pensions. Typically, Labour Members think that all pensioners are totally dependent on the state. In reality, the majority have savings and private pensions, and most pensioners' standard of living is higher than ever.

Mrs. Beckett: Perhaps the hon. Lady did not entirely follow the point made by my hon. Friend the Member for Livingston (Mr. Cook), when he pointed out that Labour, far from being unaware of the increased prosperity of many pensioners as a consequence of occupational schemes and of the state earnings-related pension scheme, actually brought those advantages into being. Under the present Government, they are being cut back so that in a few years pensioners' income growth will be substantially reduced.

Mrs. Roe: My experience is that pensioners feel that they are much better off than they have ever been, and that relates entirely to my point concerning savings and private pensions.

Since 1979 pensioners' total incomes have grown twice as fast as those of everyone else and five times faster than under the Labour Government. The modernised and reformed social security system brings more help to pensioners in greatest need. Last November's announcement of an extra £200 million income support will be particularly welcome to those elderly pensioners who never had a chance to participate in personal or occupational schemes or in SERPS.

The Labour party's extravagant and voluble compassion is nothing without policies to deliver sustained economic growth. The Government's record shows that a strong economy benefits everyone. The Labour party would be well advised to take that lesson to heart.

5.27 pm

Mrs. Llin Golding (Newcastle-under-Lyme): I bring to the attention of the House, and to the Secretary of State especially, the case of a 79-year-old woman who came to my advice bureau the other week. She entered the room very breathless and obviously upset, but with a determined expression on her face. She is one of the many working

[Mrs. Llin Golding]

women of north Staffordshire whose lungs have been damaged from breathing the industrial pollution which previously existed in the Potteries.

That lady, who had known her fair share of low pay and hardship, said to me in a quiet, firm voice, "I have come to tell you of the plight of many of the pensioners where I live. They will not come to see you because they no longer believe that the Government will listen to what they have to say, so I have come for them. Many of us received little or no increase in our pension this time. I myself received nothing. Because of my health, I cannot do much housework or my laundry—I have to pay someone to do that, and all the heavy work. Every week I carefully portion out my money into separate piles so that I do not get behind with any of my payments, and so that I do not owe anyone anything, which would be a dreadful thing to do, but I have been finding it very hard to manage and I cannot go on any longer. I used to have four pints of milk a week—now I have two. I used to have two loaves of bread a week—now I have one. For many months I have been unable to afford fresh fruit. Occasionally I buy a tin of fruit, such as apricots, which lasts me a number of days. I was looking forward to an increase in my pension, but I have had no additional money. Please could you go down there and tell them what it is like for many of the pensioners?"

I wrote to the manager of the local Department of Social Security office—a caring man who would help if he could—and received the following reply:

"This lady was in receipt of Supplementary Pension prior to April 1988 and was receiving extra payment for her additional requirements in respect of heating and laundering costs. The Income Support scheme introduced in April 1988 made no provision for payments in respect of additional requirements and to prevent her becoming financially worse off under the new scheme a transitional addition payment was awarded to maintain the weekly allowance at the pre-April 1988 level. The effect of this is that . . . benefit will remain at this level . . . until the transitional payment has been eroded by subsequent increases in benefit rates."

The letter continued that the lady was

"receiving her full legal entitlement by way of benefit"

and

"will qualify for the higher rate of pensioner premium when she attains age 80 in August 1989 which will further erode the transitional addition."

That lady will not receive any additional pension or any extra money until her pension reaches £51, but she will continue to have to pay for laundry, cleaning and for people to help her with all the heavy work that she is incapable of doing for herself. She asked me to put her case to Ministers in the belief that they would do what they could to help elderly people like her who suffer from ill health and those who are poor and unable to help themselves. I ask them—please do not fail this lady.

5.32 pm

Mr. Robert McCrindle (Brentwood and Ongar): The first half of the Opposition motion is a red herring. I shall turn my attention to that in an attempt to persuade the House that it is better to judge by actions rather than rhetoric.

However, although I cannot agree with the extravagant language of the second half of the Opposition motion, I shall show more sympathy with the underlying point that the Opposition seek to make. In the process I hope to take up the challenge of the hon. Member for Livingston (Mr. Cook) and prove that at least one Conservative Member is influenced considerably more by the plight of pensioner constituents than the threat of Government Whips. I say that with great respect for my hon. Friend the Member for Staffordshire, South-East (Mr. Lightbown).

I always look to what a Government have actually done rather than paying undue attention to either the promises that they make for the future or criticising them for their present actions. Although it is correct that, during the last Labour Government, pensions were linked to earnings rather than prices, the hon. Member for Livingston conspicuously overlooked, when addressing this point—which he has addressed many times in this House and outside—the fact that the Labour Government were unable to deliver that promise for three out of the five years during which they were in office. On some occasions that was for reasons outside their control.

Before the Labour party lectures the Government for failing to continue the link with earnings, it should recognise that those of us who listen to what it plans to do—should it ever again be given responsibility for the government of the country—are inclined to reflect that the Labour Government were unable to keep their promise because of their own poor economic stewardship of the country. Rather than concentrate, as some Labour Members seem to do, on the past and what they would do in the future, they should recognise that, since 1979, the Government—who have made no secret of their wish to link pension increases to the level of prices—have carried out that undertaking to the letter.

I freely concede that some Conservative Members would have infinitely preferred it if, during this year when we have a substantial Budget surplus—and recognising that pensioner expenditure tends to be far less inflationary than the expenditure of younger earners, and less is spent on imported goods—we had safely increased the standards of living of pensioners and other beneficiaries. I am disappointed that the Government did not consider that to be an appropriate move.

Let us examine the system which is at the heart of today's debate. It would be extremely difficult for any hon. Member to say that we did not need the reforms represented in the 1988 legislation It cannot have escaped the attention of hon. Members that, at that time, there were 30 different benefits, myriad conflicting rules and a complex administration which was vastly overdue for reform. I have been at the forefront of those who have welcomed this endeavour to improve the simplicity of the social security scheme and, in the process, to improve targeting so that those in greatest need receive most help.

I warmly welcomed the Government's aim to remove the poverty trap and encourage savings—to which Opposition Members have not paid enough attention—to foster positive attitudes towards employment and—I make no apology for this—to seek to move away from what has come to be known as the dependency culture. We should recognise that we should not continue to expect the state alone to prop us those who are able to earn additional incomes. At one time it may have been accepted as the norm, but that is clearly not so now.

The Government's aims are laudable. I regret that the results do not seem to have equalled the aspirations. I have already endorsed the welcome attempt to streamline the

benefit structure, and remove the pages of regulations, so that it is more easily understood. I have no hesitation in once again endorsing that attempt.

The Opposition spoil their case by exaggeration. However, it is true that a minority of pensioners who—being no longer entitled to the various additions on matters such as fuel, diet and incontinence, which they had and which no doubt contributed to the complication of the scheme—will find one year later, as the transitional period moves on, that they are in a worse position. That seems to be buying the simplification of the system which I support at too high a cost.

Targeting has undoubtedly benefited millions of people. Again, the Opposition spoilt their case by failing to concede that many gained as a result of last year's changes. It is a pity that a much-improved system for many people is reduced in the eyes of the population because there is a minority for whom it is not so.

Targeting is a splendid aim, which I continue to endorse, but it does not appear to be working. The people for whom it is not working are not those who, by most definitions, do not need it to work because they are among the less well off, no matter how that definition is stretched. The fact that there will be no increases or will be net reductions for some and modified increases for others because they are not entitled to the additions that they were able to expect before, or because of the end of the transition period, or because of both, shows that there is a corner of a broadly extremely successful review of social security to which the Government must turn their attention.

I concede that in most cases improvements have been made. I concede the point made by the Secretary of State that in the autumn there will be further advances for those whom I and other hon. Members have represented in previous debates, but there is no question but that a tiny element have not benefited from targeting, which was one of the principal objectives of the reforms. If people who are by no means well off are losing further benefit, targeting is not working across the board in the way that it is to a considerable extent for millions of beneficiaries, on whose behalf we understandably receive few representations.

There is no virtue in being consistent, but I hope that hon. Members will concede that, whatever else, I am at least consistent about the introduction of the requirement to pay 20 per cent. of the community charge. It may be desirable according to the views expressed by some of my hon. Friends, who say that it will involve the community and lead to understanding of what local government costs, but the other side of the ledger is that many who would have benefited as a result of the social security reforms will be tipped back on to the other side of the register. It may be too late to redress that merely by saying that we shall discontinue the 20 per cent. contribution, but this aspect must be taken into account by Ministers as they try to plug gaps.

I am reassured when Ministers remind me that they continue to monitor the position. To their eternal credit, they have monitored the system since 1 April 1988, and as a result of pressures brought by a number of hon. Members they have moved. The capital limit of £6,000 was increased to £8,000, and an announcement was made recently regarding 16 and 17-year-olds. I hope that the Minister will take this as a sincere representation on behalf of the people whom I represent, but the same could be said of people who live in Labour constituencies. When they ask me, "Could you live on this net amount?" the only answer that I can give in all conscience is no. When they ask, "Am I one of the better off, because that would seem to be the reason for my not receiving as much as I did before?", again, I must answer no.

The position of beneficiaries has undoubtedly improved as a result of last year's changes, but thousands of people have been adversely affected. As I and other hon. Members were able to persuade the Minister to move on previous anomalies, I hope that we will persuade him that fresh thinking is required. It reflects no credit on an otherwise excellent range of social security reforms if, with inflation rising, people tell me "I am about to receive less in 1989 than I did in 1988." That cannot be right.

5.44 pm

Mr. Archy Kirkwood (Roxburgh and Berwickshire): It is always a pleasure to follow the hon. Member for Brentwood and Ongar (Mr. McCrindle), who has a reputation for independence and thinking out his own thoughts. His speech would repay careful study by Ministers, and I hope that he will receive answers to the questions that he posed.

It will come as no surprise to hon. Members who served on the Committee considering the Social Security Act 1986 that we are in this position today. I welcome the motion, which was ably presented by the hon. Member for Livingston (Mr. Cook), and will recommend that my colleagues vote for it.

The Fowler reviews set themselves an impossible task. It was impossible to simplify matters, which was laudable, and increase targeting, which was also an honourable objective, without incurring any additional cost. It is the main reason for the difficulties being experienced now by hon. Members' constituents.

The Secretary of State for Social Security and the Minister for Social Security are picking up the consequences of the fact that no detailed research was done prior to the Fowler reviews. We regularly have these debates, in which Conservative Members trade statistics and Opposition Members confront them with individual cases. It is a hopeless and frustrating process which gets us nowhere.

Some of the points made by the hon. Member for Brentwood and Ongar were right. Perhaps Opposition Members do exaggerate the number of people experiencing financial difficulty, but that does not detract from the fact that some are indeed suffering very real difficulties. The debate should not proceed further without our placing on record the fact that the basic level of premiums and allowances under the new income support, family credit and housing benefit rules are far too low to allow a normal person a normal standard of living and to play his or her part in the community. It is substantiated by figures produced by the Policy Studies Institute, which show that 2 million pensioners are on income support, 2 million additional pensioners are on housing benefit and 1 million are estimated to be claiming benefits to which they are entitled. That clearly shows that the basic state pension cannot provide for basic needs, and that state of affairs must be addressed. Almost half of the 10 million pensioners are caught in the poverty trap, and the Government have an obligation to do something urgently about that.

Mr. Favell: The hon. Gentleman has put his finger on the dilemma that faces any Government responsible for looking after pensioners who cannot otherwise look after themselves. He said that the basic pension is not adequate for 2 million pensioners on income support. That being so, what is the point in increasing the basic pension for rich people such as Lord Forte or the Prime Minister? Why not concentrate benefit on income support for the poorest pensioners? What is the point of spreading the jam thinly?

Mr. Kirkwood: I do not think the hon. Member understands the difference between the needs of those on contributory state pensions and those who enjoy occupational pensions. I will try to deal with that point later in my speech.

It is incumbent on Opposition Members to resist the temptation to be extravagant about numbers. I want to limit my remarks to the generation of pensioners with us now. They will come to the end of their natural lives between now and the end of the century. There has been a significant change in the rules for providing most income from occupational personal pensions and after the year 2000 when these pensions are the norm we will not have this problem of inadequate pension provision, but the problem will get worse before it gets better. There is no point in going on in abstract terms about total incomes or even average incomes of pensioners; we have to deal with the 2 million real people suffering real hardship now. That is the question the Government must address today.

As was said earlier, benefits have increased in real terms over the period of this Government by only something like 2 per cent., while earnings have increased by more than 20 per cent. I think that the figures used by the hon. Member for Livingston are right; they are the ones the Library supplied to me. I am seeking to make a contrast between the increase in pensions and benefits and the increase in earnings, however measured, and the Government cannot deny, whichever figures are used, that there has been a substantial difference between them.

I do not think it is possible to rely only on price protection between now and the end of the century. I understand why the Government should make that pledge, and it is a pledge worth having, but if one applied price protection to the July 1948 pension figure of £1·30, which was the original level at which the pension was set, it would only be something like £18·70 at today's prices for a single person, and the figure of £2·10 in July 1948 would now only be £30·59 for a married couple. Nobody would seek to justify that miserly level of increase over that period of time. Also, the Social Security Advisory Committee says time and again in its reports that the Government cannot simply, between now and the end of the century, hide behind the screen of price protection, because the standard of living of pensioners will inexorably fall further and further behind. That is an absolutely certain consequence of the Government restricting their policy for uprating benefits like pensions merely to price protection.

Transitional protection is presented as an example of generosity by the Government. To me, it is a device to conceal the full extent of the original 1986 cuts. This debate will occur year after year, and it does this House no credit to keep running away from the fundamental problems causing the difficulties. I have warned in previous debates that this day would dawn, and constituents I meet are frequently distraught, furious and feel cheated. What distresses me more than anything else, however, is that, after going through these three respective angry phases, they invariably adopt a resigned, subdued attitude, as they realise they must submit themselves to the Gradgrind of continuing poverty for yet another year or even longer.

The poll tax rebate scheme, from a Scottish point of view, is in a state of total chaos. Nobody seems to be able to get answers to questions and all sorts of anomalies are appearing. This is a totally iniquitous, unjustified, damaging and complex new tax, loved by nobody north of the border. If English Tory Members think they have problems with transitional protection, just wait until the poll tax comes into force in England. In future in these debates words of criticism such as those of the hon. Member for Brentwood and Ongar will seem like milk in balm compared with what they will then have to tell Ministers.

Problems are not only restricted to deprived urban areas, but occur in rural areas, too. A series of very disturbing representations was made to me this weekend in Hutton in Berwickshire, an otherwise idyllic part of the world. The hon. Member for East Lothian (Mr. Home Robertson) lives within a stone's throw of there. He will confirm what type of place it is. There were real problems there which caused me substantial concern. Another separate problem is the fact that there is a capital upper limit of £8,000 on the poll tax rebate, and not, as should be since it is a personal charge, a married couple's upper limit of £16,000. This is in my view an absolute disgrace.

I anticipate I will have the sympathy and support of the hon. Member for Brentwood and Ongar for my final point. I am worried about the injustice experienced by those with small occupational pensions and other income. For reasons I have explained earlier, nearly half the 10 million pensioners in our country are potentially caught in a poverty trap. Any income over basic benefits is firstly taken into account in reducing their income support and then housing benefit. I have not done a calculation at the current rates, but under the benefit rates in place in November 1988 the first £30 of increased additional income could be reduced to £4 extra in certain circumstances, and I know of cases like that. It seems to me that, where the Inland Revenue has a special scheme enabling people to have the first £20 of income free from tax, it is quite wrong for the DSS to require it to be declared against income support and housing benefit. I put it to the Minister of State that the Department should do something urgently about that. Some earnings should be disregarded over and above those that already are. That would help remove some of the worst problems of the poverty trap faced by some of our worst-off pensioners.

The Government do have a problem. Provision for pensioners between now and the end of the century is inadequate and a matter of real concern, and I hope the Government will take carefully into account what is said in debates like this and try to do something to alleviate problems caused by the whole transitional mechanism before it hits us again in the same disastrous way next year.

5.56 pm

Mr. Simon Burns (Chelmsford): I do not know how familiar you are with contemporary rock music, Mr. Deputy Speaker, but it may not have escaped your notice that a new rock song has been going around recently,

reviving a flagging theme, the red rose. Sadly, it will not get to No. 10. However, I have been struck by some of the lyrics in that song, saying

"To help each other every day,
Remove injustice on the way".

Perhaps those lyrics are somewhat trite but, taken in isolation, no reasonable person can dispute the basic sentiments expressed. However, if these lyrics are a declaration of intent of any Labour party which might seek office at some distant time, and if they are taken in the context of today's motion by the official Opposition and the past record of the Labour Government of 1974 to 1979, they are meaningless. Good intentions, glib promises and pious rhetoric are just not good enough. It is a cruel deception to raise expectations which cannot be realised.

Labour's October 1974 election manifesto proudly proclaimed

"Britain will win with Labour".

It proclaimed that Labour's policies would

"protect the weak, the poor and the disabled, . . . and to maintain and improve their living standards."

The subsequent performance of that Labour Government failed dismally to live up to those high-falutin' declarations. Labour might have been the winners, but the losers were the pensioners, the less well off and the disabled in our society.

The oft-repeated claim that pensions increased each year by the movement of prices or earnings, whichever was the greater, is not sustainable. It was not honoured in 1976 or in 1978. If Labour had won the 1979 general election, its proposed policies would have meant that it would not have been honoured in 1979, either. Mrs. Barbara Castle dispensed with the historic calculation of earnings and replaced it with a system of forecasting in 1976. That deprived pensioners at a stroke—if I dare use that expression—of £500 million. At today's prices that is over £1 billion.

To add insult to injury, the method of forecasting was wrong in five of the seven years in which it was used to calculate the increase in the state pension. Even the Christmas bonus did not escape unscathed. It was not paid in 1975 and 1976. If Lord Barnett's memoirs are to be believed, it was only a kicking and screaming Lord Ennals and the right hon. Member for Salford, East (Mr. Orme) who agreed to pay the Christmas bonus in 1977. Opposition Members should think twice before lecturing the Government on their uprating of benefits record. Their criticisms do not square with the facts.

The Government have not simply paid lip service to the need to help pensioners, the less well off and the disabled. They have encouraged the creation of wealth, with the result that this year the Government have been able to spend a record £51 billion on benefits. Approximately half of it is paid to the elderly. Pensioners have shared in the nation's prosperity. Their total incomes have grown twice as fast as those of everyone else and five times as fast as they grew under the last Labour Government.

Much play has been made of the claim that Britain's pensioners lag behind those of our European competitors. Again that myth cannot be sustained, because 9·6 per cent. of Britain's gross domestic product is spent on all programmes for the elderly, excluding medical care. Britain is third on the EEC chart. We are marginally behind Denmark, at 10·4 per cent., and France at 9·8 per cent.

The most powerful argument for what the Government have done for pensioners comes not from me but from Mrs. Dorothy Rhodes, the president of the National Federation of Retirement Pensions Associations. Recently she said:

"I have spoken loudly in support of parity with Europe but during the past year . . . having spoken at length to those who receive Europensions and discovered that in many cases the actual cash received in relation to the cost of living is often lower than in the United Kingdom, I am revising my opinion, for in no way can our Federation ask for an equality that would disadvantage our own people."

There is a gulf between Conservative Members and the Opposition over pensions. The gulf is not about whether we care, or about trying to find the best solution and the best policies for providing help to the less well off. That does not divide us; everyone believes that the most effective help possible should be provided. What divides us is philosophy and the implementation of policy. Our policy during the last 10 years has benefited pensioners. We must create wealth so that the state can then spend the money that is generated on providing genuine help to the less well off and to pensioners whose only income is the state pension. It is crucial to target resources.

I return to child benefit which, deliberately, has not been increased but frozen. My right hon. Friend's decision was absolutely correct. My wife and I have a young daughter. It is nonsense for my wife to receive a tax-free sum of money each week towards the upkeep of our child. I much prefer that money, or the money that my wife would have received as an increase in child benefit, to be targeted on genuinely less well-off families through the income support system and the family credit system.

The less well off rightly deserve help and they are getting it from the Government. The vast majority of people do not whine and complain. They accept the Government's philosophy. They accept also that the money is going to those who are in genuine need and who need to be helped.

6.5 pm

Mr. Ted Rowlands (Merthyr Tydfil and Rhymney): The hon. Member for Chelmsford (Mr. Burns) asked you, Mr. Deputy Speaker, whether you enjoyed pop music. My eldest son writes pop music, although I brought him up on Bach and Beethoven. I much prefer Bach and Beethoven. The majority of my pensioners preferred the Labour Government to the present Conservative Government when it came to pensions.

The hon. Gentleman used the word "whine." That was obnoxious. The pensioners that I shall be speaking about are not whining. They are demanding a right that they worked for all their lives. In the community that I represent, many husbands have died and their widows have been left on their own. Their husbands earned poor money and died young as a result of the work that they did. Their widows have been left totally dependent on the state.

We have been challenged and asked to look at total incomes and targeting. I accept both challenges. I expect the hon. Member for Chelmsford to accept the challenge that I intend to put to him, based on the cases to which I shall refer and also on the cases mentioned by my hon. Friends the Members for Livingston (Mr. Cook) and for Newcastle-under-Lyme (Mrs. Golding). I refer to a widow whose husband died younger than he ought to have done, because of the work in which he was engaged. I wrote to

[Mr. Ted Rowlands]

the local Department of Social Security office. I do that as a matter of course until I find that DSS employees are victims of Government policy. I complained that that widow would not receive a penny increase in the financial year 1989-90. I received a letter from the DSS, together with the calculation. I ask the Secretary of State to listen to the simple terms of the calculation, which are that the total income on 11 April 1988 was £47·90 and that the total income on 10 April 1989 was £47·90.

Does the Secretary of State believe that a pensioner whose total income is £47·90 should be targeted? That pensioner, on £47·90, will have to soldier through the whole of the next financial year without a single penny increase in her pension. The whole of her pension increase has been clawed back because of the loss of the transitional addition. It is a pity that the hon. Member for Brentwood and Onger (Mr. McCrindle) did not say that he supported the cases that we are bringing to the Secretary of State's attention. This pensioner has lost the whole of the increase for 1989-90. Moreover, because she was in receipt of transitional addition amounting to £3·80 instead of just £2, she will lose the whole of her increase for 1990-91 as well.

With the odd exception, Conservative Members are endorsing a system under which a pensioner with a total income of £47·90 will spend this year and next year without a single increase in her pension to cover increases in the cost of living. If we do not include the mortgage interest rate and take inflation as 5·5 per cent., we still know that water charges are to increase by 10 per cent., and that, despite low inflation, the cost of living and the prices of essential goods still change. We know that rents will go up, and only a percentage of those rent increases will be covered by increases in housing benefit.

The pensioner I mentioned—I hope that the hon. Member for Chelmsford agrees that she should be targeted—is one of the 20 or 25 per cent. of pensioners who will have to depend on a static income to cover essential costs for the next two years. She is one of dozens of such pensioners in my constituency. Does the hon. Gentleman think that that is fair? Does he believe that the policy of targeting benefits should include that pensioner? In an intervention I asked the Secretary of State whether he thought that a pensioner on £47·90 a week should be targeted for support or whether that pensioner should go through the next two years without any increase in income to handle the additional costs of living. The Secretary of State did not reply.

I understand that by their very nature transitional additions must be phased out, but we should remember that the transitional additional allowances were dragged out of the Government as a result of pressure from both sides of the House more than 12 months ago when the impact of the new scheme was fully understood. I understand that among others the Prime Minister at her Finchley surgery suddenly realised the consequences of introducing the new system. Why is there not the same reaction this year? The same thing is happening. The same dozens of people who knocked on our surgery doors last year—I hope that they are knocking on the surgery door of the hon. Member for Chelmsford—are now saying that they did not realise that when they received the transitional addition the entire increase in their pensions would be clawed back in a single year and within a year.

The transitional additional allowance was not some act of great generosity but was a limitation of the loss of benefit as a result of the change in the system. We should watch out for the Orwellian double talk that the Government use when they talk about the transitional additional allowance as if it were a marvellous act of generosity when it was limiting the loss of benefit as a result of the so-called reform to a simpler system.

No one should have believed that a transitional addition equivalent to the entire increase in the pension should have been clawed back, as has happened. I hate to be in this position. I do not agree with the whole show and I do not agree with the system, but if we have to work the system and make a desperate plea on our hands and knees, I ask the Secretary of State now why he does not have an urgent rethink. He claims that he is monitoring, so here is the information he requires. Why does he not adjust the system at least by a much more gradual process by which the transitional additional allowance is clawed back? I hate the notion of presenting such a plea, but as the situation is desperate and the Government have a majority and can override our motion and continue to enforce the provisions, just as the Secretary of State had a rethink when he introduced the transitional allowances, will he not consider introducing in the next month or so some measure to provide a much slower and more gradual claw-back of the transitional addition? For example, he could say that no pensioner should lose more than one quarter of the increase in the next financial year.

If the Secretary of State is to introduce such a horrid system, let him at least do it with some amelioration, and introduce a scheme so that pensioners, such as the widow to whom I referred, do not have to soldier through the coming year and the year after without any increase in income. I hate the idea of having to ask the Secretary of State to do it, but will he reconsider urgently the concept of phasing out the transitional additional allowances over a much longer period? Instead of clawing back the entire £2·06 increase this year and virtually writing off next year's increase in the income of the average pensioner such as the one I described—and there are dozens of them in my constituency—if the Secretary of State were to ameliorate that situation it would be a modest crumb for us and we could tell our constituents that someone has listened, as my hon. Friend the Member for Newcastle-under-Lyme argued.

When the Minister replies, will he give his assessment of what it would cost not to claw back the full £2·06 from those in receipt of transitional addition in the next year if a pensioner were allowed to retain three quarters of the £2·06 increase? What will be the additional cost in a financial year to introduce a more gradual transition? Conservative Members repeatedly have defended the system by arguing that the Conservative party and not the Labour party has established a major economic success story which allows the Government to be generous to pensioners. But why can they not be generous to pensioners living on £47·90 a week? Why do they have to claw back the entire pension increase? We are not talking about millions of pounds. Perhaps we are talking about hundreds of thousands of pounds or whatever figure the Secretary of State or the Minister wishes to provide. If the Government's economic success story is so great, surely they can assist and support that group of pensioners.

I read with fascination the Secretary of State for Wales' speech last night to that tower of Tory power, the Tory

Reform Group. He condemned the "simplistic economic dogma" which does not solve the nation's problems. Nor does the simplistic social policy dogma that has emanated from some quarters of the Government and the Conservative party. But the Secretary of State is a member of the Cabinet which endorsed all the changes. I look forward with great interest to his speech on social policy in the near future, on behalf of the pensioners whom I represent. But we have to depend upon urgent pleas to the Secretary of State.

In the past few weeks, I have done what I did last year. I have sent a whole batch of cases, such as the case I have described, to the Prime Minister in the hope that some message of assistance and support to the pensioners may come from on high. I noticed that the Chancellor of the Exchequer, in presenting the Budget, spoke about the £14 billion he had to pay off the national debt. But there is another debt to be paid to a whole generation of elderly people who sacrificed their efforts, their health and their lives, and who are entitled not to request, to beg or to whine but to demand the right to a fair and just pension system.

Several Hon. Members *rose*——

Mr. Deputy Speaker: Order. There is very little time and I hope that hon. Members will make brief speeches.

6.17 pm

Mr. John Butterfill (Bournemouth, West):

"I wish to raise the subject of the uprating of retirement pensions, and especially the uprating that took place last November. I want to call upon my hon. Friend the Minister to consider paying a bonus of an extra week's pension for Britain's 8 million pensioners. I believe that this is urgently required to make up for what I consider to be a sleight of hand or conjuring trick which occurred last November. At that time pensioners received 1·8 per cent. less than the law required that they should receive. . . . I do not think that Parliament should allow the pensioners to be double-crossed in the way that they have been over the latest pensions uprating . . . the pensioners' own money was hi-jacked by the Government to pay their Christmas bonuses at Christmas . . . many of us are seriously disturbed by the fact that a firm pledge, about which we have frequently publicly and proudly boasted, is apparently not to be honoured." [*Official Report*, 12 March 1979; Vol. 964, c. 231-35.]

Those are harsh words, but they are not my words and they are not about this Government. Those are the words of the hon. Member for Birmingham, Perry Barr (Mr. Rooker) and the words of Mr. George Rodgers, the former Labour Member for Chorley, almost exactly 10 years ago, speaking about the last Labour Government. Whatever we may have heard from the Opposition about the good intentions of the Labour party, we can hear from their own lips what the performance was when they were last in power. For the hon. Member for Livingston (Mr. Cook) to say that had their formula remained in place there would have been an increase of £17-plus a week for pensioners is sheer deception, as is manifest in the words of his Back-Bench colleagues that I have just quoted. The difficulty about the speech of the hon. Member for Livingston was that it was almost entirely anecdotal.

Of course there are people who are suffering under the arrangements that have come into force recently. My hon. Friend the Member for Brentwood and Ongar (Mr. McCrindle) was right to point out that there are anomalies that need to be redressed. My right hon. Friend has said that he will look at these problems and keep the matter under continuous review. Where the hon. Member for Livingston was wrong was in not giving any account of the enormous improvements that have been made by this Government, or of the enormous improvement in the welfare of pensioners that has taken place over the past few years. We are not talking just about the basic pension; the improvements in income support and in housing benefit have to be taken into account.

My hon. Friends have already spoken about the total proportion of GDP that we in this country, compared with other European countries, spend on benefits. We are third in the European league. It is right that that should be pointed out, but it is right also to point out that the changes that we have made have not been made without extra money. An extra £200 million is being spent on income support as from October. In particular, the older and disabled pensioners will benefit by an extra £2·50 a week.

Equally, the Opposition have taken no account of the exceptionally cold weather payments. Recently they criticised the basis on which those payments were made. But at least the payments were introduced by this Government; they did not exist when the last Labour Government were in power. The Labour Government certainly did not think of such payments. Nor have the Opposition paid any tribute to the very generous improvements in the tax allowances for pensioners that were introduced in the last Budget. The age allowance was increased very substantially, the age threshold was reduced, and the earnings rule was abolished. All of those things are very good news for pensioners.

Instead, Opposition Members harp on about poverty. They produce statistics to show that an ever-increasing number of people in this country are living in poverty. It is worth looking at the basis of those claims. They tend to operate on one of two bases: either earnings related to average earnings, or earnings related to the thresholds for income support. Of course, the difficulty with that is that every time we improve the level of social security the number of people allegedly in poverty goes up. It is a no-win situation for the Government. But those are precisely the sort of statistics that the Opposition like to deal in.

We have to look at the fact that we are now spending £51 billion on the social security budget, which is a real increase of 33 per cent. since the last Labour Government were in power. We have to look also at the increases that we have made in income support and family credit. The amount being paid in income support is £421 million more than was paid in supplementary benefit; and £400 million is being paid in family credit against £200 million under the old family income supplement. Those are real increases that are benefiting the majority of people.

The great problem in this country is that, despite all the money that is being spent, we still have people who are genuinely poor. We must ask ourselves why it should be so. When we are spending £51 billion—nearly £1,000 a year for every man, woman and child in the country—why are there still poor people? If the bottom 10 per cent. of the population were regarded as the really needy, that would give them £10,000 a year each. Why do we have poor people? It is because benefit is very poorly targeted. So long as we have universal benefits, such as child benefit —this was mentioned by my hon. Friend the Member for Chelmsford (Mr. Burns)—there will be a problem. Of course, child benefit did not benefit the genuinely poor

[Mr. John Butterfill]

because it was clawed back from their other benefits; it benefited only the middle classes. So long as we continue with nonsenses like that we will never redress poverty in this country.

Mr. Robin Cook: Perhaps the hon. Gentleman could clarify a point. He has just said that so long as we continue with nonsenses like universal benefits we will never resolve the problem of poverty. Is he including in "universal benefits" the state pension?

Mr. Butterfill: I include all benefits in my assessment of the way in which we should treat people. I am not suggesting, for example, that we should get rid of the state pension, but I am saying that we need very much more accurate targeting of benefits if we are to eliminate poverty.

6.26 pm

Mrs. Rosie Barnes (Greenwich): The Government have a very shabby record in their treatement of the poor, the disabled and the under-privileged, particularly those who are dependent on benefits, and even more particularly the elderly. It is clear that the Government believe that by reducing the value of benefits, by failing to uprate benefits in line with inflation, they will produce a net result of a reduction in the dependency culture and will compel people back into productive economic employment. This is just not the case. People are not dependent on benefit of their own wish; the vast majority wish to be employed, and wish to have a dignified standard of living that they have earned and provided for themselves. If they are in need of a pension, if they are in need of benefit, it is not something that they have willed upon themselves.

It is a disgrace that, at a time when inflation is running at nearly 8 per cent, we see increases in benefit of only 5·9 per cent. There is nothing complicated about the net effect of that: the poor will become poorer—straight, unavoidable fact. There is no whining about it, no harping on about it; I am simply reporting what many of my constituents have told me, and what the constituents of all hon. Members will be telling them over the coming weeks. Whatever extravagant claims the Government may make, nothing can explain the policy of lowering the income of those people who are dependent on benefits.

That is particularly exacerbated by the combined system of taxation and benefit—or rather the fact that those are not combined. The two have to be looked at together because, together, they exacerbate the poverty trap. They frequently and continually inhibit people from taking low-paid or part-time work because, by doing so, those people would be worse off than they are when on benefit. Most people do not have a fair choice—the combined effect of the tax and social security system ensures that they stay at the bottom of the pile.

My greatest criticism of the Government is of their meanness of spirit. Yes, the system is simpler than it was before—and that is to be welcomed—but it is also totally inadequate. The Government had an invaluable opportunity to revise the system, to simplify it, and to make sure that no one was worse off. Such opportunities come very rarely. There was an opportunity last year, and the Government passed it over. Yes, many people are worse off. We are talking about a minority, but it is a minority of people who are suffering through no fault of their own.

We are looking not at a decision that was made against the backcloth of a shortage of revenue, but at one that was made against the backcloth of a surplus of £15 billion. Despite the growing shadow of inflation, which endangers our economic recovery, we have seen consistently strong economic growth. One of the advantages of a strong, successful economy is that it enables a caring, socially responsible Government to share the fruits of success with those members of society who have not been able to benefit directly—those who are not earning high wages, those who are not getting increased revenue from shareholdings. If the Government seriously want to encourage everyone to participate in our economic success, they should understand that they must give everyone, including the needy and the poor, a share of that success. They should never have considered cutting the real value of social security benefits.

The uprating of pensions and other benefits, including child benefit, should be automatic. The Government have shunted child benefit to one side and it has been gradually eroded, presumably in order to dismantle the universality of that benefit.

The Government should go further and examine ways to make benefits more buoyant. They should ensure that the poor benefit from our economic success by giving an additional increase in benefits which is related to the success of the economy. It is a measure of the Government that, today, we are debating real cuts in benefit. We are witnessing the poor becoming poorer when the Chancellor does not know how to spend the reserves that he has.

Pensioners have a particular right to be angry. The Government happily preside over a system of supposedly contributory benefits. The system educates people to believe that they are paying into a fund on which they will be able to draw, by right and with dignity, in later life. In reality, however, the Government treat pensions as though they were a handout rather than money which is given back to those who have paid in over the years. Pensioners are only asking for what is theirs by right and for what they have paid. They are right to argue that the Government are wrong to cut the value of their pensions. This is an argument of principle that goes far beyond the fact that many pensioners are living in great poverty today. If the Government have decided that they do not accept the contributory principle, they should have the courage to say so rather than to act as the arbiters and controllers of what is given back to those who have paid over the years.

The growing number of dependent elderly poses a challenge to and a great problem for the future reduced working-age population. To try to wriggle out of social obligations, to try to reduce the cost of supporting the elderly by cutting pensions and by trying to push the elderly into the private health sector by subsidising private health insurance amounts to a cowardly approach to a problem that must be faced honestly and openly.

It is right to continue the tax relief on personal private pensions to enable many people to enjoy a better standard of living in later life. Ultimately, if the majority of our elderly are covered by such schemes, it may be right to reduce the extra tax relief given to pensioners through the age allowance. For the majority of today's pensioners, however, the state pension is their basic income. It is clear to anyone who meets and talks to pensioners regularly that

their basic pension is not high enough. Those with small occupational pensions often suffer even more deprivation because they are denied access to the benefits that may be claimed by those with no additional pension.

We must consider seriously the provision for poor pensioners. To achieve a better allocation of resources is not just a question of giving more money. We must change the structure to make claiming a more straightforward and simplified matter, with less stigma attached to it. The answer must lie in the integration of the tax and benefit systems. Only by aggregating everyone's earnings and benefit entitlement can a sensitive assessment of net tax burden or net benefit entitlement be made. An integrated system is perfectly feasible within a computerised Inland Revenue. That would eliminate the "churning" of revenue that results in the Government giving with one hand and taking back with the other. For the population as a whole it would ensure that people did not become worse off by taking on work and subsequently losing benefit. Within such a system provision for poor pensioners should be a priority.

Mr. Butterfill: The system that the hon. Lady has adumbrated has some merit. Would it involve withdrawing universal benefit such as child benefit?

Mrs. Barnes: No. My party strongly defends child benefit. It was, in part, a tax concession that was taken away from the main earner in the family and given to the caring parent, usually the mother. Time does not permit me to take that argument further this evening.

Other measures that we advocate, particularly for the elderly, include the miserly £10 bonus at Christmas. We believe that a double pension should be given the week before Christmas. We should also seriously consider abolishing the standing charges on gas, electricity and telephones, which hit the elderly particularly hard.

The issue today is not how much the system costs but how effective it is. Does it fairly do the job it was set up to do? No one believes that any increase below the level of inflation will do anything other than make people poorer. There has been some indictment today of the use of anecdotes, but those who have made such criticisms should remember that anecdotes represent people who are suffering and that they are symptomatic of some of the failings of the system. They highlight the gaps which we must plug.

On Friday night, a constituent, a single parent with three children, came to me. She is a diabetic and, because her eldest child has just turned 16, her income has fallen from £72·96 a week to £46·31. Her 16-year-old son has not yet got a job. Her doctor sent a letter to tell me that she may be hospitalised because her diabetes is getting out of control as she is eating badly. How can I explain to my constituent just how fair and compassionate the Government are? Such anecdotes represent people. They may represent the minority, but they are suffering, and they deserve the attention and a share of the resources of this country.

6.36 pm

Mr. Tony Favell (Stockport): I shall confine my remarks to a few basic truths about the basic pension. A country is judged on the way in which it treats its pensioners and that is right, because a decent society should be judged on how it treats its elderly citizens.

There are widely held misconceptions about the basic pension. There is a belief held by the young, including the hon. Member for Greenwich (Mrs. Barnes), that most pensioners have to live on the basic pension. But they do not. Opposition parties complain about the rate of increase in the basic pension and ask whether it is reasonable to expect couples to live on £65·80 a week. The answer is that none do because the basic income support level is above the basic pension. Therefore, any couple on basic pension are entitled to income support and if they are householders they are also entitled to housing benefit.

Opposition Members have complained that one fifth of our elderly population are on income support or receive housing benefit, but that means that four fifths of our pensioners also have occupational pensions or savings, or both. What on earth is the point of raising the basic pension to the level advocated by the Opposition parties? As I said earlier in an intervention, what is the point of spreading the jam so thinly that no one benefits? There are many pensioners who are very rich and what is the point of giving extra help to them? As I said earlier, what is the point of benefiting Lord Forte or the Prime Minister? It is much more sensible to target extra help to those in real need.

Mr. Allen McKay (Barnsley, West and Penistone) *rose*——

Mr. Favell: No, I shall not give way. With a falling working population and the elderly thankfully living longer, to increase the basic pension would have no purpose and would simply be a waste of money.

6.40 pm

Mrs. Margaret Beckett (Derby, South): Our motion refers to the fall in income that has been experienced under the Conservatives by vulnerable groups, including many pensioners, and I remind the hon. Member for Stockport (Mr. Favell) that many pensioners do not claim the means-tested benefits to which they might be entitled because they are proud and resent the fact that those benefits are means tested. They are among the most vulnerable and needy and they most lose out and resent being deprived of that basic pension increase which is still the most important part of the income of the vast majority of pensioners.

My hon. Friend the Member for Livingston (Mr. Cook) admirably exposed the Government's lamentable record on pensions, and it was plain again, as in the past, that neither the Secretary of State nor his Back Benchers had much in the way of any accurate response to make to refute the points that my hon. Friend made. They had even less to say about the case made on behalf of those whose standard of living not only dropped last year but will drop again this year—those for whom the Prime Minister's recent sweeping assertion that everyone is better off under Conservative rule rang hollow.

My hon. Friend the Member for Livingston pointed out that every one of those individuals benefiting from or receiving transitional protection, whose difficulties we are highlighting in this debate, and many of whose case histories have been given by my hon. Friends and others, are the people who were untruthfully described by the Prime Minister and other Ministers last year as being no worse off after last year's benefit cuts—some of the 88 per cent. about whom that outrageous claim was made.

[Mrs. Margaret Beckett]

Indeed, Ministers defended the claim that they were no worse off by saying that they were no worse off because they faced no cash losses. By definition, the Secretary of State either chose not to, or could not, answer the question posed by my hon. Friend the Member for Livingston. By definition, every one of those vulnerable individuals whose cases have been highlighted in this debate were among those whom the Prime Minister said were no worse off, though their income rose at most by £1·30 and their bills alone, including in most cases their rate and water rate bills, rose by far more. They have since faced the rise in gas and electricity prices without a penny more. That was last year. This year, 600,000 of them again get not a penny more, while another 500,000 or so will get some increase, but not the full increase needed to meet price rises in November and which are already out of date.

The Government's response to the plight of those people is to talk about something else. The Government are hoping that if they shut their eyes tightly enough and for long enough they will all go away, and that if the Government shout loudly enough and long enough, mouthing one set of meaningless or manipulated figures after another, either those people will not be heard or they will not be believed. But Opposition Members are determined that they will be heard because they have a right to be heard.

It is bad enough that we have a Government who are so uncaring and deceitful that they are prepared to cut the standard of living of the most vulnerable people in the country and call it targeting on those in the greatest need. They do not even have the guts to admit that that is what they have done. To the injury of increased struggle they add the insult of pretending that it is not happening.

The Conservative case is that they are doing more than any previous Government. It is certainly true that the Conservatives have had the opportunity. No Government in history have had a windfall gain such as that of North sea oil—revenues secured for them by the Labour Government whom they succeeded, who did not believe in throwing away the nation's assets—*[Interruption.]* It is all very well for Conservative Members to laugh. If the policies of the right hon. Member for Old Bexley and Sidcup (Mr. Heath) had been pursued by the last Labour Government there would have been no North sea oil revenues for them to throw away. But that opportunity, like those assets, has been squandered.

Indeed, almost every penny of the increased expenditure of which the Secretary of State spoke—spending in real terms of which the Government boast—is due not to more generous benefits but to increased numbers forced to draw them. As my right hon. Friend the Member for Stoke-on-Trent, South (Mr. Ashley) pointed out, there are more people unemployed, more people reaching retirement, more living longer in retirement and showing increased frailty and more with some disability who can no longer find work under Conservative rule. Only three times in 10 years have the Conservatives given a real increase in benefits over and above that required by inflation-proofing, and even those amounts were usually tiny.

If the Conservatives have been so generous, how did it happen that 600,000 people did not get a penny more this year for the second year running, with no cost of living increase? Whose fault was it that there was no increase in child benefit for 12 million children and no increase of any kind for the upkeep of nearly 8 million of them? What wicked fairy brought about the reduction in case load that meant that 1 million people lost all help with their rent and rates?

We have had a further indication today of the generosity of the Government. I refer to a report in today's *Glasgow Times* about the handling of deductions from the income support of people who are refusing to pay the poll tax deductions to which the hon. Member for Roxburgh and Berwickshire (Mr. Kirkwood) referred. A memo sent to all DSS offices in Scotland has been leaked to the *Glasgow Times*. It states:

"In deciding whether a deduction can be made"—

for the poll tax—

"the adjudication officer will ensure that there is sufficient Income Support to allow for the deduction to be made in full whilst leaving 10p in payment to the claimant."

That is 10p a week, and of course it must be left in payment to the claimant because that is the law. That is the generosity of the Government.

I understand that over the weekend the Minister of State was reported as saying that when a new system of benefits such as this was introduced it was inevitable that there would be losers. That was obviously in the Whips' Office briefing because several Conservative Members have referred to it.

The Minister was talking nonsense. We know how the Prime Minister fancies that she is the Queen. Is it now the Prime Minister or the Secretary of State who considers herself or himself to be Moses? Was it divine revelation written on tablets of stone that there were bound to be losers, or were those just the instructions handed down by No. 10 and the Treasury?

There are bound to be losers because that has been decided by the Government. They chose it. It is not the product of some natural or divine law. It is certainly not divine law that the losers should be found among the elderly, the poor, the halt and the lame. That sounds much more like the woman who thought that the only thing that mattered about the Good Samaritan was that he had money in his pocket, not that he was prepared to spend it on the unfortunate. The victim was lucky that the Prime Minister did not pass by, or he would have got a brisk lecture on the value of standing on his own two feet.

As my hon. Friend the Member for Livingston pointed out, the Department has been throwing away sources of income that could have been used to make sure that there did not have to be losers. He referred to the supplement that every Government have made for 40 years, the supplement from tax revenues to make sure that decent pensions could be paid to the elderly and the disabled.

In 1980-81, £4·5 billion came from tax revenues for that purpose, but this coming year there will not be a penny, not because it is divine or natural or any kind of law other than that made by the Government, but because this Administration decided that it was money that the pensioners and the disabled did not need. In their view, they were already too well off.

The Government's attitude to the erosion of transitional protection is, in some ways, the most puzzling of all. Why are the Government prepared to defend a cut in the standard of living of the elderly, the sick and the

least well-off families, a standard of living that even the hon. Member for Brentwood and Ongar (Mr. McCrindle) described as buying simplification at too great a cost?

A parliamentary answer that I received suggested that the full uprating of income support for which the motion calls could have been provided for about £70 million. In October, as the Government amendment to the motion records, they are spending three times as much to save the Chancellor's face and divert attention away from his long-term plans to means-test benefits such as child benefit, the Christmas bonus and—as the hon. Member for Bournemouth, West (Mr. Butterfill) was good enough to confirm—even the basic state pension. If the Government can find £200 million to help out the Chancellor, the money could have been found to uprate those benefits where transitional protection was being paid when the overall uprating was calculated.

The Government amendment proudly asserts the huge success of their economic policies. In other words, the Government are not saying that they could not have found the extra money. Why is it so important for them to push through these cuts, comparatively minor by the Government's standards and doubly difficult to defend? What principle is at stake?

Since the changes of April last year the Government have tried to insist that they have made no real or significant cuts. Every example to the contrary has been decried and denied. In particular, they have insisted that if any problems were inadvertently created, it was all in the cause of targeting the help still given on those in the greatest need.

What could more surely reveal the phoneyness and dishonesty of that case than the existence alongside a growing band of new claimants of a group, however small or fast diminishing, of people whose problems, sickness or distress were identical in all major respects but who got much more money because their benefit level under the old system was permanently protected?

When the woeful inadequacy of many new benefit levels becomes apparent by comparing people's needs with their resources, what will more dramatically blow the gaff on the Government's case than a simple straightforward comparison between what is paid now and what used to be paid? We can all write the script. Mrs A gets the old level of benefit but under the new scheme Mrs. B, if she becomes ill or is injured, will receive less money every week. What could more starkly prove what we know to be the truth, which is that the Government believe that 1 million of our most vulnerable people were too well off last April? Although the Government were prepared to see the standard of living of those people fall, they are a bit squeamish about admitting it. People might even have remembered that two weeks earlier the same Government had lavished tax cuts on the wealthy.

Mr. Butterfill: Will the hon. Lady give way?

Mrs. Beckett: No, I do not have time. I would have given way if the hon. Gentleman had asked me earlier.

The debate is taking place not because justice and fair treatment for the 1 million people who have not received a full uprating or any at all cannot be afforded, but because that would expose the sham and the meanness of Government policy. The hardship of those people is the price of concealment.

6.50 pm

The Minister for Social Security (Mr. Nicholas Scott): I am delighted to know that the hon. Member for Livingston (Mr. Cook) listens to my weekend broadcasts. I do not resile for a moment from saying that I approached the debate with some relish, although the relish is slightly diminished because in my winding-up speech I have to deal with the statistical argument between the hon. Gentleman and my right hon. Friend the Secretary of State. I utterly refute the Opposition accusation that my right hon. Friend intended to mislead the House. The statistics quoted by the hon. Member for Livingston and those quoted by my right hon. Friend are simply different statistics. Both sets of statistics are accurate and acceptable in their own way, and the House can judge which set is more relevant to the debate. Having looked at both sets of statistics, I have no doubt where the right answer lies.

The hon. Member for Livingston obtained his figures from the Library and they relate to the basic state pension calculated as a proportion of male earnings. My right hon. Friend's figures were from the 1986 family expenditure survey and compare total state benefits with average manual earnings. The difference in the two sets of figures is easily explained. It is not the basic state pension that matters to pensioners, but their total income—in this case from state benefits. Those may include a whole range of benefits apart from the basic state pension. The important point about the statistics is that they contain figures about actual people with actual incomes. The figures supplied by the Library and quoted by the hon. Gentleman describe the pensioner equivalent of that well-known figure the person with 2·3 children. Such figures are an abstraction rather than a representation of the reality of what is happening.

Now that the hon. Member for Livingston has listened to my explanation and has reconsidered the matter, I hope that he will share my preference for the figures quoted by my right hon. Friend the Secretary of State. *[Interruption.]* I hope that the hon. Gentleman will read what I have said. If he cares to write to me about the matter, I shall be perfectly happy to conduct the argument by correspondence. I am certain that we have the right answer.

The right hon. Member for Stoke-on-Trent, South (Mr. Ashley) accused the Government of abysmal failure in running the social security system. Let us consider what has happened to total benefits under the Government. In 1988-89 the total benefit figure was calculated at £45·2 billion—a real increase of £10·9 billion since 1978-79. That increase was due to many factors, such as a real terms increase in the average amount paid accounting for about £3·9 billion, and increased numbers of beneficiaries accounting for about £7 billion, of which £2·2 billion was accounted for by extra unemployment. Over the same period, social security spending rose from 25·6 per cent. to 31 per cent. of public expenditure. That is what the right hon. Gentleman describes as abysmal failure. In fact, it shows a successful economy generating money for extra expenditure on people who need help.

The right hon. Member for Stoke-on-Trent, South takes a special interest in the disabled and their entitlement to benefit. He knows as well as I do that in the past 10 years there has been a 90 per cent. increase in benefits for disabled people, a real terms increase of no less than £3·5 billion. The right hon. Gentleman was right to say that £3

[Mr. Nicholas Scott]

billion of that was due to increased take-up and that about £500 million was due to the increased level of benefits. The numbers of disabled people did not suddenly multiply when we came to office. Those people were there when the Labour Government were in office but they were not getting benefits then. They are getting benefits now, and that must surely be right.

Mr. Ashley: The Minister now admits that the Government are wrong to claim that all the money has gone to increase the individual incomes of disabled people because the larger numbers of disabled people mean that it is a small increase for individual disabled people.

Mr. Scott: The Government have never made any such assertion—certainly not while I have been in my present post, and none of my predecessors has done so. We have never said that the figures were anything other than those that I have just given—and those figures can not only be defended but applauded.

With his tongue firmly in his cheek the right hon. Member for Stoke-on-Trent, South asked me to prophesy our reaction to the Office of Population Censuses and Surveys reports and the nature of the review that we intend to conduct when we finally receive those reports. I urge the right hon. Gentleman to be patient and to await the arrival of the remaining four reports. I do not think that he could expect any other answer.

Without unduly delaying any action that might flow from our consideration of those reports, we shall want to find some way in which disabled organisations and perhaps hon. Members can make their views known as to the most appropriate way forward. We shall then take those views into account before making up our mind.

The hon. Member for Newcastle-under-Lyme (Mrs. Golding) raised a specific case, and was not the only hon. Member to do so. I make it a general rule not to reply to questions about individual cases across the Floor of the House because it is difficult to establish the basic facts, but I will look at the case that the hon. Lady put forward. I can tell her that the package for poorer pensioners introduced by my right hon. Friend the Chancellor will provide a second uprating this year for poorer pensioners and that the October uprating will not erode transitional protection. We have made special arrangements to make sure of that. I hope that the hon. Lady will draw that to the attention of her constituent.

My hon. Friend the Member for Brentwood and Ongar (Mr. McCrindle) endorsed the simplicity of the new system but seemed to argue that we should return to the complexities of the additional requirements which existed under the supplementary benefits system. I remind him and the House that the additional requirements were complex and needed a great deal of intrusive questioning to ascertain the amount to which people were entitled. We got rid of those complexities and replaced them with a severe disablement premium. With Government money we established the independent living fund so that the needs of people with exceptional requirements could be met, thus preventing such people from being institutionalised rather than supported in the community. Those people were helped in a compassionate and flexible manner and the independent living fund has turned out to be a considerable success.

Rev. Martin Smyth (Belfast, South): Will the Minister give way?

Mr. Scott: I have much regard for the hon. Gentleman but I have two minutes in which to complete the winding-up speech. I hope that he will forgive me if I do not give way.

When I saw the Opposition motion, I could hardly believe my eyes. It is now 12 months since the introduction of the reforms——

Mr. Rowlands: Will the Minister give way?

Mr. Scott: No. I shall read carefully what the hon. Gentleman has said and I shall write to him because the argument is complex.

When I first saw the Opposition motion, I could hardly believe my eyes. Twelve months after the introduction of the reforms and all the predictions of dire consequences flowing from them, the Opposition have laboured mightily and brought forth a mouse. At the weekend I heard a commentator say that in preparing to mount their attack on the Government the Labour Opposition had decided to concentrate their forces on a broad front—not a military tactic with which I am familiar—but it may be that they have had second thoughts on that and decided to concentrate on a much narrower target today. Perhaps this is because, as successive commentators have recognised and as most hon. Members recognise, they know that when we get away from the minority of individual hard cases—I accept that hard cases exist—the overwhelming success of our reforms is manifest.

The motion concentrates on two points—the way in which pensions are calculated, and the transitional protection. With regard to the first, the Opposition make two points—first, about the date of the calculation and, secondly, about whether it should be linked to earnings and prices. We have given a commitment to link it to prices and we have fulfilled that obligation. The Labour party had a variety of devices linking it to earnings or moving to the forecasting method.

My hon. Friend the Member for Bournemouth, West (Mr. Butterfill) very effectively explained in his opening remarks the criticisms that were levelled against the Labour Government at the time. Further on in that debate the hon. Member then for Coventry, South-West—now the hon. Member for Preston (Mrs. Wise)—made it clear why that change had been made when she said:

> "In April 1976, when the changed basis of calculation was announced, it was clear that the change was brought into being because it was advantageous to the Government at that stage and saved £500 million compared with what would have been required for that pension uprating to keep in line with the historic costs of inflation."—[*Official Report*, 12 March 1979; vol. 964, c. 236.]

That was the record of the Labour Government.

We have given pledges and we have honoured them, and we shall continue to do so. We have honoured our commitment to monitor these reforms and to make changes where necessary in housing benefit and with regard to poorer pensioners, widows, 16 and 17-year-olds and hostels, and we shall continue to do so. The fundamental structure, however, is right and I commend the Government amendment to the House.

Question put, That the original words stand part of the Question:—

Tellers for the Noes:
Mr. David Lightbown and
Mr. David Heathcoat-Amory.

Question accordingly negatived.

Question, That the proposed words be there added, *put forthwith pursuant to Standing Order No. 30 (Questions on amendments), and agreed to.* MADAM DEPUTY SPEAKER *forthwith declared the main Question, as amended, to be agreed to.*

Resolved,

That this House notes that it is now one year since the Government introduced a simpler, fairer, more flexible system of income-related benefits and that the uprating which took place yesterday added a further £2·2 billion to spending on social security, now running at £51 billion a year; and congratulates the Government on the success of its economic policies which have enabled it not only to fulfil the pledge to maintain the value of the basic retirement pension in line with price movements but also to use the new system of income-related benefits to direct additional help this year of over a quarter of a billion pounds beyond the normal uprating to those in greatest need.

Construction Industry (Safety)

7.15 pm

Mr. Michael Meacher (Oldham, West): I beg to move,

That this House, alarmed that the number of fatal and major accidents on building sites is up by two-thirds since 1981, and noting the Government's responsibility in encouraging relentless commercial pressures whilst at the same time failing to enforce safety standards, fully supports the efforts of workers and trade unions in the industry to press for higher health and safety standards; and calls upon the Government to increase inspection, improve site management and enforce tougher penalties that counter effectively profit pressures and managerial negligence.

Madam Deputy Speaker (Miss Betty Boothroyd): I should inform the House that Mr. Speaker has selected the amendment in the name of the Prime Minister.

Mr. Meacher: The Opposition have chosen to debate safety in the construction industry because it represents a microcosm of the rising toll of preventable carnage that has affected all our industries over the last 10 years. The facts are not in dispute. Last year 157 building workers were killed on site, nearly one quarter of them in London alone. The number of fatal and major accidents is up by no less than two thirds on 1981, and on average a construction worker is killed or seriously injured every hour and less serious accidents occur every two minutes. Those are Government figures. They are shocking enough, but, by concentrating on the immediate causes of fatal and major accidents, even those figures ignore the far greater number of construction-related deaths, as many as 4,000 a year, caused later by bronchitis, cancer and other diseases of dust and lousy working conditions.

The Health and Safety Executive lays the blame for all this with the employers. According to "Blackspot Construction", the publication of the Health and Safety Executive in June last year, 90 per cent. of deaths on building sites could have been prevented, and at least 70 per cent. were directly due to the negligence of management. The Government accept no responsibility. With regard to building sites, the Parliamentary Under-Secretary of State told the House earlier this year, with mind-blowing complacency, that he was

"confident the law is already being enforced stringently."—[*Official Report*, 17 January 1989; Vol. 145, c. *168*.]

Let us consider the facts. There are only 85 construction inspectors for the entire country. In London there are only 12 who have to cover 200,000 building sites, so that each inspector is responsible for 17,000 building sites. If that is what the Under-Secretary calls stringent enforcement of the law, let us compare it with the near doubling of the number of social security fraud inspectors by the Government. If only the Government were as anxious to stop death and serious injury in the workplace as they are to stop benefit fraud, we would not have half the number of accidents.

How can the Minister seriously claim that the law is being enforced stringently when in London last year there were 36 deaths on construction sites and 413 major injuries, but there were only 18 prosecutions? The average fine was a piffling £1,050, scarcely even pocket money for some major construction firms. How is the law being enforced stringently when no action was taken on more than half the sites where a death or major injury occurred?

In their amendment the Government have found only two measures which they have taken to halt the rising toll of death and serious injury and those are enforcement blitzes and publicity campaigns—*[Interruption.]* I am surprised that Conservative Members are so disinterested in this subject and the rising roll call of death that they find it amusing to talk of other matters when this high level of carnage is happening in the industry as a result of the Government's omissions.

Clearly the news has not trickled through to the Secretary of State for Employment that enforcement blitzes and publicity campaigns have been dismissed as inadequate by the Health and Safety Executive. The HSE notes about publicity that there was no improvement in site safety where the agent or supervisor knew of the blitz campaign compared with where they did not. The HSE also refuted the Secretary of State's claims in the Government's amendment by concluding:

"Clearly even a high level of publicity does not on its own achieve improved safety on sites."

We await further proposals from the Government about these problems, but so far they have produced none.

The Government fair no better with their blitz campaigns. The HSE found that there was no significant reduction in death and serious injury on construction sites during the campaigns. That is a pretty sobering conclusion. The HSE also found that the issuing of prohibition notices during the two years of blitzes also revealed no significant improvement in site safety. That is not the Labour party view; it is the view of the HSE. So much for the way in which the Government hyped the blitzes as a great success.

Mr. Harry Cohen (Leyton): With regard to publicity and the Government taking these matters seriously, the Government do not even appear to be taking this debate seriously, because the Secretary of State for Employment is not going to answer these very important points about safety on construction sites. He is too busy creating mayhem in the docks.

Mr. Meacher: Anyone watching our proceedings and seeing that there are only seven or eight Conservative Back Benchers here, compared with many more Labour Members, will draw the right conclusion about the importance which the Government attach to health and safety. As my hon. Friend the Member for Leyton (Mr. Cohen) is aware, when the Secretary of State for Employment made his statement about the dock labour scheme the Conservative Benches were full to brimming because the Conservatives want confrontation. They are not interested in health and safety.

There would be a real difference in the position if there were proper deterrent penalties. However, the Secretary of State will not impose such penalties. On 6 January *The Independent* reported:

"Mr. Fowler does not support calls for top company personnel to be jailed where health and safety has been flouted. He hoped safety breaches would be taken 'very seriously indeed' by the courts"

even though he knows that there is abundant evidence that that will not happen. *The Independent* continued quoting the Secretary of State, who said:

"I do not think we should go to the lengths of sending people to prison."

Perhaps we should not go to the lengths of sending people to their deaths on manifestly unsafe building sites. *The Independent* continued:

[Mr. Meacher]

"His department was 'looking at' the use of television to advertise the safety message. The medium has been heavily used to promote Government training schemes."

That is certainly true. Obviously the Secretary of State can find £4 million to revive his flagging employment training programme, but that only involves taking people off the unemployment register. When it comes to paying for media coverage to save people's lives, the Secretary of State is only "looking at" the matter. What a stark difference.

Our case is not just that the Government's record on health and safety in the construction industry is limp and feeble, even though it certainly is; it is much more serious than that. In their amendment, the Government conveniently place all the blame on

"employers and others on site;"

Our central contention is that the Government have wilfully generated a commercial climate in which employers are forced to make a choice between getting business and safety, and workers are forced to make a choice between keeping their jobs and safety—*[Interruption.]* I am glad that the Secretary of State for Employment has finally decided to join us. However, we are disappointed to learn that he does not regard health and safety as sufficiently important to address the House and has delegated this task to his junior.

By encouraging a climate of unrelenting commercial pressure while failing to enforce safety standards, the Government have undermined 100 times over such small health and safety intitiatives as they have taken. The climate of intensified competition, of reduced contract times and heavy penalty clauses for delay have helped to squeeze health and safety out of money contracts.

Mr. Len Dodds, the chief safety adviser to Balfour Beatty, one of our major construction firms, has said:

"It does appear that to obtain a satisfactory safety performance on major construction projects a minimum figure of between 6-7 per cent. of total labour costs should be allowed . . . Responsible contracting companies have been seriously disadvantaged by the cowboy element in our industry under-cutting prices, which inevitably means ignoring safety provisions."

In other words, the untrammelled commercial pressures unleashed by the Government, combined with their abject failure to enforce proper safety standards, have, according to a senior construction executive, caused the safety margin to be squeezed out. That is the essence of our charge against the Government.

There is an estimated £12 billion worth of building work going on at present in London and the south-east, a much higher level than for many years. Clients are taking advantage of the current no holds barred business climate to demand completion from contractors in record time. However, at the same time, more building workers are self-employed and at the mercy of the casualisation of the industry which has created a huge hire and fire labour turnover.

The truth is not the Government's facile view about the causes of the rising level of accidents. The root of the worsening record of the construction industry lies in the lack of training. In the White Paper published last November the Government are once again reviving the proposal to end the construction industry training board. The roots of the problem lie with the failure to enforce current safety legislation, the increase in casual labour, the decline in union membership, which the Government have done their best to encourage, the increasing fragmentation of the industry and the growth in sub-contracting.

The Secretary of State's response to all that has been pitifully narrow minded. The Government are planning to make the wearing of hard hats compulsory on construction sites. That response was given on 17 January. No one would disagree with that; it should have been done many years ago. However, it completely misses the point about the wider structural causes of the rising toll of death and serious injury. The Government's only concession is contained in the statement made by the Under-Secretary of State for Employment, the hon. Member for Teignbridge (Mr. Nicholls), on 17 January when he said:

"Health and Safety Executive inspectors will also be paying more attention to the quality of site management and its ability to manage health and safety."—[*Official Report*, 17 January 1989; Vol. 145, c. 147.]

That is a noticeably vague statement. What he does not say is how that is to have any cutting edge when each inspector in London has to deal with 17,000 building sites apiece.

I want to make it clear to the House that the Labour party gives a far higher priority to health and safety than do the Thatcherite Government with their unfettered commercialism. I want to spell out briefly a seven-point programme which would transform the appalling safety record which the Secretary of State's current laxity has produced.

First, we will bring forward a charter for employees which will give equal status to all workers, part time as well as full time, which cannot be signed away on the demand of an employer for a new contract or, as with the lump, ignored because there is no contract. Under our proposals, all workers currently employed as lump labour will be covered by basic rights on pay, conditions of work, employment practices and health and safety. In effect, the lump will no longer exist and one of the fundamental causes of the worsening accident record in construction will be removed.

Secondly, we will increase the number and the role of the inspectorate and union safety representatives. On larger sites safety representatives should be full time. If convenors are in larger firms, why not safety representatives on larger sites? We shall also introduce the important concept of roving safety representatives who will have the right to inspect any site in their area either at their own instigation or on the invitation of those who work on that site. For the first time, that will give a measure of safety to building workers who believe that their lives are being put at risk by dangerous working conditions.

Thirdly, we will outlaw blacklisting. According to the booklet entitled "Against Democracy: the True Story of the Economic League", which was published last year, Service Group companies, contruction's self-sufficient organisation within the Economic League,

"just call people 'troublemakers' . . . blacklisting on grounds of health and safety activity is the most common thing."

Instead of that disgraceful state of affairs where people are victimised simply because they complain about inadequate health and safety provision, we shall guarantee the right of individual workers to be represented by trade unions on a number of issues, including health and safety.

Fourthly, we will use contract compliance to ensure that at least minimum health and safety standards are

always adhered to in the awarding of Government contracts and, indeed, on all public contracts which involve public expenditure.

Fifthly, we will make it clear that responsibility for site safety is placed squarely on the main contractor, whatever the management arrangements on a particular site. That is of great importance because it effectively remedies the present dissipation of control and responsibility where there is a series of sub-contractors. The Health and Safety Executive regards that as one of the major causes of rising accidents.

That also provides an answer to something that the Secretary of State should be considering—the alarming finding by the Health and Safety Executive that on one in every five sites visited there was no site agent and no supervisor available. Our measure would provide an answer to that by squarely putting the responsibility where it should lie—on the client and the main contractor.

Sixthly, we shall see that the Health and Safety Commission takes a stronger line. I know from my contacts that many inspectors would wish it so to do. We shall require the commission to record its decisions and to make them publicly available in order to discourage employer representatives from seeking to veto safety initiatives. We shall also encourage the executive to prosecute senior management under its powers under section 37 of the Health and Safety at Work etc. Act 1974 to appeal against light sentences—the Government are perfectly prepared to do that in other cases, so why not for health and safety?—and to invite the police to make manslaughter charges in cases of gross neglect.

Seventhly, penalties for negligence that causes death or serious injury must be tough enough to counter powerful commercial pressures, as I have outlined. At present, fines are laughable, if not insulting to the families of those who die or who are maimed. For example, Balfour Beatty, whose pre-tax profits for 1987 were £130 million, was fined just £2,700 after being found criminally guilty of three health and safety offences on three occasions during 1986. That is rather like using a nut to crack a sledgehammer. Such fines are pathetic and inadequate.

The horrific level of deaths and maimings at work will be reversed only by making negligent management liable to hefty gaol sentences. Dangerous driving that kills is subject to the punishment of a gaol sentence and dangerous management in the workplace that kills should be similarly punished, as it is already in the United States, Italy and Sweden.

We agree with Dr. John Cullen, the chairman of the Health and Safety Commission, who last month said:

"I believe that there have been circumstances where employers should have been jailed . . . I think that a jail sentence would help concentrate the minds of employers who might not be carrying out their duties under health and safety laws."

Only the Secretary of State is ready to send people to prison for benefit fraud, but not employers who cause other people's death at work.

We have a programme to match our determined commitment to higher health and safety standards. It represents a huge advance on the facile and cosmetic approach of the Government who, whenever there is a choice, put profit above safety every time. We may well make life harder for negligent employers—a few famous collars in jug would work wonders for health and safety—but it would be a small price to pay for safeguarding the lives and limbs of millions of our working people.

7.37 pm

The Minister of State, Department of Employment (Mr. John Cope): I beg to move, to leave out from "House" to the end of the Question and to add instead thereof:

'deploring the high accident rate on construction sites and noting that 90 per cent. of construction accidents are preventable, recognises that the prime responsibility for safety lies with employers and others on site; acknowledges the vigorous action which the Health and Safety Commission and Executive have taken through enforcement blitzes and publicity campaigns on construction safety; and welcomes the increased provision which the Government has made available to the Health and Safety Executive thereby enabling the Executive to increase the number of inspectors employed on construction work.'.

It may surprise the hon. Member for Oldham, West (Mr. Meacher) to learn that I very much welcome the debate and the opportunity that it gives to draw attention to the dangers of the construction industry and what is being done about it, but I deplore the hon. Gentleman's efforts to twist those dangers into political point scoring. The hon. Gentleman is hopelessly over the top in his political invective. We are used to that. It is so normal that I was able to write that firmly into my speech without even listening to him. As usual, it damages his case—which I do not mind—but today it also damages the message that should go out from the House which should be one of clear and universal support for the Health and Safety Commission and Executive in what they are doing to reduce the carnage in the construction industry.

As the hon. Gentleman knows, for more than 15 years we have had a health and safety regime, run by the Health and Safety Commission and the Health and Safety Executive. Parliament made the HSC the primary body in health and safety, recommending legislation and enforcing the laws we pass. The HSC's work, quite rightly, is based on elaborate consultation, and it has a whole family of committees, both technical and consultative. The HSC and those committees have on them representatives of trade unions as well as employers and others. It is very important that the HSC and HSE have the backing not only of Ministers—which they have, in full—but of right hon. and hon. Members in all parts of the House.

The consultative procedure is sometimes slow but it delivers wide support for the measures that it produces, and that is valuable. Opposition Members should welcome that and support the HSC if they value it, because consultation is an essential prerequisite of safety at work on construction sites and elsewhere. It is the people on site—management and employees—who can do most to improve safety. However, there is no doubt that it needs improving.

There are too many accidents and deaths on construction sites. As the hon. Gentleman said, in 1987-88 there were 157 deaths—about one in three of work-related fatalities—and many more accidents resulting in injuries. Some were serious while others, thankfully, were less so. That adds up to waste, inefficiency and lost time. More importantly, it adds up to a catalogue of pain, suffering and grief.

Mr. Allen McKay (Barnsley, West and Penistone): At least the Minister has got the order right, for a Conservative.

Mr. Cope: More importantly, everyone concerned must recognise that construction and demolition work is inherently dangerous. A building site is essentially a temporary workplace. Its condition, by definition, changes day by day, with different tradesmen arriving at the site and leaving it daily. It has a changing population and changing conditions to a much greater extent than does a factory or other fixed site. However, as the hon. Member for Oldham, West also said very fairly, many of the 157 deaths were avoidable. Last year's report by the Health and Safety Executive, "Blackspot Construction", from which the hon. Gentleman quoted, showed that about 90 per cent. of fatal accidents are preventable. If basic precautions had been taken and common sense prevailed, perhaps 140 of those 157 people would still be alive today.

The hon. Member for Oldham, West tried to make political capital out of all that, but he knows as well as I do that the figures for major accidents are affected by improvements in reporting requirements introduced at the suggestion of the HSC and approved by the House. However, the figures for fatal accidents are much clearer. The average number of deaths in construction is down under this Government by comparison with the last Labour Government. I do not crow about that, because I want the figure to be lower. Nevertheless, it was a bad political point for the hon. Gentleman to make. That is also true of his remarks about inspectors. In 1979, 86 inspectors were engaged on construction work. I do not suppose that the hon. Gentleman intended to mislead the House, but he did so—for today there are 99 inspectors, representing a 15 per cent. increase. It is for the HSE and HSC, not Ministers, to decide on the number of inspectors required for that work.

Mr. Dave Nellist (Coventry, South-East): Does the Minister condone the fact that the Government fund six times as many dole snoopers in London as they do factory inspectors? Where do the Government's priorities lie?

Mr. Cope: The hon. Member can always be relied upon to introduce a red herring into the debate, and he has done so on this occasion.

The long-term drop in accidents is welcome, but it is not enough.

Mr. Ron Leighton (Newham, North-East): I am sure that the Minister does not intend to mislead the House, but although it is true that inspectors have been moved from other duties to construction work, it is also true that for four years under the present Government the recruitment of factory inspectors was stopped, and there are fewer inspectors today than there were 10 years ago. More inspectors may have been moved to construction, but the Minister knows that no inspectors were recruited for four years and that their number was cut. If I catch your eye later, Madam Deputy Speaker, I shall give the House the relevant figures.

Mr. Cope: The hon. Gentleman can give the House those figures, if he catches your eye, Madam Deputy Speaker. It is true that the number of factory inspectors is lower than it was 10 years ago, but it is also true that the figure is rising. It is true also that the shadow Cabinet, in its wisdom, presumably advised by the hon. Member for Oldham, West, chose to debate construction safety, where the number of inspectors has increased by 15 per cent. and where the average number of deaths under a Conservative Government has been fewer than under Labour. That was the Opposition's choice, not ours, and that is the basis of the debate.

The reduction in the number of fatal construction accidents is welcome, but it is not enough. The most important finding of the studies mentioned is that 90 per cent. of fatal accidents examined were avoidable. The hon. Gentleman may pour cold water on this, but we believe that the first essential is to make people aware of the dangers and of how to avoid them. That is why we encouraged the excellent new literature produced by the HSC and HSE. It is well produced and covers every level. Some of it is highly technical, and some of it popular in format. All of it is valuable in increasing awareness, and so are the specific campaigns—the "blitzes"—run by the inspectorate. Also valuable were the special visits paid by my right hon. Friend the Secretary of State for Employment to construction sites, to draw the attention of the media to the necessity for safety. So is the special book for small firms that I had the honour to launch a couple of months ago jointly with John Banham of the Confederation of British Industry and Norman Willis of the Trades Union Congress. We want the message to go out loud and clear that 90 per cent. of fatal construction accidents are preventable.

Awareness alone is not enough. Training is also important, and that is why I welcome the emphasis placed by the construction industry training board, big companies and large sections of the industry on training. As it happens, today sees the launch of a new initiative by the Open College and the CITB. The House will be aware of the renewed support for the Open College that I announced recently. Today, it announced two new courses, "A Site more Safe" and "A Site Better Off". They are both multimedia courses that make use of audio and video tapes as well as an associated television series that will be broadcast on Channel 4 from 20 April. Open learning is particularly suitable given the irregular lifestyle of those working in the construction industry, and I am sure that those new courses will be very valuable.

For those who do not get the message, there remains the force of the law. The key power of construction inspectors —the difference between them and other safety experts —lies in their enforcement powers. During their construction blitz, inspectors issued more than 2,000 prohibition notices. Such notices are important and can prove expensive for the employers concerned.

Mr. Andrew F. Bennett (Denton and Reddish): Does the Minister acknowledge how important it is that employees receive information about site safety? But how will the Minister deal with the problem that when workers make complaints they are placed on a blacklist?

Mr. Cope: If the hon. Gentleman can produce evidence of people being blacklisted for reasons connected with safety, I shall certainly look into it. So far, I have seen no such evidence.

In 1987-88, 2,874 prohibition notices were issued in construction. I remarked that they can prove expensive for the employers concerned. They are also immediate in their effect. They can be used immediately to close down whatever piece of machinery or section of the site against which the notice has been issued. That can close a whole construction site for one day or for several days, while the

matter is put right. That can prove extremely expensive for the employer, and it should not be sneezed at as a quick, direct and forceful method of imposing site safety.

There were also 610 prosecutions last year in the construction industry, which is a considerable increase. The publicity for convictions is considerable and the fine is not always the end of the matter because civil proceedings often follow. Nor should any manager or supervisor imagine that the fine will apply only to the company. A fortnight ago, in north Wales, there was a court case following a fatal accident at a steel erection site. The site agent and the senior foreman were each fined £2,000, as well as a fine being imposed on the company.

The levels of fines imposed are a matter for the courts in individual cases, but anyone who thinks that his company can afford a fine, and does not need to bother about it, should remember two factors. First, BP was recently fined £500,000 and £250,000 on the same day—it was not for a construction accident but the law was the same. That is the highest fine so far imposed, but it does not mean that higher fines will not be imposed in other cases. Secondly, there is clear evidence that safe sites are profitable sites. That is not a matter for speculation but a demonstrable phenomenon.

The specific regulations on construction under the Health and Safety at Work etc. Act 1974 are considerable.

Ms. Mildred Gordon (Bow and Poplar): Is it not true that, in this country, no employer who has been found guilty of negligence that has caused a fatal accident on a building site has ever been imprisoned for criminal negligence? Should not such employers be sentenced? If it is their fault that a worker dies, is it not true that only imprisonment will make them take the matter seriously? When great profits are at stake, fines of £400, or even £2,000, will not improve the position.

Mr. Cope: I was drawing attention to a fine of £750,000. However, suspended prison sentences have been passed in the past and may well be passed in the future. That is a matter for the courts.

Mr. James Wallace (Orkney and Shetland): The Minister has mentioned a variety of sums. Does he know from his own experience and knowledge whether one can insure against such fines? Does he favour legislation to ensure that one could not insure against such fines?

Mr. Cope: I cannot give an authoritative answer about whether the fines are insurable, although I doubt it. I shall certainly look into the matter and, if possible, my right hon. Friend the Secretary of State for Employment will respond to that point.

There are many specific regulations on construction under the Health and Safety at Work etc. Act, as well as the broad and effective provisions of the Act itself. However, the HSC and the HSE are working up new regulations—a fact which, I was glad to see, had penetrated the mind of the hon. Member for Oldham, West—which will take account of modern conditions and fill some gaps where the present law is less demanding than it should be.

The hon. Member for Oldham, West referred to the compulsory wearing of safety helmets. We have received prospective regulations from the Health and Safety Commission and shall soon lay them before the House for the House to decide on them. Those regulations would make it compulsory to wear safety helmets on construction sites.

Mr. Sydney Bidwell (Ealing, Southall): I have had correspondence with the Minister concerning Sikhs in the building industry. The legislation would affect a devout Sikh, although not one who has given up the turban wearing with the long hair on top—which, I should say to the Minister, is to be recommended as a measure of safety if hair can be grown on top. I successfully introduced a Bill on turbans, helmets and motor cycling. The House took the view that it was right to make a religious exemption for turbaned Sikhs. Therefore, I hope that the House will support such an exemption in a measure that applies to building sites because turbaned Sikhs would have to leave the building industry if the legislation were enforced universally. If necessary, I shall be happy to provide such

Mr. Cope: No doubt we shall come to that debate at some point. The Health and Safety Commission, which considered the matter and had public consultation on it, recommended that there should be no exception for turbaned Sikhs. However, we are considering that matter, as, no doubt, the House will wish to do in due course. I am conscious—as are others—of the Bill relating to motor cycles that the hon. Member for Ealing, Southall (Mr. Bidwell) successfully introduced in Parliament.

With regard to hair on top of the head, I do not think that I am doing any better than the hon. Member for Ealing, Southall, but if he has any suggestions to improve my state I shall consider them carefully.

The regulations involving safety helmets are not the only ones coming forward. Other regulations are also being developed by the commission and the executive—the right place for them to be developed—with the active co-operation of trade unions, employers and others involved in the Health and Safety Commission and the consultative process. Those in the pipeline include regulations to require more short-term but high-risk activities to be notified to the inspectorate. At the moment, the inspectorate must be notified if sites are likely to last longer than six weeks—the length of time is one measure of the importance of the site, but certain high-risk activities may last less than six weeks.

Other regulations are being considered to extend the requirement for safety supervisors to smaller companies —at present the number of employees is 20. Regulations are also proposed to provide for better management, and co-ordination on multi-contractor sites, bringing up to date 25-year-old regulations—the hon. Member for Oldham, West picked up this point from the HSC and the HSE.

Each of those proposals will be an important step forward. I understand that the Health and Safety Commission hopes to bring them forward later this year with a view to making the regulations in the course of the next year.

Some attention has recently been drawn to safety on the youth training scheme. About 66,000 young people are on the YTS in the construction industry, 37,000 of them on construction industry training board schemes. I have already explained that construction work is more dangerous than other work. That is also true of construction work done by young people on the YTS as

[Mr. Cope]

compared with other trainees. Our evidence—which is not conclusive—suggests that youth trainees are less at risk than older construction workers. However, that is no reason for complacency; the accident rate is still too high. Tragically, there was one fatality last year involving a 17-year-old electrical trainee who fell from a ladder. I am glad to say that there were no fatalities in 1987 and there have been none so far this year.

As the House knows, we have been re-examining arrangements for ensuring health and safety on the YTS. The basic arrangements are sound. Trainees, like employees, have all the legal protection of the Health and Safety at Work etc. Act. Every trainee receives advice and instruction on health and safety matters and they have full insurance. The providers of training—the managing agents—must have effective safety arrangements in order to be awarded a YTS contract. Under the terms of that contract, managing agents must exercise a duty of care towards all their trainees and ensure that training takes place only in premises which have been notified to the Health and Safety Executive or equivalent authorities. They are also contractually obliged to ensure that work experience providers and shop floor training supervisors share in the duty of care, are fully informed of their responsibilities and carry them out conscientiously.

YTS providers are monitored by trained staff of the Training Agency and receive extensive guidance on health and safety. At regional level, its monitoring is overseen by professionally qualified health and safety experts, some of whom are former factory inspectors. Nevertheless, we have decided to institute practical steps to improve awareness and understanding of these important matters and to tighten controls on the providers of training and work experience.

The Training Agency is issuing additional new and improved health and safety guidance, in particular a document entitled "A Good Start to Assessing Placement Safety", for wide distribution to training providers and others. It complements the existing range of documentation. My copy is hot off the press and rather exclusive, but the bulk order will be delivered in the next few days and I shall place copies in the Library.

The Training Agency is making stronger provision in the standard YTS training proposal, which becomes part of the contract if the proposal is accepted, to ensure that each YTS training provider states its monitoring policy clearly in advance. It specifically identifies and monitors agreements that prohibit use of machines or locations by YTS trainees. We are inviting the Health and Safety Executive and other independent experts to examine YTS health and safety arrangements and documentation and to advise us on further improvements.

We are commissioning from independent experts a new study of YTS accidents between April 1986 and March 1989. It follows earlier studies of accidents to young trainees commissioned from consultants at Aston university, which were published in 1985 and 1987. We hope that it will be completed about the turn of the year, and it will of course be published.

Taken together, those measures will strengthen the safety regime in YTS, including the construction industry, but I must stress that the primary legal and moral responsibility remains with managing agents and those in charge of young trainees. We will not give YTS contracts to those who do not have proper safety arrangements. We withdraw the contracts of those who are not carrying out their responsibilities properly. YTS managing agents and training providers are just as liable as employers to prosecution, notices and civil liability when things go wrong.

For safety, Acts, regulations made under them, guidance, inspectors and courts are important, but not as important as the man or woman on the site. Construction is inherently dangerous, but the majority of accidents are avoidable, and that is the message that we must send out. They arise from carelessness, thoughtlessness, lack of planning and lack of attention to equipment. In a moment, a human life can be lost or blighted by disablement. Once that has happened, nothing can restore the position; no fine or inspector can recompense the family. Hon. Members should not trade politics but should back the Health and Safety Commission and its allies.

8.3 pm

Mr. Eric S. Heffer (Liverpool, Walton): The Minister, as so often in the past, made a statement that I have heard from different people in the construction industry—that the fault for the poor safety record lies with the worker.

Mr. Cope: I apologise for interrupting the hon. Gentleman so soon. I said not the worker only, but those on site—it is both.

Mr. Heffer: I assume that most of the people on site are workers, whether they are managerial workers or people doing physical work.

For years, workers in the construction industry have taken risks. Some have been tempted by bonus schemes to cut corners. To earn a little more money in relation to lump labour, some workers have taken risks, sometimes with horrible results. It would be wrong for me to say otherwise. I know the construction industry because I was a carpenter and joiner for many years before I became a Member of Parliament. I do not deny for one moment that some workers will take risks, but those risks arise from the nature and character of an industry in which profits are put before the interests of workers. It comes down to profits being made at the expense of safety. If a mistake is made by a worker, which does not happen often because he will suffer as a result, it is because he is cutting corners because the employer wants to make extra profit by finishing the job more quickly.

My hon. Friend the Member for Oldham, West (Mr. Meacher) made an excellent speech, making seven good points on behalf of the Labour party to which I am sure that workers in the industry and trade unions will respond and which give us a positive campaign for which we can fight.

The Minister said that he welcomed the debate. I find that strange. He will remember that I tabled an early-day motion which attracted about 240 signatures—probably the largest number of supporters for such a motion—from hon. Members of all political parties, including two Conservative Members. If the Government thought that their position was so strong and that they had a story to tell, why did not the Leader of the House, whom I asked every Thursday for a debate, rush forward and say, "We have a great story to tell, so we shall have a debate at the earliest possible opportunity"? On every occasion, I was

told, "You cannot have a debate next week, but we shall look into it." We never got round to having a debate, and we are having one this evening only because my right hon. and hon. Friends in the shadow Cabinet have decided to have one on this important issue in Opposition time. I am delighted that the motion is not dissimilar to the one that I tabled.

Safety in the construction industry has always been a problem. I can testify that it is a dangerous industry because I worked in it for many years. The issue of health and safety in the industry is of great importance, to such an extent that workers in the London area, though members of trade unions, have got together with the local authority and ordinary people to launch a construction safety campaign. One of the points they make in their document is "Your health, their wealth", the very point made by my hon. Friend the Member for Oldham, West and myself—that it is a case of profits before the interests of the people.

What is so tragic is that a worker in the construction industry—it may be a woman nowadays—can leave home in the morning perfectly healthy and not come home because he or she has been killed or maimed. That is a horrible tragedy. It is something that Members of Parliament do not experience—if they do not get home it may be due to a heart attack or the like, but it would not be because of the work that they do here; it would not be because the employer had failed to comply with safety regulations and had put profits before the interests of his work force. Yet that is what happens daily in the construction industry.

The Government amendment rightly says that 90 per cent. of construction accidents are preventable, and that prime responsibility lies with employers. This was pointed out in the early-day motion and in the Opposition motion today. All too often construction workers die or are maimed due to lack of responsibility on the part of the employer. It is therefore right to say that the Government are responsible, by encouraging relentless commercial pressures and at the same time failing to enforce safety standards.

The point is emphasised in the introduction of the Health and Safety Executive document, "Blackspot Construction", published in 1988, which begins by saying:

"During the five year period 1981 to 1985, 739 people were killed by the construction industry. Five hundred and sixty one were employees; 120 were self-employed; 47 were members of the public—including 21 children."

The next point is very important:

"Death comes to construction sites all too often. The industry is among the most dangerous of all industries in the post war period and the post war period of improvement in the annual toll of death has, in recent years, come to an end."

If the improvement has come to an end in recent years, that means in the years of the Tory Government. So when the Minister of State claims that my hon. Friend the Member for Oldham, West is making political points he is suggesting that his own document is making political points. In fact, this is reality.

The document goes on:

"This and the rising trend in the numbers of serious injuries reported to the Health and Safety Executive (HSE) in 1981-85 has prompted increasing concern in the Health and Safety Commission (HSC) and its construction industry Advisory Committee (CONIAC)."

Many of the workers killed and maimed in the industry are highly skilled. It is interesting to note that 49 people of managerial and professional status were killed in that period; in my own trade, 37 carpenters and joiners; 19 bricklayers; 13 plumbers and glaziers, and so on. It is not just the labourer digging holes who is affected.

Hon. Members have seen the television programme showing a woman inspector going around various sites. She stopped work at a particular site and had only been off the site for a few moments when they started work again, with the employer telling them they were either back at work or sacked because it was easy to replace them. The inspector had to go back and stop the work again. That was a recent television programme showing what actually goes on in the industry in London.

The situation has not improved since 1985; in fact, it has got worse. In 1977 the number of fatal accidents was 130. The Minister is trying to make out how much better it is now. In 1977 the number of employees in the industry was 1,167,000; in 1987 the number of fatal accidents was 100, but the number of employees in the industry at that time was 984,000—183,000 fewer. If there has been a certain fall-off in the rate of accidents, there has also been a fall-off at certain times in the number of workers in the industry. It is very interesting that the number of self-employed has gone up, with lump labour in particular. In 1981, 11 self-employed workers met with fatal accidents, and there were 40 major injuries. In 1987, 41 self-employed workers were fatally injured and 450 suffered major injuries. In 1981 there were 388,000 self-employed and in 1987 542,000, so it is clear that there is a correlation between the number of self-employed and the number of fatal accidents.

On 1 January 1979, 86 factory inspectors were employed in construction. According to Government figures given to me by the Library of the House, on 1 September 1987 there were 75. To be fair, in addition to the 75 experienced inspectors in 1987, there were a further 17 qualified inspectors. This total of 92 qualified inspectors compares with a total of 90 at the beginning of this year—a number which is unlikely to have changed by September 1989, when the recent public expenditure White Paper envisages that there will also be 90 trained inspectors. It is intended that there will be 100 such inspectors by 1990, but even with those numbers, how on earth are they dealing with the real situation? It is high time that the number of inspectors in the construction industry was doubled. We need not the 100 that the Minister boasts that we shall get but at least 200. Even that would not be enough, but it would be a great improvement on what we have now. Despite the safety blitz, whole sections of the construction industry are without safety supervision. Where trade unions are weak on a site, the employers get away with murder.

More than 2,000 dangerous sites were shut down by factory inspectors during the safety blitz. More than 10,000 contractors on 8,272 sites were inspected. Yet during the year of the blitz, which ended in March 1988, 157 people were killed—including 16 members of the public—and 21,000 people were injured. In London there were 38 deaths. Yet the average fine imposed on the 47 companies brought to court was £837. As my hon. Friend the Member for Oldham, West said, that is a joke. When will real penalties be imposed? When will people who are criminally negligent be put in prison?

If the Government are so keen to deal with safety in the construction industry, when do they intend to introduce legislation? They are keen to introduce, out of the blue, legislation that affects dock workers. How much better it

[Mr. Heffer]

would be if dockers did not have to consider taking strike action. Instead, we ought to have been welcoming Government action to eliminate death and injury in the construction industry.

The general secretary of my union, Mr. Albert Williams, was right to declare that death caused by employers' neglect should be an indictable offence and that there should be prosecution for corporate manslaughter, but it is cheaper for employers to take the risk of being fined than to pay for the introduction of proper safety standards.

We need far more health and safety inspectors. There should be an elected health and safety representative at every workplace. My trade union is the Union of Construction, Allied Trades and Technicians. I am proud to say that I have now served for 50 years in that union, beginning in the old Amalgamated Society of Woodworkers, which then merged with UCATT. The former regional secretary of the Merseyside branch of the ASW argued that every member must be his own safety officer, and I agree—where there are good, organised trade union jobs there is collective power to enforce the regulations—but the unions are becoming increasingly weak in certain areas because of the growth of lump labour and individualism. Workers are therefore unable to enforce safety regulations, as they can if there is a good trade union organisation. That is one of the problems in the construction industry.

UCATT is conducting a safe site campaign and has produced an excellent document. *[Interruption.]* Do you mind, Mr. Deputy Speaker? If I speak for half an hour, that is a matter for me, not for you. With all due respect, Mr. Deputy Speaker, even if I have been speaking for 20 minutes, I am entitled to do so. I do not intend to speak for much longer, but it is not your job to mention to the Whip that I ought to be thinking of sitting down.

Mr. Deputy Speaker (Sir Paul Dean): The hon. Gentleman has been called early in the debate. Many hon. Members on both sides of the House wish to speak and time is getting very short.

Mr. Heffer: I will reply to that by telling you, Mr. Deputy Speaker, that I tabled a motion that carried the names of 240 hon. Members. The debate has arisen from the desire of those who supported the motion that it should take place. I am ending my speech by referring to what my union is doing. It is important that the House of Commons and the country should know that if employers conducted themselves as my trade union conducts itself and as the workers in the industry conduct themselves, there would be fewer accidents and deaths. There would be a little less profit, but that would benefit the workers in the construction industry.

It is not just a question of the safety regulations. There is the question of chemicals, asbestos and wood preservatives on site, and also the problem of noise and the handling of loads. Those issues cannot be brushed aside lightly. More deaths and injuries are caused to workers in the construction industry because of the materials that they work with than happens in any other industry. I make no apology for speaking at length on the issue. It is dear to my heart and to the hearts of many other people. I am part of that industry, even though I have been a Member of Parliament for 25 years. I have fought for a hell of a long time to get the House to discuss safety in the construction industry and I make no apologies for having spoken at length on the subject.

When I was an apprentice, conditions in the industry were little different from those described in "The Ragged Trousered Philanthropists". Despite all the technology and the health and safety regulations, when I go on to some sites today I think that conditions there have returned to those described in that book. It is time that the people of this country did something positive about that. That is why I welcome the debate. I hope that the motion in the name of my hon. Friend the Member for Oldham, West will be carried.

Several Hon. Members *rose*——

Mr. Deputy Speaker: Order. I remind the House once more that time is very limited. Many hon. Members on both sides of the House wish to speak. I hope that those who are called will be fair to the others by making brief speeches.

8.28 pm

Mr. Henry Bellingham (Norfolk, North-West): I congratulate the hon. Member for Liverpool, Walton (Mr. Heffer) on his 50 years in his union, but he attached great blame to employers and at times to the self-employed. I was disappointed that he did not point out that there is a great need for good training and safety standards to be inculcated at an early stage. I understand that 107 deaths were due to industrial accidents in 1988. Half those tragic deaths were of people who had been working on site for less than one week, which makes it much worse. It also emphasises the critical need for training at an early stage.

The seven-point plan proposed by the hon. Member for Oldham, West (Mr. Meacher) is a march back to the over-regulated 1960s and apparently proposes controls and burdens on businesses. Surely that is not the way forward. We need higher standards, but we will not achieve them by imposing burdens that have not been properly thought through or considered. However, I agree with the hon. Gentleman about higher fines. It is easy to be simplistic and consider only the fine for a criminal offence. Any firm that is negligent is liable to massive damages in the civil court. I could reel off a number of cases in which firms have had to pay damages well in excess of £250,000 when someone has suffered death or serious injury, and that must not be overlooked. I also agree with the hon. Member for Oldham, West about the responsibility of a main contractor. That must also be considered extremely carefully.

I shall confine my remarks to the construction industry training board which is based in my constituency, as the Under-Secretary of State knows because he has been there. It is a centre of excellence and has a profound effect on my constituency. It is located not in a town but in a rural area and employs about 500 people. At least 10 villages are largely dependent on the CITB for their entire economy. Its impact locally is quite enormous, as my hon. Friend the Under-Secretary is well aware. Since the centre was opened, 95,000 adults have been trained. It trains 5,000 people a year on 50 different courses. This year the CITB is responsible for 35,000 YTS places.

Paragraph 4.24 of the White Paper on training criticised the failure of industrial training boards to make a

significant impact on training generally, but that does not apply to the CITB, given its record in training over the years, its standards of excellence and the emphasis it places on safety right down the line. I am very pleased that my right hon. Friend the Minister of State mentioned today's initiative. "A Site More Safe" which is being launched by the CITB in conjunction with the Open College and Channel 4 and is aimed at those on the sites who are responsible for site safety—the foremen and the managers. That is why it is an important initiative. I shall not elaborate further, but the CITB is constantly producing more initiatives to improve safety standards. It is aware of the need to reduce the number of deaths and injuries. It is rising to that challenge through its training infrastructure.

The White Paper contains an intention to move the ITBs to a non-statutory training organisation basis. However, the construction industry differs from all other industries. It is unique. A vast number of businesses operate within it. Its work is largely cyclical and is often dominated by large projects such as the docklands and the Channel tunnel. The work force is highly mobile. As the hon. Member for Walton pointed out, the work shop is the site itself and that is why the industry cannot be considered in a ordinary way. Training must take place on site and if the work force is constantly moving on in different directions and different employers are poaching skilled workers and constantly looking for new staff for different sites the usual rules cannot apply to the construction industry.

If every employer contributes to a scheme and pays a levy the industry will be happy as it is at the moment. However, if only some employers contribute voluntarily, inevitably there will be a great deal of poaching. If some firms train staff and workers and pay the levy, when times become difficult they may not continue to do so. The arguments in favour of a statutory levy are extremely strong. If training moves on to an entirely voluntary basis, as my right hon. Friend the Minister said, when things are going well firms will continue to pay that levy. Certainly in a time of plenty and an economic boom which we are experiencing at the moment, firms would continue to pay, but if there were a downturn or another recession—and, as I said; the construction industry is cyclical by definition —I am convinced that firms will opt out of paying that levy and the entire infrastructure of the CITB would be under pressure and that would be high-risk tactics.

I accept that the CITB must make certain changes. It must do something about its deficit of £94 million. It proposes to reduce that deficit over five years to £25 million by charging the industry more. At present the industry pays nothing at all for the 35,000 YTS trainees. I believe that it will be fair for there to be some charge. There are other ways in which the CITB can raise money commercially. It will do that, and, furthermore, it will make it very clear to the Government, if it has not already done so, that it is quite prepared to take a smaller, reduced levy over a phased period. It can live with that, but an organisation that turns over £160 million and has such a training structure obviously cannot make changes too quickly. I would be the first person to say to the CITB that its whole bureaucracy is outdated and outmoded. It has a board of 30 people which meets three or four times a year and that structure is hardly conducive to good, streamlined, effective management. So I am pressing for structural changes to be made. However, I believe that the CITB can produce proposals that will satisfy the Minister and will be in keeping and in tune with the White Paper.

I must say to my right hon. Friend the Minister of State and to my hon. Friend the Under-Secretary of State who is to reply to the debate that if the CITB has to cut its operations in west Norfolk the effect on local employment will be immediate and extremely serious. If we were talking about King's Lynn or Norwich the surplus employment could be taken up, but in rural villages where there are very few other jobs there is very little scope for alternative employment, especially when employment in agriculture is contracting. Obviously that is of tremendous importance to my constituency, particularly when the CITB has recently moved its headquarters to Norfolk. It was a major vote of confidence in a rural area and a rural constituency for a major organisation to move its headquarters into west Norfolk and employ 500 people. If the CITB has to cut back because the statutory levy is removed or confined to labour-only sub-contractors, inevitably there will be cuts in what the organisation offers at Bircham Newton and surely that would mean major cuts in safety standards.

If the Minister is serious about trying to reduce the figure of deaths and injuries which is far too high—there were 3,624 major injuries last year—there must be training at an early stage and those 5,000 adults a year must go through the CITB. Those adults do not all work on site. Many will be operating sophisticated plant. Many of them will be operating cranes, for example. Many will be scaffolders and steeplejacks. Those are the sorts of people who must have high-cost, highly sophisticated training, and if they do not get it at the CITB, or at Bircham Newton, it is unlikely that the firms will pay for it. In that case, this catalogue of statistics will get worse, not better.

I say to the Minister of State and to the Under-Secretary that the initiatives that the Government are coming up with are excellent. What they are doing to try to boost the Health and Safety Executive is to be applauded, but I urge them to look very carefully before making any major changes in the statutory levy. That could mean only one thing: perhaps not immediately, but over a period of years, the industry would pay less for training, and in due course a centre of excellence in my constituency would decline. That would have a devastating effect on safety and on the people about whom we care most—those working in the industry. We want to get the casualty figures down, and the only way of doing so is by continuing with the CITB. I urge my hon. Friend the Under-Secretary to do that. I hope that he will take my suggestion on board.

8.41 pm

Mr. James Wallace (Orkney and Shetland): I will not follow the hon. Member for Norfolk, North-West (Mr. Bellingham) into a consideration of the merits and demerits of the construction industry training board, whose ability to deliver its service to a constituency as remote as mine is somewhat incidental. However, I cannot help observing in passing that the hon. Member said that if the board were to play a lesser part, private employers would be likely to spend money on training. That does not seem a very great vote of confidence in the Government's proposals to put a greater burden of responsibility for training on the private sector.

[Mr. James Wallace]

As to the issue that is actually before the House in this debate, I do not think that there is any dispute about the fact that there is a serious problem and that this is a matter of considerable concern. That, I think, is common ground in all parts of the House. The fact that early-day motion 241 in the name of the hon. Member for Liverpool, Walton (Mr. Heffer) has attracted so many signatures is indicative of the level of concern that this issue has raised. Quite honestly, I do not think that it matters whether the deaths have occurred under a Labour Administration or a Tory Administration. They are deaths, the number is far too high, and it is in the interests of every hon. Member to find ways of reducing it.

It is not entirely clear to me whether the figures that have been mentioned include deaths and injuries resulting from contact with dangerous substances and noise. I noted that last month Mr. John Cullen, the chairman of the Health and Safety Commission, indicated that far more workers on construction sites are injured or killed as a result of contact with such substances or noise than as a result of accidents. The hon. Member for Walton raised that question. Clearly it is an important issue, and we shall be interested to know how the Government are responding to the claim.

In the debate in this House on 2 December 1987—the last time, I think, that the issue of health and safety was considered at length here—the Secretary of State said that "our health and safety arrangements are fitted to cope with the needs of a modern society and a changing and expanding economy."—[*Official Report*, 2 December 1987; Vol. 123, c. 1004.]

In all honesty, I do not think that those comments match the situation. Since that time it has been clear that health and safety arrangements are not coping. Reference has already been made to the report "Blackspot Construction". I take encouragement from the fact that I do not think that any such great claims were made by the Minister of State when he spoke earlier today. I think that there is recognition of the fact that much more needs to be done.

As to the causes of accidents, including fatal accidents, it is all too simple to lay all of them at the door of some buccaneering builders, although I cannot deny that a good number of such builders exist, and no doubt they are responsible for many of the accidents that take place. Nor do I believe that the accidents can be laid at the door of some system of work—that it is all the result of people pursuing the profit motive. Inevitably, human nature comes into it. During my few years of practice at the Scottish Bar I acted on both sides of the argument—for employers and for employees. An amazing number of cases were put down purely to human nature. Employers can provide helmets, but the helmets are not always worn. Nor are safety harnesses always worn. That has nothing to do with failure to provide safety equipment; it is just that, for one reason or another, people think that they can do without it, and in some cases it is a question of sheer forgetfulness. Nevertheless, what is quite clear, as was indicated in the report "Blackspot Construction", is that 70 per cent. of accidents could be prevented by positive management action. Much could be done to increase awareness of safety. Awareness, I think, is the key, and lack of awareness is attributable to both employers and employees.

The report on the blitz campaign to which reference has been made showed that one third of all managers had insufficient knowledge of basic health and safety. That is a staggering figure. The report also showed that in 14 per cent. of the cases investigated no one was in charge of the work. Quite clearly, if management is unaware of important safety matters, one cannot readily expect employees to have that knowledge. As has been said by the Minister of State, particular features of the construction industry make the problems more acute. Unlike a factory, where the same conditions tend to prevail over many weeks—indeed, years—construction sites change constantly. Indeed, we are talking about different sites, as well as changing sites. A person may be on a site for only a few days, or even just a few hours. I talked earlier today to representatives of the Scottish building trade. They said to me—I regret that I do not have figures to back this up—that in the case of a long-term project such as the Torness power station construction it appeared that over a period of 10 years the level of accidents fell due to familiarity with the site. That is not always the case when building contractors move quickly from site to site.

Mr. John Ward (Poole): I agree very much with what the hon. Gentleman is saying. Certainly I agree with what he says about big permanent or semi-permanent sites being much easier both to administer and to inspect. Does he recognise, however, that a great deal of the construction industry is based on very small sites with one, two or three men, and that in many cases those men are dealing with minor drainage projects, and so on? Very often that is where the greatest danger lies, and it is difficult to blame the employer alone for accidents.

Mr. Wallace: To some extent the hon. Member is making the point that I was about to make—that there is a whole series of small sites and that people may be on them for only a matter of hours. However, surely the underlying point must be taken together with the rapidly changing work force and lump labour—the fact that the person on whom one relied yesterday is not necessarily here today. That emphasises the need for a keener awareness of safety and for greater attention to safety matters. The fact that a site is small and that workers may be on it for only a few hours in no way absolves those responsible for safety factors.

The response that we have had from the Government is not adequate. The blitz campaign underlines the seriousness of the problem, but I do not believe that the increase in the budget of the Health and Safety Executive and the number of new inspectors go nearly far enough. The hon. Member for Oldham, West (Mr. Meacher) illustrated the shortage of inspectors by referring to the number of sites that each inspector in London has to cover. It is my understanding that in the west of Scotland, including the great Strathclyde conurbation and the whole of the south west of Scotland, there are about five health and safety inspectors. It was graphically put to me that a health and safety inspector going to investigate a construction site in Dumfries would probably have to pass many hundreds of sites on his way there and that if he stopped to check each one he would probably never get to Dumfries.

The volume of work is immense and the necessary resources should be provided. By all means let us acknowledge what has been done, but it is clear from this

debate that far more needs to be done. We have heard the Government's response in relation to the compulsory wearing of safety helmets, and I do not dissent from that proposal at all. Indeed, I look foward to an indication from the Minister as to when it might be expected. There is good precedent for tomorrow not being early enough. I welcome the fact that more guidance material is to be made available to small firms. However, if the fundamental problem of increasing awareness is to be tackled, it is not just a question of highlighting faults, as the blitz campaign did. The Health and Safety Executive must do more by way of advising safety practices and encouraging good practices. I also agree that it is important to bring home to senior management the impact of fines. We should consider personal prosecutions rather than corporate ones. That was mentioned by the chief inspector of factories, Mr. Tony Linehan, in an article in the *Financial Times* of Friday 13 January:

"The Health and Safety Executive plans to start prosecuting directors of construction companies running building sites where there are serious accidents . . . he said the time had come to move beyond prosecuting companies and to explore action against individual directors responsible for safety."

The Minister also mentioned the recent prosecution of a site agent and a senior foreman. No doubt they are now well aware of the serious lessons to be drawn from failing to enforce adequate safety standards. Until that awareness is felt at the highest level, no real action will be taken to ensure that all sectors of the construction industry recognise the need to improve safety practices.

In a recent White Paper on road traffic law, the Government rightly suggested that insurance policies which protect the drink-driver offender from the consequences of disqualification are undesirable. To that end they have reached agreement with the Association of British Insurers to phase out such policies. If the fines imposed in the construction industry are to be effective, similar consideration should be given to phasing out insurance cover against such fines. I accept, as the hon. Member for Norfolk, North-West has suggested, that civil damages may be sought, but invariably such matters are covered by insurance.

More attention must be given to smaller sites. We need more inspectors. We must also stress the importance of safety in training. Safety groups should be established under the auspices of an employers federation. It may be that a small company is unable to employ a safety officer or is not fully acquainted with the vast number of existing regulations. If a number of smaller companies joined together they could employ a safety officer whose remit would be to brief his various employers on safety requirements.

This debate is worthwhile because it highlights the importance of the issue. There is no room for complacency. I am sure that we shall return to this matter in the future and I hope that, by then, some of the positive and constructive ideas that have been mentioned tonight will have been implemented. I also hope that we shall have seen a downward trend in the current unacceptable level of fatal accidents and serious injuries.

8.52 pm

Mr. James Cran (Beverley): As I am usually tail-end Charlie in debates, I assure hon. Members that I shall curtail my remarks tonight as I know that others want to speak.

I welcome this debate because I start from the premise —I assume that it is shared by all other hon. Members tonight—that the protection of the work force is the highest priority of any company. There is no question about that. I am sad, however, that, so far, this debate has not made clear that that responsibility is ably discharged by many construction companies, although there is no doubt that the construction industry faces problems. However, over-simplification will not help to solve them.

I am especially struck by the fact that no Opposition Member has been able to explain why it is that other sectors of British industry, which are equally beset by commercial pressures and all the other pressures outlined tonight, have better records on health and safety than the construction industry. One is led to conclude that the reasons for the above-average number of fatalities and injuries in the construction industry are therefore more complex than commercial pressures.

As I read the Opposition motion, it appears that they believe that the answer lies in more regulations, but that will not solve the problems. I do not believe that the mailed fist approach would help because the problems are much more deep seated than has been so far outlined.

I am also sad that the debate has not highlighted that health and safety are not just the responsibility of the Government. The motion charges the Government with this, that and any other responsibility but, although the Government have a role to play, such an approach ignores the role of companies, trade unions and employees. Alas, individual employees within the construction industry are just as guilty of lack of responsibility as some of the companies. There are good companies and bad ones, but I believe that we have more good ones than bad ones. Unfortunately, there are good and bad sectors of industry and the construction sector gives cause for great concern. It is important to stress, however, that it has been a matter of concern for many years and that that concern has spanned a number of Governments.

Health and safety should not be a political football, but the debate is in danger of making it such. Health and safety should be completely non-partisan and if one accepts that principle it leads in a more constructive direction than that proposed in the motion. Although the reasons behind the motion are of the highest integrity, the motion itself is disappointing and narrow. It over-simplifies the issue and as soon as one does that one unfortunately reaches the wrong conclusions.

We are all well aware that the Health and Safety Executive provides inspection, enforcement and advisory services. In the main, those advisory services are given free. Therefore, there is no excuse for any company to plead ignorance. In the past I have visited many companies and too many companies within the construction industry tended to plead ignorance.

We have heard a great deal about the strength of the Health and Safety Executive. I understand that there are now 99 inspectors. That level was not dictated by the Government; rather, the HSE established that that represented the right manning level. I accept that the inspectorate might be one short, but it is manned at roughly the right level. The HSE's funding for 1989-90 will be met in full and its budget will increase within the next three years. All that is in sharp contradistinction to the message I got from the Opposition Benches. I got the impression of depleted ranks within the HSE, a lack of money and all the rest of it. That is simply not true.

[Mr. James Cran]

I have the impression that, although a number of hon. Members have referred to the need for blitzes—indeed, the word appears in the Government amendment—it is considered by some to be an irrelevance. It is far from that. The blitz that took place between April 1987 and September 1988 resulted in about 8,300 construction sites being visited which highlighted many problems and resulted in action. Therefore, we need more site visits rather than less.

There is an even more powerful weapon to solve the problem that we are discussing. Sending directors to gaol and so on may be part of the solution, although I do not think that it would work. However, the threat of the closure of unsafe sites is a more important sanction because it hits a man—or in this case a company—where it hurts, which is in the pocket. Knowing the industrial community well, I am sure that such a sanction has a strong effect. Will the Minister say how many sites have been closed and whether the Government have been considering the use of this weapon in a more aggressive way?

We must accept that, even if the number of inspections was doubled, the enforcing authority could not have inspectors everywhere at the same time. That leads me to conclude that the amendment is right. Companies have by far the bigger role to play simply because inspectors cannot be everywhere.

The problem in this industry is attitudinal. There is a high labour turnover with small sub-contracting companies. That is the classic ingredient for extreme difficulties such as those we are debating. Bearing that in mind, and curtailing many of the remarks that I would have made had the debate been longer, I will confine myself to a few suggestions.

Companies have a definite responsibility. The problem lies in the large number of small sub-contractors in the industry. If they will not tackle the problem, it must be tackled by the main contractors. In other areas, such as manufacturing, large companies use their purchasing power with those from whom they purchase to get the right quality.

It does not seem a great departure for contractors in the construction industry to get their sub-contractors together and tell them the facts of life with regard to health and safety. The essential fact—it should go ringing from the House—is that the figures of fatalities are unacceptable.

In addition, I hope that the Health and Safety Executive will continue to intensify its activities. Will the Minister give us an assurance that that will happen, because, along with the resultant enforcement actions, it is of prime importance? The other piece of the jigsaw is what the Government can do to help. I support what the Minister of State said about more regulations being needed to cover such issues as the compulsory wearing of hard hats on construction sites. That is not an irrelevancy; it can make a big contribution to reducing the fatality figures.

I applaud the Government for what they are doing and I shall be watching their efforts to ensure that they take whatever steps are possible to solve the problem. None of us wants to return to this issue in a year or two and have to speak again about this sorry state of affairs in the industry.

9.4 pm

Dr. John Gilbert (Dudley, East): I must at the outset declare an interest as a non-executive director of a civil engineering company. I support the motion and particularly the call on

"the Government to increase inspection, improve site management and enforce tougher penalties".

I congratulate my hon. Friend the Member for Liverpool, Walton (Mr. Heffer) on his campaign over many years to get this matter brought before the House. He knows far more about the industry than I shall ever know. He made a fair speech, acknowledging that responsibility for accidents lay in different places.

Some incidents are clearly management responsibilities, some are due to workers ignoring management instructions, and some are plainly accidents about which nothing can be done. For example, the provision of adequate safety clothing, and the enforcement of its wearing, the provision of railings where appropriate and the shoring up of excavations are clearly management responsibilities. But there is no way to legislate to ensure that a man handles a piece of mechanical equipment correctly. He may do it negligently or in circumstances which result in an accident.

The use that may be made of site statistics can be misleading because, as has been pointed out, some sites exist for only a day or so, or even a few hours. It would be misleading to include those in the total statistics. But that does not alter the fact that it would be good to have up to double the number of inspectors and site visits, and every responsible firm would agree with that.

No sensible firm wants a prohibition notice or prosecution. My company makes safety a formal item on the agenda for every board meeting and at every meeting we discuss a report on safety matters. In addition—at my suggestion, which my colleagues cheerfully accepted—the safety officer must make a report in person to the board at least once a year. There is great awareness that safety is, above all, a board responsibility.

The Government should consider making the appointment of a safety officer a statutory responsibility of every company in the industry, rather in the way that the appointment of a company secretary is a statutory responsibility of a company. I disagree with the hon. Member for Orkney and Shetland (Mr. Wallace) that some firms might be too small to employ a safety officer. At least one member of the management of every company, however small, should have responsibility for safety. Even if it is a small firm, he can do that along with his other duties. The fact that a firm is small should not be a let-out from having a safety officer.

Hon. Members in all parts of the House accept that the situation remains unsatisfactory, and I was glad to hear the hon. Member for Beverley (Mr. Cran) say that there should be more site visits. I did not understand how he thought that could be achieved without many more inspectors being appointed. We want more such visits and more prohibitions where necessary, but, above all, we want those visits to take place as a deterrent so that prohibitions and prosecutions are not necessary.

There will be no permanent solution to the problem, because just as there will always be traffic accidents there will always be construction accidents. There could be far fewer, and it is up to us to reduce them. The responsibility lies squarely with the Government who must play their

part. They are not doing that and their complacent amendment shows no sign of their accepting responsibility for these matters.

9.10 pm

Mr. Simon Coombs (Swindon): The subject of the debate is of great concern to all hon. Members. I shall avoid repeating what has been said with eloquence by other hon. Members. There are two ways of looking at the problem and they illustrate the difference between the Government and the Opposition. First, there is the idealistic approach. It is quite right in its way and says that every death is a tragedy, that it is preventable and should be prevented. Who among us could possibly argue with that view?

There is another view which says that it is remarkable that so few construction workers are killed every year, given the boom in construction all over the country and human nature. Little has been said about human nature, but it is the fundamental problem at the heart of the matters that we are discussing. We talk about short cuts, carelessness and over-confidence and, as my hon. Friend the Member for Beverley (Mr. Cran) said, we often talk about inexperience. We point to those things as being the causes of accidents in the construction industry.

Another difference between the two main parties in the House is that the Government look to the Health and Safety Executive and the Health and Safety Commission for guidance. The Health and Safety Executive said that by 1990 we would need 100 inspectors in the construction industry. A year before that time we have 99 inspectors in post. The Opposition propose to tell the Health and Safety Executive what to do. The hon. Member for Liverpool, Walton (Mr. Heffer) said that we could have 200 inspectors now, but I suspect that if he had his way we would have many more. I say to him and to the hon. Member for Oldham, West (Mr. Meacher), who is not in the Chamber, that it is not a bad idea to take note of the advice and guidance of the experts that we employ. The man in Whitehall does not always know best.

The hon. Member for Oldham, West spoke about blacklisting. That is a typical red herring that comes up in almost every debate on employment. I should like to quote a real expert, the director general of the Health and Safety Executive, Mr. Rimington. When he addressed the Select Committee on Employment at the end of last year he said:

"We are in fact increasing the number of inspectors in construction. Perhaps I should explain, I think it is generally known, that we did make representations to the Secretary of State, the Commission did, last year, with the result that more money was made available to us. We are building up the Factory Inspectorate from what is certainly too low a figure. Our main priorities over the next year will be to increase the amount of inspection on construction sites, and to increase the amount of inspection of small firms and contracting firms generally. As you probably know, there has been quite a mushroom growth of those. Many of them, while not wishing, I think, to defy safety provisions, prove to be unaware of some of the hazards with which they are confronted."

In the same exchange Mr. Rimington said:

"Certainly, as regards the construction industry generally, there has been an enormous amount of enforcement activity over the past two or three years. The number of enforcement actions that the Factory Inspectorate has taken on construction sites have virtually trebled over the past two years."

That is the reasoned and measured voice of the expert, and I prefer it to the hysterical ravings of the hon. Member for Oldham, West. He blamed Thatcherism and said that the amazing growth in activity in the construction industry caused the problem at the root of our debate. There has been massive growth not only in activity but also in employment, yet the hon. Gentleman berates the level of unemployment. He cannot have it both ways.

Nothing that the Government could do could be as effective as discipline and self discipline on site. Safety education, protective clothing, prohibition orders and fines are important. Perhaps when the Minister replies to the debate he will comment on the point that a maximum fine of £2,000 in a magistrates court is too low. It might with advantage be significantly increased; and the power to bring actions in a higher court should also be examined.

At the end of the day, safety comes down to one man and one job and the right and wrong way to carry it out. There is no point in saying that it is the Government's fault. It is the fault of any man who allows his life to be placed in jeopardy. We must not get into the cosy attitude of blaming it on Government. We are all individually responsible when we put ourselves at risk, whether in construction, on the roads, in the home or anywhere else. The individual's responsibility must be paramount.

9.16 pm

Mr. Ron Leighton (Newham, North-East): I echo the hon. Member for Swindon (Mr. Coombs) in paying tribute to the Health and Safety Commission and complimenting it on the documents that it has supplied. The commission says that between 1981 and 1985 there were 739 deaths in the construction industry. It said that nearly all of them could have been prevented and that in 70 per cent. of the cases positive action by management could have saved lives. It clearly pins the responsibility on management. It talks about the need to plan and develop safe systems of work before the job starts. The commission talks about roof work and says:

"In the vast majority of fatal accidents on roofs, management . . . did not exercise sufficient control to ensure that relatively simple precautions were taken."

On demolition the commission said that 67 out of 95 accidents causing death were caused by management allowing unsafe systems of work.

The Labour party has instigated this debate because there is a rising trend in accidents. Between 1981 and 1985 major injuries increased by 30 per cent. and in a 10-year period there were 1,500 deaths in the construction industry. In that same decade 500,000 injuries were sufficiently bad to keep people off work for three days. That is much worse than what happened at King's Cross or in the Clapham rail disaster. The number of deaths is much greater than the 495 killings by the IRA. During that same decade three times as many people were killed on construction sites.

In the Falklands conflict 254 British service men were killed, but there have been many more deaths in construction. We must speak out loudly and clearly and say that this is intolerable. Death and injury occur too easily and too often in the construction industry, which is one of the most dangerous industries in Britain. The worrying thing is that the post-war improvement in the figures has been halted, the trend has been reversed and the toll of death and crippling injury is increasing. That is an intolerable scandal and the House must decide to do something about it.

Why are the figures getting worse? Why is there a disaster area? Perhaps it is partly because of the changing

[Mr. Ron Leighton]

face of the industry. Many of today's larger companies have fewer directly employed workers than they used to have. There has been a huge increase in self-employment, what is known as the lump, and in small contractors. The Health and Safety Executive said that these small firms are constantly competing for work and often cut costs to the bone and that safety is usually one of the first casualties —if it is ever considered at all—so that, in the conflict between profits and health and safety, health and safety come last.

More than one third of all employees are now in companies with seven or fewer people, whereas in 1975 it was only one in seven. So we have myriad tiny sub-contracting firms going in and out of business. More than half the deaths occurred on sites with fewer than 10 people. Half the victims had been working for only a week or less on the site where they were killed. Those in charge of the work were considered to be wholly or partly to blame for two thirds of the deaths and to be solely responsible in over half those cases.

If we are to have a campaign that will succeed, most of these small firms will have to be brought into it. My hon. Friend the Member for Bow and Poplar (Ms. Gordon) knows that in the east end of London there is a great growth of construction industry at the moment. The east end is like a forest of cranes. There is an increase in work and this means great pressure to take on inadequately trained, inexperienced labour; and unless something drastic is done there will be an increase in this tide of tragedy.

What is being done about it? We have had the so-called blitz. It started in April 1987 and it was found that by law if work is to last for six weeks the health and safety authorities have to be notified. Only one third of the employers did so. That is another way of saying that two thirds broke the law. Nearly one third of the sites were controlled by agents or supervisors whose knowledge of health and safety legislation was poor or very poor. On 14 per cent. of the sites management was non-existent. Things were so bad and dangerous that on one in four sites work was stopped.

Of course, some firms were good and some were excellent and that showed that they could compete in the market place and implement proper safety measures, which disproves the argument that proper safety makes firms uncompetitive.

The other thing that was found through the blitz was that there were very few prosecutions. Why was that? The Health and Safety Executive explained that it was because of the time and effort necessary to prosecute and the fact that it did not have the necessary staff.

We must ask ourselves what we are to do about this situation. We have to have enforcement of the existing law. If there are no prosecutions, if firms know that they can break the law and cause death and injury and there will be no prosecutions, or they will just have their wrists smacked, nothing will happen. If they are prosecuted in the magistrates court, where the maximum fine is £2,000, we shall not get anywhere. We need proper enforcement. There are not enough inspectors or resources, and the Government are to blame. That is why I intervened in the Minister's speech.

The hon. Member for Swindon (Mr. Coombs), who is a valuable member of the Employment Committee, referred to the health and safety evidence given to the Committee. I have here the annual report of the Health and Safety Executive 1986-87, which says:

"During the six year period April 1980/86, the resources available to the Executive declined in real terms and the number of our inspectors by 213".

So under this Government real resources to the Health and Safety Executive have declined and the number of inspectors has been cut. There is also a reference in the report to a suspension of recruitment between 1980 and 1984. For four years there was a complete suspension of recruitment to the inspectorate. The Government ought to apologise for that error and that cutting of the inspectorate.

The same report says that the pressure on resources throughout the year was a matter of anxiety to the executive and it could not do its job. It explained that in the following year, 1987-88, the rates of pay for inspectors were increased, but the amount of money available to the Health and Safety Executive did not go up. Therefore, again the number of inspectors had to be cut.

The truth is—and I will give way immediately if the Minister can say that I am wrong—that the numbers of agriculture inspectors, factory inspectors and inspectors of mines and quarries are now lower than in 1986 and in 1977, 12 years ago. That is where the Government are to blame for the lack of enforcement.

They say that there are 99 inspectors in the construction industry. That is totally inadequate. There are 180,000 firms in the construction industry.

Time is very short and that is why I have truncated my remarks to let some of my colleagues speak, but I want to suggest a number of things that I think should be done.

First, there must be an increase in penalties. We have to get prosecutions brought in the Crown court and not in the magistrates court. They have to go to the magistrates court first and it is for the Health and Safety Executive to ask that they be moved up to the Crown court. When men or women leave home to go to work their families expect them to come home in the evening, and if employers are so grossly negligent that they cause the death of a worker the sentence should be imprisonment. I believe that until we get some sentences of imprisonment neither employers nor anybody else on the site will take these matters seriously.

The second step is to take up the idea of UCATT, which has asked for what it calls super-safety reps, rather similar to full-time shop stewards who would be full-time safety representatives.

Thirdly, the super-safety reps should have the right to stop a job when there is danger to life. If they had that power it would really mean something. Some people may think that that is going too far, but I remind the House that in the Norwegian sector of the North sea the Norwegian trade union safety representives have that right, although they hardly ever use it because the management takes them seriously and there is proper safety treatment. There should be a right to stop the job where necessary to protect life.

Lastly, because we are dealing with an emergency and need extra safety representatives and inspectors quickly, the Government should take up the visionary offer by the general secretary of UCATT to make available his 120 union officials to act as inspectors. These are people with a lifetime of experience of the industry who know what

they are talking about. They would work under the supervision of the Health and Safety Executive. That would be a way of doubling the inspectorate immediately to get some action on something which all hon. Members must regard as a national emergency.

9.28 pm

Mr. Anthony Coombs (Wyre Forest): I agree with hon. Members on both sides of the House that safety in the workplace is too important to be dealt with on the basis of ideological prejudice. Indeed, anyone who recognises the nature of the building industry will know how deep-seated and difficult some of the problems are. It is a diffuse industry which works in many different locations. As a result, it is small wonder that the Health and Safety Executive found in its survey that 65 per cent. of firms did not identify work that was likely to go on for more than six weeks.

It is inherently a risky industry. Risk is compounded by latitude in the industry, as my hon. Friend the Member for Swindon (Mr. Coombs) mentioned. It was significant that the report of the Health and Safety Executive, referring to the introduction of helmets to improve safety, said:

"Reactions range from unthinking abuse to total apathy, typifying an all too common lack of concern for safety measures."

Therefore, health and safety problems in the industry remain deep-seated. It is wrong to lash out at various so-called contributory factors, such as the lump system or what the motion calls "relentless commercial pressures". That is simplistic.

The evidence provided by the Health and Safety Executive does not support the theory that the irresponsible behaviour and sloppiness that lead to accidents are necessarily increased at times of commercial upsurge. For instance, as a proportion of the numbers in the industry there was little difference in the number of fatalities in 1981, when the industry was depressed, and 1986-87, when it was booming. The survey on the blitz between April 1987 and September 1988 on the 2,000 prohibitions issued by the Health and Safety Executive shows that, while prohibitions were imposed on 51 out of 55 sites in Glasgow, which was booming at that time, in Southampton, where market conditions were equally booming, there were only five prohibitions out of 134 sites.

Most of all, the Labour party motion fails to recognise, as Her Majesty's chief inspector of safety recognises, that it is precisely those companies with the most strict safety rules and the most strict system of monitoring and training their work forces on safety that are the most successful and profitable. As the chief inspector said:

"A well-planned contract which identifies safety requirements will be more efficiently run, more productive and therefore more profitable."

The Government are right to try to set down an effective framework within which, through voluntary co-operation, employers, employees and regulators within the industry can make an improvement in safety.

That is not to say that safety is not a matter of concern. There has been reference in the debate to an article in the *Financial Times* which said that only 49 per cent. of sites with more than 50 employees visited by the Health and Safety Executive had prohibition notices; that the overall standards of health and safety were poor; and that only one third of managers on sites had an adequate grasp of safety procedures. It is worrying that prosecutions have not led to a greater change in attitudes in the industry.

While I welcome the approach by the Government to increase safety supervision in smaller companies, to improve site notification procedure and to allow for better management and co-ordination on multi-contractor sites, I think that there is a strong case for stricter penalties for people who break the law. Equally, there is a strong case for the promotion of model contracts which could be put forward by the Building Employers Confederation, the National House-Building Council and others. Those contracts should show exactly what good safety procedures involve.

In the long run, attitudes will be improved only through training. It was significant that Brian Hewitt, the National House-Building Council president, welcomed the Government review of training recently when he said that it

"provides the house-building industry with the first opportunity for over 20 years to make a meaningful impact on training policy."

There will be 60,000 entrants a year into the building industry over the next few years and a massive need for retraining. Now that the National Council for Vocational Qualifications has recognised the CITB as a lead industrial body, it is important that it uses competence procedures for qualifications in a modular form, if necessary, including health and safety aspects so as to improve significantly the amount of training that is done within the industry on health and safety.

It is a waste of time having well-trained operatives within an industry unless the public have confidence in the way that industry is policed. Although statutory regulations for every type of building work contractor would be unrealistic and undesirable, there is a strong case for statutory self-regulation of the industry, which could take place either through the National House-Building Council or the Building Employers Confederation for companies, depending on the kind of work that they are doing, its complexity and its scope.

A house builder, if he has satisfied criteria of confidence and experience and has provided adequate insurance indemnity and evidence that he has understood safety procedures, would be made responsible on the site on which he worked, irrespective of whether he was sub-contracting, employing lump labour or directly employing labour, for safety on that site. It is curious that, while there is a seven-year training period for architects and a four-year training period for house planners, there is no specific and necessary training period for house builders. If we did what I propose, the reputation of the industry would be increased, the consumers' confidence would be restored, and the safety of employees in the industry would be immeasurably improved.

9.35 pm

Mr. Dave Nellist (Coventry, South-East): Piper Alpha, King's Cross and Zeebrugge were all dreadful disasters involving huge loss of life and terrible injuries. Shock and horror were rammed into the lives of the families affected. Every year there is a disaster of similar magnitude in the construction industry, but the disaster is diffused. It is not concentrated but hidden, and it is not exposed in the media in the same way as the terrible disasters to which I have already referred.

My colleagues have referred to "Blackspot Construction" produced by the Health and Safety Executive in June 1988. That document recorded that 739

[Mr. Dave Nellist]

people were killed in construction accidents between 1981 and 1985—an average of 147 deaths per year. That is twice the rate for agriculture and five times the rate for manufacturing industry. Since 1985, it has climbed to 160 deaths per year. A construction worker is killed or seriously injured on site every hour of every working day and a less serious injury occurs once every couple of minutes. Deaths caused by long-term diseases and injuries kill 4,000 people per year. That is carnage—the word used by my hon. Friend the Member for Oldham, West (Mr. Meacher)—and carnage on a horrific scale. It is a battlefield on which building workers are the cannon fodder for the employers' profit system.

Not all the people on a building site face the same risks. The chances of a site manager or agent dying of lung cancer before reaching retirement age are half that for the general population. By contrast, according to the Office of Population Censuses and Surveys decennial occupational mortality supplement 1979-80 and 1982-83, a plasterer runs three times the risk of disease as his boss. The risk of disease extends to families living in buildings under construction, repair or renovation, as recent evidence from Germany has shown from the use of timber treatment solutions containing pentachlorophenol and lindane. Fifty thousand people in this country belong to the Association of Victims of Wood Preservatives and are preparing to sue United Kingdom companies such as Rentokil and Cuprinol which distribute products which can allegedly cause leukemia, cancer and blood disorders including aplastic anaemia.

My time on the shop floor during the 1970s was littered with anecdotal stories of how we hardly ever contributed to retirement do's for chippies or welders as they never lived long enough to retire because they worked with similarly dangerous substances. The common link between Piper Alpha, King's Cross, Zeebrugge and the construction accidents and illnesses which we have discussed this evening is that they are all preventable. All the deaths are the result of callous disregard by employers for workers' safety. It does not matter whether the employers be Occidental, British Rail, Townsend Thoresen, John Laing, Tarmac, Rentokil or Cuprinol.

Whether those deaths are preventable is not, in a sense, in question tonight. The Opposition have stated that they are, as has the HSE in its five-yearly report which stated:

"Ninety per cent. of construction fatalities could have been prevented."

Even the Prime Minister's amendment acknowledges that. Clearly the Government have been on the defensive tonight. The HSE continued:

"In 70 per cent. of cases, positive action by management could have saved lives."

Why is that action not forthcoming? That question should be the crux of this debate. That is what I think and what I want to express in these two or three minutes after waiting many months to make a major contribution in this hallowed hall of the House of Commons. That question should be the crux of the debate in the few minutes that remain.

Action is not forthcoming because of the £12 billion worth of contracts in London and the south-east alone. Contractors have been told to complete contracts on time, regardless of how many corners they cut. The most infamous statement that I have heard in six years in this palace of varieties is "a man a mile" in relation to the building of the Channel tunnel. It is estimated that the Chunnel will lead to 20 deaths in 20 miles. That is the impact on the work carried out. Deaths are being built into the budget. That is an obscenity. There is no other word for it. It is obscene that the construction industry's profits should be put before the lives of those who create that wealth.

The Government and the Prime Minister's all pervading and perverse philosophy of "get rich quick and ignore the lives of the workers" underpins the philosophy of the employers. In the past 10 years, 1,500 people have died in construction accidents. According to the Health and Safety Executive, the number of fatal and major injuries has risen by 66 per cent. in the past seven years. In the two years 1986 and 1987, six of the top building firms in Britain—Beazer, Bovis, Laing, Tarmac, Wimpey and Trafalgar House—made £836 million profit. In the past three years, Laing, McAlpine, Balfour Beatty, Tarmac and Wimpey have all been found guilty of health and safety offences. The fines have been between £500 and £2,000. When one compares that with Jeffrey Archer's £500,000 and Elton John's £1 million—when one sets the reputations of those individuals against the lives of construction workers—how do the scales balance?

From January 1983 to March 1987, the average fine on 2,343 firms was £361—the same as the average fine for not paying the fare on London Transport. That is how much the lives of workers in the construction industry are considered. The Government take no serious account of that point, and their attitude is understandable when one notes that in 1987 Wimpey, Bovis, Tarmac, Trafalgar House and Costain each gave between £25,000 and £37,000 to the Tory party to keep it sweet. Amey Roadstone, Costain, Gleeson, McAlpine, Marples, Taylor Woodrow, Wimpey and Mowlem also all subscribe to the Economic League which blacklists any shop steward who sticks his head above the parapet and complains about unsafe working conditions.

The Labour Government gave us the Health and Safety at Work etc. Act 1974, but that is no more than a bit of paper unless it has teeth and stewards have the confidence to use it. The Health and Safety Executive is staffed by well-intentioned individuals, but it is inadequate. The Minister said earlier that this was a red herring, but the Government employ six times as many dole snoopers in London as factory inspectors. Last year, 4,133 sites known to inspectors in London had 12 inspectors to cover them. They could not get to each of them once a year if they tried, so although there were 36 deaths in London last year and 413 major injuries there were only 18 prosecutions and no employer was gaoled—so much for the law and order party!

The workers have had enough. A debate like this will not satisfy the thousands of workers who are sick to the back teeth of burying their mates after accidents. Comrades have spoken of it. Building workers, first in London and now in the midlands, have formed the construction safety campaign. They are asking for a lot of things—but the first and most important is that the number of deaths and injuries of construction workers in Britain should become a major political issue. Tonight we have made a start on that. There are a few more miles to go down that road. We shall have lobbies and meetings and, no doubt, some industrial action along the way as well. We shall do what we have started to do in Coventry,

where we are banning contractors when scaffolding and other inadequate working practices on building sites are creating risks for workers. We shall put that proposal to every Labour council.

Our experience and that of the Health and Safety Executive is that the Government do not allow the HSE the resources to operate properly. The debate may be a little irritant to those Tory Members who have turned up, but what of the wives and the bairns of those who have died in the past 10 years? There are about 1·5 million workers in the industry, and in the past 10 years 1,500 have been killed and 40,000 have died from bronchitis, cancer and other diseases caused by dust and unhealthy working conditions. The number injured runs into millions.

Our motion puts the blame where it lies. The chilling report of the Health and Safety Executive shows that 90 per cent. of fatalities in the construction industry are preventable—not "avoidable", as the Minister said. He should look in a dictionary and see the difference between the two. If employers—those with the money—really meant to save the lives of their workers, they could do so.

There is a solution to the problem. It lies in the motion, in the suggestion of the Health and Safety Executive, and in the work of the construction safety campaign. Employers do not care a damn about safety. They care only about profit. The only way that we shall stop their lust for profit and the killing of workers in the construction industry is when those employers no longer own and control it—when workers in the building industry and the working class generally own, control, plan and manage the construction industry. Then we shall build houses without the death of workers being the price that is paid.

9.45 pm

Mr. Gavin Strang (Edinburgh, East): It is a measure of the importance that we attach to the subject that not all right hon. and hon. Members who wished to speak in the debate have been able to participate.

There can be no doubt about the high level of accidents in the construction industry, and there can be no doubt about the need for effective action by all concerned to improve health and safety standards. The construction industry is one of the most dangerous in the country. The Health and Safety Executive's 1987-88 report shows that the number of employees who suffered fatal injuries in all industries totalled 340 and that no fewer than 100 of them were in construction, compared with 96 in all manufacturing industries. The figures in respect of the self-employed and non-employed are even more striking. The number for all industries is 525, of which 157 are accounted for by construction and 100 by manufacturing.

The figure of 157 deaths in construction for 1987-88 is the highest since 1981. I refer also to the figures for reported accidents per 100,000 employees, the latest of which were published in February with the *Employment Gazette* supplement, from which one can see that accident rates in construction are among the highest of all the industries included. My hon. Friend the Member for Liverpool, Walton (Mr. Heffer) made it clear that, along with all those accidents, there are deaths arising from occupational disease such as asbestosis and bronchitis. The chairman of the Health and Safety Commission, Dr. John Cullen, stated that more people die from contact with dangerous substances and from noise on construction sites than from injuries.

The Government have a responsibility, and the Minister made great play of the fact that recently there has been an increase in the number of factory inspectors dealing with the construction industry. However, that increase is against the background of a progressive decline in the number of Health and Safety Executive staff and of factory and agricultural inspectors. There has been a decline in qualified and experienced factory inspectors, and all the increases are accounted for by recent new recruits. It is arguable that the additional number of construction inspectors will be less capable of doing the job than would be the case were there a more balanced complement, with the more experienced and qualified inspectors who have left to take other jobs.

That decline in the executive, for which the Government have been responsible over 10 years, has occurred while the Government have piled additional responsibility upon responsibility on the commission and the executive. I refer to the Food and Environment Protection Act 1985, the Control of Industrial Major Accident Hazards Regulations 1984, responsibility for gas safety including domestic installations, the Road Traffic (Carriage of Dangerous Substances in Packages etc.) Regulations 1986, and the Control of Substances Hazardous to Health Regulations 1988, which will shortly come into operation. All those are increased responsibilities and yet, at the same time, year in, year out, there has been a decline in the resources available to the Health and Safety Executive. We welcome the belated improvement, but it is totally inadequate—infinitesimal against what is needed to restore the position. We need a commitment from the Government to increase the amount available to the Health and Safety Executive by a substantial amount each year in order to begin to overcome the problems.

Against that background of a shortage of factory inspectors, it was probably right to have the much publicised blitz to which the hon. Members referred. However, when a blitz takes place, the people inspecting the sites are unable to do their normal jobs. Inspectors are reallocated to the work instead of carrying out the jobs they should be doing. As I am sure Ministers recognise, an important role of the inspectors is advisory and educational.

The Government have responsibilities for health and safety in our construction industry. We need a massive increase in the number of inspectors and, as my hon. Friend the Member for Oldham, West (Mr. Meacher) said, there is a great need for longer sentences for offenders. Top managers should go to gaol if they are responsible for inadequate health and safety standards that lead to death and serious injury on construction sites.

Reference has been made to the excellent study, "Blackspot Construction", carried out by the Health and Safety Executive. That points out quite clearly time and again that responsibility for these injuries and deaths lies with the site management, and inadequate supervision and planning of the work places.

It should be made absolutely clear that responsibility lies in the work place with the workers themselves, in addition to the inspectorate. We deplore the fact that, year in, year out, the Government have enacted legislation to undermine and weaken the trade union movement, which has, and should play, a key role in health and safety in the workplace, particularly on construction sites. It is no use

[Mr. Gavin Strang]

the Government talking about the role of the workers and the trade unions and, at the same time, constantly introducing legislation to weaken and undermine them.

The Government have put private profit before public service and preferred tax cuts to public investment on improved services. The Government have undermined the trade union movement at every opportunity. We are not suggesting that the Government are indifferent to death and injury on building sites, but the Government have not given health and safety in the construction industry the priority that they deserve. That is why we shall be voting for the motion.

9.53 pm

The Parliamentary Under-Secretary of State for Employment (Mr. Patrick Nicholls): The inevitable constraints of time mean that I shall not be able to do justice to the powerful contributions made by a number of hon. Members. Without the two inevitable exceptions, the contributions made were extremely helpful, and of the sort that we expect to hear.

My right hon. Friend the Minister of State called for a debate which went above party and which would bring about some positive suggestions for tackling a very real problem and give a clear message to the industry that it must do better. For the most part, that has been the case and I shall certainly look at *Hansard* to note the points that have been made, and reply to any specific points as necessary.

I shall comment shortly upon some of the points that have been made in the debate, but I first want to emphasise two points which are central to the issue of construction safety. First, far too many people are killed while working on sites—hon. Members from both sides of the House have rightly condemned that carnage. Secondly, it is wholly inexcusable because so many—90 per cent. of the deaths—are obviously preventable.

Yes, construction sites may be inherently dangerous, with large machines, heavy weights and heights, but time and again inspectors report that the true cause of an accident was ignorance, complacency or lack of thought about basic and simple precautions. It is utterly unacceptable that some of those engaged in the construction industry have so little regard for human life and the well-being of their fellow citizens.

However, there is another reason why this record is so appalling. It concerns an area where the hon. Member for Oldham, West (Mr. Meacher) and the Opposition motion have chosen to try to make cheap political capital, and about which they are mistaken. They have charged the Government with some form of commercial interest in fostering poor safety conditions, but the message that we are trying to get across to industry is that there is every commercial reason to ensure that firms have the highest safety standards. Accidents not only cause pain and suffering but incur extremely high costs—£2 billion per annum—a high proportion of which fall on the construction industry. Young people will soon be in short supply, and the industry's image will do it no good whatever in a difficult recruitment market.

When inspectors visit sites they find that there is a direct correlation between firms with good safety standards and those that are successful. Those that have poor standards often go bust. Mistakenly, their managers think that by cutting corners they can make economies. Such short-sighted attitudes invariably backfire, and the same lackadaisical attitude to running their business leads to economic ruin. A good manager knows that he must ensure that his company performs well in all sectors and that it is counterproductive to cheat on safety.

In a powerful contribution, the hon. Member for Liverpool, Walton (Mr. Heffer) said that safety is a question of "your health or their wealth." He could not be more wrong. There is nothing contradictory or inimical between profits and safety; the two must go hand in hand.

Mention was made of accident rates, and inevitably the hon. Member for Oldham, West interpreted them in a particular way. The hon. Gentleman seems to think that we do not understand the message. There were 157 fatalities last year and 3,600 major injuries—too many. Like it or not, the hon. Gentleman will have to face up to the fact that the prevention of accidents lies not with the Government but with those who work on sites and primarily, though not exclusively, with employers.

The hon. Member for Oldham, West has a way of presenting figures. I shall make a point from which I take no comfort—it is the sort of thing in which the hon. Gentleman wants to indulge—about the number of fatalities in the construction industry. There were 139 deaths in the boom period of 1986-87 and 157 in 1987-88. Those figures are well below the rates of the last sustained boom in construction. In 1974, there were 166 deaths and in 1975 there were 182. If I adopted the simplistic nonsense of the hon. Member for Oldham, West, I could say, "That is OK. We are doing better and deaths were higher under a Labour Government." I derive no comfort from that, but that is the way in which the hon. Gentleman tried to present the argument. It is not good enough to come to the House with pretensions of office when the best that one can do is to try to attribute accident figures to political opponents. Even by the standards of the hon. Member for Oldham, West, that will not work.

We understand that the Opposition take a dirigiste view of the courts, but the Government should not lecture courts on how to decide cases. It is the Government's job to ensure that penalties are available for courts to use. If magistrates decide that a case is serious enough to commit to the Crown court, that is where it goes. Companies do not take fines of £750,000 lightly. Such fines make a substantial deficit in a company's accounts. It is about time that people such as the hon. Member for Oldham, West, who pretend to take an interest in these matters, understood that.

My right hon. Friend the Minister of State said that the construction industry's fatality record was quite appalling. The misery, desolation and grief that underlie the figures for many families is made more unbearably acute by the fact that many of the accidents were avoidable. When others rise to the occasion, the hon. Member for Oldham, West is more likely to sink to it. Surely this is an issue in which even he could have risen above his usual practice of using and abusing any issue for cheap political points. The hon. Member for Edinburgh, East (Mr. Strang) at least did his best to reflect that concern.

What we need to know from the Opposition tonight, as the debate reaches its conclusion, is which of their two spokesmen more accurately reflects Opposition views. Is it an attempt at common sense or cheap sensationalism; positive action or political posturing; heartfelt concern or

the usual Oldham claptrap? In a few moments' time we will know the answer to that, but even if students of Labour's past form are unlikely to be disappointed, we could all hope that, just this once, they might conceivably have got it wrong.

Question put, That the original words stand part of the Question:—

Tellers for the Noes:
Mr. Tony Durant and
Mr. Tom Sackville.

Question accordingly negatived.

Question, That the proposed words be there added, *put forthwith pursuant to Standing Order No. 30 (Questions on amendments), and agreed to.*

MR. SPEAKER *forthwith declared the main Question, as amended, to be agreed to.*

Resolved,

That this House, deploring the high accident rate on construction sites and noting that 90 per cent. of construction accidents are preventable, recognises that the prime responsibility for safety lies with employers and others on site; acknowledges the vigorous action which the Health and Safety Commission and Executive have taken through enforcement blitzes and publicity campaigns on construction safety; and welcomes the increased provision which the Government has made available to the Health and Safety Executive thereby enabling the Executive to increase the number of inspectors employed on construction work.

European Community (Weights and Measures)

10.17 pm

The Parliamentary Under-Secretary for Corporate Affairs (Mr. Francis Maude): I beg to move,

That this House takes note of European Community Document No. 4102/89 on units of measurement; and welcomes the proposals as providing adequate transitional periods to enable businesses and consumers to adapt and become used to the new measurements.

In 1965 the then Government announced their support to encourage the adoption of metric units as the primary system for weights and measures in the United Kingdom. *[Interruption.]*

Mr. Speaker: Order. Will hon. Members who are not remaining for this debate please leave quietly?

Mr. Maude: That was a decision taken for purely domestic reasons, in response to urging by the CBI and others; it had nothing to do then with possible membership of the European Community. In 1971 the then member states of the Community adopted a directive which established the sole use of the metric system throughout the Community. When the United Kingdom and Ireland acceded to the Community the Government accepted that eventually the metric system should be the only system to be used.

In consequence, a White Paper on metrication was published in 1972. It stated that all practicable progress towards the full use of the metric system should be made within the next few years, in the interests of economic prosperity. This led to the education system moving to the use of metric units in 1974. As a result, 11 million children since then have been taught only in the metric system.

Mr. Neil Hamilton (Tatton): I am interested to hear that the Government now take orders from the CBI. If the situation is as my hon. Friend says, I wonder whether he can tell us why abolition of the Metrication Board was one of the Government's first acts on being elected in 1979.

Mr. Maude: In the hubbub my hon. Friend may not have heard that I was referring to the Government in 1965 taking steps in response to urging by the CBI. I am now dealing with steps taken by the Government in 1972 and 1974. My hon. Friend will realise that different considerations may have applied then.

In the late 1970s, discussion began, under the last Government, on proposals for a new directive. The directive was eventually adopted in late 1979, having been modified by the present Government to allow the yard to continue to be used. In its final form, the directive continued to authorise the use of the remaining imperial units in the United Kingdom and Ireland until a date to be fixed by those member states. However, the directive provided that there should be a further directive, to be agreed not later than the end of the 1989, which would set a final date by which the United Kingdom and Ireland should end the use of imperial units. The proposals we are discussing are intended to meet that commitment. They have been brought forward as a result of a binding commitment entered into by the Government, with bipartisan support, in 1979.

Following the Single European Act, the directive falls to be decided under article 100A by qualified majority, and the United Kingdom and Ireland alone do not form a blocking minority.

Let us now consider the detail of the commission's proposals. The first proposal covers the mile, yard, foot and inch for road transport purposes, the pint for dispensing draught beer and cider, the pint for milk in returnable bottles, and the acre.

We and Ireland will be able to continue to authorise those units for these purposes for as long as we wish, without any need for a further EC decision. Therefore, the mile, the pint in the pub, the doorstep pint of milk and the acre will be preserved.

Dame Elaine Kellett-Bowman (Lancaster): Did my hon. Friend say

"as long as we wish"

or will there be a termination date of 1999?

Mr. Maude: There is no termination date and it will be for the member states concerned to set a termination date if and when they wish.

Mr. Austin Mitchell (Great Grimsby): The Minister said that the directive will be determined under article 100A. The Select Committee on European Legislation said in its report:

"It appears to the Committee, in the light of the Department's response to the second point"—

it was about article 100A—

"that there is no impediment to the Commission, if the present proposal is adopted by the Council, subsequently submitting a further proposal, under Article 100A, to fix the date for ending".

That means the use of this particular group of measures could be ended under article 100A.

Mr. Maude: There is nothing to prevent the Commission from making further proposals about anything which lies within its competence to do. In the same way, there is nothing to stop anyone making a legislative proposal in this House. However, we are discussing the final step along the road. The Commission has accepted the concerns expressed by our Government and the proposals reflect those concerns. Fears that there will suddenly be another tranche of proposals are misguided.

Mr. Austin Mitchell: Surely it means that the derogation could be ended unilaterally without consultation with us and without our consent.

Mr. Maude: For the derogation to be ended would require the Commission to make a proposal which would have to be agreed by a qualified majority. That would have to be negotiated in the usual way and, as with this proposal, the United Kingdom and Ireland would not, alone, have a blocking minority. There is no reason to suppose——

Mr. Dennis Skinner (Bolsover): It is not for ever then?

Mr. Maude: Nothing is for ever, as the hon. Gentleman knows. There is no reason to suppose, however, that the Commission has any desire to introduce further measures.

Mr. David Blunkett (Sheffield, Brightside): I initiated the early-day motion on this issue and the Minister will know that I should be pleased to hear an unequivocal answer from him about the requirement that a date be

[Mr. David Blunkett]

eventually set. That is the issue tonight. It is not whether there will be a delay in having to fix a date to do away with the pint and the mile but whether, eventually, a date will be set to which a British Goverment, now or in the future, will have to adhere. Therefore, the evil day has been put off, but it has not been put aside.

Mr. Maude: The hon. Member for Norwood (Mr. Fraser), who is sitting next to the hon. Member for Sheffield, Brightside (Mr. Blunkett), is familiar with the 1979 directive. It is framed in such a way that this proposal must provide the dates to be set and the only legal means which enables this country to have the final say on when or whether the units are discontinued is the form in which the proposal is expressed. In practical terms, it enables this country to have the last say on whether the units are retained. It has not been easy to find a form of words within the constraints of the last directive that allows that position to come about. It has been achieved, however, and I must now seek to persuade other member states of the Community that it is an acceptable compromise which should be supported.

The second proposal covers the fathom, the therm, the pint and the fluid ounce for returnable beer, cider and soft drink bottles, and the pound and ounce for goods weighed out for or by the consumer. We would be able to continue to authorise these units for these purposes until the end of the century.

Mr. A. J. Beith (Berwick-upon-Tweed): Given that weighed-out loose goods, weighed out from bulk in front of the consumer, are not items which are traded across the Community, what possible reason can there be to require a small shopkeeper to refuse to serve a consumer 5 lb of potatoes or 1 lb of peas from bulk goods? What will happen to the shopkeeper or consumer if, after the set date, the customer asks for, and the shopkeeper serves, 5 lb of potatoes?

Mr. Maude: Under the present weights and measures legislation, which has been in existence, subject to amendment from time to time, for a long time, it is, and has been for many years, a criminal offence to sell goods in measures which are not authorised under the legislation. The consequence of this directive would be that at the appropriate time—which, if this proposal remains in the directive, would not need to be until the end of the century—we would have to amend our domestic legislation according to these proposals.

Mr. Beith: What is the answer to my question?

Mr. Maude: The hon. Gentleman may not be aware of the fact that it is possible for the trading standards authorities to prosecute people now who sell goods in quantities and units which are not authorised under the legislation. There is nothing novel about that. *[Interruption.]* Amendments have been made continually to the list of such authorised units over many years.

Mr. Beith: Is the Minister seriously saying that he envisages that weights and measures inspectors will prosecute little old ladies for buying 5 lb of loose potatoes after 1999?

Mr. Maude: It would not be a criminal offence for the customer to buy goods in those circumstances. It would be, as it is now, a criminal offence for a trader to sell goods in units which are not authorised, and there is nothing novel about that. The hon. Gentleman should know that. If he is asking whether trading standards officers will do it, my answer is that it will be a matter for those officers. But I should be surprised if, on the day after these measures come into operation, trading standards officers will be stamping around the streets trying to find people selling goods in pounds and ounces. If the hon. Gentleman believes that is a possibility, he has a lesser view than I do of the enforcement officers.

Dame Elaine Kellett-Bowman: I asked my hon. Friend, in effect, if I was right in believing that what is proposed was fixed until 31 December 1999 and I understood him to say that there was no termination date. Technically that is true. But he went on to say that the pint and the mile could be used until the end of the century. That was precisely the point I questioned him on.

Mr. Maude: My hon. Friend asked me specifically about the pint for dispensing draught beer and cider and the mile. That was the first proposal I outlined and the answer I gave her was correct. There is no requirement for a termination date to be set. I am now dealing with the second proposal in the draft directive which covers the pint for other purposes—for returnable beer, cider and soft drink bottles—and it will remain possible for the United Kingdom and Ireland to authorise those units until the end of the century. I hope that that makes it clear to my hon. Friend.

Mr. Blunkett: To enable me to sleep easy in my bed, may I ask the Minister to explain into which category will fall the best service we in this country enjoy, the service that is most reliable and which we take for granted—the delivery of our pint of milk?

Mr. Maude: The pint of milk delivered to the doorstep falls into the first category. It will remain with this country to set an authorisation date, if and when we decide to do that.

The third proposal covers all the other remaining imperial units set out in chapter three of the 1979 directive. Those could continue to be authorised until the beginning of 1995. Special provisions for the troy ounce for bullion dealing would be made which recognise the international status of that unit. The proposals would also allow imperial units to continue to be used as supplementary indications to the marking in metric units until the end of the century. That would allow dual marking, which would enable us to provide a transitional period for consumers to become fully familiar with those metric units that will be used.

Mr. James Wallace (Orkney and Shetland): I have been reflecting on what the Minister said to the hon. Member for Sheffield, Brightside (Mr. Blunkett). Does he mean that dairies that deliver milk to the doorstep and also supply supermarkets will have to have different sizes of bottles after 1999 for each type of delivery? Will it be possible for supermarkets to continue to sell pints of milk?

Mr. Maude: It will be up to dairies to decide what to do. It is already possible for dairies to supply milk in metric units and some do so. It will remain open to dairies to choose which unit to use for doorstep deliveries. The permanent derogation, which is what it amounts to, would

apply only to milk being delivered in returnable containers. It would be possible for milk to be sold in supermarkets in returnable containers in the same units in which it is delivered to the doorstep.

Mr. Skinner: Will we be able to buy these things at Harrods?

I have not finished; that was just an introduction. Is there not something sick about the Common Market? Bureaucrats who are well paid with British taxpayers' money have spent countless hours on this. Every family in Britain pays £16 a week to prop up this unmitigated disaster of a Common Market. The Minister is pouring out a load of gobbledegook based on trying to regulate milk bottles and stop old ladies buying loose tatties. What a state we have got into. The Minister should take it back to the Common Market and tell them to get stuffed.

Mr. Maude: As always, the hon. Gentleman is full of splendid advice. He should have put those comments to his hon. Friend the Member for Norwood (Mr. Fraser) in 1978-79. Perhaps he did. The directive is the result of a legal obligation and arises from the directive negotiated by the last Labour Government and agreed with modifications and further safeguards by the present Government. It places on the Community an obligation to produce a further directive and agree it by the end of the year.

Mr. John Fraser (Norwood): My hon. Friend the Member for Bolsover (Mr. Skinner) did raise the matter with me, but I am afraid that he remains a convinced imperialist.

Mr. Maude: The hon. Member for Bolsover (Mr. Skinner) clearly failed to persuade the hon. Member for Norwood at that time.

We have consulted over 700 interested groups, from industry, trade, enforcement authorities and consumer bodies. Some of those consulted, including the National Consumer Council and the National Federation of Consumer Groups, have urged that the interests of consumers would be better served by the completion of metrication by the end of 1992 with no derogations at all. I cannot agree with that, because the Commission's proposals would allow such further changes as are necessary to be undertaken in a cautious and considered way, with the minimum disruption to consumers or industry. It would allow to continue to be used units for which the public have great affection and in respect of which it cannot be seriously argued that they constitute barriers to trade.

In respect of those units where such an argument does exist, the proposals allow us to move sensibly and without undue haste. I should stress that these proposals affect the use of imperial units only for the purposes of trade.

Mr. Charles Kennedy (Ross, Cromarty and Skye): I hope that the hon. Gentleman will forgive me, but I missed what he said when he was talking about the consultation exercise. In the accompanying documents there is mention of a very disappointing response. In what respect was the response disappointing? How many of the 700 groups that were asked to comment were in favour of what the Commission is suggesting?

Mr. Maude: There were two responses which were hostile to the spirit of further metrication, a number which were neutral and some, to which I have just referred, which urged that we should move more quickly. I do not believe that those representations reflect a widespread view and I do not believe that we should move more quickly than these proposals allow.

Mr. Kennedy: On a further factual point, given that there were two that were hostile, a few that were non-committal and several that said something else, what were the total number of responses from the 700 that were circulated?

Mr. Maude: I can probably find how many responses there were. The consultation, which was widespread, did not elicit very strong views in any direction. The volume of correspondence which the proposals generated was not great and it seems to me that this is not an issue on which feelings are as deep as they were some time ago. Metrication has been growing organically. More and more goods are being sold and bought in metric units and as a result people are now very much more familiar with the use of these units.

Mr. John Garrett (Norwich, South): Something just dawned on me, to my mounting horror. We shall not be expected to give litres of blood in future, shall we?

Mr. Maude: I did not catch the hon. Gentleman's question, but I suspect it was not serious.

I was saying that these measures apply only to purposes of trade and not to measurements which are only a matter of custom and practice. It would not become necessary, as some people have suggested, apparently seriously, to remeasure cricket pitches in metres and I see no reason why the use of imperial measures for non-trade purposes should not continue for as many years as people wish to use them.

There will of course be some costs in converting to the metric system. I believe, however, that the moderate nature of these proposals keeps these to a minimum.

There are also significant savings. The Institute of Production Engineers, for example, estimates the additional cost of dual manufacture and stockholding at 3 per cent. of turnover.

I believe therefore that these proposals represent an acceptable compromise and I hope that we shall be able to persuade other member states that they fulfil our legal obligations under the 1979 directive. I hope that the House will endorse the Government's stance on this matter.

10.38 pm

Ms. Joyce Quin (Gateshead, East): It is clear that the draft directive before us today both confirms and reinforces the move to metrication, although it is true that it allows some latitude in this regard.

The subject of metrication obviously evokes a mixed response in Britain and, indeed—judging from my reading of earlier debates on the subject—in the House. Certainly a variety of views has been expressed on both sides of the House.

For some, the increasing use of metric measurements seems to strike a blow against the very nature of the British identity. Some feel a strong attachment to the imperial measurement system. Perhaps, like me, they were fascinated by the mysterious, romantic-sounding lists of measurements that used to feature on the back of school exercise books. For others, however, the pace of metrication seems all too slow, and many believe that more

[Ms. Joyce Quin]

rapid progress should be made. The timetable for metrication envisaged more than 20 years ago has been put back and many who most feared the move towards metrication at that time would no doubt be agreeably surprised that we are discussing this document tonight. Whatever the different views on the subject, one real danger is that we are in a half-and-half position which is highly confusing. A metric muddle is being created.

The Minister referred to previous directives on the subject and explained how this one fitted in. He also described the provisions of the directive. I wish to ask him some questions. It seems clear from the Minister's responses to interventions that, although under the directive the United Kingdom and Ireland can fix a time to phase out remaining imperial measurements, there is nothing to stop the Commission itself from introducing a revised directive to make the timetable speedier, if it so wishes. If the British Government fail to come up with a date, presumably that is what the Commission will do. If the Government fix a date that the Commission feels is unrealistically far into the future, will the Minister confirm that again the Commission could take action?

When the matter was first discussed, it was on the treaty base of article 100, which provided for a unanimous decision by member states, but the present directive will be decided by a majority vote. I have attended a European parliamentary committee which considered the directive and it seemed to me that most of the other countries had little interest in how, when, or even whether the United Kingdom and Ireland chose to phase out imperial measurements. Perhaps the Minister can confirm that that is so.

Can the Minister also let us know whether, in his discussions on the matter, he has met other EEC Ministers? Many of us feel that too many of these decisions are taken by officials, often in the secretive workings of COREPER, the committee of permanent representatives, and that there is very little political input.

The mile is one example of a measurement for which the United Kingdom can decide on the changeover date. As the mile is not a barrier to trade, it would be reasonable for the Government to make their own decision on what they want to do. Nevertheless, I should like to know whether they have made any estimate of the cost of changing from the mile to the metric system. Some people feel that the Government are hesitating more on cost grounds than on the principle.

I am glad that there has been a reference to the pint because it should be made clear, to counter misleading impressions in the press, that doorstep milk deliveries are not threatened by the directive. No doubt the Minister will wish to take the opportunity to stress that again.

The hon. Member for Berwick-upon-Tweed (Mr. Beith) raised a valid point about the sale of loose goods. Surely we do not want to make it an offence in all cases for small local shops to continue to sell by imperial measurements.

On the point raised by the hon. Member for Ross, Cromarty and Skye (Mr. Kennedy) about consultation, will the Government tell us whether they plan further consultations on the directive, particularly since the response so far has not been adequate? I note that the Government's explanatory memorandum was vague on the cost of changing for shops and firms. Can the Minister give us any further details about that?

I hope that we could all agree that in implementing the directive there should be no unfair jacking up of prices. I hope that the Government will monitor the situation closely.

Mr. Beith: The hon. Lady may be aware of what is happening now in petrol garages. The Government have allowed garages to cease displaying the price of petrol per gallon. Some garages took the opportunity in the week when petrol prices rose to stop displaying the price in gallons so the motorist did not know the price per gallon.

Ms. Quin: The hon. Gentleman's point reinforces the case for vigilance with regard to transferring from one set of measurements to another. Consumer organisations have made that point strongly to me in the past few days.

Earlier I mentioned the danger of metric confusion. We often see a confusing mixture of measurements in shops. For example, I have seen carpets quoted in metric sizes, but the underlay price quoted in imperial measurements. Many DIY shops sell wood so many feet by so many feet by so many millimetres. The various consumer groups with which I have spoken are all concerned about the confusion. That also applies to consumer groups which are in favour of full metrication straight away, such as the National Federation of Consumer Groups and the Consumers Association, which is less keen.

I refer the Minister to the interesting work carried out by Lady Attlee and the metric sense campaign. Lady Attlee feels that the way in which metrication is used in Britain at present and the way in which we have introduced systeme internationale measurements has increased the confusion and made metrication less user-friendly or consumer-friendly than it ought to be. She made the point that very often millimetres are used to quote a size which would be much easier to understand if it were expressed in metres and centimetres. For example, the standard size of a bath is apparently given as 1,700 millimetres, while it seems to me and to the metric sense campaign that 1 m 70 cm would be a more reasonable way of expressing the size.

I hope that the Government will examine the suggestions from the metric sense campaign in trying to present the metrication that we already have in a way that is helpful and not confusing to consumers. That would make necessary changes easier to achieve.

Mr. Anthony Beaumont-Dark (Birmingham, Selly Oak): Would my hon. Friend agree—*[Interruption.]* In this matter, we are all friends in this country against Europe. Does the hon. Lady agree that when we consider organisations which make things user-friendly it makes them sound like pet budgies or lapdogs? Why should it damage a united Europe for this country to do what it wants and for Europe to do what it wants when we bear in mind that half the world will still use imperial measures anyway? Why should it destroy Europe if we do what 95 per cent. of British people want us to do?

Ms. Quin: I do not think that the hon. Gentleman's intervention detracts from the point that I was making. I was simply saying that the consumer has the right to proper information and to have measurements presented to him in an understandable way. The hon. Gentleman

seems to dislike the phrase "user-friendly", but it is common currency among consumer organisations, as I am sure that he appreciates. *[Interruption.]*

Madam Deputy Speaker (Miss Betty Boothroyd): Order. I should be obliged if the debate at the far end of the Chamber would cease. It shows great discourtesy to the hon. Lady.

Ms. Quin: The Minister said that children are educated in the metric system. That is true, but when they leave school they step outside into a rather confused environment.

The Opposition are not officially opposing this take note motion, but we hope that the Minister will listen seriously and reply to questions that I have raised and that other hon. Members will raise during the debate. We do not like harmonisation for its own sake. We want to see a diversity of customs and traditions in the EC, but we recognise that moves to metrication have taken place and that common standards exist among many areas. However, if metrication is to be successful, it needs—I do not apologise for using the expression again—to be more user-friendly than it now is. It is vital that the Government take more fully into account the needs of the consumers as well as those of industry in the decisions that they are taking.

10.50 pm

Mr. John Fraser (Norwood): I give a qualified welcome to the directive and memorandum that the Minister has presented. We should adopt the sort of programme that is being put forward tonight even if we were not a member of the EC. There is every reason for doing it for its own sake, not for the sake of harmonisation or because we happen to be a member of the EC.

My first qualification, which I share with my hon. Friend the Member for Gateshead, East (Ms. Quin), is that the use of the systeme internationale in the use of millimetres and other smaller measurements is not always appropriate, but, as a matter of practice, that does not occasion any difficulty. It does not seem to occasion any difficulty in Europe when we go on holiday, and it will not occasion any real difficulty here.

My second qualification is that the programme prolongs the agony by preserving—for example, in terms of traffic—the mile, the yard and the inch. I see no reason why the heights of bridges that are used by international traffic should not be set out in metres rather than in feet and inches; why the stopping distances on the motorways should not be in terms of 100 m, 200 m and so forth. The golden rule, followed in many other countries, is that if one wants to change from imperial to metric it should be as full and rapid a change as possible. The conversion from one method to another fails so long as one goes along with a dual signification. It is no good trying to have two languages of measurement working at the same time.

However, there is no reason why the traditional measures of a pint of beer or milk should not be preserved. Or we could have 568 ml, which is exactly the same size. The fact that we change from one system of measurement to another does not mean that we need to change the size or the weight of things; it is simply to change the way in which we measure things, and so I welcome this.

The case for metrication is overwhelming. First, there is the sheer beauty and simplicity of the metric system, which has been endorsed, embraced and developed by many British scientists. Many of the metric measures are named after prominent British scientists such as Newton. He was around some time ago and had no problems with the metric system.

A cube with a 10 cm base contains exactly 1,000 cc and 1,000 ml. Filled with water, it weighs exactly 1 kg. If its heat is raised by 1 deg C one has another measurement of heat. Put against something else it is a measurement of force. It is a beautiful and delightful system with a particular simplicity. Anybody who tried to do physics at school, learning foot pounds, will know exactly what I mean.

Perhaps the hon. Member for Birmingham, Selly Oak (Mr. Beaumont-Dark) can say how many square yards there are in an acre.

Mr. Beaumont-Dark: But I do not need to know that.

Mr. Fraser: It is very much better that an area of land should be measured in hectares, which are units of 100 metres, rather than in one chain times one furlong, which is 4,840 square yards. I suggest that you, Madam Deputy Speaker, try working out the area of something that measures 3 ft 7½ in by 5 ft 8½ in. It is impossible to do without using a calculator.

Metrication does not mean that one has to change the size, speed or weight of anything. It just provides a different and easier set of relationships.

Every country has changed or is changing to metric, with three exceptions: the United States, Ireland and the United Kingdom. For an exporting industrial nation, we are crazy to pursue a different and more difficult system of measurement. Moreover, two generations or more of our children have been educated in the metric system, and I do not find that pensioners on trips to France, Spain or Portugal have any difficulty coping with metrication. I do not underestimate the intelligence or adaptability of the people whom I represent.

Furthermore, we have largely changed to metric already. As a result of changes that I made as Minister of State, virtually every prepackaged item of food is sold in metric quantities, as are coal and petrol. I shall illustrate how crazy it is to retain the imperial system in industrial terms. For a long time, this country imposed a huge cost penalty on itself by manufacturing petrol pumps for the rest of the world which dispensed in metric quantities, and which then involved the extra expense of being converted to dispense petrol in imperial quantities, simply because of our own eccentricity. That makes no industrial sense.

There is no way that we can export in imperial sizes products such as drills and fasteners to other industrial countries, which consider our use of that system to be eccentric, unusable and unacceptable. Our failure to adapt to the metric system says something about our failure as an industrial nation.

Mr. Beith: The hon. Gentleman does not seem to realise that one must take into account also small shopkeepers weighing out 1 lb of raisins. The hon. Gentleman admits that it is his fault that in my constituency small shopkeepers have been visited by weights and measures officers warning that the practice of weighing out a few bags of raisins in advance and putting them on the shelf so that a customer does not have to wait renders those shopkeepers liable to prosecution. Is the hon. Gentleman proud of that?

Mr. Fraser: Yes, I am, and I shall tell the hon. Gentleman why. If one is to help the shopper make a true price comparison between one item and another, it is no use having that product packaged in a multiplicity of sizes. The right way is that which I introduced for biscuits, for which there was a monstrous arrangement of different sizes.

Butter has been packaged in metric sizes for a long time. It is sold in packs of 125, 250 or 500 g, which makes it easy to make a price comparison. The same applies in comparing the prices of large and small packets of raisins. The little old lady whom the hon. Gentleman has in mind will get ripped off only if raisins, fruit or whatever come in a range of sizes that make it difficult to compare the price of one packet with another.

When those changes were made, they enjoyed the total support of consumer organisations across the country. They were made not for any ideological reason but to make life easier for the consumer, in the same way that life is made easier for the consumer when petrol is sold in one single measure instead of in both gallons and litres, which results in enormous confusion. The hon. Member for Selly

Oak and his supporters—the imperialists who want to embalm and preserve the imperial system—are demonstrating not independence but insularity.

It would be senseless to drive into metrication overnight, but no one can accuse us of doing that. The French revolution embraced metrication more than 200 years ago. If we moved into the metric system quickly, we would give Japanese scale manufacturers and so on an enormous advantage in coming into our market. That is why it should be phased in over a period.

There is a beauty, simplicity, ease and saving in the long term in using the metric system. We should endorse it for our own sake. There have been many changes in measurement in the past, and the time has come to make a resolution, over a due period, to adopt the system which the rest of the world is going to use. If we refuse to do that, it says something about us as a manufacturing and exporting country and about our failure to do business with the rest of the world.

11.2 pm

Mr. Neil Hamilton (Tatton): I must admit that when I came to this debate I had not anticipated the kind of orgasmic enthusiasm that we have just heard from the hon. Member for Norwood (Mr. Fraser), who is obviously under the impression that he is still the Minister putting forward the measure. At least my hon. Friend the Minister had the decency to appear resigned and incredulous about the measure that he was supporting, but the hon. Member for Norwood actually purported to believe in what he was saying.

As the hon. Member for Norwood rightly pointed out, 200 years ago one of the consequences of the French revolution was the introduction of metrication and decimalisation in France. Indeed, the French went even further and decimalised the week. The 10-day week was not terribly popular, however, because it meant that people had one day off every 10 days rather than every seven. I have no doubt that, in due course, some earnest committee in the European Parliament and some earnest bureaucrat in the Commission will decimilise all the other things to which we are accustomed—not just the days of the week but clocks, times and everything else.

I listened to my hon. Friend the Minister who had the misfortune to have to try to make a fist of the subject today, but who is clearly a man of too great sensibility to believe in the case that his position in Government obliges him to put forward. As I listened to him I thought of the Peter Simple column in *The Daily Telegraph*——

Mr. Skinner: The hon. Gentleman was in favour of the Common Market.

Mr. Hamilton: I certainly was not in favour of the Common Market. I was one of the two members of the national executive committee of the Conservative party who voted against it in 1971. I voted against it in the 1975 referendum and to the best of my recollection I have not supported any Common Market measures since I have been in the House. As usual, the hon. Member for Bolsover (Mr. Skinner) is misinformed.

Mr. Skinner: Will the hon. Gentleman confirm that when it came to putting a guillotine on the single European market legislation he was not in the same Lobby as those of us who were against that legislation?

Mr. Hamilton: When it comes to guillotining the hon. Gentleman and his supporters, I am always to be found in the Government Lobby, but that has nothing to do with the point at issue.

As I listened to my hon. Friend the Minister, I thought back to Dr. Heinz Kiosk, the chief psychiatric adviser to the plastic stair-rod advisory council, and his effusions in the Peter Simple column of *The Daily Telegraph*. I contented myself with the knowledge that my hon. Friend did not believe in the case that he put forward.

I am astonished that the Labour party—which is now attempting to become voter-friendly, in the same way as the hon. Member for Gateshead, East (Ms. Quin) talked about becoming user-friendly—is supporting this measure, but perhaps I should not be too astonished as it is a highly Socialist and bureaucratic measure. I find it difficult to understand why any Government should wish to legislate for the weights and measures of this country. A free market Government should leave it to consumers to decide the measures in which they wish to buy goods on sale in the shops. If they prefer to buy in pounds, ounces or gallons, why should the Government interfere? That preference does not prejudice the achievement of a single market in the European Community which, by and large, I support because I believe in free trade, and these matters have no bearing on the wider European horizon which, if we believe in it, is supposed to be our reason for membership of the European Community.

My hon. Friend the Minister referred to consultation. As we know, groups that are consulted by Government to discover what consumers believe often do not represent the views of the man in the street. If we had an opinion poll on whether this measure is acceptable to British people, 95 per cent. or more would be opposed to it.

I appreciate that power politics are involved here. As my hon. Friend the Minister said, we do not have a blocking minority in the Council of Ministers, so I accept that force majeure, as a consequence of the Single European Act, means that we shall have no influence on what I regard as an important measure.

My hon. Friend the Minister said that, although we are making it a criminal offence to sell in pounds and ounces or pints and gallons, we have some refuge in the fact that this law will not be enforced. It seems extraordinary that this proposal will be a dead letter as soon as it is introduced.

I register my regret that the Government, for whatever reason, are giving credence to an unnecessary measure, which goes against the essence of what we have been trying to do since 1979—to elevate the consumer and his choices above those dictated by bureaucrats.

11.6 pm

Mr. Charles Kennedy (Ross, Cromarty and Skye): There is all-party agreement that the Government find themselves in a difficult position here, as they have on other harmonisation measures, especially emotive and traditional ones such as feet and inches and pints and litres. Essentially, within the context of Europe, the Government are trying to square a circle and have it both ways. In that respect, they are handling it as constructively as they can.

Having listened to the Minister, I suspect that we are stuck with a European fait accompli. As the hon. Member for Great Grimsby (Mr. Mitchell) said, we do not

[Mr. Charles Kennedy]

understand how, under the European voting mechanisms, the safeguards to which the Minister referred will be assured.

Mr. Skinner: What is the Scottish nationalists' view of the issue?

Mr. Kennedy: I shall come to that in a moment. Only Britain and Ireland are in an imperialistic position, so I do not understand how there will be any safeguard if we accept the spirit and substance of the directive. The Minister is not to blame because the issue was decided a long time ago.

The hon. Member for Bolsover (Mr. Skinner) just mentioned the views of the Scottish National party, to which I do not subscribe, but were an independent Scotland represented on the Council of Ministers it could give the Republic of Ireland and England and Wales the force of its arguments and vote. This would be a good opportunity for Scottish National party Members to make that point, but they are not present.

On the question of practice within this country, again, the Minister is saying what his hon. Friend the Member for Tatton (Mr. Hamilton) has just said is absolutely correct. The Minister has said, "We will introduce this" but in response to the hon. Member for Berwick-upon-Tweed (Mr. Beith) and others he has said, "Don't worry. We will be turning a blind eye to things. We will not be implementing it or following it up." *[Interruption.]* He is dissenting from that, but he gave the clear impression that it would be technically illegal for a trader to serve loose goods, for example, in the corner shop example mentioned by my hon. Friend. I cannot remember the exact phrase he used, but he spoke about how the inspectors would obviously be treating this with sensitivity, and the impression left with Labour Members, and I think with Conservative Members too, was that it would render nugatory the entire effect of the measure.

Mr. Maude: I am happy to repeat what I said, although not perhaps in the exact words. The hon. Member for Berwick-upon-Tweed (Mr. Beith) was perhaps giving the impression that the day after any such measures came into operation there would be jack-booted trading standards officers roaming around the streets, seeking out small shopkeepers who were using imperial measures. All I was saying was that that was absurd. That is not the way in which trading standards officers operate, but that is not to say that this would be a dead letter; it would become a criminal offence for traders to sell in unauthorised units, as it is now, and I stress that we have a Weights and Measures Act which makes it illegal to use certain measures at the moment.

Mr. Kennedy: It seems to be a ministerial endorsement of circumspect illegality, as far as I can see, or a softly-softly approach. That may be sensible and welcome, but we, as a country, cannot have it both ways.

Mr. Beith: I never mentioned jack boots. I have never seen a trading standards officer in jack boots. They normally dress rather as hon. Members here are dressed. They simply come along, as I have known them do in my constituency, and challenge traders for illegally dispensing packaged goods in non-metric quantities, and it seems to me certain that those same officers will come along within a short time of this legislation coming into force and tell traders that they must stop meeting the requests of old ladies who say, "Please will you give me 5 lb of potatoes". For that situation to prevail in this country seems to be plainly ludicrous.

Mr. Kennedy: I am grateful to my hon. Friend, and I think, in view of his reservoir of constituency experience, it is clearly something the DTI may want to look at as a matter of policy.

The Minister spoke about the consultation exercise. I very much agree with the hon. Member for Tatton that the Minister is either misreading the public mood or indulging in what would be quite understandable wishful thinking, given the measure he has to defend and, indeed, clarify for the House, in saying that the response to that consultation exercise would mirror attitudes in the country as a whole. That really is an exercise in wishful thinking by the Minister. Given that public opinion will be, I should have thought, rather strong on these matters, it would be as well either for the Government to launch a fresh consultative exercise or at least to embark on a programme of public education on inevitable changes towards metrication.

Secondly, in the DTI's own analysis reference is properly made to transitional periods, some of which will stretch over a decade and more. None the less, I hope that the DTI, or the relevant sponsoring departments in other parts of Government, will be sympathetic to any transitional difficulties which industries or small businesses will encounter as a result of having to change working practices and, perhaps, machinery or implements for the conduct of their business. I hope that the Government will respond positively to that point.

It is obvious that enthusiasm, or the lack of it, for this measure crosses party boundaries. My party will treat this as a conscience issue. The only point on which I seek a categorical assurance is that we shall continue to be able to talk about, to raise glasses of and to down drams well into the future.

11.15 pm

Sir Nicholas Fairbairn (Perth and Kinross): I am grateful to be called so that I may apologise for not being here for the whole of the debate.

It is a pleasure to follow the hon. Member for Ross, Cromarty and Skye (Mr. Kennedy), who clearly understands, as only a member of his party could, people who are proposing a schizophrenic situation. He said that his party would treat the issue as a matter of conscience and would vote both ways upon it. I remind him of the words of Mr. Gladstone at the time of the Turkish-Bulgarian difficulties. He said that he regarded it as a great insult that he had been accused of being a democrat.

If harmonisation, whatever that may mean, is to be undertaken, surely it is unwise to undertake it on the basis of the wrong system.

Mr. Skinner: Very profound.

Sir Nicholas Fairbairn: I am glad that the hon. Member for Bolsover (Mr. Skinner) understands that simple concept.

I was the Member of Parliament who saved the mile. Under the Labour Government of 1974 to 1979 it was to be abolished on the basis that it would be an industrial danger to Britain if the mile were not the same as the kilometre. I asked the Minister how many things were

measured in miles. I said that we do not measure miles of baked beans or miles of wire. Eventually the mile was saved. I see that the mile that I saved in the face of the idiocies of the then Government's concepts is again under threat.

If we harmonise measurements, why not get right the concept of the measurements that we intend to harmonise? My hon. Friend the Member for Tatton (Mr. Hamilton) referred to the fact that during the French revolution there was a 10-day week.

Mr. Skinner: Not in here.

Sir Nicholas Fairbairn: If there is one concept on which measurements and mathematics are badly based, it is the repeat factor of 10. The decimal system is idiotic. If 10 per cent. is added to 10, we get 11—a prime factor that is useless. If we take 10 per cent. away from 10, that leads to nine, which is three times three. That is equally useless. A repeat system of counting should be at two squared, two cubed or two to the power of four, which is the best. Very few people understand it, but—

Mr. Skinner: I am waiting for the hon. and learned Gentleman to get to the mirrored J curve.

Sir Nicholas Fairbairn: The hon. Gentleman may feed me good lines, but he can do better than that.

Mr. Skinner: The mirrored J curve was what Woy Jenkins was into.

Sir Nicholas Fairbairn: I do not know what Woy Jenkins was into, but I should be vewy suwpwised if he did not buy his clawet in dozens. At least under the duodecimal system it involves 2 squared by 3. If people are asked how much cake they want, they do not ask for a fifth of it. They say, "Halve it and halve it again", so two is the concept. People count on their fingers not because there are 10 of them, but because they are there. It would not matter if they had three fingers or 23 fingers on each hand, people would still count to 10. People with four fingers still count to 10. It is a fatuous concept that 10 is holy. As a counting system, 10 is the worst figure on which to base trade. It has no concept in sensible measurement or arithmetical relevance.

When we used the imperial system, at least children in school had to use their minds instead of a calculator or an easy system. Children can do their 10 times table, but it does not exercise their minds; they should know the other tables to understand the importance of arithmetical measurements. The sensible systems—the pint, the yard, the mile—all have much more relevant bases for intelligent measurement than any decimal system.

We are discussing a European matter. The measurement from which Europe started was the duodecimal system, the Roman system, which was a much more intelligent basic system.

If we are to change the system to a common system, we should change it to the right system, not to a stupid system. The decimal system is a foolish system. It has no helpful basis in trade; it costs enormous funds because of the complication of its mathematical incidences. If we are to change, let us stand up for a system of counting whereby the change is either at 12 or 6, thus making a major salvation in the costs of industry. In all seriousness, let us not move to something just because we do not understand that the repeat system is wrongly based. If we are all to use the same repeat system and the same weights system, let us use the most commercially sensible one.

11.23 pm

Mr. Win Griffiths (Bridgend): The absurdity in the mess of arrangements for the use of imperial and metric measurement that we have heard about tonight is principally because the European Community has bent over backwards to take account of British and Irish sensibilities over weights and measures systems.

As my hon. Friend the Member for Norwood (Mr. Fraser) said, it would have been far better had we moved much more quickly to the metric system, rather than maintained the imperial system with it. What hon. Members seem to forget is that at least those of us of my generation have children going through school who are being taught the metric system of weights and measures and are perfectly able to cope with all that that means. If there are difficulties for older people like the lady—she could be in my constituency or in the constituency of the hon. Member for Berwick-upon-Tweed (Mr. Beith)—who wants 5 lb of potatoes, the enterprising shopkeeper will sell her 2·27 kg and not worry about what the weights and measures people may say.

The use of two different systems at present gives rise to absurd situations. For example, as is my wont, I was doing the family's weekly shopping last Saturday at Leo's co-operative retail superstore in Pyle, in my constituency, and I happened to buy some coleslaw, of a reduced dressing variety, loose across the counter. It was sold in imperial units. As I wandered across towards where the prepackaged variety was on sale I thought that I would check to see whether I had got a bargain. Of course, the prepackaged variety was being sold in 227 g packs. Only because I knew that this is as close as we can get to half a pound was I able to make the calculation.

It would be perfectly easy to have common quantities displayed in both metric and imperial measurements for, say, the next 10 years to enable people, like some here who seem to find difficulty in using the metric system, to use it in an intelligent way. If there is concern about the doorstep pinta, the milkman can sell it as 0·5683 litre. Then we would know that we still had our pinta.

We are making a lot of fuss about something that is really not all that important provided that the public know exactly what they are getting. There is no need to be afraid of this directive. In fact, there is provision for the measurements that are used most commonly domestically —for example, the pint and the mile—to be protected for a very long time. I anticipate that no hon. Member need worry about being forced to give up the nomenclature "pint" when he is buying in a pub or picking up the pinta at the doorstep.

This is really a fear of facing the future—things that our children are currently being taught in school. The fuss that we are making about this directive is indicative of the general problems that we face in meeting the challenges of the 21st century.

11.28 pm

Mr. Hugo Summerson (Walthamstow): I rise to make a brief plea for the continuance of the mixed system. We have a classic example of that system, of course, in the motor car. When W. O. Bentley set out to design his motor

[Mr. Hugo Summerson]

car in 1919 he said that it would be a 3 litre model. The wheel base was in feet and inches, and the car developed so much horse power—imperial horse power, not metric horse power. From the birth of the motor car this was the system of measurement of power and engine size, and we have all understood it.

In any case—going from that form of transport to the railway train—we all know that the gauge of the track in this country is 4 ft $8\frac{1}{2}$ in, and I defy anyone to express that in metric terms. I fear that if one were to go to any British Rail workshop and say, "In future we are going to have tracks of 1·853322 m" there would be even more engines off the rails than there are at present.

The House will recall that in George Orwell's "1984" Winston Smith bought an old man a drink in a pub which served nothing but litres and half litres. The old man said that half a litre was not enough and that one litre was too much as it set his bladder running. That is a classic example of "metricism". We are faced with a tyranny and hon. Members should remember that poor man in "1984". It is clear that the pint is designed for the British stomach.

The hon. Member for Berwick-upon-Tweed (Mr. Beith) spoke about the little old lady who buys 5 lb of potatoes. Apart from the fact that if she does that with regularity she will be little no longer, she understands what 5 lb of potatoes looks like, as we do. We all understand what a 15-stone or an 18-stone man looks like. If I went to meet a stranger and somebody else told me that he weighed 200 kg I would not have a clue about him. Does that mean he is enormous or little? If I were told that he weighed 15 stone I would know the sort of person for whom I would have to look out.

I do not like all the talk about "phasing in" as it represents an uncertain process. The next thing will be a proposal, "phased in during two years", that we all drive on the right-hand side of the road. What a recipe for disaster. I suppose that, first, we shall have lorries driving on the right, followed by buses. The whole thing would be a complete muddle.

I am always worried when I hear of Governments giving "permission" for things as that implies that Governments have more in their gift than they actually have to give. My hon. Friend the Minister should keep a wary eye on the Commission on the other side of the Channel. Any further proposals to do away with the imperial measures, which we all know and which the man on the Walthamstow omnibus understands, will receive short shrift.

11.32 pm

Mr. Bob Cryer (Bradford, South): I shall be brief as I know that this debate has to end shortly. I want to put down the marker that I do not like the directive and I do not like the idea that the proposal would authorise the United Kingdom and Ireland to fix a date for ending the use of miles, yards, feet and inches, even though the Minister may say that the Government will not exercise that right.

If this legislature had any sort of adequate scrutiny over the flood of statutory instruments which pour out of Departments at the rate of more than 2,000 per year, it might be arguable that all hon. Members could keep an eagle eye out for any Minister, who is but a pawn in the hands of civil servants, slipping one or two subclauses into a subparagraph of a statutory instrument—which is not amendable in any case—to get rid of the mile, the yard, the foot or the inch. In reality, however, this place does not give adequate scrutiny to statutory instruments, and any change to our measurements will be implemented by such means rather than by primary legislation.

The Joint Committee on Statutory Instruments cannot report on the merits of a statutory instrument; it can report only on its technicalities. A statutory instrument cannot be amended and I do not believe that we have the power to keep an adequate grip on Government to stop some surge of ambition by a Minister deciding to metricate. I view the proposal before us with great caution.

As my hon. Friend the Member for Norwood (Mr. Fraser) has already said, it is not true that industry has been progressively metricated. We have not, for example, adopted universally the metric thread, which is a basic component of engineering. We consider ourselves to be a manufacturing nation, albeit less so under the present Government. There is American fine thread and unified thread, both of which are a basic requirement for any country exporting motor vehicles. The notion that metrication is a basic prerequisite to building up our manufacturing base to achieve more exports is not universally true. Millions of people use miles, yards, feet and inches as a matter of convenience and we should continue with the duality. If it is convenient for consumers to do that, why not let them do it? Why should we not retain gallons rather than litres as a matter of consumer choice?

It would be to our advantage in many respects to stay as we are. We would not have to calibrate instruments again. If people want the option of using metric measurements, they can use them, but I object to this creeping harmonisation for no purpose other than the harmonising of everything that the Commission can get its hands on.

In view of what the hon. Member for Walthamstow (Mr. Summerson) said about changing the side of the road on which we drive, I warn the House that there is a strong desire on the part of the members of the transport committee of the EEC to make us do that. It is the stated aim of many in the Strasbourg assembly that we should make that change. Let us retain the dual system of weights and measures and let this directive meander on for the next 40 years while we do nothing about it. I hope that hon. Members will take that view and vote against it today.

11.37 pm

Mr. Anthony Beaumont-Dark (Birmingham, Selly Oak): These debates take place late at night for a good reason—in a sense, they reflect the twilight of the power of the House of Commons.

Mr. Skinner: You can say that again.

Mr. Beaumont-Dark: It matters not that we have spoken about this issue for an hour and a half. Indeed, whether or not we vote on it does not matter——

Mr. Skinner: It matters to us.

Mr. Beaumont-Dark: —because what is proposed will happen all the same. These debates take place simply to humour us.

Mr. Skinner: Humour?

Mr. Beaumont-Dark: Do you agree, Madam Deputy Speaker, that if the hon. Member for Bolsover (Mr. Skinner) wants to take part in the debate he should do so in a civilised way like the rest of us?

Mr. Skinner: Frankly, I get fed up listening to this sort of hypocrisy from Tory Members who take part in debates on EEC directives and often speak against them, but when it comes to a vote, as it will today, they—and the hon. Member for Birmingham, Selly Oak (Mr. Beaumont-Dark) in particular—are missing as usual.

Mr. Beaumont-Dark: Despite the cleverness of the hon. Member for Bolsover—I have his permission to say how clever he is—it is no good him saying that one is missing from this or that vote on a Common Market issue. Which Government sold this country out?

Mr. Skinner: I did not vote for it.

Mr. Beaumont-Dark: It is no good the hon. Gentleman saying that he did not vote for it. He is not the only member of the Labour party.

Mr. Skinner: Get on with it.

Mr. Beaumont-Dark: Madam Deputy Speaker, do you intend to control this debate or is the hon. Member for Bolsover——

Madam Deputy Speaker: Order. Does the hon. Member for Birmingham, Selly Oak (Mr. Beaumont-Dark) intend to proceed with his speech?

Mr. Skinner: That is a good question.

Mr. Beaumont-Dark: If you intend to allow this sort of hectoring to go on minute after minute, hour after hour, we shall have no debate——

Madam Deputy Speaker: Order. The hon. Member for Selly Oak does his share of hectoring. Does he intend to continue his speech, or shall I call the Minister to reply to the debate?

Mr. Beaumont-Dark: I am deeply wounded that you should suggest such a thing of me, Madam Deputy Speaker.

I repeat that our votes on these directives matter not at all. We are given an hour and a half's debate to humour us. If we voted unanimously against what is proposed, it would still happen. That is why it is a waste of time having these debates and voting at the end of them.

11.39 pm

Mr. Maude: This has been a fascinating debate in which contributions have ranged from the crusty reaction of the hon. Member for Berwick-upon-Tweed (Mr. Beith), to the radicalism of the hon. Member for Norwood (Mr. Fraser) and the revolutionary approach of my hon. and learned Friend the Member for Perth and Kinross (Sir N. Fairbairn). Not content merely that we should oppose any further move towards metrication, my hon. and learned Friend thinks that we should unravel the whole system of counting and should abandon 10 as the base for anything. I fall neatly in the middle in this interesting debate.

I take issue with my hon. Friend the Member for Birmingham, Selly Oak (Mr. Beaumont-Dark) who says that such debates are simply for show and mean nothing. They are important, especially when they take place at an early stage in negotiations. That is the case with this debate. Such debates genuinely allow the Government to gauge mood and they inform the negotiating process. I should be disappointed if any hon. Member felt that contributions to the debate are not noted. They are noted and fulfil an extremely important purpose.

Mr. Bowen Wells (Hertford and Stortford): Is it right that this proposal was put forward in an explanatory memorandum in January? My hon. Friend the Minister has taken the opportunity to bring the measure before the House long before the Council of Ministers has to make a decision, which is expected before the end of the year. I congratulate the Minister on bringing this matter to the House so that it can express an opinion.

Mr. Maude: I am grateful to my hon. Friend. That has been our intention and, as I say, matters are at an early stage of negotiation. The European Parliament has not yet made a final decision and there is still some way to go.

I do not know whether the hon. Member for Gateshead, East (Ms. Quin) is making her debut on the Opposition Front Bench, but if she is I warmly congratulate her on her appointment. We have faced each other in Committee. She made a distinguished contribution to the debate.

The hon. Lady asked whether the Commission might produce another proposal, but I have nothing to add to what I have said. As hon. Members know, there is nothing to prevent the Commission from producing further proposals, but there is no reason to suppose that it proposes to do so.

The form of words used in the group of measures, which it is in our power to retain for as long as we wish, is the most liberal—if I may use that word—that it is possible under law for the Commission to propose. There is no possibility under the law of that being further amended.

The hon. Member for Gateshead, East and some of my hon. Friends asked about consultation. There were approximately 140 responses to the 700 letters that we sent out. Only two were firmly against the proposals and the others were in favour or neutral. I repeat that the consultation and the fairly wide publicity that the proposals received in the media did not elicit very strong feelings in one direction or the other. On that basis we have gone forward with the discussions.

The hon. Lady asked whether there would be further consultations. I do not anticipate further public consultations this side of the directive being agreed. At some time in future when domestic legislation has to be amended to give effect to the directive, it will be right to have detailed and extensive consultation about the way in which the directive is implemented and its timing. Of course I give the undertaking that that will take place.

The hon. Lady asked about costs and whether the mile could be argued to be a barrier to trade. There are those who argue that the continued use of the mile is a barrier to trade. We do not agree that it is a significant one, but car manufacturers have to produce cars with two different distance meters. That is, of course, a trifling inconvenience compared with that of having to put the steering wheel on the other side. None the less, it is argued by some to be a barrier to trade, but it is in our estimation a trifling one.

[Mr. Maude]

The cost of converting road signs into metric units would be very large indeed. It would be in the region, we estimate, of £30 million to £50 million, and clearly that is a powerful reason for not proceeding.

Mr. Tony Favell (Stockport) rose——

Mr. Maude: I must not give way because I have only one minute to go and I have a little more to say.

The hon. Member for Ross, Cromarty and Skye (Mr. Kennedy) paid me a slightly backhanded compliment—I hope that I am correct in referring to it as a compliment. He referred to specific requests for transitional periods. A number of those have been made and as far as possible they have been accommodated in the proposals. The hon. Member asked whether he and his constituents would continue to be able to drink drams and I can confirm that they will. I shall be happy to join him for one as soon as the debate is finished.

It being one and a half hours after commencement of proceedings on the motion, MADAM DEPUTY SPEAKER *put the Question, pursuant to Standing Order No. 14 (Exempted business).*

The House divided: Ayes 107, Noes 27.

Question accordingly agreed to.

Resolved,

That this House takes note of European Community Document No. 4102/89 on units of measurement; and welcomes the proposals as providing adequate transitional periods to enable businesses and consumers to adapt and become used to the new measurements.

Driver Licensing

11.56 pm

The Minister for Roads and Traffic (Mr. Peter Bottomley): I beg to move,

That this House takes note of European Community Document No. 10357/1/88 on driver licensing; and endorses the Government's objective of negotiating satisfactory amendments with respect to the drivers of non-commercial minibuses and light goods vehicles, drivers from other Member States resident in the United Kingdom, and disabled drivers.

The ratio of risk for a passenger travelling in a minibus is less than half that of someone travelling in a car. It is one sixty fifth of someone travelling on a motor bike.

One part of the Commission's proposals on driver licensing is that minibus drivers should be required to take a public service vehicle test and after the age of 45 should be required to take regular medicals. That is unacceptable. If the British licensing system for minibuses applied throughout the European Community, instead of there being 10 million passenger journeys a year in voluntary minibuses there would be 50 million or more. The groups that benefit from the voluntary minibus system in Britain, often in buses provided by the Lord's Taverners or in the Variety Club's Sunshine coaches, would increase so that children, young people, youth organisations, Church groups, students and the elderly, including war veterans, terms translatable throughout the rest of Europe, would also benefit. That would provide extra advantages, extra mobility and, as I have emphasised, extra safety.

In considering European Community draft directives we want to maintain and enhance safety and mobility. Other countries will raise other points about this draft directive.

Mr. Bowen Wells (Hertford and Stortford): How could the European Commissioner responsible for this proposal —Mr. Stanley Clinton Davis who used to be a Member of this House—have written a letter claiming that he had steered the proposal through the Commission in the light of the facts that my hon. Friend has just provided for the House?

Mr. Bottomley: There are some things that I cannot answer. It is common ground between the Commissioner emeritus, myself and hon. Members on both sides of the House that the Mobility Alliance, which represents many of the groups which would be affected by this part of the proposal, has been praised by ex-Commissioner Clinton Davis. If he and I respect the work that it does, we should respect its opinion. I think that it is right to say that the present Commissioner, Mr. van Miert, is willing to look at the matter again. I do not want to turn this into a personal attack and that is why I responded to the rather extraordinary letter of 14 December in the way that I did. That may have been a mistake. Perhaps I should have invited a punch up, but I cannot believe that the evidence is not so clear that in time the European Parliament, the Council of Ministers and, I hope, the Commission will come together and acknowledge that Britain has developed a system of transportation which will be of value throughout the EC and which should be protected in Britain and be allowed to spread.

Mr. Roger King (Birmingham, Northfield): Does my hon. Friend agree that, although the level of injuries, accidents or deaths is high, given the vehicle densities it is the lowest in Europe?

Mr. Bottomley: That is right. We are way behind some European countries on pedestrian safety, but we are way ahead in the provision of non-commercial transport for groups with special interests or needs and with community interests such as students. When students go to another college to play water polo—*[Interruption.]* The hon. Member for Truro (Mr. Taylor) may laugh, but that is what I did. If we consider rugby as he suggests, we include a spare man and we will start going above the 16-seat capacity and we are talking about minibuses with between nine and 16 seats.

There is common interest in this matter throughout the House. Many other countries will have difficulties with parts of the draft directive. I suspect that during the next year or so the Council of Ministers will be finding ways of allowing flexibility, which will be important. If other countries find difficulties when we do not, it is not in our interests to force them to change unnecessarily. They may be trying to protect a position that we may wish to adopt. We may want to learn from their experience. We want to try to bring some of the obvious problems into the open. One of the problems is minibus driver licensing, which is wrong. I hope that there will be unanimity in the House on that, although, sad to day, there was not unanimity in the European Parliament on 14 December when one or two people of other political groups said that the Secretary of State was trying to use deregulation of buses to assist his arguments.

We want to make it plain that commercial operators of minibuses would be required to have their drivers take the public service vehicle test. It is the volunteer drivers who are important and well worth protecting.

Mr. Anthony Beaumont-Dark (Birmingham, Selly Oak): Many hon. Members receive letters from many charitable organisations and we are heartened not just by my hon. Friend's view but by his flexibility. Can he give us a genuine and clear understanding that that flexibility will take place in Europe? The charitable organisations that use the minibuses do an enormous amount of good for hundreds of thousands of people.

Mr. Bottomley: I think that the message is getting through. Some developments that Britain has pioneered have been copied by others. For example, the orange badge scheme which allows privileges to people with real mobility difficulties has now been copied. In London the air buses between Heathrow airport and the London railway stations each take two wheelchirs. That sort of integrated service is far better than a specialist service. That is the kind of transport spectrum which many people have developed—*[Interruption.]* That is a sensible expression for those with mobility handicaps. For others we use the word coherent. I am sure that, as the Labour party searches for reality, it will come to adopt that, together with most of the other policies that it is learning from us.

The key point is that we want to try to spread what is good and right. Something that is as good as or better than going by car or not moving at all needs to be protected.

Mr. James Wallace (Orkney and Shetland): I am sure that the Minister will enjoy the unanimity that he is seeking, but can he give some idea of the extent to which he has discovered, in discussion with his fellow transport Ministers from other Community countries, that the argument that we are advancing is gaining ground?

Mr. Bottomley: It is difficult to be certain. However, if Members of the European Parliament who spoke against the Government's proposals change their minds, that will help. There were one or two who, as reported in the official journal of the European Parliament of 14 December, made it plain that they were not convinced.

I do not want to personalise this matter in any way. I know the difficulties that can arise. I see that my right hon. Friend the Patronage Secretary is in his place, so I may know more very shortly. However, I am sure that in the last month that Commissioner Clinton Davis was working he tried to clear many issues—and bringing the draft directive into the open was important. Nevertheless, a mistake was made. If he could be man enough to say, "I am sorry. I made a mistake over minibus driving licences", that would make a great difference to the staff within the directorate concerned.

I repeat that I do not want to be personal. When Clinton Davis wrote a rather peculiar letter to me, I turned the other cheek. That may have been a mistake, but it was probably better to go on as I did and to ask him to change his mind and accept the case for safety and mobility, and to join the all-British campaign to maintain the right to drive minibuses on ordinary driving licences—perhaps with the extra assurance of safety that that option will be available only to people with two years' driving experience. That system is one which we think will work for motor bikes of greater power or of larger cubic capacity.

The Commission's proposal is the latest step in Community plans for harmonisation. Discussions began more than 10 years ago, and the first directive was adopted in 1980. It is intended that the latest initiative will complete the harmonisation process.

Conformity of licensing systems is generally welcomed. It is good news for drivers—especially those of lorries and buses—who go abroad, as common format licences will be recognised immediately in all member states. The introduction of a single licence showing all driving entitlement offers opportunities for streamlining the existing system to provide a quicker and cheaper service. This should not be achieved at the cost of existing safety standards or of the mobility of sections of the population. A number of serious issues must be resolved before we can agree to the latest proposals.

The Commission's proposals are supposed to replace and enlarge upon the 1980 directive. There is a long way to go before their adoption. The proposals will need to be discussed in a European Council working group, and negotiations are likely to take many months—I suspect that that means one year or more—to complete.

Widespread consultations are in progress. The Department is consulting about 800 individuals and bodies. There are three major areas of concern. One is the indefinite recognition of licences issued in other member states. That will cause problems for the driver record, because a category of drivers would be unrecorded. It would cause problems also for the fixed penalty system, because there is no provision for recording endorsements on licences issued in other member states. It would cause problems for the courts, because they have no jurisdiction to endorse licences issued by other member states.

I ought to share with the House the information that a number of other member countries are to examine our system of penalty points and endorsements, because it offers a flexibility that others might welcome.

Mr. Alan Meale (Mansfield): Italy imposes an age limit of 60 on the drivers of commercial buses and lorries. Will the Minister advise the House if in future negotiations it is attempted to impose such a limit on British drivers?

Mr. Bottomley: The Department must be open with the House because here and in industry—among unions and employers alike—there is a common interest in working out what makes sense. It is a question of deciding what is right and then ascertaining whether such is possible. I shall certainly be open with the House, as the hon. Gentleman suggests.

Mr. Meale: The Minister is surely aware that a number of commercial vehicle drivers are aged over 60 and are intending to retire at 65. He must be aware also that a number of the people who offer their services as drivers to voluntary groups are also aged over 60.

Mr. Bottomley: Without saying that our system is the best in all respects, we try to judge people by their medical condition rather than just by their age. People are different from racehorses.

Mr. John Prescott (Kingston upon Hull, East) *indicated assent.*

Mr. Bottomley: I am grateful to the hon. Member for Kingston upon Hull, East (Mr. Prescott) for agreeing with me. In him we see the new shadow Cabinet spokesman whom we recognised last Friday. I should not say too much about racehorses, having read *The Guardian* on Sunday and discovered that none of its tipsters put the Grand National winner in the top four.

The specification of details of conditions attached to drivers with a disability on the licence causes another problem. It is incompatible with the "until aged 70" licensing which we have, because vehicles, adaptations and prostheses are likely to change several times over the life of a licence holder. The proposal would be hurtful to disabled people because their disability will be printed on the licence. It will be difficult to fit the details on computer licences because limited space is available. Of those reasons, I regard the third as the least important and the first two as very important.

As I have said, there is a problem with the treatment of drivers of minibuses and light goods vehicles. The directive would be disastrous for the voluntary and community transport systems, because volunteers would not come forward if a second test and higher medical standards were required. Dr. Barnardos estimated that it would lose five out of six volunteer drivers with this sort of system. Those who suggest that it is up to Government to pay the cost of extra tests do not understand how the volunteer system works.

The proposal for the treatment of drivers of minibuses and light goods vehicles is unjustified on road safety grounds because statistics show that travelling in minibuses is safer than travelling in cars. If adopted, the

proposal would be a missed opportunity for other member states, who could enjoy the benefits of our system. Other points may arise in the light of the consultation exercise.

Mr. Ian Taylor (Esher): Judging from comments tonight and previous discussions in the House on this issue, it appears that the House is behind the Minister in his battles with the European Community. Will he comment on the fact that this matter will be taken under majority voting by the European Community under article 100A? Therefore, of much more importance is whether he has the support of the Council of Ministers.

Mr. Bottomley: We have not yet reached that stage. I shall share with the House a letter which I have received from Commissioner Karel van Miert, who has taken over as the transport Commissioner. He said that he was much impressed by our case for

"still more sympathetic consideration in the provision of transport services and of the difficulties which may be experienced by people with restricted mobility".

That goes slightly beyond the strict charity definition. The Commissioner said that he attached

"great importance to this issue and would like the Commission to play an active role in this area."

It seems as though we are regaining some of the ground that should never have been lost. The Commissioner said that he will accept our suggestion to have this important matter discussed—starting with discussions between officials, and then between the Commissioner and my right hon. Friend the Secretary of State or me. That shows that there is an appreciation of our initiatives on mobility and safety.

If the rest of the European Community had our road safety record, 40 per cent. fewer people would have died last year. We lead the Community in road casualty reduction and in mobility for those with special needs.

The United Kingdom is generally able to comply with the directive, without major changes to existing arrangements. The draft directive offers the opportunity to consider changes in tests, other than those required by it, and we shall consider our tests generally in the light of consultations on the directive which are now in progress.

The basic concept of staging of entitlement for driving lorries, passenger vehicles and trailers is acceptable in principle, but individual cases will need to be considered very carefully. We look forward to the results of the consultation, in which we hope people will participate. In some cases, experience criteria will be preferable to extra tests. We made that compromise on minibuses and it may also apply to motor cycles of more than 400 cc or more than 35 kW in power.

We agree with the Commission's proposal to limit the size or power of bikes which inexperienced motor cyclists may ride. Considerations of the detailed proposal—whether it should be a cubic capacity or a power limit—are still being considered, and we have an open mind on that.

We do not accept the need for a separate test before motor cyclists may ride large machines, although I am prepared to continue to give consideration to the motor cyclist who passes the test and then wishes to move on to a larger machine. It may be appropriate to allow the option of an extra test. We shall argue for two years' experience after passing the old motor cycle test before allowing a motor cyclist to ride larger and more powerful machines.

The Government aim to get the Commission to accept changes that maintain an incentive for drivers to exchange licences issued elsewhere for the United Kingdom version if they are to spend some time in this country. We want to allow descriptions of disabilities on licences and details of prostheses to be in a generalised form compatible with long-period licensing. We want the Commission to allow minibuses and light goods vehicles to continue to be driven on an ordinary car entitlement without a second test or higher medical standards. We are not trying to ease the qualifications for commercial bus drivers, which may have been one of the misunderstandings that occurred in December.

There are some signs that the Commission is willing to listen to our arguments. We will need to work with other member states, many of which have similar if not identical concerns, in discussions in the Council working group. In the meantime, it is necessary to press ahead with existing commitments under the first directive.

The Road Traffic (Driving Licensing and Information Systems) Bill will come before the House for Second Reading on Thursday. It will be essential to meet existing commitments, particularly the integration of ordinary and vocational licences to show all entitlements on a single licence. This will be an advantage to professional and vocational drivers. The change will involve a major transformation of both systems. The transfer of vocational licensing to the DVLC will lead to a quicker and cheaper service for lorry and bus drivers as well as improvements to the service for ordinary drivers.

It is sensible to facilitate the adoption of the best features of the Commission's latest proposals, and we are doing that. I assure the House that the Bill that we shall consider on Thursday does not facilitate the introduction of the proposals that are of concern, especially those on minibuses. It does not sell the pass on these issues; it is drafted on the assumption that our present arrangements will continue. If we are unsuccessful in Brussels—and I do not expect to be—and have to adopt any of the proposals, we will have to return to Parliament before we implement further changes.

I am grateful for hon. Members' support and I hope that we can spread it so that it becomes universal among our representation in Europe, and I hope that we can get a little change from the Commissioner emeritus, which would make it much easier for the Commission to accept a sensible change that would maintain and enhance safety and mobility.

12.7 am

Ms. Joan Ruddock (Lewisham, Deptford): This is a short but by no means unimportant or insignificant debate.

The document that we are discussing must be set in the context of the European Commission's efforts to ensure the removal of all obstacles to the free movement of people. As I understand it, we are already at the first stage of that process—a halfway house requiring member states to adopt a common format for the licence, to harmonise their categories of licence and to provide common standards of competence and fitness to drive.

As the Minister said, part of the Road Traffic (Driver Licensing and Information Systems) Bill arises from the

[Ms. Joan Ruddock]

first directive. Hon. Members will be relieved to hear that I shall keep my remarks on those aspects of the directive brief in anticipation of Thursday's debate.

We believe that our overriding aim should be the improvement of road safety. It would be disastrous to introduce legislative change simply to save money or for administrative convenience. In other circumstances, we have encountered the contradictory pulls of safety requirements and pressure to cut costs and save money. It is clear that cost-cutting should not be a priority in developing a safe and comprehensive driver licensing system.

We note that the Government's consultative document on the unified driving licence estimates that the effect of centralising the licence issuing system will be the loss of 100 jobs and savings of up to £1 million a year. Will the Minister give more detail on where the job losses will be? Will he take the opportunity to increase staff at Swansea to reduce delays in obtaining licences, especially passenger service vehicle and heavy goods vehicle licences? Will he give the House the assurance that the reorganisation of licence issuing will not be used as an excuse for a cost-cutting exercise?

I turn now to the document under discussion, which, as the Minister said, is still subject to negotiation with other member states. The document falls into a number of sections. The basic proposal is that member states should introduce a national driving licence which would be mutually recognised in all member countries. On the face of it, that seems to make sense, and would relieve a foreign national of the need to exchange his or her national licence for a UK licence when resident in this country. However, we foresee, as the Minister has described, problems for the penalty and endorsement system, as no court in one country can award penalty points or endorse a driving licence issued in another country.

The Minister has informed the House tonight that the Government are pressing for licence holders from other member states living in Britain still to be required to obtain a British licence, and in general we support that position.

That brings me to the question of driving standards. Members of the Transport and General Workers Union have expressed their concern to me about the possible deterioration of driving standards if a unified drivers' licence with mutual recognition is adopted. In order to prevent such a deterioration it will be necessary to harmonise testing throughout the Community and that testing will need to be to the highest standards. The document we are considering does lay down minimum requirements for drivers' tests, which will mean that in this country, for example, we will have to include a parking test and more theory.

No doubt in some countries the minimum standards proposed will result in an improvement in driver testing, but we believe that there are problems for us. First, the judgment used in passing or failing applicants will vary from country to country, so a standard of driving which may pass in one country may fail in another. Secondly, we need an assurance that these standards will be implemented as quickly as possible so that any discrepancies in the testing requirements are ironed out. Perhaps the Minister would comment further on these points in his response.

Harmonisation in licensing also encompasses the reclassification of vehicles and the entitlement to drive, and of course, as the Minister has said, it is this aspect of the document which has generated most controversy, with its proposed new category of vehicles with nine to 16 passenger seats or between 3·5 and 7·5 tonnes in weight. Drivers in this category will have to have not just the car licence, as at present, but a second driving test, and be subject to more rigorous medical conditions than for the standard licence.

We sympathise very much with those voluntary organisations who are alarmed at these proposals. Their drivers at present, of course, because they do not drive for hire or reward, are able to drive minibuses on ordinary car licences. We recognise, as does the Minister, that the use of minibuses by community groups is particularly widespread in Britain. Some of the organisations in my constituency which would be affected by these proposals have been in contact with me. Age Concern, Lewisham Association for People with Disabilities, the Lewisham Indo-Chinese Community and Pensioners' Link are all organisations that I know well. I know how well they serve our community. The position is unique in Britain, as has been said already tonight, for the extent of innovative and accessible transport schemes which these organisations facilitate. Many of these minibus drivers are women who gain a great deal of confidence and satisfaction from this voluntary work.

Community transport groups are rightly concerned that many voluntary drivers will be deterred from driving by the prospect of a more stringent test. The organisations themselves will be hard pressed to pay for the necessary training. Many of those organisations—and I must say this to the Government—are filling a gap left by Government underfunding in many cases, left by the deterioration in social service provision and, in rural areas in particular, by the collapse of public transport. These groups are already very short of money, and with the continuing squeeze on local authority finance most of these organisations——

Mr. David Harris (St. Ives): Is the hon. Lady aware that in many rural areas of Cornwall the number of bus services has increased as a result of deregulation? I agree with her that the voluntary sector provides a valuable additional service. If voluntary organisations were unable to provide that service, it would be a terrible blow to rural communities.

Ms. Ruddock: I understand that an examination of the provision of bus services in Cornwall showed that there had been a reduction in mileage.

I repeat that many of the community services are under pressure and are being called upon because of the reductions in public service transport. There is little prospect that the voluntary organisations, given their difficulties, will be able to find the money for extensive training.

The Minister said that we would not demonstrate understanding of the problem if we sought tonight to obtain a commitment from him simply to pay, but should the Minister be unsuccessful in his negotiations, and should additional training and testing of volunteer drivers be necessary, the Minister must give a commitment that

voluntary groups will not be faced with the additional cost and that local authorities will not be expected to pick up the bill.

Mr. Peter Bottomley: There has been no suggestion on either side of the House that it would be acceptable to impose a secondary statutory test. Even if the Government paid for all the additional testing, there would be fewer drivers, fewer voluntary minibuses and more people opting for cars, involving greater risk. In addition, more people would have to stay at home. They would lose their mobility. One part of Commissioner Emeritus's letter ought to be buried and never disinterred. Additional statutory testing of minibus drivers in the voluntary sector is not needed.

Ms. Ruddock: I am prepared to agree with the Minister, but he is not infallible. It will be a majority decision. We cannot be certain of the result.

We believe that safety should come first. The Minister began by quoting the relevant safety statistics for the minibus and the car. I believe that minibuses do not have as good a safety record as other forms of public transport. They are not as safe as public transport buses. I hope that the Minister will say that he supports greater efforts to reduce minibus accidents and that he will describe the steps that he intends to take to improve minibus safety if he continues to press for a derogation for voluntary minibus drivers from the new test.

Mr. Bottomley: Passengers in public service buses are more at risk—I suspect because of falls rather than because of crashes and collisions. People in the voluntary sector take great care of their passengers. I pay tribute to the fellow members of my own union who do much of the driving in the public sector and who have been involved in many of the developments in public transport services. I attended a branch meeting of my union this evening. All the time was spent on the dockers' centenary. No mention was made of the dock labour scheme.

Ms. Ruddock: In principle, we are not opposed to stricter medical tests for drivers who are responsible for the safety of other people or who are in charge of larger vehicles. However, the document specifies certain conditions, such as diabetes. That seems to preclude drivers from holding a passenger vehicle licence if they suffer from that condition. I am no expert in such matters, but it seems unnecessarily restrictive, and I would urge that medical conditions should not be specified in that way but should be left to professional opinion as to whether they constitute a safety risk for a particular individual. Perhaps the Minister will explain his understanding of that provision.

I shall comment briefly on two further aspects of the document—the proposals for motor cycles and the new requirements for people with disabilities. I am sure that the Minister and I share a deep concern about the accident statistics for motor cycles. As I frequently travel along the Old Kent road in heavy traffic, all too often I see how motorbike accidents occur. Furthermore, research by the Transport and Road Research Laboratory shows that the number of fatalities is higher on big machines than on smaller bikes. The Commission's proposal to introduce a test for 400 cc bikes and above appears attractive. Yet the same motor bike organisations which are supporting compulsory training as proposed in the Road Traffic Bill are opposed to the new test. It would be helpful if the Minister could provide a little more detail about any consultation he has had on what he outlined as a compromise of passing the ordinary test and proceeding to ride a bigger vehicle on the basis of two years' experience.

Finally, I shall make a few comments about the proposal that people with disabilities would need to display on their licences any vehicle modifications or details of any artificial prostheses that they wear. I reinforce the Minister's point that that is a particularly offensive proposal. Any change in vehicle, vehicle technology or physical condition would have to be recorded, increasing the administrative burden. For that reason, I understand that the DVLC in Swansea is opposed to the proposal. How would it be enforced? Would people be stopped to check whether they have an artificial limb? Clearly it is nonsense. Why should disabled people be singled out in that way?

The Greater London Association for the Disabled opposes the measure because

> "It is personally intrusive and demeaning for drivers to be required to make public that sort of information on a document which is often used for identification and other general purposes".

I wholeheartedly agree. I support the Government in this matter, and, on what is perhaps an unusual occasion, in general we support the Government on the EC document.

12.32 am

Mr. Jacques Arnold (Gravesham): I welcome the Government's objective to obtain satisfactory amendments to cover drivers of non-commercial and light goods vehicles. The EC proposal contains one of the most damaging spin-offs of European proposals for some time. The rigorous tests for voluntary drivers and the stringent medical requirements that would be required by the measure would have a devastating effect on the numbers of volunteers. At present, we rely on thousands of volunteers who are prepared to give up their time to drive minibuses for organisations and who would take a completely different view if they had to undergo difficult tests and medical inspections at frequent intervals.

I do not believe that the European Commission has taken into account the scale of this sector in the United Kingdom. There are 85,000 minibuses in Great Britain, which is way above the number to be found in other countries. Community transport in Britain alone makes some 10 million passenger journeys each year and 48 per cent. of all minibuses in Britain are used by voluntary organisations and private individuals. Without those voluntary services thousands of elderly and disabled people could become housebound, and many more would be denied their only chance to take part in recreational and sporting activities, to travel outside their homes and to take a holiday. Many thousands of organisations are totally dependent on the use of minibuses with voluntary drivers to transport their members to and from club activities, on outings and on holidays.

It may be helpful if I cite a few examples from my own constituency of organisations which rely on voluntary drivers. The Gravesend and Northfleet day centres, for instance, are local branches of Age Concern, which has thousands of branches up and down the country. Every day, buses collect old people from their homes and take them to the centres. Many of the drivers are retired, and in all cases they are volunteers. In my constituency there is

[Mr. Jacques Arnold]

also the Meopham community bus, again driven by volunteers, half of whom are retired. They take local people shopping and link villages not served by scheduled buses. They also provide services to the old people's clubs in the area. Other examples of organisations which rely on voluntary drivers are the Helen Allison school, which serves autistic children, numerous parent-teacher associations, scout groups, Mencap, Cheshire homes and PHAB —Physically Handicapped and Able-bodied groups.

Who brought forward this extraordinary proposal? It was the then Transport Commissioner—a certain Stanley Clinton Davis, a former and unlamented Labour Member of this House. Mr. Clinton Davis was sent to Brussels, where he promptly went native and has since tried to regulate and regiment everyone from "Ballywhatnot" in the west to the Bosphorus in the east. I found in the Library a quite extraordinary letter from that former Commissioner to my hon. Friend the Minister. It certainly takes some reading. It accuses my hon. Friend of lobbying against these proposals, as though it were a disgraceful thing to lobby and to try to apply democratic pressure on behalf of people in this country. The former Commissioner went on to complain about the kind of people with whom the Minister was lobbying—the Mobility Alliance, an organisation bringing together the Community Transport Association, Help the Aged, Barnardo's, London Community Transport Association, the Lord's Taverners, the Variety Club, the National Union of Students and Youth Clubs (UK). These are all good organisations heavily dependent on minibuses with voluntary drivers, but it seems that they are all extremely suspect to Commissioner Emeritus Clinton Davis, who notes darkly in his extraordinary letter:

"The Mobility Alliance is enjoying the active support of your Department."

His reference to "Mrs. Thatcher's Government" seems to imply some form of guilt by association. In his letter to my hon. Friend the Minister he also complains:

"Any change of these proposals would be dangerous because they merely represent a road safety measure."

We heard this evening from the Minister exactly how safe our minibuses are by comparison. It may be of interest to the hon. Member for Lewisham, Deptford (Ms. Ruddock) if I refer to the recent Transport and Road Research Laboratory study, which found the accident rate for minibuses to be no higher than for cars and—this is of considerable significance—far lower than for buses.

Mr. Peter Bottomley: In this matter I have tried to be scrupulously fair, which is why I have not joined in the Clinton Davis bashing. He is a Right-wing Socialist and I am a Left-wing Tory, so perhaps we ought to be working together. The point about the bus statistics is that in general buses are working in inner city areas, where the crash rate is higher, whereas other vehicles tend to get out on to the motorways and other roads which are inherently safer. In dealing with the point that the hon. Lady raised, however, my hon. Friend is correct in saying that, overall, passengers in minibuses are safer than passengers using almost any other form of transport.

Mr. Arnold: I thank my hon. Friend for emphasising the point about safety, and I admire his restraint in not responding in kind to the letter from Commissioner Clinton Davis. The best that one can say of the Commissioner's proposals is that they are bland and have not been thought through. The kindest interpretation is that this is a well-meaning measure that he intended to be his epitaph. It would perhaps be less kind to regard his letter, in particular, as making cheap party political points which I regret to say were echoed by the hon. Member for Deptford.

What we need to do now is to convince the new Commissioner to think the whole issue through again, and I call on my hon. Friend the Minister to get together with him and sort the whole thing out.

12.39 am

Mr. Richard Livsey (Brecon and Radnor): The EC document refers to the licences for drivers of European countries and the exchange of those licences, which is necessary as it will not only produce a common standard of driving, but will reduce bureaucracy. The standards of testing, however, should be the same throughout the Community because safety is vital.

The discrimination mentioned in the document regarding physically handicapped people and the testing of them is unfortunate and must be considered. Mobility for the physically handicapped is an important asset as it enables them to get round, to participate in the community and, therefore, to live a much more normal life.

The most important part of the document relates to minibuses. In many parts of Britain, particularly in rural areas, public transport is non-existent. In the past 10 years the Government have contributed to the abolition of public transport in many areas.

Half the 85,000 minibuses that operate in our communities are driven by volunteers. Such minibuses are vital to my community, to that represented by my hon. Friend the Member for Orkney and Shetland (Mr. Wallace) and to other rural areas. Given the dependence on volunteer drivers in remote rural areas, it is unrealistic to say that such drivers must be tested unless they carry nine or fewer passengers.

In Brecon we have a disabled club which has 600 members. That club is served by six buses and they must cover a wide rural area. The elderly are brought to local towns once a week and the disabled are taken to centres and hospitals. Those people would be unable to live a civilised life without the service provided by the minibuses. Many small communities in my constituency now operate their own minibuses and they provide a flexible form of transport for people to visit market towns, their doctors and other essential destinations. Since the loss of support from the Manpower Services Commission, volunteers now play a much more important part in the operation of minibus services.

Before I entered the House I was a lecturer at an agricultural college, which had six minibuses. All the lecturers, myself included, used to drive students round the country to visit farms, factories, creameries and so on. We worked flexible hours and the students would have been denied the benefits derived from those visits if we had been unable to drive them. It is important to note that not too many restrictions were imposed on us. Other colleges, especially those that teach technical subjects, depend on their minibuses to get their students about. The issue of private contractors is not as simple as some hon. Members have suggested. In some cases part-time drivers assist

contractors in the evening to take out local people when there is a demand. That is a particular feature of remote rural areas.

I agree with the Minister about minibus services that assist the elderly and the disabled. Without such services and volunteer drivers, such people would be trapped. They would be unable to go shopping or to enjoy a day out. The mentally disabled would not be taken to places where they can enjoy themselves. This form of transport also enables children to visit the seaside and sports clubs to engage in competitive sports.

Post buses are important in remote areas, and I am not clear about the position of PSV licences and post bus drivers, many of whom drive royal mail vans. In the highlands and mid-Wales, the post buses run important services. Many of them are minibuses and are designed as such.

Mr. Archy Kirkwood (Roxburgh and Berwickshire): Does my hon. Friend agree that this debate provides the Minister with an opportunity to reflect on the extent to which post buses could help to compensate rural communities which are experiencing the downgrading or loss of local post offices? A mobile provision in such areas of the facilities to which my hon. Friend is referring could be of considerable help.

Mr. Livsey: That is right, and the post bus is a flexible tool in providing services to extremely remote areas. The concept could be developed further.

I hope that the points that hon. Members have made will be heeded by the Commission and that it will amend the instrument accordingly. The Government must press the issue hard at that level, and the Minister will appreciate that he has the support of Members in all parts of the House in that endeavour.

12.47 am

Mr. Roger King (Birmingham, Northfield): The House is unanimous in stressing that the proposals are not satisfactory. I do not like retrospective legislation of any kind. Since gaining a driving licence at the age of 17, I have driven most categories of vehicles that that licence entitles me to drive, including minibuses and medium-sized goods vehicles of up to 7·5 tonnes gross vehicle weight.

Because of the peculiarities of British driving legislation, we have become one of the foremost producers of the 7·5 tonne truck, with the Ford Iveco cargo range and the Leyland Daf Roadrunner range, which are pre-eminent in this country. We export them in significant numbers throughout Europe because of the high demand for that type of vehicle, which a driver may drive on his normal driving licence and without having to take a special test.

I support what has been said, not just about minibuses but about the impact that this legislation may have on British manufacturers of minibuses and other commercial vehicles which hitherto we have been entitled to drive on our normal driving licences.

There will be a significant effect on the number of people entitled to drive minibuses if everyone must re-sit the driving test to enable them to drive that type of vehicle. The list of requirements in the instrument to enable one to drive a minibus is awesome indeed. For example, paragraph 5(2) on page 27 states:

"Drivers of vehicles in these categories must demonstrate a knowledge and sound understanding of the fields set out below".

There follow a number of subjects in which the would-be driver must be knowledgeable, whether or not the vehicle is equipped with the items involved. If one wants to drive a Freight Rover Sherpa van or a Ford Transit minibus, one must know about the effect of wind on the course of the vehicle, rules on vehicle weights and dimensions, driving hours, rest periods and use of tachographs, the principles of braking systems and speed governors. We are talking about the driver of a minibus. He must also know about precautions to be taken when overtaking because of the dangers of splashing spray or mud. He must know how to read a road map and be capable of checking power-assisted braking and steering systems, which are unlikely to be found on such vehicles. He must know how to use various braking systems and a speed governor, which may be fitted but is unlikely to be.

If category D of the driving test has to be taken before a person may drive a minibus, much new information will be needed by the applicant before he can take the driving test. That alone makes nonsense of that category. The heading "Knowledge" on page 22 is rather intriguing because paragraph 2.2 demands that the applicant for a driving test must have a knowledge of

"mechanical aspects with a bearing on road safety; in particular they must be sufficiently familiar with, and be able to put right, the most common faults in the steering system, tyres, lights and direction indicators, reflectors, rear-view mirrors, windscreen washers and wipers, the exhaust system and seat-belts;".

One's mind can run amok on this. What about replacing king pins on the front steering arms of a vehicle? Perhaps one's wife could do it because her licence indicates that she is able to do it. That is nonsense if for no other reason than it is hopelessly impractical to expect any normal person seeking a driving licence to be able to put those items right. Common sense should tell people that something is wrong, but it is nonsense to expect them to have to put matters right. I suggest that something has gone wrong in the translation of the document because I cannot believe that what it says is correct.

We understand that in the new arrangements the theory part of the driving test will be much more elaborate than that which we are used to in the United Kingdom. Generally, the principle has been for the person being tested to pull up by the side of the road and be asked three or four questions by the examiner on the "Highway Code". I am not sure about the present procedure, but I doubt whether it is any different from what I have suggested.

The proposals suggest that the theory test will be more elaborate than that. Perhaps my hon. Friend the Minister will say whether he intends this to be a written examination to be taken before a practical driving test. The number of items on which people will be tested on theory precludes the side-of-the-road verbal test arrangement that has been the hallmark of the British driving test for as long as it has been taking place.

Perhaps the Minister will tell us whether we are to move towards a theoretical element in the driving test. I would not object to such a test because a case can be made for more emphasis on theory. If that means a written test, I would not argue against it.

Mr. Peter Bottomley: In the light of the directive it is sensible to review what we do. It is important to realise

[Mr. Peter Bottomley]

that any theoretical examination of the driving test in this and other countries shows that we have the simplest driving testing system and that it leads to the safest driving. We should try to avoid having a sort of GCSE in driving. We want people to be able to negotiate the streets without hitting other people and injuring themselves or others.

Mr. King: I entirely agree. Experience shows that we have produced above-average drivers. Our good record on accidents—high and unacceptable as it is—seems to establish Britain as capable of training and testing its drivers to a high standard. There are grounds for suggesting that we can sub-categorise some of the categories for driving tests and that we can continue with the present arrangements for at least five years at which time the Commission will probably have the right to look again at whether we should all come together in a common cause throughout the European Community.

So things may not be as black as they are painted. But this is very much the thin end of the wedge and I support what my hon. Friend has said, and more power to his elbow in ensuring that we get a sensible result from what at the moment is a rather impracticable solution.

12.55 am

Mr. Garry Waller (Keighley): As many hon. Members have already said, our standards in this country are high and our casualty rate, although far too high still, is lower than that of other European countries. I believe that our approach, certainly as set out by my hon. Friend the Minister, is that we should not be prepared to compromise our standards in any way. I am delighted that he adopts considerable rigour in fighting our corner over the issue of minibuses and I give him my full support. I do not think there is any need for me to say any more about it because my hon. Friend the Member for Gravesham (Mr. Arnold) and other hon. Members have spoken at some length on the subject.

There is concern in this country about the issue of interchangeability of the driving licence. I think that many people feel that it might be possible for an individual to escape the consequences of bad driving in the United Kingdom, or anywhere else for that matter, by obtaining a driving licence elsewhere in the Community, perhaps in that member state where obtaining a licence is easiest, and using it permanently here. I am sure that our approach must be that our standards must be maintained, and because we have this system of penalty points and endorsements there may be difficulties in moving towards harmonisation. In doing so we must be prepared to say that our standards are those to which others should aspire, and we should not be prepared to lower ours.

I want to say a few words about the proposals relating to motor cycles because it is in that respect that the directive seems to be particularly half-baked. Let me remind the House of what is proposed.

The proposals are, first, the creation of a separate licence for motor cycles over 400 cc—a level which can also be equated in terms of engine power—not to be granted until the applicant has held a licence for motor cycles under 400 cc for two years; secondly, the creation of a separate test for such a licence; and, thirdly, the requirement that all tests for a motor cycle licence should be taken on a motor cycle of a capacity of the class of motor cycle that the applicant will become entitled to ride by virtue of obtaining that licence.

The distinction between motor cycles under 400 cc and those over 400 cc is really not justified. The statement which the hon. Member for Lewisham, Deptford (Ms. Ruddock) made about the higher casualty rate among riders of large motor cycles was a little simplistic. The situation is much more complex than she suggested. I do not believe that there is strong evidence that there is a higher casualty rate among riders of cycles over 400 cc. There may be a higher casualty rate for riders of motor cycles over, say, 125 cc, but it is much more complex when one comes to a higher figure.

Mr. Peter Bottomley: It is the earliest weeks and months of motorcycling that are the most dangerous and therefore the greatest risk is on lower powered machines. Our licensing system takes account of that. Once people get to a certain age and maturity, the safety improves, which is why a hell's angel of my sort of age is much safer on a 600 cc bike than someone 20 years younger on a lower powered machine. But I believe there is something in what both my hon. Friend and the hon. Lady are saying.

Mr. Waller: I agree entirely with my hon. Friend. That is why I am so worried about the proposal. It seems to me that introducing the extra tier will constitute a diversion of funding and resources from the training and testing of all motor cyclists during the vital period of their first six months on the road. That should be where we concentrate our effort rather than on moving towards an extra tier. By moving towards an extra higher tier, and requiring those who have already qualified to ride motor cycles of 125 cc or more to pass another test later in their motor cycling career, when they are less dangerous, is bound to damage what should be our primary objective.

Considerable evidence was provided in this country for the Transport and Road Research Laboratory by Broughton last year, in West Germany by Koch in 1987 and in Denmark by Carstensen also in 1987, which failed to find any correlation between machine size and accident involvement. So we should be careful before we plump for the kind of proposals which the Commission has adopted, which seem to be based on evidence what is at the very least dubious.

The other practical aspect on which I should like to concentrate is the requirement which appears in the draft directive to take a test on a strange higher capacity machine to gain the qualification to ride it. That seems to be based on the system for learning to ride motor cycles in other countries. Most other member states do not grant provisional driving licences for motor cycles or other vehicles. They have only a single system of a full driving licence. People in member states with such regimes prepare for the full driving licence by completing a specified number of hours' instruction with an authorised driving school. Then they take a driving test; if they pass, a full licence is granted to them. Some people may feel that that system is better than ours, but it appears from the evidence that there is quite a lot to commend our system.

It is notable that, except when undergoing tuition with a driving school, persons may not drive on the road prior to being granted a full driving licence. The Commission's proposals relating to motor cycle testing are suited to what might be described as the driving school regime, where

people possibly hire machines. The provisions are not suited to the British position where a rider takes a test on his own machine, after an introductory off-road session.

The proposals in the draft directive may be counter-productive. The combination of on-road experience and instructor tuition on the rider's own machine has been shown to be more beneficial than off-road testing on a strange machine. The latter often becomes little more than coaching to pass a test. It seems crazy to expect someone to hire a motor cycle to pass a test before he acquiries his own machine. The alternative system does not seem to be suited to the way in which we conduct training and testing. I hope that my hon. Friend will press for the Commission to reconsider that proposal and take account of our system.

I should like my hon. Friend to answer another question. The consultation paper circulated by his Department on 17 March contained under its description of article 4 the following wording:

"Sub-categories for motorcyclists not exceeding 400 ccs, exceeding 400 ccs and light motorcycles not exceeding 125 ccs may be provided."

There seems to be some confusion. It is not clear whether that is a mandatory or discretionary proposal. In some translations the word "may" is replaced by the word "shall". In the most recent versions the word "shall" predominates.

Mr. Peter Bottomley: I am not sure whether that is certain. We want to opt for "may". If there is this power or cubic capacity limitation, experience generates a greater degree of safety and that would be more suitable and preferable to requiring more motor cyclists to take another test.

Mr. Waller: I am glad to learn that my hon. Friend the Minister is in favour of a discretionary provision, and I would entirely support that. It would be right for us to adopt our procedure which may differ from that in other countries. I hope that that matter will be clarified, and if there is any doubt I trust that my hon. Friend will press for the directive to take account of what we do in this country.

I support my hon. Friend the Minister's general approach to this matter. We can be proud of the practical steps that we have taken to reduce road casualties, although there is still an enormous amount to be done. We should be willing to consider trading up where necessary if other countries do things that are worthy of consideration. However, we should absolutely refuse to trade down merely for the sake of unnecessary harmonisation if that involves sacrificing road safety in this country.

1.5 am

Mr. Bowen Wells (Hertford and Stortford): I congratulate my hon. Friend the Minister on bringing this measure to the House at an early date to obtain the views of hon. Members. On this occasion it is the unanimous view of hon. Members that the directive should be seriously amended before it is brought before the Council of Ministers for decision. I support my hon. Friend the Minister, as have all other hon. Members, in his stand on minibuses. The directive clearly fails the test of safety because travelling in motor cars, the obvious alternative in the voluntary sector, would be more dangerous. It also fails the test of practicability.

I want to suggest a way in which my hon. Friend the Minister should approach the matter so that he does not need the derogation to which the hon. Member for Lewisham, Deptford (Ms. Ruddock) referred. Article 100A applies to measures designed to create a single market. Therefore, we need not become involved in licensing minibuses which do not cross frontiers or take part in trade between nations in the European Community. It cannot be necessary to harmonise those licences to create a single market.

I venture to suggest that the same applies to the remarks made by my hon. Friend the Member for Keighley (Mr. Waller) about motor cycles. Generally speaking, they are not part of the trading system between nations. There seems to be very little reason why there should be a harmonised basis for motor cycle licensing.

When the Minister argues these matters in Brussels, we should opt for local and country variations to remain and not be interfered with by the directive. In that way the directive could be made much simpler and we could rely on the testing and licensing method of each country and only legislate a European point of view from when matters affect cross-border trade, as was envisaged by the creation of the power in article 100A to make legislation for creating a single market.

1.8 am

Mr. Peter Bottomley: I am very grateful for the support of the House. I suspect that the House will be returning to these issues not simply on Thursday when we debate a dissociated Bill, but as we move forward in our discussions in the European Parliament which has not entirely disposed of these matters. I hope that in its plenary session the European Parliament will find a way to declare that it will support only measures that maintain or enhance safety and mobility. Its consideration of the draft directive and its advice will then be more welcome than if it were simply the people of Europe who were speaking.

The general conformity of licensing is welcome. In a way this kind of debate tends to focus on areas of disagreement. It is like some of the meetings of the Council of Ministers where people come together to disagree instead of explicitly saying that there are gains. In this measure there are gains for those with vocational licences where the ease of recognition and showing what qualifications have been obtained are important.

My hon. Friend the Member for Hertford and Stortford (Mr. Wells) made some important points. I welcome his support, particularly on minibuses. We would not want to take forward his suggestion if we could avoid it because we want conformity and recognition.

Let me build on the point that my hon. Friend was making that within the aim of conformity we should have some flexibility and respect for the traditions of each country. Britain will not unnecessarily try to force other countries to give up what works for them if we think that it provides a reasonable standard of protection for other member countries. That is the principle that should increasingly be adopted.

I am encouraged by Commissioner Karel van Miert who will want to bring together the expertise within the EC to try to work together on matters which do not necessarily require legislation but which can improve safety and mobility. I take great comfort from the fact that in 1987 we had the lowest number of road casualties for 34

[Mr. Peter Bottomley]

years. In the two or three years before that there was no change in law. It was a new awareness that made the big difference. That is one way forward in Europe as well.

My hon. Friend the Member for Keighley (Mr. Waller) talked about the casualty rate, which is unacceptably high. My right hon. Friend the Secretary of State set a target of reducing the number of those killed or seriously injured by one third by the year 2000. He will shortly be announcing the figures for 1988, which will be of interest to the House. My hon. Friend is right to point to the fact that it is the results that matter, not the theory of what in an ideal world the provisions would amount to. What will happen on the road? Will more people be killed? Will fewer people be injured ? Can more people move around? Those are the issues that really matter. My hon. Friend made that point clearly in relation to motor cycles.

I welcome the alliance of motor cycle interests that we have created on training. That will be of enormous value. We are beginning to create a culture among motor cyclists which will transfer the experience and the defensive riding techniques of the mature motor cyclist more often and faster to the younger motor cyclist who is so dramatically at risk.

I said at the beginning that to travel a mile or a kilometre by motor-cycle is 65 times more dangerous than travelling as a passenger in a minibus. That illustrates the extent of the problem. As my hon. Friend said, whatever is right or wrong on the 400 cc motor bike, or whatever it may be, whether it is a "may" or a "shall"—he appeared to lean more toward "shall" but we shall argue for the "may"—it is for the smaller machine for the younger cyclist that we must make the change.

My hon. Friend the Member for Birmingham, Northfield (Mr. King) is an expert in most motoring interests. I am delighted that the Society of Motor Manufacturers and Traders has agreed to a meeting where we could take the manufacturers' interests into Europe. Most people in mainland Europe cannot understand that we have 85,000 minibuses in Britain, of which 60,000 to 70,000 are non-commercial minibuses in the voluntary sector. They cannot understand that we have 11,000 minibuses with lifts to take wheelchairs. That is incomprehensible to other countries. If the system as negotiated by Commissioner Emeritus Clinton Davis allowed the development of the voluntary minibus sector, there would be minibuses throughout Europe for scout groups, organisations for the elderly or students and people who want to go on a pub crawl while the driver stays on the wagon. That would be common throughout Europe, but it is not, because the regime that has been suggested does not work. People would be condemned to stay at home or use cars and neither is desirable.

My hon. Friend also spoke of the Mobility Alliance. It is important for the Government to go on working with the voluntary sector. One thing that we have learnt from local government is that it is possible to work with the voluntary sector to help it. Many county councils have done that. They have said that they do not need a monopoly of the public bus service but want to try to achieve a spectrum of provision to come together and make possible more mobility for those around them.

I pay tribute to the training schemes that many voluntary organisations run. No one should believe that most of the major voluntary organisations take people off the street, give them a key to a minibus and ask them to drive 14 people around one weekend a month. Many voluntary organisations provide very professional training schemes and reassure themselves that their drivers know how to cope with their passengers, their vehicle, and the traffic.

Commissioner Clinton Davis remarked that because minibuses are longer—often much longer—than cars, their drivers should be required to take the public service vehicle test. The truth is that a car such as the Peugeot 505 family estate is longer than any minibus capable of carrying 14 people. Also, if a licence holder is permitted to drive a van of certain dimensions without being required to undergo a special driving test, why should he be obliged to do so to drive a minibus on the same wheelbase? That does not make sense, and most people understand that now.

The hon. Member for Brecon and Radnor (Mr. Livsey) spoke of the importance of handicapped people being allowed to drive vehicles, because otherwise they would be condemned not to share in the community. I pay tribute to MAVIS—the mobility advisory centre at Crowthorne in Berkshire—and to the other advice centres serving the handicapped who drive themselves. I pay tribute also to those who established and have kept going Motability, which makes individual driving possible for many people to whom it was denied before. I pay further tribute to Motability's unleaded petrol campaign, which did so much to wake many of us up to the fact that we were unnecessarily pumping lead into the air, which may harm the development of children.

The hon. Member for Lewisham, Deptford (Ms. Ruddock) helped by providing support across the Chamber for what we are trying to achieve. My hon. Friend the Member for Gravesham (Mr. Arnold) spoke specifically about the letter that I sadly received from the ex-Commissioner. On balance, it is probably right of me not to reply to my hon. Friend in detail. The points made by the Commissioner emeritus were wrong. They misinterpreted the Government's intentions and the unity of the Mobility Alliance delegation. Some of the correspondence in *The Guardian* made it plain that Socialist councillors from London boroughs wanted to keep politics out of it, and I go along with that. It is better to sacrifice political advantage and to ensure that we continue representing the interests of those with special needs, whether or not they are handicapped.

The arguments concerning motor cycles revolve on the question of training more than anything else—though engine capacity is also important. I do not go along with all of the interpretations of my hon. Friend the Member for Keighley in respect of the Broughton studies. Nevertheless, we can probably work together and reach agreement. The hon. Member for Lewisham, Deptford spoke about moving the administration of vocational licensing from traffic area offices to Swansea. There are about 30 million ordinary licence holders. It is necessary to hold such a licence before one can hold a licence to drive a lorry or bus. There are about 1 million vocational drivers who are PSV or HGV licence holders.

It is sensible to handle that work at Swansea, where ordinary licence details are already held on computer. That should lead to a better and faster service for vocational drivers. It is important to recognise that, as a consequence of shifting that work to Swansea, there will be greater demands made of the staff there and less of the staff

at traffic area offices. It follows naturally that that is the way it goes. I pay tribute to the staff at Swansea, who have lifted their efficiency far higher than most of British industry. Efficiency is the ally of compassion rather than its enemy. We should not judge how good a service is just by the number of staff employed to provide it.

As to general licensing, even under the Commission's draft proposals, existing driver rights will be preserved in respect of medium-size group vehicles and for minibuses used non-commercially.

On the driving test, we and other member states challenged the relevance to safety of including in the proposed syllabus map reading, repairs and other aspects mentioned by my hon. Friend the Member for Northfield. We do not understand the proposals requiring a move towards a written test. We shall probably have to ask a few more oral questions as part of our current testing arrangements.

The hon. Member for Mansfield (Mr. Meale) asked about the upper age limit for lorry drivers. The Bill that we shall debate on Thursday does not prescribe an upper age limit for lorry drivers. Those aged over 65 will have to renew their licences each year, and produce a medical certificate on renewal. If the directive is adopted, other member states such as Italy—which the hon. Gentleman mentioned—will have to recognise our arrangements. That is a move forward. I do not want to be too diverted by post buses, but if they are used for hire or reward they will need to be driven by someone with a public service vehicle licence. The directive would not change that.

If we can obtain a change of heart from those Members of the European Parliament who fell on the side of Clinton Davis in December—if they acknowledge the safety and mobility points, and that is confirmed by Stanley Clinton Davis—it will be much easier to work with the openness of the new Commissioner, Karel van Miert, and his staff. We could then work out an arrangement that would be satisfactory to the European Parliament, agreed by the Council of Ministers and confirmed by the Commission as leading to better safety and mobility.

These are the points on which we rest our case and I hope that the House will pass the motion as an indication that, throughout the country, we support these aims as we consider the draft directive.

Question put and agreed to.

Resolved,

That this House takes note of European Community Document No. 10357/1/88 on driver licensing; and endorses the Government's objective of negotiating satisfactory amendments with respect to the drivers of non-commercial minibuses and light goods vehicles, drivers from other Member States resident in the United Kingdom, and disabled drivers.

Leeds Urban Development Corporation

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. John M. Taylor.]*

1.21 am

Mr. Derek Fatchett (Leeds, Central): When the Government first announced their intention to establish a series of urban development corporations throughout the country, the main reason given was that the areas to be covered by the UDCs would, at that stage, be suffering from a lack of investment and development. That was never the case in Leeds. If there was an argument for a UDC in the Government's own terms in other cities, that has never been and is not now the case for Leeds, which is enjoying probably the most substantial growth of any city outside the south-east. There are those who claim that Leeds, under its Labour-controlled authority, has now become the country's second city, and there are many people in Leeds who would regard it as the first rather than the second city.

When establishing the UDCs, one of the Government's suggestions was that they perceived some animosity between the local authority and the private sector. That has never been the case in Leeds, which is a success city as a result of the partnership which has developed between the Labour-controlled city council and the private sector. That success and partnership have enabled the city council to attract investment and to bring about the rebirth and renaissance of the city centre and much of my constituency.

My first point, which is not necessarily central to this debate but needs to go on record, is that if there was ever any justification for a UDC, it could not be justified in Leeds. Under the previous council leader, councillor Mudie, and now under councillor Tricket, Leeds city council has enjoyed much success, taking it beyond the necessity of establishing a UDC.

The Government's motives and their objectives for the UDC were far more sinister, manipulative and political. The Tories in Leeds know that they have no chance of ever gaining control, but it is essential for Tory patronage, influence and organisation to have some quangos appointed by Government and made up of placemen appointed by Government. That is why a proposal was made for a housing action trust, why we have the task force and why the urban development corporation came about—as part of a much larger agenda to subvert the city council and local democracy. It was a recognition by the Minister of his party's failure to attract votes in local elections in Leeds. *[Interruption.]* The hon. Member for Leeds, North-West (Dr. Hampson) may find that amusing, but he will not want to make any bets with me about the date when the Conservatives take control of Leeds city council as it will be a long time before that happens.

There was no need for a UDC, but we now have one in Leeds, and we recognise that it has a potential contribution to make. We hope that it will behave in a socially responsible way, and part of its social responsibility is to consult local business and residents and to be part of the city's government in partnership rather than opposition.

The UDC should ensure that its decisions are open to public scrutiny and subject to the maximum involvement

[Mr. Derek Fatchett]

of local community organisations and local business. That is crucial because people and business in Leeds have a right to know what is happening.

We are discussing major issues that will affect the future of Leeds and its residents for many years. An example of the importance of its decisions is the possible development by Triple Five, a Canadian organisation that has already held talks with the city council and the UDC. According to a UDC press release, the scheme could be worth more than £3 billion. It is a major investment of such significance that it could change the shape of the south central area of Leeds for many years to come. I am not making a judgment on the scheme, but I am asking that the UDC's involvement in it be open so that the public know what is likely to happen and can comment on the way in which it develops.

Another example is the road scheme for the Richmond hill area of my constituency, which is important for local residents and business. It is important that when the UDC, as the planning authority for the area, puts forward proposals for the development of the road scheme it recognises the legitimate interests of local residents, who have a right to know what the UDC intends. Nobody in the area affected by the UDC's proposals is yet aware of them. I am aware of them because information has begun to be leaked that the UDC is thinking of building a road down East street—on stilts at points—which is probably the worst environmental scheme that could be conceived for the area. There has been no consultation or discussion with local residents. That is not the way in which the Minister would go about his business; it is not the way that the UDC should go about its business.

Dr. Keith Hampson (Leeds, North-West): If one considers the Kirkstall valley scheme, there is no evidence that the UDC is trying to bypass local community views. Its strategy and proposals are well known to the community and council, and two councillors serve on it. The hon. Gentleman has not shown why, apart from the overall strategy, which should be public knowledge, its detailed scrutiny of often confidential matters should be in the goldfish bowl of public debate.

Mr. Fatchett: I have already shown that there are important schemes, substantial investment, and substantial local interest involved. I am not saying, and never have, that sensitive commercial interests should be made public. Nobody is saying that, but everybody who has been involved in local government—and I presume that the hon. Member for Leeds, North-West knows the nature of the rules in local government—will recognise that there is secrecy in commercial interest. I recognise that; I am not asking for that.

In relation to the road scheme, there has been no discussion whatsoever with local residents. There is no commercial interest that stops that discussion, and it is that degree of participation and openness that I am asking for, a basic minimum. The hon. Gentleman, by his reaction, understands the point I am making. There is a potential degree of consensus there, and I hope that the Minister recognises that.

There is, besides the right to know, a need for openness on the part of the UDC. If it is not open, given the scale of the projects with which it is dealing, there is always an argument that there is some lack of legitimacy attributed to the decisions taken by it. Openness gives legitimacy, as does consultation. I would not for a moment suggest that corruption surrounds the UDC. That is not the nature of my accusation. However, if the UDC is open and allows consultation, there is never any question of corruption because we know what is going on. If there is secrecy, it builds up a suspicion that there may be corruption around the organisation. In the UDC's own interest, there is a need for openness. So there are two reasons suggesting that the UDC should change its current practices: the right to know, and the need for openness.

The UDC makes a number of points in its own defence, but one defence it cannot use is that it is the planning authority; if the planning decisions were taken by local government, Leeds city council, these decisions would be subject to the Local Government (Access to Information Act) 1985. It is a strange paradox that, if there is a major or minor planning decision to be taken by the Leeds city council, that would be open as per the normal practices of local government. If there is a major or minor planning decision to be taken by the UDC, it will be taken behind closed doors. I see no justification whatsoever for that.

The Minister may say that the legislation does not provide for that access or openness in relation to the UDC. I recognise that, but I also say that the London Docklands UDC already allows openness; it allows journalists to be present at certain meetings, and it allows the public to be present. The Sheffield UDC is moving in exactly the same direction. I hope that the Minister will use his influence and powers to ensure that the Leeds UDC moves further in that direction.

A further argument made by the UDC is that openness —what the hon. Member for Leeds, North-West called "the goldfish bowl"—leads to inefficiency, but the fact that emerges from the evidence which has come into my possession is that the UDC is itself inefficient. Its secrecy does not breed efficiency; I suspect that its secrecy compounds inefficiency.

Let me give one or two examples. A firm called South Leeds Builders Merchants Ltd. received a letter from the UDC saying, without consultation or discussion, that that business would be subject to compulsory purchase. That is neither efficient nor the way in which the UDC should behave. The company secretary wrote to his own solicitor and kindly sent me a copy of his letter. I quote from Mr. Foster's letter:

> "To say I am astounded would be an understatement, as you would have thought that someone at The Leeds Development Corporation would have had the decency to forewarn, explain or indeed just discuss the plans affecting our premises and livelihood."

That inefficiency was recognised by Mr. Martin Eagland, the chief executive of Leeds urban development corporation. He replied on 21 March 1989 to Mr. Foster, the company secretary of South Leeds Builders Merchants Ltd., and made the following point:

> "I do apologise for the fact that you received no prior warning of the Development Corporation's intention to compulsorily acquire the freehold interest in the . . . site".

The Leeds urban development corporation ought to have talked to a company that it was about to make the subject of a compulsory purchase order.

Another example is Chapman Springs, a well-established engineering firm in south Leeds. It is now the subject of a compulsory purchase order without consultation, participation and information. From time to time a

number of hon. Members find it convenient to criticise the Post Office or British Telecom. They may feel that that was the reason why the Leeds urban development corporation was unable to talk to either South Leeds Builders Merchants Ltd. or Chapman Springs. Both firms are sited within 100 yd of the UDC's offices. I suspect that Mr. Peter Hartley, the chairman, and Mr. Martin Eagland, the chief executive, pass both firms on their way to and from the UDC's offices. A simple courtesy would have been to talk to the two firms. Jobs in two local businesses are at stake. One of the firms wrote to me and said that the Conservative Government pride themselves on their interest in small businesses, so it is difficult to understand how they can allow one of their organisations—the UDC —to behave in such a way.

Secrecy in the UDC has not bred efficiency. All the evidence suggests that secrecy has bred inefficiency. So far, the UDC's record is a catalogue of inefficiency and secrecy. For the sake of what I believe is important—the continuing development of Leeds—and for the most constructive relationship that is possible between local business, local residents and the city council, I ask the Minister to use his influence with the UDC to ensure that it conducts its business openly and does not continue with its current hole-in-the-wall approach. Such an approach will damage the work of the UDC and local business in Leeds. It is important that openness should be one of the UDC's characteristics. I hope that the Minister will join me in that campaign.

1.37 am

The Parliamentary Under-Secretary of State for the Environment (Mr. David Trippier): I welcome the interest of the hon. Member for Leeds, Central (Mr. Fatchett) in the subject. I congratulate him sincerely on securing this Adjournment debate. I welcome the valuable contribution by my hon. Friend the Member for Leeds, North-West (Dr. Hampson) to which I shall return later.

The hon. Member for Leeds, Central has already tabled a number of written questions about the UDC's responsibility for planning. I have been pleased to inform him about the very satisfactory progress being made in Leeds. I thought that his summary of the reasons for establishing the Leeds urban development corporation stretched credulity to breaking point.

If the hon. Gentleman wants to know precisely why the Government established an urban development corporation in Leeds, he could do no better than to read a pamphlet called "New Life for Inner Cities" which I wrote and which has recently been released. Unfortunately, I cannot give a copy to the hon. Gentleman. It costs £2·50, which I consider to be good value for money. That money will go to the Conservative party. We are always grateful for any contributions that we can get—certainly from Labour Members of Parliament.

The best illustration that I can give of why the Government set up an urban development corporation in Leeds relates to a meeting that I had with the former leader of Leeds city council, whom I have always liked, councillor George Mudie. He told me of the progress that had been made over the Leeds development company, with which the hon. Gentleman will be familiar. That is the longest gestation period known to man. It had been talked about for four years, and it had been in formation for three years. I asked councillor Mudie when he would appoint a chief executive and he said, "Soon". It is crass stupidity for the hon. Gentleman to describe to me and to the House anything to do with the UDC as a catalogue of inefficiency when we have such an example.

The Government believed that things should move a little more speedily than they have in the urban regeneration for the centre of Leeds. As the hon. Member knows, I visited the development corporation only last month. I was impressed by the way the corporation has started to implement the proposals contained in the strategic plan which it published last October. Land is being brought forward for development in partnership with the other agencies; environmental improvements are under way, and I know the corporation has the needs of both new and existing businesses uppermost in its mind. Those are no mean achievements for a corporation which has been in existence for only nine months. If not now, I hope that at some time in the future the hon. Gentleman will become as enthusiastic about what is being achieved on the ground in his home city as he seems to be about the procedures required to bring that about.

Before I reply to the more specific points which the hon. Gentleman has raised, the House may find it helpful if I say something about how the UDCs operate and relate that to what the hon. Gentleman has said.

UDCs have been set up by the Government as single-minded bodies. Their remit is to regenerate rundown urban areas by bringing land and buildings back into use and creating new businesses, jobs, an improved environment, new homes, recreation and leisure facilities. Already they are doing that, and in my view they are doing it very well. But UDCs are not local authorities, and they are not funded through the rating system. The arrangements established to ensure that local authorities are accountable to the local electorate are not therefore applicable. UDCs are funded largely by the Exchequer and they are accountable to Parliament through my right hon. Friend the Secretary of State for the Environment. They are subject to a fairly formidable array of procedures, which includes the Select Committee and Public Accounts Committee systems, the Parliamentary Commissioner for Administration, and the Local Government Act 1988 which brought UDCs' planning activities within the ambit of the Commissioner for Local Administration—the local ombudsman. Each UDC produces an annual report, including a copy of its audited statement of accounts, which is laid before both Houses. Hon. Members will appreciate that those are just some of the arrangements which exist to safeguard accountability to Parliament, but it might help if I explain that when carrying out their development control functions all UDCs are required to operate in the same way as any other planning authority. That includes an obligation to carry out consultations and determine applications as laid down in the Town and Country Planning General Development Order 1988. The list of possible consultees, on any application, can be lengthy. It can include, for example, a local authority, the highway authority, the water authority, and the waste disposal authority.

Most UDCs have established agency arrangements whereby local authority staff receive and process planning applications. That hardly equates with charges of operating in secret, and perhaps more than anything else shows that, behind the rhetoric, co-operative and mutually beneficial working arrangements can and do exist between UDCs and local authorities, and I welcome that.

[Mr. David Trippier]

Councillor George Mudie persuaded me that in this context the Leeds city council should act as a planning agency for the UDCs. Apart from that, as the hon. Gentleman knows, at the time I was convinced that it was quite fair and proper that there should be a number of Labour party councillors appointed to the board.

Mr. Fatchett: The Minister talks in detail about the development control procedures, but one or two of my examples concern broader planning and development matters. I talked about the road scheme and about Chapman Springs in relation to the development of a business park. Those schemes are not covered by the development controls. They are the schemes that should be the subject of much greater consultation and much greater public scrutiny. If the Minister is prepared to persuade his colleagues in the UDC to move in that direction, we are beginning to move towards a consensus, but in relation to the road scheme, for instance, that involves the UDC recognising that my constituents, at a very early stage, have a legitimate voice.

Mr. Trippier: I should say two things to the hon. Gentleman. First, the intervention by my hon. Friend the Member for Leeds, North-West was very relevant to this case, though I do not think there could be any possible criticism of the consultation that took place. Time permitting, I shall refer to that matter again. Certainly I want to see urban development corporations consulting local people. That is very important if we are to see this form of urban regeneration in that area. If the people themselves do not recognise that that form of urban regeneration is an improvement and that it will benefit them and the area as a whole, clearly the whole policy will have failed. On that matter there is a meeting of minds.

I do not know specifically about the case of the road network. Obviously I am not directly responsible for the Department of Transport. However, in an effort to be helpful, I shall look at the matter. I am anxious to convince the hon. Member that the UDC is very keen to consult, as are all UDCs. There may have been mistakes, particularly in the case of what I call the first-generation UDCs. One hopes that one can learn from mistakes, and that there will be improvements. But in the case of the second and third-generation UDCs it is perfectly clear that it is a necessary prerequisite for successful urban regeneration that they should carry the local communities with them.

Of course, circumstances vary from area to area. No two areas are the same, and no two UDCs are the same. It is therefore right that they should have discretion to organise themselves in the best way to achieve positive results. I must stress that all UDCs are well seized of the importance of carrying local opinion with them. Many UDC chairmen and chief executives spend a considerable amount of their time addressing public meetings up and down the urban development areas. I have indicated that I do not for a moment suggest that they have got everything absolutely right; I am not that stupid. It is always easy to find fault from the sidelines, as the hon. Gentleman has sought to do. It would be wrong of the Government to be too prescriptive about the way in which the UDCs carry out their business, as the hon. Member and certainly the Campaign for Freedom of Information would suggest. I believe that that is a matter for the UDCs to decide, with the overall arrangements that I have already described.

Mr. Fatchett: Will the Minister give way?

Mr. Trippier: I want to make a final point because we are running out of time.

A number of decisions will have to be made by the UDCs—decisions that certainly would be commercially confidential. As the hon. Gentleman made a number of political points—and I realise that he might have felt obliged to do so—may I make one important political point from my party's point of view? I find it a bit difficult to take it when any member of the Labour party talks about secrecy or about excluding the press from meetings. My experience in local government—which, I am glad to say, is pretty long—is that the Labour party is the first to exclude the press from meetings of this kind. I am sure that that experience is shared by my hon. Friends.

Mr. Fatchett: The Minister might be reassured to know that Leeds city council won an award for its willingness to open up and to disclose information. So, in this respect, it is a model authority. The Minister argues that he does not want to be prescriptive. He knows the position taken by the docklands corporation, and he knows the position that Sheffield is likely to take. Will he give the Leeds UDC some indication that it would make sense to move in the same direction as its sister UDCs in docklands and in Sheffield?

Mr. Trippier: The Leeds city council has won an award for openness. I only wish that it had won an award for speed of inner city regeneration through the Leeds Development Company. I accept that a number of urban development corporations provide the type of access that the hon. Gentleman seeks for the Leeds UDC, and the London Docklands UDC is undoubtedly one. Certainly I shall be very happy to draw to the attention of the chairman and the board of the Leeds UDC the matters that the hon. Gentleman has raised this evening, but I repeat that the Department does not wish in any way to be prescriptive in this regard. It is entirely a matter for the UDC. I personally feel that in practice there can be little or no difficulty, in view of the representation on the board not only from the hon. Gentleman's party but from the private sector, which he was quick to mention.

I emphasise the point made by my hon. Friend the Member for Leeds, North-West that there will be quite a number of interested parties in Leeds whose best interests might not be served by knowing too much about the confidential matters that are discussed before the board. That is a matter of judgment, principally for the board.

I hope that in future the hon. Member for Leeds, Central will find himself able to support the Leeds UDC and the work that it does to regenerate that vitally important city.

Question put and agreed to.

Adjourned accordingly at ten minutes to Two o'clock.

House of Commons

Wednesday 12 April 1989

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

NEW WRIT

For Vale of Glamorgan, in the room of Sir Herbert Raymond Gower, Knight, deceased.—*[Mr. Waddington.]*

Oral Answers to Questions

FOREIGN AND COMMONWEALTH AFFAIRS

Drugs (East European Route)

1. **Mr. Stern:** To ask the Secretary of State for Foreign and Commonwealth Affairs if the east European route for the supply of drugs has now been closed.

The Parliamentary Under-Secretary of State for Foreign and Commonwealth Affairs (Mr. Timothy Eggar): Relatively small, but increasing quantities of illicit drugs continue to reach the United Kingdom via eastern Europe. We are developing our co-operation with the Governments concerned to combat drug trafficking.

Mr. Stern: I am grateful to my hon. Friend for that reply. Does he agree that although the situation remains far from satisfactory, efforts are being made to block that route, and the only way that that will be achieved will be by the continuation of intergovernmental co-operation?

Mr. Eggar: I entirely agree with my hon. Friend. There are a number of routes through eastern Europe into western Europe, mainly for drugs originating in Afghanistan or the neighbouring countries. We now have close co-operation with a number of eastern European Governments, particularly the Soviet authorities, as a result of which Operation Diplomat recently led to a large seizure of cannabis.

Mr. Ron Brown: Have not the east European, Soviet and Afghan authorities done a great deal to clamp down on this evil trade? It must be remembered, as the Minister said, that most of the drugs come from Afghanistan, thus providing additional resources for the Mujaheddin whom, ironically, the Government support.

Mr. Eggar: As usual, the hon. Gentleman has a skewed view of the world. I have already said that there is close co-operation with the Soviet authorities and with other Governments in the fight against drugs, and that is how it should be. We shall not defeat the threat from drugs unless all Governments combine against it.

Hungary and Czechoslovakia (Human Rights)

2. **Mr. Knapman:** To ask the Secretary of State for Foreign and Commonwealth Affairs what representations the Government have made to Hungary and Czechoslovakia about human rights abuses in those countries.

The Minister of State, Foreign and Commonwealth Office (Mr. William Waldegrave): We have made bilateral representations to the Czechoslovak authorities four times this year about their handling of human rights issues. We have not raised human rights issues with the Hungarian Government recently as Hungary's record on these matters is relatively good.

Mr. Knapman: I thank my hon. Friend for that reply. I agree that the Hungarian Government's record on human rights is better than that of Czechoslovakia, but can my hon. Friend assure the House that those differing standards will be taken into account if either of those countries seeks closer economic co-operation with the west, and particularly with EC countries?

Mr. Waldegrave: My hon. Friend makes a good point in relation not just to those countries but to others in eastern Europe. The EC has recently halted all negotiations with Romania on the matters to which he refers. It is obviously right that the progress of countries in that respect should be reflected in our relations with them generally.

Mr. Winnick: Is it not the height of political illiteracy for the hon. Member for Stroud (Mr. Knapman), who has never worried about such matters in South Africa or Chile, to compare Czechoslovakia, which remains the prison house of Europe, with Hungary where, as the Minister has conceded, there has been remarkable progress? If European Governments are to be represented on 16 June in Budapest, when the remains of Imre Nagy are to be reburied, will the British Government be represented? It should not be forgotten that when the Hungarian uprising was crushed in blood in November 1956 the Tory Government were engaged in criminal action at Suez.

Mr. Waldegrave: The hon. Gentleman has managed to widen the question to take in Suez and a number of other matters. It is a little unwise of him to accuse my hon. Friend the Member for Stroud (Mr. Knapman) of illiteracy. My hon. Friend was making the perfectly justified point that one of those countries is meeting its conference on security and co-operation in Europe obligations while the other is not. That is the distinction.

The hon. Gentleman asked about the reburial of Nagy. We have not yet considered that, but I will write to the hon. Gentleman about it. Mr. Nagy's memory has not yet been restored to its proper place. As Mr. Grosz recently made clear, Mr. Nagy is being reburied as a humanitarian gesture, but he has not been rehabilitated. We should like the Hungarians to go a little further on that.

Mr. Boswell: Does my hon. Friend accept that in many respects, not just this one, the Warsaw pact is a case of some animals being more equal than others? In relation, for example, to the relaxation of visa requirements, which I welcome in principle, will he bear in mind the importance of taking matters one step at a time and making them

conditional on adequate performance in relation to human rights in individual countries and on the performance of their security services?

Mr. Waldegrave: All those matters should be taken into account, but none of us should miss the opportunity of recognising that the Hungarians and the Poles, having recognised that Socialism does not work, are steadily moving away from it.

Mr. Alex Carlile: Does the Minister agree that in Czechoslovakia there remains substantial evidence of discrimination, particularly against doctors and teachers, 21 years after they chose to express their opinions freely? Will he make further strong representations to the Czechoslovak Government in that respect?

Mr. Waldegrave: The hon. and learned Gentleman is entirely right. We have recently been protesting about the whole new series of trials that have been held in Czechoslovakia. The most famous is that of Vaclav Havel, but he is not alone. The tragic thing about Czechoslovakia is that it is a country with a tradition of democracy which wants to make real progress but it has a Government who are resisting the clear but carefully expressed will of their people.

Conventional Forces

3. **Mr. Waller:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement about the progress of negotiations to reduce conventional forces in Europe.

The Secretary of State for Foreign and Commonwealth Affairs (Sir Geoffrey Howe): Two negotiations—one on conventional armed forces in Europe and one on confidence and security-building measures—began in Vienna on 6 March. The discussions have got off to a good, businesslike start. I presented radical Western proposals for both sets of talks on 6 March. We now look for a response from the East.

Mr. Waller: Does my right hon. and learned Friend agree that although the Vienna talks have got off to a good and constructive start, they are bound to be long drawn out in view of the many complexities involved and the many different weapons systems in Europe? Given the asymmetry of conventional weapons and arms in Europe, does he agree that we have no choice but to rely on a nuclear deterrent for our total security for what may be a considerable time?

Sir Geoffrey Howe: There is no doubt that my hon. Friend is right in the last part of what he says. The central problem is the gross inequality between the conventional forces available to the Warsaw pact and those available to the NATO Alliance. There is progress in the fact that that inequality is now acknowledged by the Warsaw pact and it is recognised that unequal reductions are necessary to achieve an outcome that will be acceptable in the end.

Mr. James Lamond: Does the Foreign Secretary think that it helps to advance the possibility of weapons reductions throughout the world when he sits in the Guildhall smiling and nodding while Mr. Gorbachev outlines the Soviet Union's unilateral proposals but then goes around the world slagging off those efforts and doing everything he can to undermine any possibility of confidence-building between our two nations?

Sir Geoffrey Howe: The hon. Gentleman, as always, has a wholly inaccurate perception of the facts. The proposals put forward by Mr. Gorbachev at the Guildhall were of a very modest nature. Perhaps the most important and least attractive part of them was his attempt to bring nuclear weapons back into the negotiations and to suggest that there can be no progress on conventional arms reductions so long as there is no progress on nuclear weapons. In doing that, he was going unhelpfully right outside the terms of reference of the talks.

Sir Peter Blaker: What recent developments have there been in the attitude of the Soviet Union to the key question of verification, which is relevant not only to conventional disarmament but to the possible abolition of chemical weapons? Am I right in thinking that the recent trial inspection of chemical weapons establishments in the Soviet Union was somewhat disappointing? Will my right hon. and learned Friend continue to give a lead on this important matter, as he has been doing in recent years?

Sir Geoffrey Howe: With regard to the conventional negotiations, the mandate rightly calls for strict and effective verification measures. That is crucial to its success. The Soviet Union has demonstrated its ability to agree on such matters by its acceptance of the necessary measures in the intermediate nuclear forces treaty. My right hon. Friend is, however, entirely right to point out that the Soviet Union's absence of candour and failure to be straightforward about the size of its chemical weapons stocks, and the lack of openness of investigation during the recent visit to Shikhany, illustrate how far there is to go.

Occupied Territories (Human Rights)

4. **Mr. Nellist:** To ask the Secretary of State for Foreign and Commonwealth Affairs what assessment he has made of the recent United States State Department report on human rights violations in the territories occupied by Israel; and if he will make a statement.

Mr. Waldegrave: The State Department's assessment is in line with our own.

Mr. Nellist: Does the Minister agree that the United States State Department report was devastating, showing that thousands of Palestinians had been detained without trial and thousands had been injured by the activities of the Israel Defence Force in the last 17 months of occupation, and that more than 400 had been killed in that period—including, when I was last there two weeks ago, a four-year-old girl? When will pressure be put on the Israeli Government to reduce the carnage?

Mr. Waldegrave: It is relatively unusual for the hon. Gentleman to endorse what is said by the United States State Department. It emphasises the fact that there is no doubt about the unacceptability of Israeli behaviour in the occupied territories. That is recognised by a wide spectrum of opinion—it would be hard to be find a wider spectrum. As the hon. Gentleman knows, the British Government and other Governments in the European Community have repeatedly made their views clear.

Mr. Adley: a few moments ago, in reply to my hon. Friend the Member for Stroud (Mr. Knapman), my hon. Friend the Minister said that relations between eastern European countries and the Community would depend on violations of human rights not taking place. In view of the obvious violation of human rights by Israel in the occupied territories, why the double standards?

Mr. Waldegrave: As my hon. Friend knows, the relationship between Israel and the European Community came into question over the access of goods to the Community from the occupied territories, particularly Gaza. Speeches in the European Parliament and elsewhere had a pronounced effect. In general, however, we believe —I believe that the right hon. Member for Manchester, Gorton (Mr. Kaufman) is with us on this—that it is not sensible to try to change a country such as Israel by means of threats. Israel is a genuine democracy. We must engage her own public opinion, and persuade Israelis who want to make that change freely.

Mr. David Young: In his talks with Israel, has the Minister entered into any discussion about resolving the difficulties in the Lebanon, which seems to be a key issue in this worrying saga?

Mr. Waldegrave: It remains one of our principal quarrels with Israel that Israel still has troops in the Lebanon, and we refuse to sell weapons to Israel until she has accepted the relevant Security Council resolution and withdrawn her troops. That is one of the matters that come up regularly.

Mr. Rhodes James: Is my hon. Friend aware that Israel has many friends on both sides of the House, in this country as a whole and in the West, and it is those friends who are the most dismayed by the report and by developments in Israel? Will my hon. Friend convey that very strongly to the Israeli Government?

Mr. Waldegrave: One of the most impressive recent developments is that genuine friends of Israel on both sides of the House—indeed, all sections of opinion in this country and also in the United States—have begun to make it clear to the Israeli Government and people that they do not consider the policy on which Israel is engaged to be either right or sensible. My hon. Friend's own part in that is important.

Middle East

5. **Mr. Sumberg:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement on recent progress made towards achieving a settlement in the middle east.

Sir Geoffrey Howe: There have been a number of positive developments—the PLO's renunciation of terrorism, Israel's recognition that the status quo is untenable, the constructive attitude of the Soviet Union, and the determination of the United States to work actively for a settlement.

We continue to believe that an international conference remains the most suitable framework for negotiations between the parties.

Mr. Sumberg: Bearing in mind the sale of bombers to Libya, the continuing civil conflict in the Lebanon and the tragedy of Lockerbie, is not the caution and scepticism of the Government of Israel at the PLO's renunciation of violence understandable? Does my right hon. and learned Friend accept that just as he would be cautious if the IRA were to announce tomorrow that it had renounced the bomb and the bullet, Israel has understandable reasons for taking a cautious view of events in the middle east?

Sir Geoffrey Howe: I have explained to the House on more than one occasion my understanding of that. The length of time before the PLO made the important concessions to which I referred is certainly a ground for caution on the part of Israel. However, the Israeli people and Government have to understand that although we are committed to Israel's right to a secure existence, we are also committed to the view that Israel's security can be achieved only through peace with all her neighbours. Above all, Israelis cannot deny to the Palestinians the rights that they themselves have earned at such cost. Repression of Palestinians breeds resentment and hatred, which is the exact opposite of security. Fortunately, more and more Israelis understand that fact, as does the overwhelming body of opinion in the House. The search for peace along those lines deserves—and is receiving—the active support of more and more Israelis.

Mr. Ernie Ross: Can the Foreign Secretary tell us of one positive result of the most recent visit by the Israeli Prime Minister to the United States?

Sir Geoffrey Howe: The proposals put forward by Mr. Shamir for elections may point in the right direction and are worth exploring in detail without dismissing them out of hand. It is also important to emphasise the statement made by President Bush after his talks with President Mubarak that

> "The goals of the peace process should be security for Israel, the end of the occupation and the achievement of Palestinian political rights".

That statement should be studied carefully in Israel as it is important to the progress of the negotiations.

Sir Dennis Walters: Bearing in mind among other reasons the continuing oppression and violation of human rights by the Israelis on the West Bank and Gaza, is not the hesitancy and slowness of the Bush Administration rather disappointing? Will my right hon. and learned Friend assure the House that he is doing everything in his power to put some speed into the Americans by pointing out that the problem has continued for a very long time and that excessive caution is a mistake?

Sir Geoffrey Howe: My hon. Friend is right to emphasise that the United States engagement in the peace process is absolutely vital. That means that the new Administration must take a leading role, and we shall certainly support them in that role. We have already made our position plain. I shall be going to Washington at the weekend to discuss the topic along the lines suggested by my hon. Friend.

Mr. Janner: Does the right hon. and learned Gentleman accept that the making of peace in the middle east is a very complex matter? Those of us who are desperately anxious that the parties should be brought together in negotiation recognise the sensitivities of both sides, not least the anxiety of all Israelis in their genuine democracy that their country should be safe from attack, their worries about the dangers that a Palestinian state on the West Bank and in Gaza would create, and their fears

that a terrorist enemy which now says that it has renounced terrorism cannot be trusted with the lives of their people.

Sir Geoffrey Howe: I understand fully the point articulated by the hon. and learned Gentleman, namely Israel's anxiety that it should not take steps that might weaken rather than enhance its security, and I understand why that rests against a background of threats to the security of that state. However, it is Israeli opinion that is emphasising that the status quo cannot be maintained and is recognising the need to move forward. Time is not on the side of those who seek a peaceful solution, whether they be in Israel or among the Palestinians. The Israeli leadership and people must recognise, for example, the impact upon the other side of the sheer arithmetic of 420 Palestinians having been killed in the occupied territories compared with only 13 Israelis. That balance of hardship and human suffering cannot be allowed to endure indefinitely. For their own sake, the Israelis must respond to the mounting sense of urgency about the situation.

President Bush

6. **Mr. Conway:** To ask the Secretary of State for Foreign and Commonwealth Affairs when he next expects to meet the President of the United States of America; and what matters will be discussed.

8. **Mr. Gwilym Jones:** To ask the Secretary of State for Foreign and Commonwealth Affairs whether he has any present plans to visit the United States of America.

Sir Geoffrey Howe: I plan to visit the United States next Sunday and Monday, 16 and 17 April. Following President Gorbachev's visit last week, East-West relations and arms control will be on the agenda. I also expect to discuss regional issues, particularly the middle east and southern Africa.

Mr. Conway: I welcome my right hon. and learned Friend's announcement that he will be visiting Washington next week. When he meets President Bush, will he assure him that, despite the warmth of the reception received by President Gorbachev on his recent visit to the United Kingdom, we are not gullible and there is still a constant need to be prepared for all eventualities in relation to countries which still do not appreciate a true democracy? Will he assure him that we still need to maintain a proper role in NATO and that the steadfastness of the United States in this matter is still deeply appreciated?

Sir Geoffrey Howe: I shall certainly make the central point of my hon. Friend's question when I meet members of the United States Administration. They, too, will share our feeling that the changes taking place in the foreign policy thinking of the Soviet Administration represent a challenge and an opportunity, as has been pointed out in the report of the Select Committee on Foreign Affairs. However, they will also understand the central point made by my hon. Friend that we need to maintain our vigilance and unity in defence of our security because it is that formula which has helped us to move as far as we have in recent years.

Mr. Gwilym Jones: During the talks in Washington, will my right hon. and learned Friend thank the United States Administration for their strenuous efforts to inhibit the fund-raising activities of extreme Irish nationalist groups on behalf of the IRA? Will he also make it clear that neither Government will relax their vigilance so long as the terrorist threat remains?

Sir Geoffrey Howe: I shall certainly emphasise my hon. Friend's last point. Neither Government should or will relax their vigilance so long as the threat remains in any form. It is also right to say that the United States Government have taken significant steps to inhibit the fund-raising activities of extreme Irish nationalist groups. The House appreciates that, as I shall make clear when I am in Washington.

Mr. Steel: If during his discussions in Washington the Foreign Secretary is tempted to press for an early commitment to the modernisation of short-range nuclear weapons in Europe, will he make it clear that he does so without the support of the other European members of NATO?

Sir Geoffrey Howe: I shall conduct my discussions on that topic in Washington and elsewhere on the basis of the Brussels communiqué of the North Atlantic Council in February last year—that it is necessary for NATO to continue to modernise its weapons, nuclear and conventional, where necessary.

Mrs. Clwyd: Will the Foreign Secretary raise the important question of the future of Kampuchea, given that the Vietnamese troops are to be withdrawn completely in September? Will he convey the great concern of many hon. Members that any future political settlements must ensure that there can be no return to power of Pol Pot and the Khmer Rouge in Kampuchea?

Sir Geoffrey Howe: I shall certainly discuss Cambodia with the United States Government in the light of the prospective withdrawal of Vietnamese troops, just as I did last week with Mr. Shevardnadze and a few weeks ago with the Chinese Foreign Minister. As on both those occasions, I shall make it clear that this House and the overwhelming body of opinion round the world would regard the return of Pol Pot and his cronies as an intolerable prospect.

Mr. Kilfedder: As the Foreign Secretary will be aware, another terrible atrocity has been committed today by the IRA in Northern Ireland. Is my right hon. and learned Friend aware that in the United States, the IRA and its front organisations are consistent in their propaganda campaign in the media? Surely it is time for this Government and the United States Government to counter that campaign, which brings in funds for the IRA.

Sir Geoffrey Howe: My hon. Friend is absolutely right to underline the importance of putting that message across. It is a message that has been put across in every possible way by our embassy and staff over there, and by a series of visits by, among others, my right hon. Friend the Secretary of State for Northern Ireland. That message will go on being put across by this Government in every possible way. Alongside that, incidentally, we shall also hammer home our opposition to the so-called MacBride campaign because it is counter-productive to investment and takes no account of our own fair employment proposals, which are more radical and more effective.

Mr. Kaufman: Was not the Foreign Secretary's response to the question put by the right hon. Member for Tweeddale, Ettrick and Lauderdale (Mr. Steel) a deliberate and disingenuous attempt to dodge the issue on the modernisation of short-range nuclear weapons? Is it not a fact that Belgium, Norway, Denmark and Spain have made it clear that they are against forcing an early decision on modernisation, that the Netherlands and the Federal Germans have great misgivings and that the President of France gave the Prime Minister the brush-off by saying that it was a sovereign decision for the Federal German Government? Why is the Prime Minister alone, of all the NATO heads of Government in Europe, impervious to reason on that issue?

Sir Geoffrey Howe: The right hon. Gentleman never loses his gift for getting something absolutely wrong. As I told the right hon. Member for Tweeddale, Ettrick and Lauderdale (Mr. Steel), NATO committed itself in principle last year to the modernisation of nuclear and conventional weapons where necessary. It is agreed that short-range nuclear weapons are one type of weapon that needs to be modernised and there is no doubt about that. The only question, about which there are widely varying views, is at what point particular decisions need to be taken in that respect. As it has in the past, NATO will reach an agreed conclusion without any help from the right hon. Gentleman.

Single Market

7. **Mr. Thurnham:** To ask the Secretary of State for Foreign and Commonwealth Affairs what measures his Department is taking through its offices in other European Community states to help to prepare for the single market in 1992; and if he will make a statement.

The Minister of State, Foreign and Commonwealth Office (Mrs. Lynda Chalker): British embassies are fully involved in lobbying and reporting on single market measures. They also provide a range of services to help British exporters make the most of growing opportunities.

Mr. Thurnham: Will my right hon. Friend make it clear that there is a great deal that her Department can do to help British industry—not only manufacturing industry, but service and professional industries such as engineering contracting, consulting and distribution—to prepare for 1992?

Mrs. Chalker: My hon. Friend is absolutely right. He will know that the agreement that we have reached on the mutual recognition of professional qualifications is an important opportunity for British professionals to ply their trade abroad. Service industries, just as much as manufacturing industries, can contribute greatly and we hope that they will all participate in the setting of European standards because without their help in achieving the right technical standards we shall not be as well prepared as we could be.

Mr. Skinner: Does the Minister recall that there was a hype a few years ago in the City about the big bang that was going to occur and that there was the same kind of co-ordinated propaganda about how well Britain was going to do? In fact the City got nothing out of it and the invisibles have fallen rather than risen. Does the Minister expect the big bang of the single European market to be more or less successful than that in the City?

Mrs. Chalker: We make steady, positive and continuing progress towards success in the City. When I see the hon. Gentleman and his big bang, I know that steady, solid progress is much to be preferred. I can say firmly to him that I believe that the United Kingdom's financial sector, which is by far the largest in Europe, is likely to be the most successful. Financial services will stand us in very good stead in Europe.

Mr. Wells: What work is my right hon. Friend doing in preparing this country to debate the issues that are likely to be in the Delors committee report on central banking and the single European unit of account? How can our country have an opportunity to discuss and understand those issues before there are decisions and discussions at the Europe Council?

Mrs. Chalker: I doubt whether any decisions are going to be arrived at the next European Council. It is far too early to say, when the report of the Delors committee will possibly come forward only later this month and will have its first examination in the ECOFIN Council in May. We will thoroughly discuss everything in that report and see what progress can be made. We should never underestimate this country's practical commitment, by the introduction of ecu-dominated Treasury bonds, to the development of better monetary co-operation throughout the Community.

Mr. Madden: Will the Minister confirm that, with the free movement of people, Common Market nationals will have the right to enter the United Kingdom without a visa, bring children up to the age of 21, their parents and their grandparents, be able to undertake employment without a work permit, and establish businesses without any evidence of financial resources? Will she reflect on those matters when she examines the family disunity and separation that is caused to many British citizens who originate from the Indian sub-continent? Because of the Government's unfair yet firm immigration policy, for years they have been separated by thousands of miles from their spouses and families.

Mrs. Chalker: The hon. Gentleman knows that European Community nationals have total reciprocity in those mattters. Our immigration policy is based on sensible, longstanding reasons. The one does not affect the other.

Mr. Rowe: Is it true that the momentum towards the Common Market in 1992 is now virtually unstoppable? Does my right hon. Friend agree that it does nobody any good to start casting doubts on it as being some kind of fiasco or disaster? It is a great opportunity, particularly for small firms in this country.

Mrs. Chalker: My hon. Friend is right. We are making good progress in dismantling barriers to trade. It is quite wrong for any commentator, whoever he may be, to say that 1992 measures are failing. More than 40 per cent. of the issues that were raised in the 1985 White Paper have been agreed. We have progressed almost daily. I was delighted to see the European Court of Justice's judgment on air fares, which was reported in the press this morning. That judgment represents a significant step towards our

aim to liberalise international air transport and bring down the cost of air fares to the ordinary travelling public. The court said that, from now on, airlines should clear their price-fixing controls between Community countries directly with the Commission. That is another great step forward.

Mr. Robertson: Does the Minister agree that, although Britain has not done very well in Europe, Europe has done very well in Britain?

Mrs. Chalker: I am afraid that the hon. Gentleman must look at his figures again.

Cyprus

9. **Mr. Nicholas Bennett:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement on Britain's financial contribution towards the United Nations peacekeeping force in Cyprus (UNFICYP).

Mrs. Chalker: Britain's contribution towards the cost of the United Nations force in Cyprus (UNFICYP) in the financial year 1989-90 is estimated at £22·87 million, net of recoveries.

Mr. Bennett: Can my right hon. Friend confirm that the United Kingdom is the only member of the Security Council that pays its dues in full? What action is being taken by the United Kingdom to press the other countries to make their full payments towards this force?

Mrs. Chalker: Indeed we have been paying our full amounts towards this force. The account is in deficit by some $167 million, as my hon. Friend knows, but the United Kingdom is not in deficit. We have absorbed all our own costs since 1964, and we have encouraged all other nations to contribute fully. I hope very much that many other states, including France and the Soviet Union, will stop resisting the change from voluntary contributions to assessed contributions. That would go a long way towards solving the problem.

Mr. Cyril D. Townsend: Will my right hon. Friend take the opportunity to pay tribute to the British soldiers who have served with that force over many years? Is it true to say that we carry the bulk of the administrative burden, not only of the United Nations force in Cyprus but of the peacekeeping force in Lebanon? Can he confirm that we supply the biggest element of that force in Cyprus, and, but for its presence, the number of deaths on both sides of the green line might have been considerably greater over the years?

Mrs. Chalker: Indeed, I am delighted to join my hon. Friend in paying tribute to the whole British contingent —currently 741 officers and men, or about one third of the total force—who have worked extremely hard. They bring a very special balance to a very difficult situation, and they continue to give absolutely first-class assistance in this very difficult area. We only hope that the negotiations towards resolving the problems of Cyprus will soon again proceed smoothly, and we wish both sides well in their efforts to find a solution that is acceptable to all.

Israeli Foreign Minister

10. **Mr. Galloway:** To ask the Secretary of State for Foreign and Commonwealth Affairs when he next expects to meet the Israeli Foreign Minister of State; and what will be discussed.

Mr. Waldegrave: My right hon. and learned Friend hopes to visit Israel later this year, and looks forward to discussing bilateral and regional issues with Professor Arens then.

Mr. Galloway: When the Foreign Minister meets Professor Arens will he raise the question of the arrest yesterday of two prominent leaders of the Palestinian community on the West Bank—the distinguished Jerusalem journalist Sam'an Khouri, and Adnan Shalalda? Today those men were charged before a military court with being leaders of their own people in the territory in which they live and have always lived. Will the Minister point out the irony of the absurd proposal by the Israeli Administration to hold elections to identify such leaders at a time when any leaders who do emerge are either shot down in the street or clamped in irons for months on end?

Mr. Waldegrave: I certainly agree with the hon. Member that it is no way to develop a sensible dialogue with the leaders of the Palestinians to treat people in that way. We have made regular representations, and I should think that we shall have an opportunity to make representations on these cases well before my right hon. and learned Friend goes to Israel.

Mr. Tredinnick: Does my hon. Friend agree that handing back the Taba enclave to Egypt has been very much to Israel's advantage, and will he make that point to the ambassador?

Mr. Waldegrave: What the Taba incident demonstrates to Israel and to others in the region is that it is possible to resolve disputes by means of law and treaty. In a sense, that is the main significance of Taba, and I should have thought that, small though it is, it reminds people that it is possible to solve disputes in a way other than by force.

Mr. Flannery: Does the Minister agree that the most vital component, or at least one of the most vital components, of the struggle for peace in the middle east is the necessity for Israel to have discussions with the PLO? The PLO is recognised throughout the middle east—by all the Arab nations, as well as by the people of Palestine—as the representative of the Palestinians. Let it be made clear to the Israelis that they took lands away from the Palestinian people by force, and that before there can be a peace settlement in the middle east there must be a conference involving Britain and America, along with the PLO and the Israelis. Will the Minister impress that on the Israelis with all the prestige that Britain commands in this area?

Mr. Waldegrave: It is certainly our view that the Israelis will not find it possible to conduct negotiations with the Palestinian leaders in the occupied territories without talking to people who identify themselves with the PLO, and they will not find such people. It is the British Government's position that there should be an international conference under the aegis of the five permanent members of the Security Council but, in a sense, that matter is secondary. We want to get the process going and

believe that such a conference would ultimately be the best way of establishing a framework for the direct talks which must take place between the Israelis and the other parties to the dispute.

Mr. Cyril D. Townsend: Will my hon. Friend make it perfectly clear that the British Government see no need for elections in the occupied territories to find out who represents the Palestinian people because it is well known that the PLO does? Does my hon. Friend agree that the idea of such an election is merely a means of trying to postpone having a proper international conference, which is obviously the right way forward?

Mr. Waldegrave: I am not sure that I would put it in quite that way. I would emphasise that the Palestinians would be chary of taking part in any elections that did not lead to a further process that would result ultimately in negotiations about the final status of the territories. From what I have understood of the PLO position and of its reactions to Mr. Shamir's proposals, if it believes that such elections are part of a continuing process, it would consider them seriously, but it does not wish to be caught in a cul de sac of voting only for municipal elections or for something that establishes Israeli hegemony over the territories.

Romania (Human Rights)

11. **Mr. Flynn:** To ask the Secretary of State for Foreign and Commonwealth Affairs what recent representations he has made on human rights violations to the Government of Romania.

Sir Geoffrey Howe: I raised Romania's appalling human rights record with the Romanian Foreign Minister in Vienna on 6 March. We deplore the Romanian Government's failure to meet their commitments under the Helsinki agreements and, in particular, their continuing policy of systematisation. We urge them to heed international calls for an end to repression and intimidation.

Mr. Flynn: The Government are to be congratulated on their leadership of the European protest against Ceausescu, a leader who increasingly oppresses his own people with the primitive cruelty and arrogance of a mediaeval tyrant. However, is it not time for the Government to lead a new initiative against the process of systemisation—a process of cultural pogroms—which is sending the process of civilisation into reverse in Romania, and against the most savage breaches of human rights in any country in Europe? Would it not be a start to the new initiative if Britain stripped from Ceausescu the honour that was given to him in 1978 in the same way that we have taken honours from past Members of the House and other citizens of this country when they no longer deserve those honours?

Sir Geoffrey Howe: The whole House will have sympathy with the vehemence with which the hon. Gentleman condemns what is happening in Romania. Condemnation is being expressed not only by Western countries because it is notable that even the Soviet Union and other Warsaw pact partners of Romania have failed to support that country in recent proceedings before the European Commission of human rights. Condemnation of that cultural and human savagery is widespread.

However, the award to which the hon. Gentleman referred was conferred long ago as part of the longstanding arrangements for the exchange of courtesies during state visits. Although there have been occasions in wartime when our enemies in recent conflicts have had their awards taken away, there is no precedent for depriving the holder of an honorary award in peacetime. It is not judged right to depart from that rule in this case. However, that does not in any sense diminish my sympathy with the point made by the hon. Gentleman.

Sir Bernard Braine: In view of the appalling human rights record of Romania under the corrupt and repressive Ceausescu regime, the fact that it has become an acute embarrassment even to its Warsaw pact partners, the creation of a major refugee problem by the enforced devillagisation that is taking place in Transylvania and in view of the fact that our own ambassador has been manhandled by the police in that country, is it not high time to show our disgust and our repugnance with this regime and to withdraw our ambassador?

Sir Geoffrey Howe: I understand totally why my right hon. Friend makes that point so strongly. One of the purposes of retaining an ambassador there is to continue to fight against the very conditions that my right hon. Friend describes. He is right that our ambassador and members of his staff were grotesquely ill-treated on an occasion when they were trying to establish contact with the historian, Doina Cornea, who has been outrageously treated. It is also right that more recently our embassy was able to establish contact with her, which has been of value. It confirms that she is continuing to be extremely badly treated, both in encirclement and in being deprived of communication with the outside world. That in itself justifies a continued presence there, although my right hon. Friend's statement of anguish about what is going on in Romania is equally justified.

Rev. Martin Smyth: Can the Secretary of State tell us what representations have been made to the Romanian authorities? Is it not time that words of condemnation were backed by action?

Sir Geoffrey Howe: As was conceded by the hon. Member for Newport, West (Mr. Flynn) in his supplementary question, the United Kingdom has been playing a leading part in mobilising action by the Community in demarche after demarche. We have been making representations with continuous vigour. We have also been able to block progress on the negotiations that were due to take place between the Community and Romania. So we have intervened effectively in the way that was open to us. We shall continue to mobilise as much condemnation as we can of the intolerable conduct of the Romanian Government.

Mr. William Powell: My right hon. and learned Friend's robust denunciation of the despicable regime in Bucharest will be widely welcomed in the House, in the country and across all countries of Europe. My right hon. and learned Friend has said that there is no precedent for stripping the President of the Romanian Republic of honours that have been accorded to him. Does my right hon. and learned Friend accept that there are times when new precedents must be set? This is probably a case where we should begin the process.

Sir Geoffrey Howe: I take note of my hon. Friend's point. Perhaps the most important point is the immense strength of feeling expressed on all sides of the House. I am sure that that in itself will underline a crucial message to the Government of Romania. One only hopes that it may make some difference to their conduct.

Namibia

12. **Miss Lestor:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement on progress in implementing United Nations resolution 435 on Namibia.

Mrs. Chalker: As my right hon. Friend the Prime Minister made clear in Windhoek on 1 April, we are actively supporting the United Nations operation in Namibia. It is vital that the parties abide strictly by their obligations under the United Nations plan for Namibian independence.

Miss Lestor: In order to counter the feeling among many that South Africa is having far too great an influence on the implementation of independence, can the right hon. Lady tell us whether she supports the call made on 8 and 9 April at the Mount Etjo conference that the full United Nations transition assistance group force should be implemented, and whether she would also endorse the United Nation's view that South Africa should not be allowed to interrogate SWAPO guerillas? Will she recommend that in future SWAPO should be involved in discussions of the implementation of the resolution?

Mrs. Chalker: It may interest the hon. Lady to know that the Mount Etjo declaration is being placed in the Library. The full UNTAG troops will get there as soon as possible. I was pleased yesterday to be able to announce that we have given a gift to the United Nations of the use of 55 Land Rovers and 12 four-wheeled trucks to try to help, while other equipment is on the high seas. In talking to those concerned about whether returning SWAPO guerillas to Angola will be interrogated, we have been assured that any information from the SWAPO forces will be sought by UNTAG and it will be solely directed towards the implementation of the Mount Etjo plan.

Mr. Gardiner: Does my right hon. Friend agree that the essence of resolution 435 is that fair and free elections should be held in Namibia to determine its future? Will my right hon. Friend investigate allegations that British taxpayers' money is going through the European Community to give a preponderant advantage to SWAPO, despite its recent violations of the peace accord? Will she do her utmost to ensure that all parties can participate in those elections on an equal basis?

Mrs. Chalker: Of course, there must be free and fair elections and everything must be done through the United Nations, whose responsibility it is, to ensure that that is so. We have no evidence of my hon. Friend's accusation that funds are being given to SWAPO and, in fact, I have written about that only this morning, or last night. In addition, I believe that it is absolutely vital that we do all that we can to support UNTAG in its most difficult task of maintaining the peace and proceeding towards those free and fair elections.

Mr. Boateng: Does the Minister agree that it would be highly damaging to UNTAG, and to the implementation of resolution 435, if elements of the Koevet unit—the notoriously murderous unit of the South African army —were to be in any way engaged in the policing of the withdrawal of SWAPO? Does she further agree that that is likely because that unit now comprises almost half of the South African police force in Namibia?

Mrs. Chalker: I am certain from what I have heard this morning that the task of the fully deployed contingents from the United Kingdom and Australia, who will be manning the nine assembly points, accompanied by UNTAG military observers—but, indeed, with the police and the Angolans alongside, as agreed under the Mount Etjo declaration—will be to see that the SWAPO forces return north of the 16th parallel in Angola. It is clear, too, that those members of the South African forces who may be alongside will be under the direction and supervision of the United Nations forces there and, indeed, our own forces.

Mr. Ian Taylor: Was my right hon. Friend able to discuss with the Soviet delegation in London last week the situation in Namibia and Angola, especially as President Gorbachev had recently returned from Cuba, which is well known to be heavily involved in the activities in that area?

Mrs. Chalker: My right hon. and learned Friend talked with Mr. Shevardnadze last week. Our efforts, especially those of the Prime Minister and her decisive intervention in Windhoek on 1 April, have been warmly welcomed by the President of the Soviet Union, by the President of Angola and by the Cubans. I regret that Opposition Members should seek to try to bring party politics into such a subject.

Mr. Anderson: Is not the Minister being just a little naive about the cease-fire assembly points? Apart from members of the South African forces who may be present, is it not correct that the South African militia—the South West Africa Territorial Force—is in the majority at those cease-fire assembly points and that a South African spokesman has said that UNTAG would be permitted to be present during interrogations? Who gave the Government those assurances? Will the Government ensure that visiting parliamentarians from western Europe are given visas to be present to monitor the electoral process and that SWAPO is given reasonable facilities for access to the media during the electoral process?

Mrs. Chalker: I must remind the hon. Gentleman that the British Government are not in charge of what is going on in Namibia, but the United Nations. Many of the questions that he has posed are questions for the United Nations. We are working in support of the United Nations' transition assistance group to get those free and fair elections. That will obviously mean all parties to the election wanting access to put their points over.

I further say to the hon. Gentleman that, of course, at the present time—with South African forces on the ground —the United Nations has not been able to get all its forces there, because there was a filibuster after the United Nations Secretary General put his plan to the Security Council. That was not by this country, which warned again and again that, if there was a delay in coming to a conclusion in the Security Council, and then the General Assembly, there would not be full deployment on 1 April.

Those responsible for the filibuster are responsible for the fact that United Nations forces were not there. Others had to be used under United Nations supervision. They are being used only in support of UNTAG until other forces arrive.

Angola

13. **Mr. Anthony Coombs:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement on Her Majesty's Government's recent contacts with Angola.

Mrs. Chalker: There are regular contacts with representatives of the Angolan Government in the normal course of diplomatic relations.

Mr. Coombs: While welcoming the regional peace settlement, the withdrawal of Cuban troops from Angola and Angola's application to the international monetary fund, which are evidence of more flexibility by Angola in its attitude to the West, does my right hon. Friend agree that Angola is still divided between the Marxist PLA and the equally unattractive Jonas Savimbi who has recently been accused of human rights abuses? What proposals have the Government, either on a regional basis or through the United Nations, to ensure democracy and peace in Angola?

Mrs. Chalker: I am pleased to say that the President of Angola has played a constructive role in helping to get the United Nations plan back on the road in Namibia. Having concentrated on doing that, the next step for peace in Namibia is to seek internal reconciliation for peace in Angola. We welcome the proposal for a regional security conference with Angola's neighbours. There is no doubt that we shall not see lasting peace in Angola until the parties come together. I have made it clear that a military solution in Angola is not possible. It needs to proceed towards a peaceful reconciliation between both parties.

Mr. Speaker: Motion under Standing Order No. 20 —Mr. Robert Hughes.

Mr. Robert Hughes (Aberdeen, North) *indicated dissent*

Mr. Speaker: Presentation of Bill.

BILL PRESENTED

Religious Prosecutions Abolition

Mr. Tony Benn, supported by Mr. Jeremy Corbyn, Mr. David Steel, Sir Ian Gilmour, Ms. Jo Richardson, Sir Cyril Smith, Mr. Richard Shepherd, Mr. Bernie Grant, Sir Russell Johnston, Mr. John Gorst, Ms. Diane Abbott and Mr. Eric S. Heffer presented a Bill to abolish prosecutions for the expression of opinion on matters of religion: And the same was read the First time; and ordered to be read a Second time on Friday 21 April and to be printed. [Bill 115.]

Abolition of Welsh County Councils (Creation of Unitary Local Authorities)

3.32 pm

Mr. Nicholas Bennett (Pembroke): I beg to move,

That leave be given to bring in a Bill to abolish Welsh county councils by the creation of unitary local authorities.

Colleagues may say, "Not another local government Bill," but I make no apologies for seeking to introduce such a Bill. The time has come to debate again the structure of local government in England and Wales. That is especially appropriate in this centenary year of the county council system which was an enacted by the Local Government Act 1888.

Local government is vital and plays an important role in our national life and in helping to administer our country. However, it is top-heavy. There are three tiers of local government outside London and the metropolitan districts. They are the counties, districts and boroughs and the parish councils or, in Wales, the community councils. I want to concentrate on Wales because specific questions about that part of the United Kingdom need to be addressed. The Association of District Councils in its report "Closer to the People" said:

"Nowhere are the arguments for change put forward in the previous chapters more relevant than in Wales, highlighted by the remoteness of County government and by major difficulties in co-ordinating service provision between the County and District tiers. The 37 Welsh Districts provide a sense of identity and community which cannot be matched by the County structure. The latter, in terms of service provision, operates in the main through a system of area offices largely coterminous with existing district boundaries, and accountable to a distant County Hall. They do not provide a focus for the local community of interest."

The association's report continued:

"Welsh local government's reliance on Government funds, thereby improving the structure of local government, local responsibility and the local tax base. The distinctive character of Wales should be clearly recognised within such a review;".

The present system was introduced in 1974 as a result of the Local Government Act 1972. It was bitterly resented in many parts of Wales. In my own county of Pembrokeshire, in Montgomeryshire and in Monmouthshire there were protests at the time. Pembrokeshire county council produced a report in 1970 entitled "A unitary authority for Pembrokeshire" which made three points. It recommended:

(i) that all authorities be unitary;
(ii) that the size of authorities be based on population, area and sociological need;
(iii) that existing county boundaries need not, of necessity, be the boundaries for the new authorities."

The Redcliffe-Maud report, the Royal Commission on local government in England in 1969, came out in favour of unitary authorities for England whenever "geographical and other factors allowed".

In Wales, there was a reconsideration by the then Labour Government, who agreed in March 1970 in a White Paper that single unitary authorities for Glamorgan and Monmouthshire could be introduced, but it was not to be so. In 1974, we saw the creation of eight jumbo-sized local county councils in Wales.

There are four main problems with county government in Wales, First, it is too large and cumbersome. The report of the Association of District Councils in 1987 said:

"Certainly, the radical reorganisation of 1974 failed to get the system right in Wales. The 'big is beautiful' argument, popular at that time, was particularly unsuited to the four rural counties of Gwynedd, Dyfed, Powys and Clwyd which make up some 75 per cent. of the Principality in terms of area; and bears no relationship to the ADC view 'that a truly effective and durable system of local government is one which binds democratic institutions and service delivery to identifiable communities'."

Secondly, the county councils are remote from the voters and, indeed, from the councillors. As the Welsh committeee of the national committe of the National Association of Local Councils said:

"The Association believes that the present system has in most areas gone too far in increasing the size of authorities and that the local government system in many places now suffers so severely from the defects of remoteness that any compensating advantages of scale are lost. Particularly in the counties of Dyfed and Gwynedd, distances are so large that councillors in both counties and districts have to travel long distances to meetings and very few of them at any meeting can have a proper local knowledge of the matters under consideration."

Thirdly, the present county boundaries are not coterminous with the natural communities. Redcliffe-Maud in 1969 said:

"Local authority areas should be defined so that they enable citizens and their elected representatives to have a sense of common purpose."

That view was echoed by the Society of Local Authority Chief Executive Officers in its report last year entitled "Local Government of the Future". It argued that natural communities, rather than size, should be consideration for local authorities.

Our 1974 experience has shown that local communities hold together due to historical and other links that are particular to each area, and I believe that it would be sensible for our system of local government to be based on the social structures of communities.

Fourthly, there is confusion among the general public about the roles and services of local authorities. People do not know which authority provides which service, and that is particularly true where there are overlapping responsibilities, such as on questions of social policy, roads and planning. That has been recognised in recent years. The London boroughs and metropolitan districts have become all-purpose authorities and the area health authorities have been abolished, so reducing the number of tiers in the National Health Service.

In Pembrokeshire, we were split from the Dyfed health authority to have our own health authority, and the Secretary of State for the Environment is now looking at the boundaries of Humberside county council. In Scotland, the Conservative party is considering the abolition of the regional tier of government, and in Wales the Labour party has already announced that it wishes to get rid of county councils and to have 24 or 25 all-purpose district councils, albeit with a regional assembly as well. The ADC, in its report "Closer to the People", talking about Wales and the views of the Committee on Welsh District Councils, agrees

"that the paramount goal is the creation of a single tier of most-purpose district authorities which would exercise, either directly or through joint arrangements, all the functions now exercised by district and county councils."

Somebody might say, as Mandy Rice-Davies said, "They would say that, wouldn't they?"

There is further evidence, supported by academic research commissioned by the ADC, by Murray Stewart and Frank Tolan at Bristol university. They, having

looked at Cheshire, came to the conclusion that the transfer of functions in Cheshire was a real and viable option:

"We are convinced now—as we were not at the start of the study—that a move towards a single tier of most purpose authorities is an entirely sensible and indeed important issue for widespread public debate."

Three issues should be at the front of our minds in the reform of local government: it should be democratic and more easily understood, and decision-making should be at the level closest to the people; it should be more cost effective in providing local services to the public and it should be financed from locally controlled sources of revenue; and powers should be decentralised to local government and, when possible, unnecessary controls by central Government should be removed.

I therefore propose in my Bill that we abolish the eight Welsh counties and amalgamate some of the smaller district council areas to create 16 or 17—or, if necessary more, depending on local feeling—all-purpose district councils.

Cardiff would once again become responsible for its own affairs. That would bring back a form of local government similar to the old county boroughs, but larger and without the competing counties surrounding them. For some services like the police, fire services and other emergency services and perhaps for some parts of education, joint committees would be set up composed of members of the constituent authorities. Town and community councils would remain, although I would like to see the Welsh community councils renamed parishes, and an increased role might be possible, especially for the larger parish and town councils.

The Association of District Councils in its report "Closer to the People" concluded:

"A single-tier structure of local government would facilitate accountability and realistic budgeting and eliminate waste. It would minimise bureaucratic duplications inevitably associated with a two-tiered system, thus reducing unproductive overheads. It would provide a tighter management of services and give better value for money to local people."

I believe also that is would be immensely popular with the people of Wales, as it would bring back the historic county names and communities which the Welsh people would recognise.

3.40 pm

Mr. Ray Powell (Ogmore) *rose——*

Mr. Speaker: Is the hon. Gentleman seeking to oppose the motion?

Mr. Ray Powell: Yes, Mr. Speaker.

I am mindful of the time, effort and energy that hon. Members employ to secure a ten-minute Bill. On several occasions I have presented such Bills, all of which I had hoped would be useful to the country at large. I introduced the Grandparents (Adoption of Children) Bill, which included some measures contained in the present Children Bill. I also recall the Bill to ban opinion polls before general elections and by-elections. That Bill was opposed and was never enacted. However, it would have been useful.

I believe that the Bill presented by the hon. Member for Pembroke (Mr. Bennett) is no more than a publicity stunt. Obviously he has not bothered to research the subject; he may have something more sinister in mind, such as a running conflict with his county councillors in Dyfed.

Why should the hon. Gentleman introduce a Bill to abolish his county council, especially when county council elections are being held at the moment? That makes me wonder whether the hon. Gentleman has no confidence in his county candidates in his constituency and whether his main aim with this Bill is to abolish them. To propagate this proposal now is very suspect.

Those of us who have been here for the past 20 years since the reorganisation of local government by a Tory Government long before the hon. Member for Pembroke entered politics, who genuinely and profoundly wish to see the real devolution of power from central to regional government, feel outraged that anyone should want to attempt to waste the time of this House by tinkering with such a complex, intricate and emotive subject for whatever reasons. To confine the Bill specifically to Welsh counties complicates maters and infuriates hon. Members on both sides of the House.

From my experience at community council, borough council and county level and from my friendship with county councillors from most parts of Wales, I would respectfully suggest that it would have been far more responsible of the hon. Member for Pembroke if he had presented a Bill to establish a major programme of consultation in all parts of Wales to consider the future of local government, paying particular attention to the differing needs and problems in various areas and clearly undertaking that any change in Welsh local government should proceed only in step with the leading region or regions in England. I must add that I support my Scottish colleagues in their demands for devolution of power to Scotland.

Before the House can even consider supporting the Bill we must ask numerous detailed and probing questions. It is proposed to alter the present local authority functions, but how will they be redistributed in the new dual structure? What Welsh Office function, presently unaccountable, should be given to the unitary authority?

Are there to be further reductions in the Exchequer block grant, or can we expect substantial increases to ensure improvements in local government services to meet the urgent need for industrial modernisation, social change and distinctive cultural development?

The structure of finance begs a series of questions on the right of levy taxex. Should there be an additional Welsh tax or would that be an unacceptable burden on the taxpayer? Would it prove a disincentive in attracting industry and much-needed employment? What limit, if any, should be given to revenue-raising powers, and should there be any limit to the amount or purpose of such expenditure? What machinery should be established to determine the level of rate support grant or its replacement? Should Wales have different financing methods from England?

Those of us who have been born and bred in Wales and have studied the problems of decentralising government, appreciate that we need more than a ten-minute Bill.

Other questions need to be answered. What about the Welsh Office and the Secretary of State for Wales? Only recently the Secretary of State made a statement which showed that he is not in step with the Government, but he has not subscribed to any criticism of them for the past 10 years. Should he have a seat in the Cabinet? I wonder

[Mr. Ray Powell]

whether the occupant of No. 10 is considering that today. How many tiers of Government should we have—regional, unitary authorities, community councils? Who should serve on them? What areas are to be covered? How many Members of Parliament should there be? Do we need a parliamentary constituency reorganisation? Would they be coterminous with the unitary authorities? How would we define the responsibilities of Members of Parliament, regional elected members, unitary authority members and councillors? Most areas of Wales have differing needs. How shall we cater for them if we reform Welsh regional, local and community representative bodies?

All those essential, pertinent, obvious, responsible questions need answers, which need to be well researched and, more importantly, well and truly discussed with our present representatives. Until that happens, and a concentrated and concerted opinion is voiced by the majority of people in Wales, the House has no alternative but to reject any ill-informed, however well-intentioned opinion.

I have many other questions, but the House has a number of matters to deal with which may be more important than the Bill. I ask all hon. Members to join me in the Lobby and reject the Bill.

Question put, pursuant to Standing Order No. 19 (Motions for leave to bring in Bills and Nomination of Select Committees at Commencement of Public Business):—

Question accordingly negatived.

Points of Order

3.59 pm

Mr. Harry Cohen (Leyton): On a point of order, Mr. Speaker. Will you look into the activities of the Secretary of State for Health in treating the House with contempt in relation to his proposed changes to National Health Service hospitals? He is already acting on the basis of his proposed legislation, assuming that it has been passed by the House. But it has been subject to no legislative scrutiny whatsoever.

I have received a letter from Mr. Terry Hunt, the regional general manager of North East Thames regional health authority, stating:

"I am seeking preliminary suggestions for the identification of hospitals . . . to be considered for self-governing status . . . These proposals will be explored with a view to establishing a shortlist of a few hospitals that . . . will be the first to become self-governing."

He asked for the names of hospitals to be considered for inclusion on the initial shortlist to be sent to him no later than 5 May.

I wrote to him saying:

"It seems a negation of the democratic process for you to invite immediate bids for self-governing hospitals under a proposal which has not yet been through Parliament."

I asked him to

"withdraw this letter and recognise that it is not right to anticipate the outcome of the Health legislation. Even if the Government thinks it can ride rough-shod over the democratic process, there is a responsibility for others not to do so".

On 6 April I received a reply saying:

"In this matter we are acting directly on the instructions of the Secretary of State through the Chief Executive of the NHS Management Board."

He is acting directly before the legislation has been considered by the House. The Government are treating Parliament as a rubber stamp. It is an abuse of the parliamentary process and I ask you, Mr. Speaker, to look into it.

Mr. Speaker: The hon. Gentleman raises a highly political matter, which continues what we were discussing yesterday. I have no responsibility for what Ministers say or do. These are matters which legitimately must be taken up in debate across the Floor of the House but not through the Chair.

Mr. Tony Banks (Newham, North-West): Further to that point of order, Mr. Speaker.

Mr. Speaker: Order. No point of order can arise on that. What the Secretary of State writes in a letter is not a matter for me.

Mr. Banks: As a member of the Procedure Committee, I know that the report that was published yesterday made it quite clear that one of the reasons for the apparent lowering of parliamentary standards and the running of tempers rather high was the practice adopted by Ministers of making statements outside the House, and effectively circumventing procedures on the Floor of the House. This is yet a further example. Therefore, Mr. Speaker, you should take some interest in the matter.

Mr. Speaker: But we are referring not to a statement but to a letter that the Secretary of State wrote to an hon. Member. It is not a matter for me.

Mr. Banks: The Secretary of State wrote to the health authority.

Mr. Cohen *rose—*

Mr. Speaker: Order. It is not a matter of order in the Chamber, it is a matter of political debate, and that is how it should be carried on.

King's Cross Fire (Fennell Report)

Mr. Speaker: I must announce to the House that I have selected the amendment in the name of the Leader of the Opposition.

4.3 pm

The Secretary of State for Transport (Mr. Paul Channon): I beg to move

That this House welcomes the thorough and comprehensive report by Mr. Desmond Fennell QC on the investigation into the King's Cross Underground fire; endorses the Government's commitment to invest in the improvement and modernisation of the Underground and its decision to provide £266m over the next three years for the implementation of the report's recommendations; notes London Regional Transport's constructive response to the report; and looks forward to continuing vigorous action by London Underground to implement its recommendations.

The House will agree that it is right to have a full debate in this House on the Fennell report, but it is also right that it should not have taken place until after London Regional Transport and London Underground had made their formal reply to the report. As the House will know, their reply was published on 6 February and copies were placed in the Library.

The fire at King's Cross Underground station happened on 18 November 1987—more than 16 months ago—but the tragic events of that night are still very much in our minds—and so they should be. The House will not need reminding that the fire resulted in the loss of 31 lives. I know that many are still suffering from the loss of a loved one or were themselves injured and are still trying to come to terms with what happened. I am sure that at least on this I echo the sentiments of the whole House when I once again offer my sympathy to those who have suffered. Also, we must never forget the heroism and sheer professionalism exhibited by many members of the emergency services on that night.

Let me remind the House of the events which followed that terrible tragedy. I appointed an inspector, Mr. Desmond Fennell QC, to carry out a formal investigation. The inquiry sat in public for 91 days, hearing a mass of evidence from 150 witnesses. A number of technical and scientific studies were carried out. I believe that it is generally agreed that Mr. Fennell's report, published on 10 November 1988, when I made a statement to the House, is thorough and comprehensive. It is more than a once-and-for-all prescription for some action to be taken: it calls for continuous vigilance and action, long after the debate has been forgotten.

Mr. Fennell concluded that the fire was caused by a lighted match, which fell through the gap beside the escalator treads and ignited an accumulation of grease and rubbish on the escalator tracks. The fire beneath the escalator spread to the wooden escalator components and then erupted into the booking hall in a flashover. The flashover was attributed to the "trench efect" in which the flames and hot gases are confined within the escalator trench and extend rapidly up it, before bursting upward and outward, at the top of the escalator. This phenomenon, previously unknown, was discovered and explained in the course of the painstaking research commissioned by Mr. Fennell during his work. The message is that nobody responsible for safety can be complacent that all potential hazards have been identified or that the cumulative effect of individually unlikely events can be predicted, let alone ignored.

The report found serious shortcomings within London Regional Transport and London Underground Ltd. which called for a totally new approach to safety management and fire prevention. There were 157 recommendations, the majority of which were directed to LRT or LUL in particular. I accepted the resignations of the senior management and directed the two bodies to institute prompt action. The House will know from their formal reply that the new managements of LRT and LUL have accepted the vast majority of the recommendations which are addressed to them and many have already been implemented. I invite the House to take note of this response as a serious and responsible reaction to the criticisms made.

It would take too long to describe all the measures which are being taken so I shall just summarise the main actions. First, there is the elimination of wooden panelling from escalators. LUL is replacing the wooden skirting boards and balustrades, decking and advertisement panels with metal. I understand that 51 out of the 74 escalators have had their wooden skirting boards and balustrades removed and 23 have had their decking and advertisement panels removed. LUL is also proposing to close temporarily some stations so that this work can be completed by the end of August.

Secondly, there is the introduction of heat detectors and sprinklers beneath escalators. LUL has fitted linear heat detectors and alarm systems to 235 escalators and is aiming to complete the remaining 41 by the end of this month. Smoke detectors have been fitted into 113 escalator machine rooms. Work has now begun on installing sprinklers, and LUL aims to complete this by the end of 1990.

Thirdly, there are to be better below ground radio communication systems available to the emergency services. A VHF radio system has been installed for British Transport police use at 42 Underground stations and it is being enhanced to enable communication with London Underground staff. London Underground, together with the British Transport police and the London fire and civil defence authority, are looking at ways of achieving compatibility with the equipment used by the London Fire Brigade.

Fourthly, there was to be enhanced emergency training for station staff. Station staff now receive fire and safety training every six months. Management and supervisory staff also receive regular refresher training in controlling station emergencies. Fifthly, there was to be liaison with the fire brigade, including joint exercises. These now take place twice yearly. Sixthly, there was to be closer monitoring of statistics and formal reporting up of incident investigations to ensure that trends were identified and action taken. Reports are now considered at director level.

Hon Members have expressed concern about the safety implications of the Underground ticketing system. This was addressed in the Fennell report, which recommended that there should be a review of the proposals. The House will know that the London Underground has recently discovered that in certain circumstances, if one phase of the three-phase power supply system fails, not all the gates will open automatically. London Underground is taking steps to eliminate that remote possibility and should

complete the work by the end of June. London Regional Transport has, at our suggestion, appointed independent consultants to carry out the review. It should be completed by the end of April. I shall inform the House of the review's findings and I shall ensure that prompt action will be taken if necessary.

Mr. Tony Banks (Newham, North-West): Is the Secretary of State aware just how deeply unpopular the new barriers are to the travelling public in London? It is not just a question of them not opening up in an emergency, as we were given to understand they would. It is that access itself is difficult even if all the barriers are completely open, because they restrict the movement of people throughout the station. Has the Secretary of State gone round and seen for himself what happens at Westminster, for example, at rush hour in the morning?

Mr. Channon: Both my hon. Friend the Minister for Public Transport and I have seen the Underground ticketing system in operation. I accept that it is unpopular with some of the travelling public at this stage, although one cannot estimate how many, and I accept that the unfamiliarity of the system makes it unpopular. However, similar systems have been introduced in many underground systems round the world; I have a full list of those countries if the House is interested. The claims that the barriers are inherently unsafe are not shared by the London fire brigade or the railways inspectorate.

Mr. Terry Fields (Liverpool, Broadgreen): That is not the case.

Mr. Channon: That is not my view alone, but the view of the London Fire brigade and the railways inspectorate, which are more likely to be expert than the hon. Gentleman or myself.

Whatever views the House may have about the opinions of the London fire brigade or the railways inspectorate, the important point is that consultants are considering the operation of the system. We shall have their report at the end of the month, the House will be able to study the findings and then we shall have to decide on an appropriate course of action.

Mr. Robin Squire (Hornchurch): Will my right hon. Friend confirm that one of the central reasons for introducing the barriers in the first place, other than increasing the number of exits, was to tackle fraud, which is estimated to total £25 million, all of which falls on the rail users?

Mr. Channon: My hon. Friend makes an important point. My hon. Friend the Minister will deal with the matter in more detail, if the House wants to go into the questions, when we have heard the comments of other hon. Members.

Mr. Harry Cohen (Leyton): The public are upset about the barriers not only because they are an inconvenience, but because they are viewed as serious safety risks. The Secretary of State has made the excuse that consultants are being brought in and that a report will be issued shortly. Why did the Secretary of State not stop the installation programme when he agreed to consultants being appointed to look at the safety aspects? Why are yet more barriers being installed while the safety aspects are being considered? If the Government were really interested in safety, they would have stopped that installation programme.

Mr. Channon: Mr. Fennell made no suggestion that that should be done. The hon. Gentleman's view, which has also been expressed by other hon. Members, that the Underground ticketing system is unsafe is not shared. Let us wait for the consultants' report. It is evident that the system is, in some ways, likely to enhance safety. The gates, which are made to spring open in emergencies, replace fencing and one or two-manned opening's. Evacuation will be easier in some circumstances. The introduction of gates and ticket machines is often accompained by the redesign of the ticket hall to provide an open area less prone to congestion, and in some stations the barriers will release ticket controllers to give advice and assistance and to look out for problems.

Mr. Terry Fields: Will the Secretary of State give way?

Mr. Channon: No, I shall not.

Mr. Fields: This is an important point.

Mr. Channon: I must press on. I have already given way three times.

The House will express its views, and hon. Members will hear what the consultants say at the end of April.

The Fennell report highlighted the need for London Regional Transport and London Underground to examine their management structures and introduce an effective and continuing audit of safety. I welcome the establishment of the new safety audit committee, together with the safety services directorate. I am sure that the House would agree that it is absolutely vital to get a new safety culture. To do that, we must get the new structures right. Further changes may well be required in the future as the new management, under the chairmanship of Mr. Newton, who was appointed only last month, get further to grips with its task.

The safety audit committee established by London Regional Transport will monitor the safety of operation of all the subsidiary companies. The committee reports direct to the LRT board. It is chaired by a non-executive board member. In addition, a safety audit unit has been established within LRT to administer the safety monitoring process.

London Underground has established a safety committee which meets monthly. That committee is also chaired by a non-executive member with a special interest in safety. That director has direct access to the chairman of London Regional Transport. These measures will ensure that any concerns about safety on the Underground can be made known at the very top of LRT. The committee has a wide range of functions, including safety and fire prevention, safety audit reports, as well as reviewing the underground's safety performance in relation to other similar undertakings or industries.

London Underground has also established a safety services unit, which includes a group of safety auditors and advisers, each with a particular speciality, and a safety programmes unit which provides a central focal point for the overall management and co-ordination of its reply to the recommendations of the Fennell report.

[Mr. Channon]

The lessons from Fennell go wider than just London Underground. Thirty of the recommendations were directed at the emergency services or Government Departments.

On 10 November, I made it clear in my statement that my right hon. Friend the Home Secretary would be making regulations under section 12 of the Fire Precaution Act 1971, specifying fire precautions arrangements for Underground stations. The House will know, or it will wish to know if it does not already, that the consultation process on those regulations is now at an advanced stage and that my right hon. Friend intends to lay them next month. The regulations will encompass a number of Mr. Fennell's recommendations, above all those for the installation of heat detectors and sprinklers in escalators and other areas of high fire risk, for the protection and maintenance of exits so that all of them, including ticket barriers, can be immediately opened, and for the training and provision of staff so that, in an emergency, they know what to do and are there to do it.

I also told the House on 10 November 1988 that the railway inspectorate, with support from the Health and Safety Executive will be conducting a special investigation of London Undergound's safety management systems. This debate gives me the chance to report progress. The study team has now completed its field work and written an early draft of its report. I understand from the Chief Inspecting Officer of Railways that further analysis is going well and that the aim is to produce the final text by the end of this month. The report will be published. I have no doubt that any study of that kind is bound to produce important lessons. As the House would expect, I shall want any such lessons acted upon promptly and vigorously.

I now refer to the railway inspectorate. The House will know from the response of my hon. Friend the Minister for Public Transport to a question by the hon. Member for Truro, (Mr. Taylor) on 13 March that, following a successful recruitment campaign, the inspectorate is now almost at full strength. Only two vacancies remain, and I expect them to be filled within the next couple of months. The chief inspecting officer has been carrying out a review of his staffing resources to see what further manpower needs are necessary in the light of the inspectorate's enhanced health and safety role recommended by Mr. Fennell. Meanwhile, as an interim measure, five additional inspectors are being recruited. The interviewing of candidates has just finished. We shall, of course, be sympathetic to any request for a further strengthening of the railway inspectorate.

I have heard Opposition Members allege that the Government's policies have led LRT to reduce its expenditure on safety. Those allegations are wrong and I reject them.

Mr. Robert G. Hughes (Harrow, West): That point is central to some of the comments that have been made. When I was a member of the GLC's London transport committee, the capital expenditure projections by the GLC at the time and its projections for further expenditure were substantially less than the amounts that have been spent by the Government. Will my right hon. Friend confirm that capital expenditure now is 60 per cent. higher than was envisaged by the GLC?

Mr. Channon: I think that my hon. Friend is right. It is a fact that in every year since 1984 London Regional Transport has been able to spend, more in real terms, on capital investment. As my hon. Friend has just said, in the year that has just finished, London Regional Transport had authority to spend around 60 per cent. more, in real terms, on capital investment than it spent in 1984-85—the last year of GLC funding.

Mr. John Prescott (Kingston upon Hull, East): Is it not right to say that the Government turned down an application from the GLC and reduced its capital expenditure allocation by one third? What the Secretary of State is making a comparison with is not what the GLC wanted to do, by way of capital expenditure, but what the Government allowed it to do.

Mr. Channon: The hon. Member is rather changing the tune—we have not heard that particular argument before. In the past, the argument was that we were spending an inadequate amount on capital investment. Whatever were the merits or demerits of GLC control of London Underground, 60 per cent. more, in real terms, is being spent on capital investment than was spent in the last year of GLC funding. LRT's spending level of £365 million —£1 million a day—was agreed before the King's Cross fire. That £365 million is the totality, not just the figure for London Underground.

The only point that I am making is that there is no question of the Government's starving LRT or the Underground of the funds it needed before the fire. Indeed, experience has shown that, in the past, they have not been able to spend some of the resources allocated to them by the Government.

Mr. Tony Banks: We ought to get the facts correct. It is quite clear that it was the Government who stopped the GLC putting capital investment into the Underground system. The GLC wanted to spend £669 million on transport in 1983-84, but the Government accepted expenditure of only £461 million—capital and revenue.

Mr. Channon: I am sorry that the hon. Gentleman is getting so excited about this.

Mr. Banks: We want the truth.

Mr. Channon: I am telling the truth. I am giving the facts of capital investment. What interpretation the hon. Gentleman puts upon what I am saying is a matter of dispute between the two sides of this House. My recollection is that the GLC had plenty of money to spend on subsidising fares, but never had any money for capital investment in the Underground. That is the reality of the situation. The money that was available was spent on reducing fares, but no money was spent on the long-term health of the Underground, and that is something for which the GLC will be condemned. *[Interruption.]* Well, it is true.

Mr. Fennell's report on this tragic fire explicitly states:

"In my judgment there is no evidence that the overall level of subsidy available to London Regional Transport was inadequate to finance necessary safety-related spending and maintain safety standards. I accept the evidence of the most senior management in London Regional Transport and London Underground that if funds were needed, funds were available. There does, however, remain the question of how the available resources were allocated and used by London Underground."

Mr. Terry Fields: When we talk about what Fennell had to say, we are getting to the nub of this matter. Fennell said also that the board put more emphasis on performance and profits than on human safety. The avoidable and unnecessary death of my comrade, Station Officer Townsley and others is down to the board and down to this Government—on a par with the spirit of the Herald of Free Enterprise.

Mr. Channon: I do not agree with all that the hon. Gentleman says, but I do understand the strength of his feelings about this matter, which he has expressed on many occasions. I am coming on to refer to Fennell's view about the climate that he found in London Underground at the time of the inquiry. His report makes it clear that, sadly, London Underground and LRT had allowed a climate to develop in which safety was not given the priority we should all have wished it to take. The point I am making is that, in his view, the resources that had been made available had been misallocated.

There is now an entirely new management at the top of London Underground, and the climate has changed completely. Fennell exposed major weaknesses, which are being attacked. LRT has made an estimate of the cost of implementation of Fennell's recommendations—some £266 million over the next three years. We have made full provision for that amount, but that is not the end of the matter. That is the point that I want to emphasise to the House again and again. Safety must remain the No. 1 and continuing priority of LRT and the Underground. I am sure that problems will continue to be identified in due course. No doubt we shall have shock-horror stories all over again. If we get them, we shall ensure that London Underground deals effectively and speedily with any new problems that may arise. I want to make it clear, as I have in the past, that finance will not be a barrier to implementing the Fennell recommendations or any additional safety measures that may be identified in due course.

In my view—I think the House will agree—safety includes protection against crime, which is becoming a worrying fact of life on London Underground. As the House knows, the Government published a report in 1986 on "Crime on the London Underground" and provided £15 million additional finance to LUL to implement it.

We also agreed an increase in the complement of the Underground division of the British transport police from 280 to 350 officers and we agreed last year on the recommendation from Her Majesty's Inspector of Constabulary to an increase in the division's complement by a further 50 officers.

The additional funding has financed the inauguration of an Underground police radio network recognised by the 1986 report as

"the single most effective aid to improving the efficiency of Underground policing"

—and by the Fennell report as an essential facility.

The additional funding has also supported the setting up of new area police stations to allow extension of the home beat policing system commended by the inspector for its effectiveness in the Stockwell area, where the number of robberies has fallen in each of the last three years to half the 1985 figure—contrary to the rising trend elsewhere. New area offices are being opened at Finsbury Park, Wembley Park and Hammersmith. These are important steps, and they are producing results, but the level of crime is far too high and the rising trend of violent crime throughout the system worrying. We shall continue to make combating crime a priority and I shall keep the matter under constant review.

Mr. Cohen *rose*——

Mr. Channon: No, I shall not give way to the hon. Gentleman, because I have already given way about 15 times and think that I should press on—*[Interruption.]* I even gave way to the hon. Member for Liverpool, Broadgreen (Mr. Fields) so perhaps the House will allow me to get on a little further.

Mr. Tony Banks: We love you for it.

Mr. Channon: Thank you so much—*[Laughter.]* I am not sure that the hon. Member for Kingston upon Hull, East (Mr. Prescott) does.

Mr. Prescott: Yes, I love you.

Mr. Terry Fields: This is a serious matter.

Mr. Channon: Yes, it is indeed serious.

The Government have recognised the central role and strategic importance of the Underground in keeping London moving and sustaining economic growth. Major improvements are needed in the London Underground system to improve safety, to relieve congestion, to modernise the system, and to provide additional capacity to cope with the future increase in demand.

We must not forget this is the oldest underground railway system in the world and the measures required are expensive; the reconstruction of one station alone, Angel, which many hon. Members know, cost £40 million. That is why we have given approval to yet another significant real increase in the capital expenditure for the Underground in 1989-90—about twice as high in real terms as in 1984-85—to allow LRT to embark on a range of major upgrading projects, including many measures to reduce congestion in stations and on trains.

However, more will need to be done. The central London rail study has identified the need for a major upgrading programme to relieve congestion on the Underground and on Network SouthEast and I shall be taking decisions later this year on the need for new lines through central London to cater for the future. The east London rail study will also shortly be reporting on the best options for improving rail access from central London to docklands and east Thames-side.

Of course I accept that the Underground is congested and that much needs to be done to improve the quality of service. Substantial sums will have to be invested, and I am determined that that will happen. Inevitably, when the investments are made, while the improvements are under way, passengers will suffer some inconvenience, but passengers will not suffer in vain.

It is my intention that London travellers should eventually enjoy a safe, efficient and high quality Underground system. That should be the wider context for this debate and it defines the challenging task now facing Mr. Newton and the new management in LRT. I have given him a clear remit, published on 22 March, establishing that safety is the highest priority, followed by the need to provide for the projected increase in traffic on the Underground and to docklands and the need to improve the quality of services and security afforded to the traveller.

[Mr. Channon]

All of us know that those who experienced or suffered in this tragedy will never forget what happened—nor must we forget it, on whichever side of the House we sit. The right measures must be taken. We must ensure that this kind of tragedy is never allowed to happen again, and we must do everything in our power to try to avert it. We owe that to those who lost their lives. I have described the positive steps that LRT and LUL have taken to ensure that safety receives the highest priority. I emphasise again that I am sure that more will need to be done. Everyone involved must continue to view safety as the number one objective.

Mr. Fennell's report ultimately contains a vital message for all large organisations, whether or not they are in the transport field, that safety must be one of the top priorities of management. I am determined to play my part in fulfilling that objective for the industries for which I am responsible. I hope that the House will recognise that Mr. Fennell's report has set in hand a necessary change of perspective within London Regional Transport and London Underground. I am convinced that it will be a lasting change, and I am determined that it shall be.

The Opposition have put down an amendment. I assume, therefore, that we shall be asked to divide at the end of the debate. That is a pity, but that is for the Opposition to decide. Whatever division there may be on the point on which the Opposition base the amendment, the clear and united message from the House should be that we demand that safety must be paramount in all questions of this kind. If we implement it effectively, the Fennell report will ensure a lasting change of attitude in London Regional Transport and London Underground to the benefit of future and present travellers on the system. That is something that the Government are determined to achieve. I ask the House to support me in that aim.

4.30 pm

Mr. John Prescott (Kingston upon Hull, East): I beg to move, to leave out from "House" to the end of the Question and to add instead thereof:

"congratulates Mr. Desmond Fennell QC and his assessors on the report into the investigation into the King's Cross Underground fire on 18th November 1987, particularly the scientific skill shown by the personnel of the Health and Safety Executive Laboratory at Buxton in discovering the new phenomenon of the trench effect; expresses its deepest sympathy to the relatives of the 31 people who died in this terrible tragedy; endorses Mr. Fennell's tribute to all members of the public, London Underground staff and emergency staff who helped others, especially Station Officer Townsley and Police Constable Hanson; looks forward to the urgent implementation, by both the Government and London Underground, of all the report's recommendations; but regrets the fact that Mr. Fennell ruled as ultra vires any consideration of the role that the funding of London Underground may have played in the circumstances leading up to this terrible disaster."

At last we have this debate, 16 months after the fire, five months after the publication of the report and four months after the debate in another place. The amendment makes clear our point of view on the matter. We congratulate Desmond Fennell and all those associated with producing the report. We express our appreciation for their analysis and conclusions. We record our deepest sympathy to the relatives of the 31 people who died and to those who are still suffering from the trauma. We state our admiration for the emergency services, the public and the London Underground staff who played a major part in the rescue. We pay tribute especially to the contribution of Police Constable Hanson and of Fire Officer Townsley, who died a hero's death.

We are impressed by the Health and Safety Executive laboratory at Buxton for its painstaking scientific research into the trench effect of a new fire dynamic, something that we have learnt much about, which means that many people will have to change their traditional thinking on fire. We congratulate the personnel of the Health and Safety Executive. I am sure that all hon. Members endorse the view that much credit is due to them.

Like the Secretary of State, we look forward to all the recommendations in the report being implemented as soon as possible; on that I think that there will be unanimous agreement in the House. However, one substantial reservation is identified in the amendment. We regret Mr. Fennell's decision to rule as ultra vires any consideration of the role of the funding of London Underground in the circumstances that led to the fire. We believe that that decision was wrong. Indeed, the Secretary of State made it clear in correspondence that we have had on the terms of reference for other tragedies on the railway system that the terms of reference are traditional and should have allowed anything to be considered. It was only the judgment of Mr. Fennell that the matter should be ultra vires. Therefore, he refused to accept evidence on that point. That was an extraordinary decision. The Secretary of State claimed some support for the view that it had no role in the circumstances leading to the fire. It was curious for Mr. Fennell, a barrister, to decide that he would not hear evidence on the part that funding played.

In chapter 2, paragraph 14, of his report, Mr. Fennell stated:

"This Investigation had only one goal: to ascertain the cause of the tragedy and to try and ensure that it will never happen again."

We all agree with that; indeed, that point was made by the Secretary of State.

We are in common agreement about the cause of the fire. The analysis is clear about the circumstances that led to the fire. There is a unanimous acceptance of the cause of the fire; that the fire was on an escalator at King's Cross, that the accumulation of grease and dust became the seedbed for the fire, that it was ignited by a lighted match from a smoker who continued to defy the ban on smoking, and that fire incidents were not uncommon. A number of previous inquiries over recent years have recorded similar incidents and recommendations, which were not implemented, and which were ignored by London Regional Transport and London Underground. The wilful neglect of the use of water fog systems, due to cost considerations, contributed to the horror of a new concept in fire dynamics —the trench effect. The trench effect caused a massive flame-thrower effect that led to the considerable death and destruction.

As in all tragedies—as anyone who is concerned especially with safety will know—a combination of smaller incidents came together to contribute to the tragedy. It was a combination of inadequacies, each of them small enough in themselves but combining to make the tragedy so much worse. For example, as Mr. Fennell points out, there was no one with overall responsibility for safety in London Regional Transport. A system for training staff on fire drill and evacuation was not evident. Anyone who has spent a

considerable period at sea—or who is familiar with the legislation of the House—will know of the continual fire training that must be carried out on ships, and the important part that that plays when the time comes to deal with an emergency, especially with a fire.

The staff of London Underground were unco-ordinated and haphazard in their reactions to the fire. There were poor communications and, indeed, the very operations room was unstaffed, and had been unstaffed since 1984, due to the cuts in staff implemented by the London Regional Transport Board. There was an ambiguous interpretation of fire legislation and certification that was to apply to all the Underground system.

There has been some controversy about the role of the GLC, but from Mr. Fennell's report it becomes increasingly clear that the issue of fire certification was a matter of dispute between the Secretary of State's Department and his inspectorate and, indeed, the fire brigade and the GLC. The GLC wanted to treat all the Underground system as being subject, in law, to fire regulations. The people who opposed it on that issue were the Government, the inspectorate and London Underground. I shall return to that point a little later, because it raises the issue of the inspectorate—for which the Secretary of State is responsible—which must have received the greatest indictment of its operations of any inspectorate in this country at any time.

There is ample evidence in the report about the roles of the various bodies concerned. The railway inspectorate was undermanned, insufficiently resourced, confused as to its responsibilities, had no proper liaison with the London fire brigade and was too informal with the management of London Underground. I am bound to say that those have been common criticisms of the inspectorate in the Department of Transport going back many, many years, even before the Secretary of State had taken over the responsibilities of that Department.

In Mr. Fennell's report there is ample evidence to support all the conclusions. The 157 recommendations will undoubtedly, if implemented, effect radical improvements to safety, which all of us in the House want to see.

As the Secretary of State has said, the report will not only affect London Underground. To the good and to the credit of Mr. Fennell's report, I am aware of many publicly and privately owned industries that have made a special examination of the report and are considering what they can learn from it in dealing with similar incidents. Other Departments, especially the Home Office, which is heavily involved in fire certification, other underground railways —for instance, Glasgow and Tyneside—and those concerned with the Channel tunnel will learn a lot from the Fennell report. Increasingly, concerns are being raised about the safety of the Channel tunnel, especially by the fire brigade and others. I would like to meet the Secretary of State to discuss the Channel tunnel, because of the decisions soon to be taken.

Special sections in the report challenge the whole ethos of management about safety. The report also changes the approach of management, employees and Government to safety. It raises an important issue that I am constantly raising—the public's right to know. The people who travel on our transport system have a right to know what is being done in the name of safety. They have a right to know about the stability of a ferry, about safety on the Underground and the age of an aircraft. People do not believe that everything has to be done in secret and the events of the last few years convinces them that the right decisions are not being taken.

I am glad to see that Mr. Fennell supports the principle that the public have a right to know. That is spelled out in his report because paragraph 21 of chapter 19 says:

> "The travelling public have a right to know about the safety arrangements made by transport operators and the safety of places in which they habitually gather."

That principle needs to be spelled out more and more in our debates about transport.

The question, "Who is responsible and what circumstances led to the fire?" is still being asked. It is clear that the role of management was thoroughly examined by Mr. Fennell. It is also clear that under legislation management's responsibility is spelled out. As has often been said in the House, it has the responsibility for managing the London Underground economically, efficiently and safely. Those are management's obligations. However, greater attention has been paid to economy and efficiency than to safety and that is shown by correspondence between earlier Secretaries of State and London Regional Transport.

I note that the Secretary of State now says in his terms of reference to Mr. Newton, whom we wish well in his job of improving safety, that safety is now the top priority. That is written out specifically and disposes of the argument that a statutory obligation is sufficient. The Secretary of State has made it clear that safety in the operation of the system is fundamental. That poses the question how we are to achieve that and how it will come about.

It is clear that management failed to observe the many warnings about fires, believing that it could live with them rather than take preventive action. In the appendices to the report it is said that of 49 fires on escalators, 35 were due to smoking materials. If anybody reads the case history at the back of the report he will see that it predicts almost exactly what happened in this case. It was a different form of fire, the trench effect that we now know about, but the cause of the fire is made clear in all the reports that made recommendations, all of which were constantly ignored. Apparently they were ignored not only by London Regional Transport but by the inspectorate. I shall come to that matter later. Management failed to observe the warnings, to employ sufficient staff or to ensure that they had proper training.

It is right that the people responsible should pay the penalty, although I am not sure whether they were sacked or resigned. I was often sacked from shipping companies but I never got a year's or six month's pay. If I had, I would not have understood that to be a sacking. Thousands of workers would love to get the sack if it meant getting half a year's pay. People carried out the obligations placed on them by the Secretary of State and that is why they have not been sacked. If they had failed to carry out that obligation they would have been sacked. That is one of the issues that we must address.

Until that fateful night, on the criteria established by the Government, Dr. Bright and Mr. Ridley were major successes in the eyes of the Government. They were ahead of schedule in the plan to cut costs and reduce taxpayers' subsidies. They had achieved the objectives of section 16 of the Act of 1984 when London Regional Transport was taken over from the GLC. One of the primary aims was the reaching of financial targets. The terms of reference given

[Mr. John Prescott]

to London Regional Transport on 20 July 1984 placed much emphasis on efficiency and cutting costs. That was made clear by the then Secretary of State, the right hon. Member for Cirencester and Tewksbury (Mr. Ridley).

The then Secretary of State told Mr. Bright—I should call him Dr. Bright, although he is now Sir Keith Bright; the man even got knighted. He must have been reasonably successful to have got knighted by the Government. He must have carried out his obligations, and these are the tasks he was given:

"You have told me that you can achieve a reduction in unit costs of 2·5 per cent. per year in real terms. Over the next few years I look to you, if possible, to do better than that, and I shall want to review the target with you."

He was set to cut the passenger revenue support level by half in two years. In the event, the revenue support level of £190 million inherited from the GLC was reduced to £90 million in one year. He was ahead of time, and no doubt that influenced the knighthood.

In those circumstances, while extra income came from passenger revenue—we can debate that later—the greater proportion had to be found in other ways. Taking the contribution of revenue and capital together, the amount of saving to the taxpayer and the ratepayer, or the Government, was about £200 million.

There is much talk about the way in which the Government have cut revenue support. This country has the only transport system in Europe that runs without revenue support. On average, the rate of support is 50 to 80 per cent. in most other European systems and, by common accord, they have safer and better quality services than we have. Clearly, it remains an issue of judgment between the two sides of the House as to how much revenue support should be given. We must bear in mind that we are attempting to run our transport system on far less than any other transport system in Europe.

As we require an extra £100 million to £200 million, what constraints are being put on the system? What cuts must be made and what is the quality of those cuts? Are they affecting the level of safety, administration and training? We are aware of the conclusion that Mr. Fennell reached about the overall level of subsidy available to LRT —the Secretary of State has quoted it often enough. In his view, there was no shortage of subsidy. To be fair to the right hon. Gentleman, I should quote Mr. Fennell's words, which appear in chapter 19, paragraph 3:

"In my judgement there is no evidence that the overall level of subsidy available to London Regional Transport was inadequate to finance necessary safety-related spending and maintain safety standards."

I note that those words appear in chapter 19 rather than in the analysis. Chapter 19 is headed, "Matters for further consideration". That issue should certainly receive further consideration because of the refusal to receive any evidence on the point. I have never witnessed such a startling conclusion, considering that it was not backed by evidence.

Indeed, on reading the report one comes across many examples of staff cuts and cuts in resources, all of which affected the level of safety. To be fair, it says that it is an issue for further consideration. The Secretary of State has ducked behind that conclusion, as if there had been a powerful examination of the case. There has not been such an examination, and his conclusion does not even appear in the section of the report that would have dealt with such an examination. It is simply there "for further consideration".

Mr. James Arbuthnot (Wanstead and Woodford): If what the hon. Gentleman says is right, why did counsel for the National Union of Railwaymen accept that the fire was not as a result of inadequate investment in the Underground?

Mr. Prescott: I am not prepared to accept the hon. Gentleman's assertion that that was accepted by the union. I am talking about the Fennell report and its conclusions. The evidence is examined and conclusions are reached. I am challenging the Secretary of State's conclusion when he ducked behind the argument that it was not due to a shortage of resources. He also said that he considered it to be ultra vires. As I have said in the past, we do not consider that to be an acceptable proposition. We disagree with it. It is a subject for debate.

Mr. Nigel Spearing (Newham, South): I was pleased to hear my hon. Friend's response to the intervention by the hon. Member for Wanstead and Woodford (Mr. Arbuthnot). It is not just a matter of capital but of the pressure on necessitous revenue in relation to safety matters.

Although Mr. Fennell heard from one of the parties that there was a case relating to the prevailing economic climate and Government directives, that was dismissed at the stage when it was put. Later, a witness said that, as a result of the economic climate, various schemes were not put forward. Does my hon. Friend feel that at that stage Mr. Fennell might have reconsidered his decision about taking more evidence after hearing that witness?

Mr. Prescott: I am glad that my hon. Friend raised that point as that was the next point that I was coming to. It flows from chapter 19. If the Secretary of State had read further through chapter 19, but ignored what the managers were saying, he should at least have challenged the judgment of Mr. Fennell. As my hon. Friend the Member for Newham, South (Mr. Spearing) said, the reduction in revenue support is very important.

If the Secretary of State had read on in chapter 19, he would have read about Mr. Sykes who had to make a judgment about escalator investment. Mr. Sykes was asked why the wooden cladding was not replaced, because many of the inquiry reports had pointed out that wooden cladding on an escalator made a fire much more difficult to handle once the rubbish underneath the escalator had been ignited. Report after report recommended that the cladding should be replaced, and escalators cleared. The obvious question then is why the cladding was not replaced. Mr. Sykes believed that

"There was a feeling among London Underground managers that the financial climate would rule out proposals to increase spending in certain areas."

That was the judgment of Mr. Sykes. [HON. MEMBERS: "Mr. Styles."] I am sorry. I meant to say Mr. Styles.

Mr. Styles, the lift and escalator manager, said that the relocation of the water fog controls or the replacement of wooden escalators "stood a thin chance" of being implemented. Mr. Styles had to make requests to the board to replace the wooden panels. He had the backing of the inquiry reports. All the evidence was that the

number of fires was increasing, but he felt that he could not make his application even though it was clear what was necessary.

Mr. Toby Jessel (Twickenham): Did not Mr. Styles have to have an excuse for doing nothing?

Mr. Prescott: I cannot understand the hon. Gentleman's question. I am not sure whether it was offensive. Mr. Styles is still employed by London Regional Transport. He had read the reports and he felt that in the interests of passenger safety something should be done about the wooden cladding. Who can deny that something should have been done about that cladding after the accident? The fact that the hon. Member for Twickenham (Mr. Jessel) made such a silly comment shows that he does not understand the problems of safety on the Underground and he throws doubt on a man who was desperately trying to remove materials on our escalators which contributed to the fire and which played such a tragic role in the terrible loss of life at King's Cross. The hon. Member for Twickenham should re-think what he has said.

The wooden cladding was not replaced because of the financial climate and the budget for escalator cleaning was reduced. The Secretary of State would be aware of that if he has examined the figures. One third of the cleaning staff were sacked despite all the reports about dirty material in the escalators which caused fires. It was known that cigarettes and matches caused fires, so smoking was banned. However, the logic presumably was that as there were to be no matches, the dirty material did not matter. That assumption was fatally wrong.

The risers stopped discarded matches from reaching the dirt on the escalators. However, as people were denied the right to smoke on trains, they simply began smoking on the escalators. That is why there were more and more fires on the escalators. The inquiries highlighted the water fogging equipment. Why was that equipment not used to dampen the dirty material? When management was asked why the water fogging equipment was not used, the answer was that it caused corrosion and there were cost considerations.

I accept that those material factors should be taken into account. However, the management reduced staff by more than 3,000 because that is the traditional way to cut costs. It is important that we consider what kind of workers were lost. The man in the control room lost his job, and he was not there to handle the fire. From 1984, cleaners, inspectors and trainers lost their jobs. Those people are supposed to play a part in improving the safety ethos about which the Secretary of State is now convinced.

There was a crucial absence of adequately trained staff on the six tube line platforms at King's Cross. In 1984 the Oxford Circus fire report reached the same conclusions as those in the Fennell report. However, did that stop LRT reducing the number of staff at stations? No, it did not because there was a desire to reduce costs as there was not sufficient money.

The station inspector post was withdrawn from the operations room and that was left unmanned. Mr. Fennell criticised that. Those cuts are a consequence of cutting revenue support from £190 million in 1984-85 to £45 million in 1987-88.

I presume that LRT will face a demand that there must be a 7 per cent. return on investment. I believe that that requirement applies even to the escalators. I wonder whether the Secretary of State, with his £260 million, can tell us whether all the escalators have been subjected to the Treasury rule of 7 per cent. rate of return—which I believe will be 8 per cent. after last week. I do not know how we can have a 7 per cent. return on capital investment on an escalator. That is a stupidity which affects the whole level of safety on London Underground. To add to that stupidity, the Treasury increased the 7 per cent. demand to 8 per cent. last week.

On 18 November, "Tubeline", an LRT publication, reported Mr. Jeff Allen, the LRT finance director, as saying

> "The Directors consider it important that the company show its owners and paymasters it can keep proper control of spending."

He then went on to boast of cuts in recruitment of a further £1·3 million, £800,000 on maintenance—which meant that more cleaners' jobs would be lost—cuts of £40,000 in training and even £400,000 on electricity, which presumably means that the trains went slower.

When was that report about cost savings published? It was published on 18 November, the day of the King's Cross fire. Mr. Fennell now claims that all the areas where LRT was saving money were contributory factors, which meant that people's efforts to deal with the tragedy were inadequate. That is the connection between costs and safety. That is what affects the ethos of safety. Money is what matters.

Have things really changed? That is the important question now. The Government have £260 million. Basically the Government are simply giving back the money which they have robbed from LRT in the form of public revenue support. I assume that the Secretary of State now believes that that money should have been spent before. That money will not be spent on new areas. Why was the money not spent on these areas before? LRT believed it could get away with it. The Government are providing money now to pay for something which could have been done a long time ago. However, the Treasury wanted to make it clear that it wanted to save money and get rid of revenue support. The Treasury is moving towards removing capital support because it wants to privatise LRT. As the Secretary of State so proudly proclaimed at his press conference, privatisation is the way forward for the railway system.

The subsidising policy is questionable. I join the Secretary of State in wishing Mr. Newton well. The managers are trying to change the whole ethos of safety and to introduce a safety audit. I wish Mr. Newton well in that. The progress report contains positive responses to the recommendations and I welcome that.

However, subsequent discussions that I have had with LRT have raised some concerns. It rejects recommendation 36 which recommended the replacement of wooden risers. I notice that the Secretary of State did not mention that point when he referred to escalators. The wooden risers contributed to the trench effect. The proposal was rejected because it would cost a lot more money to replace the wooden risers.

Why are cigarette kiosks still allowed to sell cigarettes and matches on platforms? The answer is that LRT will not find the money to buy them out. They continue to sell matches and cigarettes on the Underground despite this terrible tragedy.

[Mr. Prescott]

What about the regular fire practices? Mr. Fennell made it clear that there should be a fire practice on the Underground every six months. I do not believe that there has been one so far. A request from the fire authority to conduct such a practice was met with the response from LRT that it did not want to hold one during busy times because it would inconvenience passengers.

That attitude is not acceptable, particularly after the report. Of course passengers should be involved in such exercises. They give them a sense of security. Instead, London Regional Transport is feeding the old-fashioned view that passengers should not be told in case they panic. That view must be pushed out of London Regional Transport. That is particularly important given the incidence of fires. Last year there were over 4,000—11 a day. There were 135—more than two a week—on escalators. Many of those fires required the fire brigade, and that is since the incident.

The railway inspectorate's role is crucial. The Secretary of State is directly responsible for that department. Mr. Fennell makes it clear that checking and monitoring is vital to enforce the law. In chapter 18 he says that the railway inspectorate was mistaken in its interpretation of the law and its responsibilities. There were insufficient resources, staff shortages and a lack of vigour. There was a cut from three quarters of one person in 1984 to one quarter of one person in 1987, and no proper liaison with the fire brigade. The railway inspectorate had to admit that, after 1984, it stopped receiving the fire brigade's reports. It did not even want to hear about fires on the Underground. Its relationship with the London Underground "lacked creative tension." That is another way of saying that it was too damn cosy.

The report refers to the registered application of fire certifications for the Underground. The inspectorate led the fight against certification for the Underground—now accepted—and lined up with London Underground against the GLC and the fire brigade's recommendation. That is made clear in chapter 18 which says:

"I believe their general relationship with London Underground lacked the creative tension necessary to instil discipline and produce prompt results within the organisation. A more vigorous use of enforcement powers would probably have alerted London Underground senior management to the unsatisfactory state of affairs in stations sooner, and produced general improvements in housekeeping standards. The degree of liaison and co-operation with the London Fire Brigade was insufficient and the decision to stop receiving copies of fire inspection reports was wrong."

That is a long quotation but it is crucial to put it on the record. It is the most massive indictment that I have ever heard of a safety body which the Government claim is independent under their own legislation but is under the influence and shares the priorities of the Department of Transport, obsessed with saving money.

Who is the railway inspectorate responsible to? I have looked at the agency agreement——

Mr. Robert G. Hughes (Harrow, West): I well recall the incident in relation to the GLC to which the hon. Gentleman is referring. I do not disagree with the thrust of what he is saying in terms of the necessity for fire safety certificates but, before we build the GLC's attitude on such matters into something that it was not, will he confirm that the discussion and the correspondence with the GLC related only to the Heathrow Underground station?

Mr. Prescott: That is a fair point to which my hon. Friend the Member for Lewisham, Deptford (Ms. Ruddock) will refer later. The inspectorate was referring to the Heathrow station, which it called a hole in the ground, not a building. The report goes into all the arguments because Mr. Fennell asked for a report on that matter, but at the end of the day it was not applied to the rest of the Underground system which we are now considering. My hon. Friend will deal with that later.

I have looked at the agency agreement between the inspectorate and the Health and Safety Executive. It is clear that the Health and Safety Executive paid the Secretary of State for his inspectors. If I were the Health and Safety Executive I would be asking for my money back because the Department did not carry out its responsibilities as identified by Mr. Fennell. The Secretary of State is directly responsible for the railway inspectorate. He often shuffles responsibilities on to other people in all sorts of areas, but he is directly responsible for the railway inspectorate's actions.

Mr. Fennell says that this terrible tragedy was foreseeable and that important warnings were ignored. Safety suffered because of the management's obsession with reducing taxpayers' costs to the detriment of all other considerations. The railway inspectorate lacked the staff, resources, motivation and independence to enforce the law and bring London Underground to account. The management has paid the price by resignation.

The Government are the only body who have not been brought to account for their role. Yet the Secretary of State is responsible to Parliament for the railway inspectorate and for London Regional Transport and London Underground. The Secretary of State set the financial climate in which the wooden escalators were not replaced and in which the cleaning of escalators was cut, along with the staff who should have raised the alarm.

The Government created London Regional Transport, set its priorities and its funding and drove senior management in its policy to eliminate subsidy. Indeed, they supported everything that London Regional Transport did until 7.30 pm on 18 November 1987.

The Government's responsibility in this matter is of paramount importance. They failed to fulfil their obligation to ensure that safety had the highest priority in London Regional Transport. That is why the Opposition's amendment will be supported tonight.

5.5 pm

Mr. David Evennett (Erith and Crayford): I am appalled by the speech that has just been made by the hon. Member for Kingston upon Hull, East (Mr. Prescott). We are trying to debate a report on a major tragedy. There are real issues to be raised and we need a constructive debate. The Opposition have shown today that, apart from the old traditional Socialist view that with more money and more staff all will be all right, they are bankrupt of ideas for going forward.

We should return to basics and say, first, that we are fortunate in our capital city to have such a comprehensive and extensive underground railway network. That service is too often taken for granted. Little attention is paid to it until there is a failure, a disruption, or, as in this case, a major tragedy.

My constituency in south-east London does not have the direct benefit of an underground network, but many of

my constituents use the Underground in and around the city for many and varied purposes, either for getting to work, to visit their relatives or for entertainment. They have told me of the deterioration over the past 10 to 15 years in some aspects of the service. That did not happen in the past five years; it has been going on for 10 or 15 years. As my right hon. Friend the Secretary of State said, over the years there has been an inadequate investment in London Underground to meet the needs of a developing service.

The Fennell report has highlighted a number of areas that we need to debate in looking to the future in order to expand and improve the service on behalf of all. It has highlighted many of the complaints which the travelling public has raised as well as identifying a number of serious problems about the way in which the Underground network has been operated.

Conservative Members accept that real causes for concern have been expressed by the travelling public. We understand that and we want to do something to improve the service in our capital city. We should begin by congratulating the Government on their speedy and commendable response to the King's Cross fire and to the report's recommendations. I also congratulate my right hon. Friend on his comprehensive speech this afternoon. It is imperative that we learn from this tragedy the lessons contained in the report to ensure that as far as possible such a tragedy does not happen again.

We must be constructive about the tragedy and the report. I deplore the sort of manufactured hysteria that we hear from Opposition Members such as the hon. Member for Newham, North-West (Mr. Banks). Opposition Members have attempted to make party-political capital out of the tragedy—[HON. MEMBERS: "Come on."] That is, as I say, deplorable and will be deplored by everyone in the country. This is a serious issue that must be debated seriously, and not by means of sedentary interventions——

Mr. Tony Banks: The hon. Gentleman does his case less than justice by suggesting that we are making party-political capital out of the tragedy. He should realise that some of us have been arguing for more investment in safety measures on London Regional Transport for many years, and began to take an interest in the subject before this tragedy occurred.

Mr. Evennett: I shall come to that point later when we examine what the hon. Gentleman said about investment in transport when he served on the GLC.

This afternoon the Government have shown that they are determined to adopt a positive and effective approach. The changes that have been implemented or are being implemented are welcome, as is the vast sum of £266 million which will be spent on safety over the next three years. That is to be commended.

However, the travelling public are still worried about several matters—the frequent breakdown of trains, overcrowding and vandalism and the crime which has become commonplace on the Underground. These issues have not been raised by people who have jumped on the bandwagon: they are the realistic and long-term concerns that passengers have been expressing long before the King's Cross fire and the subsequent Fennell report——

Ms. Diane Abbott (Hackney and Stoke Newington): Does the hon. Gentleman agree that the recent report on crime on the London Underground pointed out that the self-same matters that Opposition Members have raised to do with safety—staffing and investment—are the key to crime, too? By dismissing what some of my hon. Friends have been saying about investment for years he shows that he neither cares about nor understands the issues.

Mr. Evennett: I am sorry that the hon. Lady did not wait for me to develop my argument. The increase in crime has taken place during the past decade, not only in the past couple of years, as she seemed to suggest. Unfortunately for the Underground, for part of the past 10 years it was run badly by the GLC.

Individual complaints may be of minor importance, but the combined views of the many naturally cause concern. Too frequently in the recent past the safety and the reliability of the service have been called into question. The major issues are crime, safety and investment. Robbery, assault and the other offences against the person which have regrettably increased in the past 10 or 15 years on the Underground have made many of my constituents and the travelling public afraid to travel on the tube late at night —*[Interruption.]* I wish the hon. Member for Hackney, North and Stoke Newington (Ms. Abbott) would listen —she might learn something.

Crime denies people freedom of movement and access to many of the capital's attractions, because they cannot travel in safety on the trains. I welcome my right hon. Friend's announcement that he has increased the police establishment on the Underground to 350 officers. I also welcome the fact that the British Transport police is recruiting and training officers to fill the new posts. When they are in position their presence will make a noticeable difference. To date, this action has not produced significant results but I hope that there will be an improvement in time. We need to catch the people who are committing these offences while they are committing them and I am sure that more police in the service will be able to do just that——

Mr. Steve Norris (Epping Forest): While welcoming the extra commitment to police resources for the Underground, does my hon. Friend agree that the levels of violent crime on the Underground are statistically no different from those for crime above ground? Although both are too high, and although extra investment to try to combat violent crime is welcome, it is important not to get the problem out of perspective.

Mr. Evennett: That is a good point. We must not overstate the case. I was merely trying to discuss the fears of constituents in the Greater London area. We must carefully note such people's concerns and fears, of which one is crime, which we all agree is far too high throughout the capital.

Mr. Cohen: Of course we welcome the increased number of police, but 350 police to man the whole Underground system 24 hours a day are not many. The money spent on putting in automatic exit barriers could have been spent on police—on 550 of them for 10 years. Which would the hon. Gentleman prefer—police or barriers?

Mr. Evennett: We must not confuse the two. We welcome the increased number of police for the service; the barriers must be debated separately. I am grateful for the hon. Gentleman's welcome for the increased police

[Mr. Evennett]

establishment—such a welcome was noticeable by its absence from the speech by the hon. Member for Kingston upon Hull, East.

As for the barriers, we must recognise the real problem of fare evasion on the Underground. It has been said that £25 million has been lost through evasion—a fantastic sum. Something must be done to minimise such losses. Constituents have told me of barriers which have been out of operation or have swallowed tickets. They can present difficulties for the elderly or for young mothers with children and shopping or pushchairs. These are genuine concerns which we share. But we must not overstate the case.

I was grateful to my hon. Friend the Minister of State for answering my question about the average number of gates that fail. He said that on average gates fail once for every 79,000 passengers, which represents about 16 gate failures a day. That puts the number in perspective. Although we share the concerns of those who are frightened about the safety implications of these barriers, we must bear in mind the money that is lost by people evading fares, and the true number of times when the gates fail. That is not to say that there is no problem; we await with interest the report of the independent inquiry which my right hon. Friend mentioned.

I was surprised that more public relations work for these gates was not done in advance. Fear of change and of what might happen is always the key—particularly after the tragedy of 16 months ago which highlighted some of the potential problems on the Underground. LRT has failed to communicate the importance of the installation of the gates. I am delighted, however, that my right hon. Friend has insisted on an independent inquiry into the operation of the barriers, and we await its report with interest. The fears may well be misplaced, and we should not judge the report until we see it.

In the past 10 to 15 years there have been many cycles of investment in the Underground network. As the hon. Member for Newham, South (Mr. Spearing) mentioned earlier in a slightly different context, a few years ago the GLC operated a policy of using money to subsidise fares rather than for capital investment. That was a ludicrous policy—keeping fares down rather than considering the operation of the service. It was imperative to restore the right of management to manage without undue political interference, and that has been done since the removal of the GLC. *[Interruption.]* I am afraid that Opposition Members do not like to hear the truth. They prefer their own illusions. The fact remains that a management must have the right to manage, and London Underground has a duty to use that right to ensure that the system is managed in the best interests of the travelling public.

Mr. Spearing: Is the hon. Gentleman saying that when the GLC decides to subsidise fares that is political, but that when his right hon. Friend the Secretary of State decides to cut the subsidy, thus increasing fares, that is not Government interference and is non-political? He is saying, surely, that such action is political when taken by Labour, but non-political when taken by his hon. Friends.

Mr. Evennett: The hon. Gentleman's view is not sustainable. The entire aim of the GLC's management of the Underground system was to keep fares down rather than to invest in a better transport service for the people of London and all who wanted to use it.

No one could have foreseen or prevented a tragedy like that at King's Cross. It should never have happened——

Mr. Menzies Campbell (Fife, North-East) *rose*——

Mr. Evennett: I have given way quite enough.

The Fennell report is comprehensive and highlights aspects that could and should have been improved; nevertheless, the scale of the tragedy could not have been predicted. Action has been taken, and I am sure that all Londoners and users of the Underground service will be pleased with that action. Too often we are quick to criticise. In this instance, praise is due not only to my right hon. Friend the Secretary of State and to Fennell, but to new men at London Underground for their actions to date.

A debate such as this gives us the opportunity to highlight a few developments, particularly the vast investment in the London Underground of the past few years and the projected investment for the next three or four years. That investment will be used to upgrade, renew and generally improve aspects of the service. Together with implementation of the Fennell report recommendations, it should ensure a far better Underground system for the future, which will provide a more efficient and safer service in the interests of the entire travelling public.

Efficiency and safety must go together. Mere numbers of staff working at a station will not guarantee an efficient service, or a safer service. The Opposition suggest that more money and more staff will produce a better service, but surely its efficiency and safety depend on how money is spent and how staff are utilised to the best effect.

There is still much to be done to improve the service to the extent that Conservative Members would like, but at least we have started to tackle the problems and improve the service. The Government must be congratulated, and the motion should be supported. The general public will be delighted at the prospect of better investment in an important London service, rather than money being wasted on subsidising fares.

5.24 pm

Mr. Frank Dobson (Holborn and St. Pancras): I am grateful to you for calling me, Madam Deputy Speaker, as I have retreated to the Back Benches. Let me begin by declaring an interest—and I do so proudly. I am sponsored by the National Union of Railwaymen, which has many members in my constituency.

My constituency is dominated by railways and railway stations, including three mainline termini and no fewer than 14 Underground stations. Underground stations in my constituency include the deepest—Holborn—and the busiest—King's Cross and St. Pancras. There have been major fires in recent years at both Goodge street and Holborn stations, but nothing to compare with the horrors of what happened at King's Cross on the night of 18 November 1987.

Although the Fennell report is written in clear, unemotional, official English, many of its pages are upsetting. To read the transcript of some of the evidence given to the inquiry is be filled with horror at what happened, pity for those who suffered and—in my case at any rate—awe and admiration for the many people,

including passengers, railway staff, transport police and members of the emergency services, whose personal courage and common sense did so much to limit the extent of the catastrophe.

The inquiry, although absolutely necessary, was in itself an additional cruelty for many who had to give evidence. It forced them to relive the horrors of that night, and also subjected their every action throughout the crisis, minute by minute, to the harshest, most clinical public scrutiny —something to which few of us would like to be subjected even for an afternoon at the House of Commons, where nothing more than our reputation is at stake.

I found it a humbling experience to read how my ordinary fellow citizens reacted when faced with a fearful combination of fire, fumes, smoke, darkness, noise and panic—all of it below ground. In that heat and horror many ordinary people performed extraordinary deeds, saying afterwards that they were only doing their jobs. No words of praise or admiration from me, at least, can do justice to—for example—the fire fighter Station Officer Colin Townsley.

When Colin Townsley arrives on the scene he goes down to the booking hall, reconnoitres down the escalators and instructs other members of his watch to go back to the surface to order more pumps and bring breathing apparatus for themselves and for him. He himself stays down there, in that dangerous, horrible place, to urge passengers to get out. The flashover fire occurs. The booking hall is engulfed in flames—flames so hot that they melt aluminium. Colin Townsley gropes around in the dark, and picks up a woman who is badly injured and burned. He makes for an exit where light and air would represent life to both of them, but the fumes poison him before he reaches safety. The report says, in its prosaic way:

"his was a heroic act".

St. John's Gospel says:

"Greater love hath no man than this, that a man lay down his life for his friends."

Colin Townsley laid down his life for a stranger.

Constable Hanson of the Transport police, although himself very badly burned and injured, risked his life to save more people—more strangers. We should remember that to the members of the emergency services the risk of injury and death is an ever-present part of their workaday world. When a catastrophe occurs, the rest of us run away, but the people in the emergency services run towards it.

The Fennell report rightly makes it clear that the fire and the shortcomings in the response to it were not the fault of the people working at King's Cross that night, nor were they the fault of those working in the emergency services that night. But the fire should not have occurred and, having occurred, it should have been dealt with more promptly and more effectively. The responsibility for any failure lies with the managements of London Regional Transport and the emergency services, with those who laid down the priorities to be followed by those managements and with those in Government whose job was and remains to secure the safe operation of all our railways. At the pinnacle of that pyramid of responsibility is the Secretary of State for Transport.

Almost all of us who enter national politics seek important offices of state which carry personal power and personal trappings of office. They also carry personal responsibility, particularly where Ministers have played a direct part in events. The law made London Regional Transport responsible for the efficiency, economy and safety of its operations. It also required it to act in accordance with principles laid down by the Secretary of State for Transport.

In July 1984, the then Transport Secretary, the right hon. Member for Cirencester, and Tewkesbury (Mr. Ridley), now the Secretary of State for the Environment, wrote to the chairman of London Regional Transport setting out the Government's objectives. His 838-word letter talked only of economy and efficiency, calling for reductions in costs and subsidies. It set a target for reducing unit costs and, as my hon. Friend the Member for Kingston upon Hull, East (Mr. Prescott) made clear in his excellent, trenchant opening speech, the letter urged London Regional Transport to beat the target that had been laid down. That letter made no mention of the word safety. The Fennell report rightly says that people "must place safety first". The then Secretary of State placed it nowhere.

In case anyone thinks that only his letters were inadequate, I have been checking his answers to my hon. Friend the Member for Crewe and Nantwich (Mrs. Dunwoody) in June and July 1985. After the fire at Oxford Circus, she asked the Secretary of State to have discussions with London Regional Transport about the problems of contractors' work and materials and to do something about station plans which fire brigades could use when they reached fires at Underground stations. In his usual way, the right hon. Gentleman dismissed her questions saying that they were nothing to do with him and that the hon. Lady should write to the chairman of London Regional Transport. We all know what his priorities were.

Ministers may seek to evade responsibility, but the cavalier attitude of LRT management towards safety sprang at least in part from Ministers' clear, cost-cutting priorities.

Before the King's Cross fire a report produced by the Department of Transport revealed that the Department's railway inspectorate had an establishment of 24 but that five posts were vacant. All the vacancies were for inspectors responsible for health and safety on railway premises. There was just one inspector in post to cover every station on London Underground and the Southern Region of British Rail—a total of 796 stations were to be inspected by that benighted individual. There was no possibility that he could make those inspections. The inspectorate was run within the Department of Transport and, not surprisingly, the report says:

"As a matter of policy, the Inspectorate have deliberately refrained from making any preventative checks on railway maintenance . . ."

I bet they had. One inspector for 796 stations would be lucky to visit them all in a year just waving to the staff as he passed through. The report also reveals that the chief inspector and another inspector were spending between 20 and 30 per cent. of their time advising on the Channel tunnel and that agency advice for Hong Kong and Singapore was involving the inspectorate in more work than had been expected. The preposterous irony is that those same inspectors insisted upon higher standards of safety in Hong Kong and Singapore than they required on London Underground.

How did Ministers respond? According to the report, there had been criticism from Ministers that the

[Mr. Frank Dobson]

inspectorate was seeking too much information from London Underground. How could that one man reponsible for 796 stations ask for too much information?

Department of Transport officials had a cosy relationship with London Regional Transport. They ignored reports on earlier fires and, as my hon. Friend pointed out, they sided with London Underground when the fire brigade wanted to improve safety. They issued not a single statutory safety notice to London Underground in the 18 months before the King's Cross fire and only one in the year before that. They admit that they knew that the staff was being cut and less was being spent on cleaning and maintenance. They knew that staff were not trained to evacuate stations and that the fire brigade was not usually called when there was a fire and that fire fighters found it hard to master the layout of stations. Yet they did nothing. They did not even object when London Regional Transport stopped sending them the fire brigade annual reports. I suspect that they did not even notice when they stopped receiving them.

Some may ask what are the Minister's responsibilities for those officials. It is the basis of our constitution that Ministers are responsible to the House for what their officials do. The Prime Minister is fond of quoting Winston Churchill. This is what he said on ministerial responsibility after the fall of Singapore:

> "I ought to have known. My advisers ought to have known and I ought to have been told and I myself ought to have asked."

The Secretary of State had no need to ask. Most of the facts that I have cited were available in the report produced by his own Department that was published in April 1987, six months before the fire at King's Cross.

Now we are told that everything has changed and that everyone is conscious of safety, but are they? Last year, in the summer after the fire, I managed to obtain the fire brigade's secret reports on six Underground stations in my constituency. They reported 50 fire hazards at those six stations, one of which was King's Cross. By God, if London Regional Transport had not learned that there was a danger of fire at King's Cross, they would not learn it anywhere, but eight fire hazards were listed at King's Cross, including rubbish at the top of the escalators at King's Cross where people were working on the adjacent escalators to put right the damage caused by the fire. There were other fire hazards at escalators at Tottenham Court Road, Warren Street and Euston. That report also stated that the box containing the station plan for use by the fire brigade at Mornington Crescent was impossible to reach. That was the case even though we knew that it had been a problem at King's Cross and Oxford Circus. Anyone with a grain of sense knows that it is a problem to approach a rabbit warren and risk one's life trying to save people without a plan or a guide. Admittedly, Mornington Crescent is a small station but it is still a dangerous place for a fire fighter trying to do his duty.

I want to know why London Regional Transport and the Secretary of State are defying Desmond Fennell's recommendations. He said that they should publish all the fire brigade reports on the Underground stations. Why have they kept secret the 1988 reports? The people who travel on London Underground are entitled to know the state of safety both last year and this year. We are told that we will see the reports for this year, but I want to know why we cannot see the reports for last year.

We are told that the new management will pay more attention to safety and that, as the Secretary of State describes it, a new culture prevails. If there is a new culture of safety and things have changed, how can we explain the amazing advertisement for London Underground engineers which appeared in *The Daily Telegraph* at the end of March? It said that the new management was looking for "natural risk-takers" who were "commercially aware." The people who travel on London Underground have had enough of such people and want to be rid of them. Yet London Underground with its new culture of safety is trying to recruit more.

Despite the claims of a new culture, London Regional Transport is still pushing on with the installation of the dangerous new ticket barriers, which Ministers have been forced to admit do not always fail-safe. The barriers are not the product of a management doing what Fennell suggested—putting safety first. They are the product of a cash register mentality; the same mentality that introduced into London doors on buses in which nine or 10 people have been killed over the past few years because they do not work properly.

The Minister for Public Transport (Mr. Michael Portillo): They are much safer than they were.

Mr. Dobson: All I can say is that if I had been caught in those doors, I would not find them much safer. I do not want to die in that way. I understand that adjustments to the doors will make them safer. Why were they not safe in the first place? They were not safe because cheapness not safety was placed first.

I will not repeat all the excellent points made by my hon. Friend the Member for Kingston upon Hull, East but I shall talk about the emergency services. They were rightly praised on the night of the fire. However, as the Fennell report reveals, their actions were poorly co-ordinated and, with the exception of the Metropolitan police, their contingency plans were inadequate. Poor communication and inadequacies in equipment also hampered the rescue efforts.

Although the emergency services have now considered the Fennell report, I find it difficult to conclude that they are better placed now to deal with a major incident than they were in November 1987. For example, let us look at London's ambulance service. This evening it is likely that 10 per cent. of its emergency vehicles could not roll if they were called out because there are no crews for them. Tonight or this weekend, the proportion that could not roll may be as high as 25 per cent. Almost a quarter of the emergency vehicles have radios which are incompatible with the new computer-controlled radio communications system. Therefore, they cannot be properly contacted. At the recent Clapham rail crash, there was a 13 minute delay before the ambulance service called in the medical team. There are constant and justified complaints about delays in the 999 service and slow responses to calls.

The Fennell report rightly recommends that the emergency services should mount joint exercises to test their plans, procedures and personnel. The ambulance service had to withdraw at the last minute from one such

exercise organised at Hither Green because it was overstretched. Therefore, up to now, the ambulance service has not taken part in a joint exercise.

Ministers rightly paid tribute to the work of the fire brigade that night but that is all they have done. The number of front-line fire fighters in London has been reduced by 389 since the King's Cross fire. As a result, the management has arranged that certain special vehicles—not the pumps—turn out with smaller crews than in the past. What are those special vehicles? Ironically, some of them are the vehicles that carry special smoke extraction and lighting units which are important in many fires but critical for underground fires. In future, they will be sent out with fewer fire fighters to look after them. That is absurd. A special unit has been created within London's fire brigade to deal with underground fires. However, it has been financed by making cuts elsewhere.

The Home Office is now conducting what is called a fire cover review. It is confidently expected that that will lead to the closure of fire stations and less cover.

What of the hospitals visited by the Prime Minister and the accompanying television crews on the day after the King's Cross fire? University College hospital is a famous and fine hospital in my constituency. It was rightly praised by the Prime Minister. However, since the King's Cross fire, and now that the television cameras are no longer around, Bloomsbury health authority has been forced to cut its budget by over £10 million. Therefore, it is less ready to play the part that it did on that terrible night. Now there is even a threat from the regional health authority to close University College hospital and the Middlesex hospital without replacing them.

The consultant in charge of the accident and emergency unit at UCH, Howard Baderman, told me today that he is "still very apprehensive about the firmness of the region's commitment to maintain hospital services in Bloomsbury."

Where would the injured go if another fire occurred at King's Cross, or if there was a fire at St. Pancras or Euston?

Mr. Tam Dalyell (Linlithgow): My hon. Friend is making a devastating speech. He will understand that as a Scot I am often asked by my constituents in good faith whether the London Underground is safe. What answer would my hon. Friend give?

Mr. Dobson: I do not know. I do not like using the Underground, that is all I can say.

Many of the people injured at King's Cross need plastic surgery. Anybody who has seen some of them will realise just how much plastic surgery they need. I hope that they do not need it in my health authority area because the local waiting list for plastic surgery alone now totals 1,143 and over 70 per cent. of them have to wait for more than a year. I am not talking about people waiting for face lifts. In the case of people injured at King's Cross, they may be waiting to have a new face constructed. Who would like to wait for more than a year for something like that?

So the greatly praised emergency services have been cut and their future is clouded with doubts and uncertainties. Lessons may have been learnt from King's Cross but the Government do not appear to be involved in that learning process.

I visited King's Cross Underground station after the fire. I saw what it was like and tried to envisage what people had put up with. Since then, I have met passengers, people from the fire service, ambulance staff and railway staff who were there. I have met people who were burnt and severely injured and the relatives of people who died. I have been to one funeral service and one memorial service. I do not wish to go to a memorial service for someone who has died in my constituency ever again.

I have talked and listened to all those people and they are not satisfied with what has happened. They are not satisfied that those at the top have paid the proper price for their responsibilities. They do not believe that Secretaries of State, Ministers and senior civil servants have paid the price that some of the emergency services staff paid that night. They are not wholly satisfied with the Fennell inquiry because of that. They regarded the inquest as nothing more than a low and insulting farce and they are not satisfied that the system is now safe. It will be a long time before I do anything other than share their dissatisfaction.

5.51 pm

Mr. Toby Jessel (Twickenham): Close to the outset of this debate my right hon. Friend the Secretary of State referred to the heroism and sheer professionalism of the emergency services and the hon. Member for Holborn and St. Pancras (Mr. Dobson) later referred to the courage of the firemen, the police and others. Their bravery was of the highest order in the highest British tradition and I hope that they can be honoured, posthumously where appropriate, with even higher honours than they have received hitherto.

The hon. Member for Holborn and St. Pancras went on to refer to a 1984 letter from my right hon. Friend the Secretary of State for the Environment, who was then Secretary of State for Transport, to London Regional Transport, setting out its objectives. The letter referred to the need for London Regional Transport to operate within the London Regional Transport Act 1984, which refers to safety. It cannot, therefore, be said that my right hon. Friend the then Secretary of State for Transport ignored the question of safety.

Mr. Dobson: The hon. Gentleman should know that the primary obligations placed on London Regional Transport were to operate its system with economy, efficiency and safety. If the person who appoints London Regional Transport and who was its paymaster writes a letter which, admittedly, refers to the Act that set up London Regional Transport, but talks only of economy and efficiency, what is London Regional Transport to conclude about the priority that the Secretary of State wishes it to give to safety? If it was satisfactory to cover safety by referring to the Act, the Secretary of State needed only to write a one-line letter saying that London Regional Transport should carry out its obligations under the Act.

Mr. Jessel: The hon. Gentleman cannot have heard what I said. The letter in question referred to the requirement to operate within the London Regional Transport Act, which contains the very words referring to safety that the hon. Gentleman quoted. There was, therefore, a reference to safety. One cannot expect every major letter or communication to refer to every important consideration at equal length and with equal weight. One important letter may refer to economic objectives while referring to safety, whereas another might refer mainly to safety with a passing reference to economic considerations.

Mr. Spearing: Will the hon. Gentleman give way?

Mr. Jessel: We must live in the real world and that reference was made.

The hon. Member for Holborn and St. Pancras said that there were 14 Underground stations in his constituency. There are none in mine; Twickenham is not served directly by the London Underground. However, my constituency has 16 British Rail stations, all of which lead towards central London and many of my constituents connect with the Underground in the constituency of my hon. Friend the Member for Richmond and Barnes (Mr. Hanley), who is here now, at Vauxhall or at Waterloo. Many of them, especially central London commuters, use the Underground every day.

When the terrible and deeply tragic accident occurred in November 1987, I was surprised that out of my heavy postbag from an articulate constituency—which produces some 3,000 letters directly from constituents and which generates a total of some 10,000 letters a year—I received only six letters on the subject of the King's Cross disaster. I asked myself why. I believe that people in the face of that terrible disaster had the mature and sensible view, by and large, that they wanted to await the outcome of the inquiry that was announced by my right hon. Friend the day after the accident and to see what action was proposed to prevent any recurrence of such an event. Their attitude was not to cast blame on anyone in particular, although that would be natural for some people to want to do.

It is a most unhappy story. There were 31 deaths and it is no comfort to anyone to say that it is a unique event in the history of London Underground. The hon. Member for Linlithgow (Mr. Dalyel), who has now left the Chamber, asked the hon. Member for Holborn and St. Pancras to say whether London Underground was safe. It is inevitable that the media will tend to focus particular attention on accidents in which many people die at once, whether on a train, a ferry—which was mentioned by the hon. Member for Kingston upon Hull, East (Mr. Prescott) —or an aircraft. If a vehicle in which many people are travelling is in a crash, there is a risk of many people being killed at once and that will hit the headlines, whether in broadcasting or the printed media, and impinge on the public consciousness to a greater extent than accidents in which people are killed in ones and twos.

The statistics show that it is far safer to travel on London Underground or British Rail than to travel by road, as my hon. Friend the Member for Richmond and Barnes mentioned in a question on the statement a few weeks ago. The number of deaths in road accidents is far greater, although it has fallen fom 7,319 in 1967, to 6,614 in 1977 and to 5,125 in 1987. I understand that the figures for 1988 are likely to be announced tomorrow. Accidents in which people in ones or twos lose their lives, whether by fire, a smaller railway or Underground or a road accident, are just as tragic for the families of those involved as are accidents in which people are killed together in larger numbers, as I happen to know personally. If one considers the Government's safety record, and if one considers all transport accidents, it will be seen that there has been a decline in the level of mortality compared to five or 10 years ago.

I shall now consider some points arising out of the Fennell report and I hope that the Minister will have time to refer to them in his winding-up speech. The first is the effect of inevitable traffic jams in London streets upon the swift movement of fire engines and ambulances. We know that the King's Cross disaster took place after 7 o'clock in the evening, but the tail end of the London rush hour has now become extended. Rush hour conditions continue to apply after 7 o'clock, and they did so in that case. It took fire engines seven minutes to go 1,420 yards at an average speed of 7 mph.

I ask the Minister to re-examine the Highway Code and whatever other measures the Government might be able to take to encourage a more flexible response on the part of drivers of other vehicles on the road. For example, will he consider whether in an emergency of this sort, when they hear fire brigade bells ringing, drivers can be allowed carefully to mount the pavement to let fire engines go by, or whether any other action can be taken to get emergency vehicles through more quickly?

That is part of a wider problem. The state of the British national economy has brought about an increase of about 8 per cent. a year in motor vehicle usage in conurbations, including London. There is no easy solution, and it is a waste of time for anyone to pretend to be able to produce a swift and easy solution. But it has a consequence upon the efficient operation of the emergency services. In the light of what Fennell wrote on that matter, I should like the Government to give it particular attention.

Secondly, my right hon. Friend the Secretary of State said that Mr. Fennell concluded that the fire was caused by a lighted match. Of course, a naked flame remains a major potential cause of fire—it always has. I am as aware of that as any hon. Member, as the royal coroner found that either a lighted match or candle caused the fire at Hampton Court palace two years ago. Naked flames are a prime cause of fires.

In the papers before us, there is reference to a ban on smoking on the London Underground. It seems overwhelmingly probable that the naked flame was from a match that was presumably being used to light a cigarette, pipe or a cigar. There is no other particular reason why someone should light a match on an escalator leading to an Underground station. As it is almost certain that a smoker was involved, I ask my right hon. and hon. Friends to draw London Transport's attention to the need to step up the enforcement of its no-smoking policy.

Thirdly, as the number of passengers on London Transport has increased by 70 per cent. in the past six years, which is a staggering increase, one must ask about safety implications—especially if the Government are considering measures in the short or medium term to deal with traffic congestion on the roads, which might result in an even greater number of people using the Underground —and about the capacity of Underground stations to cope with a further rise in the number of passengers.

When I have used the Underground and seen crowds of people on platforms, I have wondered whether a surge among the passengers standing there or any pressure resulting from adverse conditions might trigger off some kind of panic, resulting in some people falling off the platform, which they would not do in normal conditions. The authorities should be asked to look at the capacity of platform areas, whether in the context of fire or other risks.

Mr. Jeremy Hanley (Richmond and Barnes): Perhaps London Regional Transport should consider banning the distribution of promotional or protest literature in leaflet form in tube stations. It tends to lead to many leaflets being discarded. When there is a mass leaflet drop, there can be many leaflets all the way down escalators and on platforms.

Mr. Jessel: That is an excellent idea. I hope that the Secretary of State will consider that suggestion. It is worthy of the most sympathetic and careful consideration.

My hon. Friend's suggestion leads me to consider buskers. One sometimes sees buskers singing or playing musical instruments at access points to the London Underground. I hope that they will not be banned. It is not necessary to do so, provided that they keep away from platforms and, preferably, from escalators. As long as they perform their songs or play musical instruments in the horizontal passages between escalators and platforms or are at ground level, I do not think that they are a danger or that they are objectionable. They lighten the tedium of people's journeys. I do not see any risk in that connection.

I do not see why I should not make my next point. I should take a very dim view if any hon. Member tried to stop me from saying it. Paragraph 3 of chapter 19 of Mr. Fennell's report states:

"In my judgement there is no evidence that the overall level of subsidy available to London Regional Transport was inadequate to finance necessary safety-related spending and maintain safety standards. I accept the evidence of the most senior management in London Regional Transport and London Underground that if funds were needed, funds were available."

That is what the most senior management said, not what Mr. Styles, a junior person, said. Mr. Fennell went on:

"There does, however, remain the question of how the available resources were allocated and used by London Underground."

That is the important point. I am glad that the Government have decided to make £266 million available over the next three years. It is double the previous amount. Users of the London Underground, whether my constituents, people from any of the other 90-odd Greater London constituencies, or people from elsewhere will be grateful for the measures that are being taken. Things need to be done, and they are being done. I shall continue to press the Government to carry on with them faster.

Mr. Dobson: It would be better if the hon. Gentleman were consistent. If he is happy to rely on the Fennell conclusion that a shortage of money did not stop anything to do with safety being done, why is it suddenly necessary to spend £266 million to put right things that were not being done? He can either accept Fennell or praise the Government for putting in the extra money. It is a bit difficult to do both.

Mr. Jessel: Not at all. There is nothing sudden about it. The increase has been steady over several years. In the light of the recommendations of the Fennell report, still more is being spent. That is the right thing to do. I am glad that it is being done, and I support it.

6.8 pm

Mr. John Cartwright (Woolwich): I endorse what the Secretary of State said about the impact on the lives of the individuals concerned of what occurred in that awful disaster in November 1987. Those hon. Members whose constituents' lives were shattered by what took place on that night know that it will take many years for them to come to terms with what occurred or to get over the traumatic event. It is right that we should recognise that point at the outset.

I shall concentrate my remarks on the ability of London Regional Transport and London Underground to respond to emergencies. However good the operating performance of London Underground, there are inherent risks in a system as congested as the London Underground undoubtedly is. Where large numbers of people are packed tightly into a confined space, any emergency inevitably puts lives at risk.

When the Secretary of State announced the inquiry, I thought it vital that it should examine the emergency procedures on the Underground, and the frequency with which they were reviewed and tested on a practical as well as a theoretical basis. I also felt that it was absolutely essential that the adequacy of training given to staff on the London Underground in handling emergencies be examined. I am very glad that the report goes into these issues in great depth and in considerable detail, and I welcome the clear, frank and readable way in which it presents its findings.

However, I am bound to say that the report presents a frightening picture of the almost total inadequacy of London Underground's state of preparedness to handle any emergency. Emergency procedures were almost non-existent, and where they did exist, in some cases they were positively harmful. For example, under the two-stage system of handling fires, the fire brigade was not to be called in immediately. Staff were expected to deal with minor fire incidents themselves. They were to call in the fire brigade only if a fire got out of hand—by which time, of course, precious time had been lost and lives were inevitably put in danger.

The report relates the fact that the London fire brigade objected vehemently to this two-stage system. Indeed, on 23 August 1985—the day after the Baker street fire—the brigade actually wrote to the operations director of railways, objecting very strongly to it. The brigade expressed grave concern about it and about the fact that its professional advice was being ignored. The brigade made it quite clear that it should be called immediately any fire occurred on the Underground system. I quote the letter exactly:

"I cannot urge too strongly that the two-stage procedure be withdrawn and instead clear instructions be given that on any suspicion of fire, the Fire Brigade be called without delay. This could save lives."

Despite that clearest of warnings, London Underground stuck to its two-stage system and made it very clear to staff that they should not call the fire brigade in the first instance. I welcome very much the fact that that policy has been changed, but I am bound to say that if it had been changed a little earlier, lives could well have been saved.

I want to say a word or two about staff training. Chapter 10 of the report, which deals with the response of the London Underground staff who were on duty in King's Cross that night, makes it absolutely clear that in no way could the staff be blamed. As Mr. Fennell points out, the staff were not adequately trained, there was no plan for evacuation of the station, there was no supervision, and the communications equipment either was poor or was not used.

Perhaps the most chilling comment in the entire report is this one in paragraph 4 of chapter 10:

"it is apparent that the outbreak of fire was not regarded as something unusual; indeed it was regarded by senior management as inevitable with a system of this age."

Yet, despite the inevitability of fire on the system, there was no policy to call the fire brigade at the onset of one. There were no evacuation procedures, and there was no

[Mr. John Cartwright]

proper training of staff. It seems to me that that reveals extraordinary complacency on the part of the management concerned.

When one reads chapter 10 one is struck by the fact that Mr. Fennell uses the same phrases over and over again about the performance of the staff involved: they were doing the best they could; they were unprepared, by training and experience, for what occurred; they were simply doing the best they could in a totally unexpected situation, a situation of which they had no experience. Paragraph 34 sums it up:

"Those on duty did the best they could using their common sense in the absence of training and supervision."

One pays tribute to their common sense, but surely it is appalling that they did not have the training and the supervision to enable them to do a rather better job.

The net result, says Mr. Fennell, was that

"not a drop of water was applied to the fire nor any fire extinguishers used by the London Underground staff."

That is the most incredible indictment of a management that had the safety of millions of passengers in its hands, and it inevitably raises an issue that has been underlying this debate so far—the relative priority given to safety on the London Underground system.

I do not think any hon. Member on the Opposition side of the House would argue that the management of London Regional Transport or of London Underground Limited deliberately and cold bloodedly sacrificed safety standards in the search for profits. That is not the argument. Surely the argument is that safety was not given the level of priority that it ought to have been given. The management seems to have relied on a faith that concern for safety was part of the railway operating ethos. Clearly, one ought to have been able to look to London Regional Transport, as the supervisory body, to take responsibility for monitoring levels of safety on the Underground.

That inevitably brings us to the famous letter of 20 July 1984 from the then Secretary of State to the chairman of London Regional Transport. It was not just any old letter. It did not suddenly come into the Secretary of State's head to write to the chairman. The letter was written on the foundation of the organisation, a new body just established under the 1984 legislation. Here was the Secretary of State writing to the brand new chairman of London Regional Transport, setting out four tasks, none of which embraced safety.

The Secretary of State may argue—perfectly justifiably—that the legislation placed a duty on London Regional Transport to have due regard to efficiency, economy and safety of operation. That is absolutely right, but all the four prime tasks set out by the then Secretary of State related to efficiency and economy; not one of them related to safety.

In that sort of climate, that sort of environment, London Regional Transport and London Underground Limited, and indeed the Department of Transport, were clearly all more concerned about improving value for money and about reducing the burden on the ratepayers and the taxpayers—about economic efficiency—than about safety. If one wants the underlying proof of that, it is to be seen in the very different set of objectives that the current Secretary of State has given to the new chairman of London Regional Transport—placing first, and giving the highest priority to, the issue of safety. To that extent, I welcome very much the change that has occurred.

Chapter 15 of the report quotes a very wide range of evidence, including that of ROSPA, suggesting that the level of staff training in safety issues on London Underground was totally unacceptable. The chapter goes into great detail about the inefficiency and the inadequacy of training. It says the staff really could not be expected to deal with a situation of this sort, because their levels of training were totally unacceptable. It is quite true that London Underground and London Regional Transport reacted quite swiftly to these indictments about staff training, but it is also clear from chapter 15 that Mr. Fennell was not very impressed with the first steps they had taken to improve the quality of staff training.

I accept that these were the initial, short-term reactions, and that totally different systems are planned in the longer term, and I welcome very much the fact that London Regional Transport has accepted the recommendations about the need for much more professional levels of staff training. I welcome particularly what the Secretary of State has said about joint exercises taking place at least twice a year. But surely it is important to monitor those joint exercises and the level of training to make sure that the standards that we are entitled to expect are reached.

This raises the issue of the level of monitoring safety activities generally on the London Underground. I am very glad that the concept of a safety audit system has been accepted, but we must be assured that those involved in the safety audit operation have the sort of clout within the management of London Regional Transport that they need if safety is to be given top priority. If there is to be any clash between profitability and safety, we need to be assured that safety will be given top priority.

I endorse what other hon. Members have said about information on safety improvements and safety activities being made available to the public regularly. It is quite true that passengers have a right to know about the safety systems that are in operation for their protection. Most important of all is the recommendation that the Secretary of State receive from London Regional Transport regular reports about the implementation of all recommendations in this report. I hope that the reports go further than that and do not deal only with the implementation of the recommendations. There should be regular progress and performance reports on London Regional Transport's general record of safety on the Underground and throughout its systems on London's public transport generally.

Welcome though the steps undoubtedly are that have already been taken by London Regional Transport and London Underground Limited, it is essential that this burst of activity is not allowed to run down. There must be the continuing process that the Secretary of State mentioned. We all recall that, after the Oxford Circus fire in 1985, a major report was produced by the London Passenger Transport Research Group and was taken seriously by London Underground. Several steps were taken on that report, but many of its recommendations had not been implemented by the time of the King's Cross fire. We must learn from that lesson.

In the light of the tragedy that took place on 18 November 1987, I believe that the travelling public will be

looking to the Secretary of State to ensure that never again will complacency about safety put lives at risk on the London Underground.

6.20 pm

Mr. Steve Norris (Epping Forest): In November 1987 I had no idea of the impact that the King's Cross tragedy would have on my own life. I was not then a Member of the House, but shortly after the accident Des Wilson, whom I had met as a co-chairman of the admirable Campaign for Freedom of Information, telephoned me. Knowing that I was not engaged on business in the House, he asked me if I would run the Christmas King's Cross disaster appeal while the disaster was fresh in people's minds.

I spent the three weeks before Christmas 1987 in a Portakabin at King's Cross station. The support that we received from members of the public, every one of whom volunteered their services entirely free, was tremendously heart-warming. Hon. Members may know that on the station near the Portakabin people put a most wonderful tribute of flowers and notes and messages of one sort or another. I watched that spot for the entire three weeks up to Christmas eve 1987; it was extraordinary that, three weeks later, the flowers were being changed and fresh flowers brought.

We had no legal right to operate a collection other than on the days when the Metropolitan police gave us permission to do so. They exceptionally gave us, at very short notice, permission to mount a three-day collection for the King's Cross disaster fund. However, we literally had to start a collecting box because of the number of people who pushed open the door of the Portakabin and said, "There but for the grace of God go I." They made substantial donations, obviously at some cost to themselves. People helped who were unemployed and some people took holiday leave specifically to be able to work in the campaign. The effort that they put in was absolutely marvellous and made a great impact on me.

The only other point that I shall make in that regard is that I remember talking to one of the reporters who came to follow our progress. That reporter had been with a camera crew on the night of the fire at King's Cross. Following the moving remarks of the hon. Member for Holborn and St. Pancras (Mr. Dobson), I should add that the reporter told me that he had been in a lot of tough places with tough teams of people who had had to follow and to photograph disasters of one sort or another, but that he had never seen a group of people so moved as they were by the King's Cross disaster. The sheer horror aroused by it and the feeling, "There but for the grace of God go I", had a most powerful effect on a great many people.

By one of those strange ironies, since the by-election at Epping Forest in December, I now represent many constituents who use London Underground daily, and my interest in Mr. Fennell's excellent report and in the action taken by the Government as a result of it has therefore been heightened.

What do we make of London Underground Limited in the period leading up to the fire? What I make of it is that it was, and to some degree still is, an absolutely classic example of a public sector operation where, sadly, management accountability had been all too clearly lost, where there was a compartmentalisation of functions as people went about their daily business—I do not wish to imply any individual imputation but make the point simply by way of illustration—and where one might have said that the business would have run terribly well if it were not for the customers.

Then we come to the events of that night. The most important question to ask ourselves is whether one can reconcile the statement that Mr. Fennell made in chapter 19, which I shall not repeat as my hon. Friend the Member for Twickenham (Mr. Jessel) read it to the House, which effectively said that finance was not the issue, with the £266 million that the Government have laudably pledged to put right the apparent under-funding. I believe that it is perfectly proper for the hon. Member for Holborn and St. Pancras to say, "How do you reconcile that? On the one hand you say that money was not the problem, whereas on the other hand £266 million is needed to bail us out."

I do not believe that there is any inconsistency. If I may be forgiven for quoting briefly from the report, the answer lies in a chapter to which no hon. Member has yet referred, chapter 4, in which Mr. Fennell describes what he calls

"The Ethos of London Underground",

and states:

"An understanding of the way in which the actions of London Underground and its predecessors have been conditioned by the management style and nature of the organisation, and the way in which they are likely to be so in future, goes to the heart of this Investigation and the lessons to be learned."

Management style and the management of LRT are crucial to the King's Cross disaster.

Listen to these damning words—damning in the sense that they could ever have been written about the staff of LRT at the time—that Mr. Fennell uses about the engineering directorate in paragraph 3 of chapter 4:

"There was a clear demarcation between each of the four disciplines within the Engineering Directorate, and Mr. Lawrence, the Engineering Director in post at the time of the Investigation, described his main task over nine years as that of breaking down the boundaries between the different engineering disciplines. Moreover there was little cross-fertilisation between Engineering and Operating Directorates and even at the highest level one director was unlikely to trespass on the territory of another. Thus, the Engineering Director did not concern himself with whether the operating staff were properly trained in fire safety and evacuation procedures because he considered those matters to be the province of the Operations Directorate. However such matters clearly had a bearing on the safety of passengers in stations for which he shared corporate responsibility, and the security and maintenance of the assets for which he was directly responsible."

In describing the operations directorate, Mr. Fennell states:

"Mr. Clarke, the Operations Director in post at the time of the Investigation, for his part did not concern himself with the state of the escalator machinery and machine rooms, or decisions concerning the replacement of wooden components on escalators or re-siting of water fog controls. These were seen as being in the province of the Engineering Directorate."

In paragraph 12, Mr. Fennell makes what I believe to be one of the most telling comments in the whole of the report:

"It was, therefore, a matter of some concern to me that the directors of London Underground should still subscribe to the received wisdom that fires were an occupational hazard on the Underground."

The hon. Member for Woolwich (Mr. Cartwright) has referred to that telling indictment.

I shall not quote any further from the report, because it is there for all hon. Members to read, but I make no apology for having done so because those quotations

[Mr. Steve Norris]

illustrate one of the most crucial truths about LUL in advance of the fire—that the necessity to spend £266 million now can be reconciled with the fact that money was not the issue, because nobody had the management accountability to consider safety and to take it on board so as to ensure that out of the many hundreds of millions of pounds of resources that circulate annually within LRT a suitable amount was devoted to safety.

My hon. Friend the Member for Erith and Crayford (Mr. Evennett) made a statement that produced some consternation among Opposition Members, when he said that nobody could have foreseen the fire. He later explained that what he had meant was that nobody could have foreseen the extent and the sheer horror of the fire. Of course, he was right, but hon. Members might have been right to pick him up on the point that the fire could have been foreseen. The report makes that clear.

Therefore, it is crucial to note that the management style of LUL was defective in that there was not a proper process of accountability which brought the seriousness of the issue sufficiently to the attention of senior management. Indeed, senior management itself was conditioned to working in boxes. There is a reference to Dr. Ridley's evidence in which he said that he took the operations director and the engineering director pretty much at their word on the issues because they were extremely experienced. In other words, he had enough problems of his own, and if he could not let the engineers get on with things, what else could he do?

It is not an easy job running an organisation like LUL; it never was and it never will be. Since 1982, when Dr. Bright undertook the first strategic management review of LUL, there has been a tremendous improvement in productivity and revenue. Productivity in terms of passenger usage is up by 60 per cent. to 70 per cent. Even with fares being held at the same level since 1983, overall revenue has gone up 15 per cent. in real terms. There is a tremendous management task, but it is clear that it may be necessary to accelerate the level of capital investment that is required to put right not only the safety problems but the fact that in my constituency the Central line still runs on rolling stock introduced in 1962, on signalling equipment manufactured in 1940 and on the original power supply equipment put into the line in the 1930s.

Before Opposition Members start to make a great issue of that—I am glad to see that they are not; I appreciate that that might have something to do with my speed of delivery—let me point out that successive Governments have in a sense under-estimated the importance of management in such a great transport operation. The issue of replacement of rolling stock and equipment, of renewal and of an accent on constructive reinvestment has been there for half a century. It is a tragedy that it has taken until the 1980s for us to take up seriously the challenge of regenerating London Underground Limited. I pay tribute to the management of London Underground Limited, past and present, for the tremendous efforts it has made to put right the lack of investment in our mass transit system in this great capital city.

I shall put down a marker which may not please my right hon. Friend the Secretary of State. In a debate on how to operate a mass transit system in a capital city, it is necessary for hon. Members on both sides to consider common sense before dogma. Bearing in mind the fact that Underground travel has such a profound effect on congestion above ground—to which my hon. Friend the Member for Twickenham referred when he talked about the difficulty of getting emergency service vehicles through—and on pollution of the environment, the desirability of operating an attractive mass transit system is considerable.

That desirability should, if necessary, be enhanced by operating a service financed not just by the users but by central Government, so that there is a positive incentive for people to move to that system. For example, people in my constituency could take the Central line from Loughton and reach the House in about 45 minutes. At the moment they might not use the Underground for that journey because of the frequency with which it becomes a journey of one and a half hours. The most frequent comment I heard from the great number of hon. Friends who came to canvass for me during the election was, "I wish you had not told me to come on the tube. It has taken me all day to get here. I hate to think how long it will take me to get back." Thank goodness their efforts had such a welcome result.

I put down that marker. It is pivotal to the decision to inject £266 million into LUL. We ought seriously to consider at another time the overall impact of a mass transit system on a capital city and the way that it should be financed and used.

On publicity and safety, the hon. Members for Kingston upon Hull, East (Mr. Prescott) and for Holborn and St. Pancras raised an extremely important point—the public's right to know that dangers exist and that those dangers are being dealt with. I am delighted that the hon. Member for Gateshead, East (Ms. Quin) has time to be with us. I know that she was detained elsewhere and could not be here for the earlier part of the debate. She has brought to the House a Bill of which I am proud to be a co-sponsor, the Public Safety Information Bill. Over 350 hon. Members from both sides of the House support that Bill and over 150 local authorities of all political complexions have also pledged support for it.

I draw the attention of hon. Members to page 156 of the Fennell report. In paragraph 21 on public safety information Mr. Fennell made the following statement:

> "I view with dismay the suggestion that information gained by a statutory authority which has a bearing on the safety of the public using a system for mass transportation should not be made publicly available. The travelling public have a right to know about the safety arrangements made by transport operators and the safety of places in which they habitually gather."

Later, he said:

> "I attach considerable importance to this and would hope to see the principle followed more widely in areas where the safety of the travelling public may be at stake."

Mr. Tony Banks: The Bill to which the hon. Gentleman referred is an excellent Bill, and he is right to draw the attention of the House to the enormous support that it has. Why does he think that the Government are blocking that Bill?

Mr. Norris: I prefer, for reasons that I am sure the hon. Gentleman will understand, to leave that question hanging in the air for other hon. Members to contemplate. I have made my views clear, as the hon. Gentleman understands. I believe that it is a necessary measure. I recognise that there may be technical difficulties in its drafting. My hon. Friend the Under-Secretary has made it clear that he

supports the principle of the Bill but believes that there are drafting problems. The principle is sufficiently important for those difficulties to be considered in Committee. That point is known publicly, and I am pleased to restate it now.

I want to underline a point made by Mr. Fennell in paragraph 24 on page 157:

"My preference would be to have London Regional Transport publish an annual report, perhaps addressed to the London Regional Passengers' Committee, in which progress, achievements and proposals of the safety programme are set out."

That is vital. Among the most important recommendations of Mr. Fennell in chapter 13 on the management of safety is no. 46, in which he says:

"Copies of the reports shall be sent to the Chief Safety Inspector and Railway Inspectorate and arrangements shall be made by London Underground to publish the reports in consultation with the London Fire Brigade and the London Regional Passengers' Committee."

We cannot afford to take lightly the public's right to know about safety dangers. The country took a great step forward when the Environment and Safety Information Act 1988 introduced by the hon. Member for Islington, South and Finsbury (Mr. Smith) reached the statute book. That was a private Member's Bill, which regrettably had to be forced through tooth and nail. I am sorry that I was not in the House at that time to give it the support that it deserved.

The important issue is that Mr. Fennell is in no doubt that the public have a right to know. He says so quite unequivocally. I see that not as an invitation to know what disaster may befall one, but—referring back to the management accountability of London Underground Limited—how one would make that accountability work would be to ensure that public interest and indignation was raised by the clear indication of unsatisfactory safety practices, which would force the management of the day to take them on board and to do something about them.

It is sometimes said ex post facto that steps could have been taken that could have prevented the tragedy. I believe that, if LUL, and other parts of our public transport service, had actually been faced with public pressure to do something about safety, because of the publication of reports on safety, there is a substantial chance that the sensible work on safety that the Fennell report tells us was carried out on the Underground would have received much more attention. That is a crucial absence and we should consider that as one of the cardinal lessons of the report.

It is directly relevant to the Fennell report on the King's Cross disaster that there are similar tragic parallels to be drawn in at least two cases—that of the Bradford City fire and that of the Zeebrugge ferry disaster—because those disasters, too, did not arise entirely without foreknowledge or without any evidence that they might occur. There was evidence that they might occur, but management, because of secrecy and privacy, was able to get away with doing nothing about it.

I urge my right hon. Friend the Secretary of State for Transport and other members of the Government to remember that issues of secrecy are not party political issues, but are about the citizen's right to know in a democracy. The healthiest part of an open society is that it improves the accountability of those who work in the public sector. It means that there is a discipline on management to care about such issues as safety, which otherwise it would be all too easy to push to the bottom of the agenda.

If the House is so minded, it should not only pass the excellent private Member's Bill standing in the name of the hon. Member for Gateshead, East, but should move to a comprehensive freedom of information Bill, which would have among its provisions the opportunity for us to ensure that the kind of absence of public information on safety that we saw at King's Cross does not recur, and that future tragedies of this sort are prevented.

6.42 pm

Mr. Chris Smith (Islington, South and Finsbury): On behalf of those of my constituents who died in the fire at King's Cross and their families, and on behalf of those working in the emergency services based in my constituency who responded so magnificently on the night of the fire, I express appreciation for the detailed work contained in Mr. Fennell's report. I have, of course, criticisms about the remit that Mr. Fennell accepted and those aspects which were deliberately excluded from his sphere of investigation. However, the work that he and his officers carried out in ascertaining how the fire started, how it spread and how such an event could be prevented in the future was impeccable and deserves gratitude.

Because of the terrible and terrifying nature of the event, even through the clinical prose of the Fennell report comes a moving and tragic account of individual pain, of individual heroism and of human fragility in the face of unprecedented and uncontrollable forces. In Mr. Fennell's report, of course, there are many detailed, practical recommendations. A large number of those recommendations are, I am delighted to say, already in the process of implementation. A major question that we are, of course, entitled to ask is: will the funds that the Government say that they are making available—the £266 million spread over three years—be sufficient to enable all the recommendations of the Fennell report, in capital terms, to be carried out? If the answer is yes, I hope that the Minister can tell us so when he replies. If the answer is no, we are entitled to ask how else the recommendations and the work that is requested to be carried out will be financed. Will it once again be the travelling public, through their fares, who must pay for the long-overdue improvements to the Underground service?

The Government and Government Back Benchers have made much in the debate about the increases in capital funding that are now available to London Regional Transport and London Underground Limited. Of course, increases in capital funding, which many of us have been urging on the Government for many a long year, are welcome. However, how are those increases in capital funding being deployed? In some respects, expenditure is welcome. I have long been hammering at the doors of London Regional Transport and of the Government to ensure that Angel station in my constituency gets the desperately needed work that has now at long last been agreed. It took a long time coming but, nonetheless, it is welcome. I shudder to think what would happen to the island platform at Angel station if a major disaster were to occur at platform level.

Other aspects of London Underground Limited's capital expenditure, however, are not so welcome. The most obvious one that springs to mind, and to which

[Mr. Chris Smith]

reference has already rightly been made, is the installation of the new ticket barriers. I believe that the total cost of the new Underground ticketing systems is some £165 million. That money is being spent on systems and barriers about which Mr. Fennell expressed considerable disquiet. Money is being spent on barriers that, universally among Londoners, are detested and feared, because they are well aware of the inconvenience that in day-to-day use those barriers represent, and the potential dangers to safety that they represent in the event of a fire or a major disaster underground.

The Government have admitted that there are circumstances in which the barriers will not automatically open in the event of a disaster. Until those problems are put right, we rely on the presence of staff to operate the barriers and to keep them open in an emergency. That is the key point. We need a guarantee from the Government and from London Regional Transport that there will always be the requisite number of staff on hand—adequately trained and aware of what to do—to ensure that those barriers can be opened immediately if they need to be. The story, however, that we read in the Fennell report is one of inadequate staffing in the running of a large number of aspects of the system.

Two large unanswered questions arise out of the Fennell report. The first of those questions relates to the level of staffing at stations on the Underground system. Here there is an inner contradiction within the Fennell report. In paragraph 6 on page 152 of the report Mr. Fennell says:

"I found no evidence that the reduction in the number of operating or maintenance staff contributed directly to the disaster at King's Cross."

No doubt the Government will quote that passage extensively in the months and years ahead.

We may pause at the word "directly" because in some other places in the report a contradictory impression appears to be given. On page 136 Mr. Fennell addresses the issue of station operations rooms. He says that the operations room was not manned by a London Underground supervisor. He says:

"I was disturbed to learn that this had been the position since 1984, when a station inspector's post had been withdrawn and the practice of manning the station operations room had ceased."

Mr. Fennell was disturbed by that. In some ways paragraph 16 on page 141 is one of the most damning paragraphs of the entire report. Mr. Fennell says:

"London Underground set great store by the use of trains to evacuate passengers from the tube lines platforms in an emergency."

We know that that was the way in which many passengers who were due to alight at King's Cross on the night of the fire managed to escape from the conflagration. He goes on:

"However, this procedure depended critically on the availability of staff to communicate with the train drivers, to stop passengers getting off and to ensure evacuation of passengers already on the platform."

The crucial point of the paragraph is the part which says:

"In the event there was a crucial absence of adequately trained London Underground staff to cover the six tube lines' platforms prior to the flashover."

On those two specific occasions in his report Mr. Fennell clearly lays a portion of the blame for the events that led to the disaster on the inadequacy of the staffing arrangements at King's Cross on the night in question. All that ties into the crucial issue of the revenue subsidy available to London Transport. Of course the numbers and availability of staff for proper deployment in case of an emergency depends not on the capital subsidy available from the Government, but on the revenue that London Transport needs to run a full and safe Underground system. Over the last four or five years the Government have consistently cut the revenue subsidy.

Mr. Prescott: My hon. Friend has spoken about the importance of the reduction in staff and the importance attached to that by Mr. Fennell. Is he aware that while the Government cut the revenue support they gave £45 million to London Regional Transport to pay for staff redundancies?

Mr. Smith: My hon. Friend is right, and highlights not just the absurdity but the tragedy of Government policy. London Regional Transport did not fight against reductions in staff: it insisted on reducing staff even further.

The revenue subsidy figures speak for themselves. In 1984 the Government gave London Regional Transport nearly £200 million in revenue subsidy. In 1990 the amount will be £7 million which will be specifically directed at the running of the dial-a-service. That shows the scale of the reduction in revenue subsidy that the Government have imposed on London Regional Transport.

I am sick and tired of hearing Conservative Back Benchers say how wonderful the Government are because they are gradually—but belatedly—increasing the capital subsidies to London Regional Transport. However, at the same time they are drastically cutting the revenue subsidies. Safety does not rely on physical work alone. It resides also in the availability of staff to cope in an emergency. The availability of staff is also crucial to ensure the availability of alternative exits in the event of a disaster.

On 26 March at Finsbury Park Underground station in the constituency of my hon. Friend the Member for Islington, North (Mr. Corbyn) only one set of stairs was in use. Two alternative exits were blocked with gates that had been deliberately padlocked. No keys were available and in the event of an emergency all exiting passengers would have had to funnel through only one exit with a very narrow passageway. On the same day at Highbury and Islington tube station in my constituency the passageways between the Victoria line and the Great Northern electric line platform were gated and padlocked. In the event of fire only one exit would have been available for passengers trying to escape. The reason given for the blocking of those exits and the locking of the gates was lack of staff.

The inadequacy of staffing continues in London Regional Transport, and the Government, Mr. Fennell and all the lessons that should have been learned subsequent to the King's Cross fire seem to have taught London Regional Transport absolutely nothing about the need to ensure that stations are properly staffed.

The other principal question that seems to arise from the Fennell report is about the role of the railway inspectorate. Mr. Fennell is shocked, to say the least, in his criticism of the railway inspectorate. As my hon. Friend the Member for Holborn and St. Pancras (Mr. Dobson) has said, it is almost unbelievable that throughout 1987 one quarter of one person in the railway inspectorate was detailed to supervise the conditions at London Regional

Transport Underground stations. A year after the fire the situation was precisely the same. Although the Secretary of State for Transport now tells us that the railway inspectorate is almost up to complement, he has offered no explanation in response to the questions that I asked him on 10 November about, why for a year following the King's Cross fire, the railway inspectorate was not as a matter of urgency brought up to complement even before the findings of the Fennell report were published.

We are now entitled to ask the Secretary of State to answer the two questions that I asked him then. Why was the inspectorate not brought up to strength during the year following the fire? Will he also tell us not about the entire complement of the railway inspectorate, because that is the figure we so often get, but about precisely what resources the inspectorate, now that it is almost up to full complement, is able specifically to devote to safety at London Underground stations? It would be extremely revealing to know the precise answer to that question.

Of course I accept and fully support what the hon. Member for Epping Forest (Mr. Norris) said about the need for greater openness and the public being able to know what the safety inspectorates are doing. The Bill that I introduced last year and to which the hon. Gentleman in his private capacity gave considerable support outside the House had to be carried through in the teeth of opposition from Government Whips who blocked it week after week until we finally shamed them into accepting that it should be placed on the statute book. It was a minor measure designed to give the public some degree of access to information about reports and notices issued by the safety authorities.

My hon. Friend the Member for Gateshead, East (Ms. Quin) has a Bill now before the House which would go further. Again, it is a modest but important measure, and again the Government Whips, led by the hon. Member for Watford (Mr. Garel-Jones), block its progress. May we have an assurance that my hon. Friend's Bill will at least have the chance of a Second Reading and a debate in Committee so that any detailed points can be sorted out? It is time that the Government gave that commitment, as a practical response to the points that Mr. Fennell makes about the need for openness, disclosure and public access.

Other important issues relating to the future of King's Cross are at stake. Dr. Ridley's comments at page 154 show that he regards congestion as one of the major problems for public safety. King's Cross, as Mr. Fennell reports, is the most congested set of Underground stations on the London tube network. About 250,000 passengers pass through that station on an average weekday.

It must therefore give pause for thought when BR, together with London Underground, present the King's Cross Railways Bill, a private measure which includes proposals designed to increase congestion at that station both below and above ground. It will shortly come before the House for Second Reading. I hope that hon. Members will take to heart the points Mr. Fennell makes about congestion and safety when they consider that that Bill would add yet another Underground station to the existing five clustered together below ground at King's Cross.

Mr. Dobson: Will my hon. Friend confirm the preposterous intention of BR to build a vast cavern underneath the existing tube station and main line station at King's Cross so that Britain's second Euro-station will be the famous concrete hole in the ground to which the chief inspector referred when he was talking about a smaller cavern that BR is building at Heathrow?

Mr. Smith: That is precisely what BR is proposing. If I have anything to do with it, it will not proceed. King's Cross is already too congested above and below ground. It cannot cope with an additional international terminus located below ground such as BR and London Underground are proposing.

There are major lessons from Mr. Fennell's report yet to be learned—lessons about the level of revenue subsidy as well as capital subsidy that is available to the Underground system; about the level of staffing at stations; about the role and nature of inspection; and about the future of King's Cross. There is no sign that LRT or the Government have learned those lessons. For the sake of the travelling public, and the memory of my constituents in particular, we deserve a better response.

7.4 pm

Mr. Robert G. Hughes (Harrow, West): It is important to consider the background to the Fennell report, and I am pleased that the two members of the shadow Cabinet who have spoken in the debate, the hon. Members for Kingston upon Hull, East (Mr. Prescott) and for Holborn and St. Pancras (Mr. Dobson), praised the report and welcomed Mr. Fennell's comments.

When Mr. Fennell was asked to chair the inquiry he was considerably rubbished by Opposition Members, who claimed that he would not do a fair and reasonable job but would merely report what the Government wanted. I hope that they will now accept that Mr. Fennell did a comprehensive job and that we have before us a fine report which, hopefully, will lead to improved safety on the Underground.

I regret that the hon. Member for Kingston upon Hull, East said that the Opposition would force a vote at the conclusion of the debate. Labour Members seem to have found an excuse to vote against the report. That is a pity because it sends out the wrong signals about the way in which we should be approaching the report. We should be considering it constructively and ensuring that all its recommendations are implemented.

A paramount question is whether in recent years the underground system has improved or deteriorated. Oddly, perhaps, the answer must be yes to both parts of that quesion. My hon. Friend the Member for Twickenham (Mr. Jessel) said that there had been a 70 per cent. increase in six years in the number of passengers using the Underground. For LRT that has been a magnificent triumph. Those who were concerned with the Underground some years ago would have considered such a turnround in the situation to have been impossible. We recall how, whichever body was running London Underground, the rate of passenger use decreased by 1 or 2 per cent. a year. Since LRT took over—perhaps since political interference was removed from the system—there has been a tremendous increase in usage.

It is because of that increase that the system has deteriorated. People boarding Underground trains on the Metropolitan line at Pinner or the Piccadilly line at Rayners Lane suffer dirty and crowded trains in which they cannot get a seat when they manage to board, and the platforms are crowded.

[Mr. Robert G. Hughes]

Despite that—indeed in response to it—there has been a large increase in capital spending. The Government are now giving LRT, for capital spending on the Underground, double that allocated by the GLC in its last year of existence. The GLC's spending plans would have kept capital investment levels constant. That must be borne in mind when Labour Members complain about the sums that should be spent on London Underground. Their comments on that score are claptrap because it is clear from the spending plans approved by the GLC in the last year when it had responsibility for the Underground that spending levels would have remained constant.

It is no good the hon. Member for Islington, South and Finsbury (Mr. Smith) complaining that all he hears from the Conservative Benches are comments about increases in capital investment. He will hear a lot more about that because those increases will bring about the safety measures that we all want.

The revenue subsidies which were poured into LRT by the GLC were largely a complete waste of money. The hon. Member for Finsbury, South and Islington and other Opposition Members will be aware that that money was used to keep fares artificially low. It is clear that increases in fares have not deterred passengers because of the increase in passenger usage. Fare levels are not a huge consideration.

Uncharacteristically, the hon. Member for Islington, South and Finsbury did not include any figures in his comments. I rather suspect that he has examined the figures already and is aware that the reduction in revenue support matches the amount of money which has not been used for subsidising fares. It has not been removed from revenue support for staff, safety or running the system.

Mr. Tony Banks: Will the hon. Gentleman explain why transport systems in other capital cities in Europe still receive about 80 per cent. in terms of revenue support to keep fares low? That is the big attraction of the Paris Metro. Why are they doing that in other countries?

Mr. Hughes: The hon. Member for Newham, North-West (Mr. Banks) probably spends most of his time in his chauffeur-driven car. If he travelled on the Underground, he would be aware of the fact that it is sometimes impossible to get on a train. The hon. Gentleman can hardly claim that the level of fares acts as a deterrent to passengers. What is the point of pouring public money into subsidising fares if they do not act as a deterrent? The hon. Member for Newham, North-West and his colleagues on the GLC milked the capital investment which should have been invested in LRT and perhaps that caused some of the problems that we have now. They used that money to subsidise fares. I do not believe that that did Londoners or London Underground any good.

Mr. Tony Banks: Since the Conservative Government abolished the GLC, I have not had a chauffer-driven car at my disposal, as the hon. Member for Harrow, West (Mr. Hughes) is well aware. [HON. MEMBERS: "Shame."] Yes, it is a shame.

I can assure the hon. Member for Harrow, West that I use the Underground and British Rail every day to get to the House. However, will he answer the question that I put to him? Why are the operating costs of systems in other capital cities subsidised to a much higher level, in some cases at about 80 per cent., while in London there will soon be nil revenue subsidy?

Mr. Hughes: At last the hon. Member for Newham, North-West has provided me with a good reason why the GLC should have been abolished. It took him out of his chauffeur-driven car and put him on the Underground.

Mr. Dobson: If depriving my hon. Friend the Member for Newham, North-West (Mr. Banks) of a chauffeur-driven car is the sole justification that the hon. Member for Harrow, W[illegible] (Mr. Hughes) can think of for abolishing the GLC, that is hardly a proper justification for transforming the whole of local government in London.

Mr. Hughes: I would not disagree with that.

A comparison between our transport system and that of systems in other capital cities is not reasonable. As has been said, our system is much older and larger. If revenue subsidies are not needed—and I do not believe that large revenue subsidies are needed—I do not understand why the hon. Member for Newham, North-West is arguing for them. We need more capital expenditure.

I am delighted that my hon. Friend the Member for Epping Forest (Mr. Norris) is now a London-ish Member and able to make a good contribution to our debate. I join him in saying that the Government should not be afraid of saying that if more capital subsidy is required, it must be provided. The need for extra subsidy is the major subject on which I receive letters from my constituents. The number of hours that my constituents have to spend on London Underground makes their lives a misery.

We should welcome the fact that the Autumn Statement provides £266 million over three years for the Fennell report to be implemented in full. I agree with my hon. Friend the Member for Epping Forest that if that proves not to be sufficient, and if more money is needed, the Government should respond generously. The Government's record in that area suggests that they will consider the matter generously and be prepared to provide the necessary money.

No reference has been made in the debate so far to the exchanges between counsel on behalf of the National Union of Railwaymen and the inspector. Mr. Cooper, the counsel for the National Union of Railwaymen, admitted during the inquiry that the fire was not the result of inadequate investment in the Underground. The exchange went as follows. The inspector said:

"It is the allocation of resources that I at the moment am persuaded about. I do not believe that there was a shortage of money; it was a question of allocation of it."

Mr. Cooper said:

"Quite so, sir, and the wider aspect that another party was pursuing on that."

The inspector said:

"I do not think that the disaster is about costs, if I can use that phrase?"

Mr. Cooper said:

"It is the allocation, getting priorities right."

To which the inspector agreed.

I believe that the hon. Member for Kingston upon Hull, East was rather confused when he opened the debate for the Labour party. If the management structure was poor, it was simply not up to making safety the required priority. There is no doubt that good management and safety go hand in hand in industry, whether in the public sector or the private sector. If there is not good safety, we can

guarantee that there is not good management, and vice versa. I do not believe that the hon. Member for Kingston upon Hull, East understands that. He does not understand that simply because the money is available that does not mean that it will be spent on the right things if there is poor management.

As has already been mentioned, it came as a shock to all of us who have examined this matter to discover that it was not LRT's policy to call the fire brigade immediately in the event of a fire. Smoke was obvious earlier in the evening and had the fire brigade been called when the smoke was first spotted the tragedy would not have occurred.

I welcome the fact that the London fire brigade claims that it now has a good relationship with LRT. It is called out on every occasion and, more to the point, it wants to be called out on every occasion as it would rather attend a series of false alarms than not be there on the spot when it is needed.

Opposition Members have referred to fire safety certificates which relate to the Fire Precautions Act 1971. It was thought that King's Cross did not need a fire safety certificate and it did not have one. Apparently no one thought that an application needed to be made. According to the Fennell report:

"Broadly speaking, the fire certificate may impose requirements for securing that the means of escape are adequate to meet the circumstances of the case, and are properly maintained and kept free from obstruction; that firefighting equipment is sufficient and satisfactorily maintained, . . . that employees are appropriately trained to deal with fire and its consequences."

That seems to be very sensible and it is welcome that fire safety certificates will be applied for by other stations. However, the hon. Member for Kingston upon Hull, East did not say that that applies only to the larger stations.

The Fennell report, on page 241, continues:

"It should be observed that a significant number of smaller underground stations would fall outside the ambit of section 1 of the FPA 1971, owing to the employment limits not being satisfied."

I agree with the hon. Member for Islington, South and Finsbury that the Angel, a station that I use fairly frequently, may not fall within that Act because it is relatively small. My hon. Friend the Minister should consider whether all Underground stations should be required to have fire safety certificates.

Hon. Members have already covered the detailed specific recommendations in the report, but I want to make one point about the King's Cross management. On page 18, the report says:

"London Underground did not guard against the unpredictability of fire."

That is strange. I have never run a large concern, but in doing so surely safety must come first. It is interesting to compare what I have read in the report and what I know about London Regional Transport as a result of being involved with it on the GLC with my experience over the past few months while doing an industry and parliamentary trust fellowship with a chemical company. It is noticeable that in that chemical company, engaged in dangerous processes where people could be hurt making highly flammable chemicals, safety is the first item on the agenda at every executive and local board meeting and at meetings between management and trade unions. Safety is a primary issue.

One question that I would ask my hon. Friend the Minister to consider, the answer to which I cannot find in the report, is whether London Regional Transport or London Underground Ltd. has a director not primarily, but solely responsible for safety. I genuinely believe that without that the safety audit that is talked about in the report will not do the job that we want done. We need a man on the board to be in charge of safety.

We welcome the new and experienced chairman, Mr. Newton, at London Regional Transport. We have to give him time to come up with the goods to provide the underground system that we need. He deserves a year before we judge whether he has done that job. His task will be to take a proper management grip on London Regional Transport. There are visible signs that we should look for. A tiny but important example which could cause a problem is the indicator board at Baker street, a station which my constituents use when travelling on the Metropolitan line. That board is the only way in which in advance of announcement people know from which platform their train will leave. A light on that indicator board has not been working for three years. A management which had a grip would have replaced that bulb. My message to Mr. Newton is that I and my constituents will be looking closely to see whether that bulb is replaced. That may sound a light-hearted matter but, as the hon. Member for Brent, South (Mr. Boateng) knows because his constituents use the same line, many people have to move a long distance and that could cause a considerable problem.

We shall want to see that rubbish is cleared away from the Underground system. Knowing that I would seek to catch your eye this afternoon, Mr. Deputy Speaker, I was looking at litter when I travelled to the House of Commons today. I was not very impressed with the rubbish and the lack of cleanliness in the various stations that I used. I have no objection to people using bicycles —how could I when at the general election I voted for my hon. Friend the Member for Ealing, Acton (Sir G. Young) —but I found it rather surprising to see someone take a bicycle on to a District line train today. That is not very safe and I wonder whether that should be reconsidered.

We shall also look for visible signs of security and safety on the trains. New Metropolitan police have been allocated to the Underground. I do not want to go into this in detail as other hon. Members wish to speak, but the response of the management and the Metropolitan police to the Guardian Angels was that the assistance of citizens was not needed or wanted. Whether the Guardian Angels are a reasonable group of people, or whether they were right for the London Underground, is not relevant. Such a group, even if it had to go under a different name, could have been managed by the Metropolitan police as a new branch of the specials. Citizens want to improve physical safety on our trains and platforms and they should have been encouraged to do so, not snapped at. They would have been a great benefit to the community. London Regional Transport's management should see whether we can encourage people to help with security.

Overcrowding on platforms is also a problem. At the last meeting that I had with Dr. Ridley before he resigned I raised the problem of overcrowding, particularly on the Victoria line at Victoria station where it is dangerous day after day. I may have taken some time to find out about that, but Dr. Ridley clearly did not know about it. It is still going on and we look to London Regional Transport to do something about it.

[Mr. Hughes]

London Regional Transport should give real decision-making power to lower management. That has been done in connection with buses and in my constituency the bus service has improved as a result. After some initial teething troubles, Harrow Buses now runs a more comprehensive and reliable system than at any time since I have been a Member of Parliament. I have not had one complaint about the buses for six months. I shall probably now receive a torrent of letters complaining about them. Nevertheless, I have not had one complaint and that is a tribute to Harrow Buses. Real power has been given to local management and that could work on London Underground.

This is a good report. It has not been allowed to gather dust as so many reports do. It is a blueprint for a safe and easy-to-use Underground system. I commend the report and I commend the Government's response to it so far.

7.27 pm

Mr. Tony Banks (Newham, North-West): My hon. Friend the Member for Holborn and St. Pancras (Mr. Dobson) made a moving spech, as he did at the time of this particularly unfortunate tragic event. He paid tribute to the emergency services in London and elsewhere. We should be far more mindful of those services, not just when there is a tragedy—I regret that there have been too many transport tragedies recently—but all the time.

Words are cheap in this place. In some cases they are almost useless. We should not just wait for the occasion when the House unites in expressing profound regret at some calamitous event and then pays its normal orthodox tributes to the emergency services. Our capital city has superb emergency services. In many respects they are far better than we deserve, given the resources we make available to them. I hope that we shall return to provision for the ambulance service, the fire brigade and the police on an occasion other than after some tragedy that concentrates our mind. Then perhaps we can speak with a clear and easy conscience in the House. As far as I am aware, there are not many dangers in being a Member of Parliament. The only thing that we are likely to die of in this place is boredom. We do not face dangers such as those who serve the people of this country in the emergency services face daily.

I shall not go through the various points in the Fennell report in a forensic way—that has already been done for some time now. I want to draw some general conclusions about transport in London from the report. I was grateful recently when the Secretary of State found time, as they say, during his busy day to come to a meeting of the London group of Labour Members for a general discussion about transport facilities and provision in the capital. The right hon. Gentleman was helpful; there was no great meeting of minds, but we were grateful to him for listening to our points and trying to answer some of them.

The Secretary of State said one thing that shocked all our members. We had pointed out that there were so many reports and inquiries in London at present that we wondered who was taking a strategic overview of transport in London. From the chair, I asked him whether, since he had removed the strategic authority—the Greater London council—he was now effectively the strategic transport authority for London. He said that he was not. My hon. Friend the Member for Peckham (Ms. Harman) invited him to assume that responsibility. This is one of the gravest problems we face in London. No one is looking at the overall pattern of transport provision. That is a fatal weakness, and the Government must deal with it soon.

Mr. Spearing: I would not have intervened but for the fact that I tabled a question to that effect, to which I have just had a written answer. The Minister for Roads and Traffic said that legislation had

"established London Regional Transport and charged them with the duty of planning and providing passenger transport services for Greater London."

Apparently, the duty now devolves on LRT, which does not fill me with confidence.

Mr. Banks: That does not sound like what really happens. I cannot see how LRT can be responsible for the whole transportation system in London. Network SouthEast might have a few words to say about that.

I went to see British Rail board members about the siting of the second London terminal for the Channel tunnel, which was mentioned by my hon. Friend the Member for Islington, South and Finsbury (Mr. Smith). I asked British Rail about the strategic implications of more and more people coming through King's Cross station area and the problems that that would cause for central London. British Rail board members said that they were sorry but that British Rail was a commercial transport undertaking, charged by the Government with being just that. They said that British Rail was not the strategic transport authority for London or the south-east—and that is correct.

All this is nonsense. The CBI has now decided to make some noises about the chaos that is beginning to overtake London transport. It is not good enough for the Government, the Secretary of State, Ministers or their apologists on the Back Benches to say that the market can somehow deal with all those matters and that there is no need for a strategic transport planning authority in London—there manifestly is. Such authorities exist in other capital cities in Europe; the Government must deal with this problem forthwith.

I should like to discuss capital and revenue subsidy for LRT and London Underground Limited in the context of what was done when the GLC was responsible. The Government have consistently pointed to high levels of capital investment on the Underground. I put it to the Minister that some of that capital expenditure makes the Underground system less safe. I refer immediately to the £165 million that is being spent on the Underground ticketing system and those infamous ticket barriers. They have been installed not for safety but to try to cut fare evasion. We join Conservative Members in saying that it is wrong for so many people to evade their fares. They make honest fare-paying passengers pay more. However, given the level of unemployment and social deprivation in London, it is not surprising that, with fare levels rising, people evade payment.

That answers the point made by the hon. Member for Harrow, West (Mr. Hughes), who said that no disincentive was caused by high fares. There is disincentive; it arises from people not paying the fares and still using the system. Then expensive capital investment is needed to cut the fare evasion that was created by sticking up fares in the first place. The hon. Gentleman needs to adopt a more sophisticated approach.

The other point about deterrence is that it begs the question: how does the hon. Member for Harrow, West know how many people who are not travelling on the system because of high fares have been deterred by them? If he claims that the answer shows up in the level of passenger usage, I put it to him that, because of the chaos on the roads, more and more people are using the transport system, not because they think it wonderful or comfortable but because it is the only way in which they can travel. Some people cannot exercise any choice. The hon. Member for Harrow, West should take other social factors into account before saying that higher fares do not constitute a disincentive.

We have heard about the failure of the gates. One does not need a Ph.D in transport management to work out, having used them, that the gates are highly inconvenient at the very least, particularly for people with luggage, children and pushchairs. They have made it more difficult and inconvenient to travel on the system. As was shown with the introduction of one-man operated buses, LRT could not give a monkey's toss for what the customer wants on the Underground or the buses. It receives plenty of complaints and just ignores them. Unless the Government are prepared to exercise their function as the transport authority to which London Regional Transport reports, customers of the Underground and bus system will complain into empty air.

One quarter of the capital investment for the Underground outlined in LRT's annual business plan for 1987-88 for the three years to 1989-90 was allotted to stations. In 1985-86, £34 million was spent on station modernisation.

"The refurbishment of stations has done little for passenger safety. At some stations refurbishment has meant covering up old wiring and asbestos panels with plastic, creating new fire risks."

That is the opinion of the London Hazards Centre. The hon. Member for Harrow, West mentioned overcrowding on station platforms—yet much of the modernisation has had the effect of reducing platform areas. They may look prettier when passing through but for those standing on them they become less safe. This problem, too, needs attention.

The Government and Conservative Members have argued that they are spending more than the GLC did. I looked up the figures, because I guessed that the subject would come up in debate. The Government prevented the GLC from spending money on the Underground. I served on the Standing Committee considering the London Regional Transport Bill, in which the Government took responsibility for LRT from the GLC and vested it in themselves. That was done not because it was considered to be in the interests of the fare-paying public in London; it was done as a prelude to the abolition of the Greater London council.

The then Secretary of State for Transport—the present Secretary of State for the Environment, the right hon. Member for Cirencester and Tewkesbury (Mr. Ridley)—was warned time and again. I have been reading the report of our proceedings, and recall that I was one of those who kept jumping up to say, "You are going to cut back on safety." The right hon. Gentleman pooh-poohed it—as he always does—saying, "Nonsense. I have complete confidence . . ." and so on.

We were saying all this long before the tragic disaster at King's Cross, and we need no lessons from Conservative Members who say that we are trying to gain a party political advantage from that disaster. We are not doing that, but we certainly do not intend to say nothing and to allow the tragedy to cover up the real political battles that have taken place in Committee and on the Floor of the House. Unless we fight and win such battles there will be more King's Cross disasters, and no hon. Member wants that to happen.

The GLC wanted to spend £669 million on transport in 1983-84, its last year as the body responsible for LRT. The Government accepted expenditure of £461 million. At the time, the GLC said:

"These cuts have meant that the programmes devised by the council to maintain and modernise London's transport infrastructure have not been fulfilled. In particular London's 10-year programme to modernise the Underground"—

we must remember that nearly all the central London system is more than 70 years old—

"had to be curtailed."

That was the result of a decision made by the Government on purely party political, ideological grounds. They wanted to ensure that the GLC did not invest in the London Underground system, and they wanted to cut public expenditure.

Capital investment may well have increased under the present Government, but subsidy has virtually disappeared. That cannot be ignored by the hon. Member for Harrow, West or his hon. Friends. When the Government took over public transport in London in 1984, the last year of GLC control, operating subsidy stood at nearly £200 million. For 1988-89, subsidy is expected to be £39 million; next year it will be down to £7 million—and the only reason for that £7 million is a Government grant to LRT to operate the grossly under-funded door-to-door service for the disabled, dial-a-ride. That too was originated and paid for by the GLC.

It should at least concern us that in the mid-1980s public transport in, for example, Turin covered 87 per cent. of operating costs. In Rome the figure is 81 per cent. In Amsterdam it is 80 per cent., in Paris 54 per cent., in Brussels 74 per cent., and even in that home of capitalism, the United States, Chicago and Washington have figures of 47 per cent. and 51 per cent. respectively. Why should the position be so different in London? The hon. Member for Harrow, West said that it was because we have the oldest and most extensive system, but that is an argument for funding it, and for funding it more generously than other capital cities fund theirs.

Mr. Robert G. Hughes: No. That is an argument for spending more on capital, not for revenue subsidy. It was the hon. Gentleman and his friends on the GLC who did the opposite and caused so much damage.

Mr. Banks: I realise that the hon. Gentleman was chatting away when I read out the figures for capital and revenue, but he cannot keep repeating this one. It simply is not true. I thought I had explained at the beginning of my speech why I believe that it is possible through spending on the revenue side to avoid spending so much on the capital side—although I accept that capital investment is needed. The revenue side covers the number of uniformed staff who operate on the tranport system. That means that it is unnecessary to put capital investment into these ridiculous gates.

If we are serious about dealing with crime, safety problems and ticket evasion, we should consider the

[Mr. Banks]

revenue subsidies that would provide adequate staffing levels. Not only are they needed; they are what the public demand. We need not one or the other, but both. At least the hon. Member for Harrow, West has come halfway to agreeing with us that not enough is being spent on the capital side. I hope that eventually he will also see the sense of investing far more on the revenue side, for the two cannot be divorced in the simple way that he suggests.

If the Government are serious about Underground safety, why are they allowing LRT to get rid of all the guards? It makes no sense. I will say for the Minister that he is far more attuned to safety needs in the transport system than the former Secretary of State—the right hon. Member for Cirencester and Tewkesbury—would ever have been. He showed not the slightest interest in, or concern about, London's transport system. In the enormous letter that he sent to the chairman of LRT, he did not mention safety once. That was how much such priorities obsessed him: he could not care less. It is he who should be here in the dock today having to answer for what happened at King's Cross and elsewhere, but of course he has got out from under and is causing mayhem somewhere else in the body politic.

The Bakerloo line will be the next to lose all its guards. What will happen to passengers if there is a fire in a tunnel which incapacitates the driver? That is a serious possibility. There were 1,248 fires on the Underground in 1988, compared with 844 in 1987. A spokesperson for the London fire brigade tells me that there has been an increasing incidence of fires in tunnels. When the guards have gone, who will be responsible for safety if something happens to a driver?

According to a report in *The Observer* of 19 February 1989, there is still no automatic override to prevent driver operators from opening the doors on the wrong side. If the Government have really established the safety culture of which the Minister speaks, they must consider such matters, and I expect the Minister to do just that.

Let me conclude by asking the Minister a few specific questions. The Fennell report's verdict on the railway inspectorate is that it is mistaken in its interpretation of the law, which has been too relaxed, and that it has misunderstood its responsibilities. That is indeed an indictment. What progress has been made on Fennell's recommendation that consideration should be given to the establishment of a single passenger safety inspectorate, charged with monitoring and supervising standards in all passenger transport? If the Minister wants to prove his worth as one who subscribes to the idea of the safety culture, he should put it into effect. We do not want words; words are cheap in this place. What we want is a testament that there will be action.

Let me also ask the Minister why journalists and Members of Parliament still find it difficult to obtain information about safety from both LRT and London Underground Limited. Fennell says that the travelling public have a right to know about the safety arrangements made by transport operators, and the safety of the places in which they habitually gather.

The Minister knows, as I know, that the new ticket barriers are not safe. He gave assurances to the House in good faith, but then had to write letters to hon. Members saying that he had been misled. I hope that he kicked the posteriors of those who inadvertently misled him into misleading us. If those new barriers are unsafe, why did not LRT employ an independent safety consultancy to look at them instead of Mott McDonald, a civil engineering consultancy that has worked with London Underground Limited many times before? Will the Mott McDonald report be made public when it eventually lands on the Secretary of State's desk?

What progress has been made in involving the unions more closely in safety matters? Fennell says:

"There must be more employee participation in the preparation and execution of London's underground safety programmes."

The management of London Underground Limited is still mediaeval. There is to be another strike next week. If the Minister is interested in safety he must investigate the present industrial relations in London's transport system.

The Government have been monumentally complacent about the underground system and, as the Secretary of State admitted, they have denied any responsibility for the strategic overview. In the past, they have shown themselves unfit to run the Underground and bus system of the capital city. I remember the former Transport Minister telling the House:

"Ratepayers are well satisfied at finding less than half the sum which the GLC would have required in subsidy to mop up the industry. Neither I nor the management are complacent."—[*Official Report*, 23 February 1987; Vol. 111, c. 9.]

I wish that Ministers would meet the travelling public in London more often. Then they would realise just how dissatisfied people are. The Fennell report reveals exactly how complacent the Government and London Regional Transport have been, and indicts the Government as derelict and unfit to be responsible for the running of a transportation system. That is the accusation I level at the Government tonight.

Several Hon. Members *rose*——

Mr. Deputy Speaker (Sir Paul Dean): Order. There are still eight hon. Members, four from either side of the House, hoping to speak in the debate. Time is getting short, so I hope that hon. Members who are called will be fair to others by making brief speeches.

7.50 pm

Sir George Young (Ealing, Acton): I shall honour your injunction, Mr. Deputy Speaker, and be brief. I apologise for not having heard the two opening speeches, but a member of the royal family was opening a hospital in Ealing and that detained me.

I shall make two quick introductory points. First, quite rightly, smoking is banned on London Underground, but a number of stations, including Ealing Broadway, are joint British Rail and London Underground. Platform 4 of British Rail backs on to the Central line platform eastbound. Smoking is banned on London Underground but not on British Rail. There is a common booking hall and other common parts of the station. It would simplify matters if smoking were banned throughout joint British Rail and London Underground stations as it would avoid the present confusion. Secondly, 18 months after the tragedy at King's Cross one man who died is still unidentified. It is sad that we live in a society in which someone can die and no one notices—no friends, no family

and no employer. If it is tragic to die in circumstances such as the King's Cross tragedy, how does one describe a death that no one notices?

I wish to make three points about the Fennell report which is excellent. In particular, I pay tribute to the diagrams which are essential if one is to understand the three-dimensional nature of the problem. Although the Fennell report relates to King's Cross, much of it has a much broader application. Chapter 14 on "The Auditing of Safety" recommends a structural response to safety issues which is equally relevant to construction companies and the airline industry. The concepts of introducing safety audits paralleling the financial audits, setting standards of safety and monitoring progress towards them are extremely relevant. I hope that the recommendations will be read not only by people responsible for London Underground but by people who have broader responsibility for safety throughout commerce and industry.

The same is true of chapter 15 which deals specifically with "Station Staffing and Training." The approach that it recommends is equally applicable throughout British industry. The concept of proper training, proper fire prevention drills and the evaluation of job training and joint exercises with the emergency services have a much broader application than London Underground. One can well imagine the shambles described in chapter 10 being replicated in other parts of our society if there were a similar fire. Much in the report has general application and I hope that the coherent response on safety issues that is recommended will be taken up more broadly.

Secondly, I wish to raise some of the specific action taken by British Rail to deal with the recommendations. I declare an interest—sadly, not a financial one—as a sponsor of the British Rail (King's Cross) Bill. Much in that Bill will not be controversial. Part of the work suggested involved an escalator and a subway connection between the Circle line platforms and the three tube line platforms. That will allow passengers to change lines without passing through the ticket hall as they do at present. That work would reduce the pedestrian flow through the ticket hall by about 30 per cent. and release enough space to accommodate further growth in demand for several years to come. I hope that there will be no difficulty about that. There are also plans to enlarge the existing underground ticket hall on the north and west sides to provide additional circulating space to deal with further growth in demand.

An eastern ticket hall under the Bravington block on the corner of York way and Pentonville road is to be constructed to serve the three tube lines and the Thameslink platforms. That will replace the existing street entrance in Pentonville road, but it is in a far better position so is expected to take pressure off the existing entrances to the Underground and the ticket hall. The relocation of the Thameslink station, the expansion of the Thameslink services and the new subway connections between the Thameslink platforms and the main line platforms at King's Cross will segregate the British Rail traffic from that on the London Underground and avoid some of the congestion that has been referred to.

The hon. Member for Islington, South and Finsbury (Mr. Smith), who is not in his place, said that if King's Cross were to be the international terminal the problem would be made worse. I hope that we will have the opportunity to debate the matter more fully, but one can argue exactly the opposite with some force. If King's Cross were chosen as the second international terminal for London, it would reduce the number of passengers who would otherwise have to cross London from Waterloo, many using the Underground. If there were through trains to the north going through London it would reduce even further the number of people who would have to travel to King's Cross to change trains. Therefore, the arguments adduced by the hon. Member for Islington, South and Finsbury are not all one-sided and one can argue the opposite. Doubtless we shall do so on a suitable occasion.

Thirdly, the problem at the heart of the Fennell report and our debate is congestion. Page 153 of the report states:

> "We heard evidence about the greatly increased use of the Underground system in recent years and the effects of congestion on passenger safety at King's Cross station and more generally."

Almost every hon. Member who has spoken in the debate has mentioned congestion on the Underground. All the forecasts that I have seen suggest that it will get worse. So we are confronted with the problem of increasing capacity. We have squeezed almost all the capacity out of the existing system. We could create some marginal extra capacity by introducing new signalling systems, new rolling stock and perhaps some adjustments to platforms, but ultimately we need new tube lines in London to reduce pressure on the existing system.

Finally, given the understandable constraints on public expenditure to which all Conservative Members subscribe, will my hon. Friend the Minister explore to the full the opportunities for joint funding of new tube lines in London? Will he engage urgently in negotiations with the private sector to find some way of expanding the public transport network in London without relying wholly on public sector finance? My right hon. Friend the Secretary of State and his Department have done sterling work by getting the private sector to invest in transport. The Dartford crossing is a good example and the Heathrow express linking Paddington to the airport will be privately funded. There is an opportunity for my right hon. Friend to pursue even further the initiatives on which he has already embarked to get at the heart of the problem underlying our debate. There is simply not enough capacity on the public transport system to cope with London's booming economy. If we are not to bust the public expenditure constraints which we accept, and if we are not to put up with the congestion, we shall have to look urgently at the solutions that I have mentioned to see if, as Conservatives, we can get the private sector to invest in the improvement of the capital's infrastructure and resolve the problem at the heart of our debate this evening.

7.58 pm

Ms. Diane Abbott (Hackney, North and Stoke Newington): The Secretary of State said that the lessons of Fennell go wider than London Underground. That is true. The lessons of the Fennell report go to the heart of the Government's attitude to public service and public spending and I shall return to that later in my speech.

Like thousands of my constituents in Hackney, I use King's Cross station and termini every day. Like thousands of people throughout London, when I heard the news of the King's Cross fire and heard about the dreadful way in which those people died, struggling to get to the surface, like millions of Londoners who are regular commuters, I thought, there but for the grace of God. . . .

[Ms. Diane Abbott]

I remember—I doubt whether the Secretary of State or Ministers do because they do not use the tube regularly—travelling through King's Cross station the day after the fire and looking at the set expressions on commuters' faces. It will not avail Conservative Members to read from the Whips Office briefing. It will not avail the Secretary of State to talk about more money being spent and more capital investment. I have used London Underground since I was a schoolgirl travelling to Harrow County school for girls on the Metropolitan line. I, like millions of lifelong London commuters, have seen its decline in the past decade under this Government. I have seen an increase in squalor, overcrowding and crime and I have seen the extent to which people, particularly women, are frightened to travel at night.

There is no doubt that, whatever their political persuasion, Londoners have seen a public transport system which was the envy of the world decline to a state of sad and seedy squalor. As this is now the triumphant 10th anniversary of Thatcherism and as the decline has occurred in the decade of Thatcherism, one does not need to be a political scientist or an expert on the politics of transport to know where to point the finger of blame. The finger of blame for the squalor, decline and seediness of the underground system points squarely at the Government. Every London commuter knows that.

I want to raise three main points. I have been approached by some of my constituents and by members of the unions concerned to raise with the Minister the fact that on the very day of the King's Cross fire employees of London Regional Transport who tried to hand out leaflets to passengers explaining the safety problems on the London transport system—problems which have been fully justified and supported by the Fennell report—were disciplined for their pains. I also understand that in the aftermath of the Clapham accident employees were disciplined or threatened with disciplinary action for trying to raise those important safety issues.

I ask the Minister to respond to that claim, which was widely aired in the newspapers at the time, and to give the House an assurance that in the future no employee of LRT or British Rail will be disciplined for trying to bring to the public's attention the very real safety problems. There is nothing that members of the Associated Society of Locomotive Engineers and Firemen or the National Union of Railwaymen have said about safety on London's transport system that is not amply borne out by the Fennell report.

We have listened to speeches from some Conservative Members claiming that the problem was not a lack of investment. However, as has been pointed out, even by some Conservative Members, the Government are boasting that their main response to the Fennell report is an investment of £266 million. One cannot square the fact that their response to the report is that much-needed shot of extra investment with the claim that investment was not the problem. If it was not a problem, why is there to be new investment? It is obvious to every traveller on the Underground that it is suffering from a lack of capital investment and revenue expenditure.

Only a Government with a fixed and dogmatic opposition to public expenditure and the public sector in general could deny that public expenditure and investment in public transport in the capital city ought to be the highest priority. The Government should be ashamed that public investment and public subsidy for our transport system in London have fallen so low. I should like the Minister at the Dispatch Box to defend that position. The level of investment and subsidy for London Transport is among the lowest in Europe.

The Secretary of State has made great claims about the new safety culture. That is not before time. I was horrified, in the same way as anybody who read the Fennell report must have been, to read that there was nothing explicitly about safety in the standing orders of either LRT or London Underground. That has now been rectified, but it was clear that until the tragedy which took so many lives the priority of the managements of LRT and London Underground was profit.

As the Secretary of State said, the lessons of the Fennell report go wider than London Underground. For a decade we have had a Government who say that the market and profit are all-important. They believe that the public sector, those who work in it and anything it does should be denigrated. Therefore, it is no surprise that we end up with public sector services in the poor state of London Underground today. The Government put mammon before everything and their motto, as J. Galbraith said, is public squalor and private riches. Therefore, it is no surprise that we had a terrible disaster such as that we saw at King's Cross.

Opposition Members hope, speaking for the millions of people in London who depend on public transport, that the terrible disaster has changed the Government's mind and forced them to focus on the importance of investment in the public sector together with the importance of public transport to London and a high level of subsidy. At the Dispatch Box today we have seen a Secretary of State who is perhaps, unfortunately, on his way out. Let us hope that the debate will encourage a new culture among the Government in which there is pride in public transport and the public sector. Let us hope that money for public transport is on its way.

8.8 pm

Mr. David Wilshire (Spelthorne): What the debate ought to be about and what it is about are two different things. It should be about the points made in chapter 2, paragraph 14, of the Fennell report. It should be about finding the cause of the disaster. I stress the word "cause" rather than "blame" because those two words are also different. It should be about ensuring that such a tragedy never happens again. In fact, the debate has been about who is to blame and what produced the causes rather than about the causes themselves. That amounts simply to raking over the past for cheap party-political gain.

We should have been debating the importance of improving the future of our transport system and reassuring the travelling public. We should have been asking constructive questions such as whether the Fennell recommendations are the right recommendations to which we may wish to add—*[Interruption.]* I am glad that the hon. Member for Kingston upon Hull, East (Mr. Prescott) has come back to listen because I listened to his speech. I did not try to interrupt him, so I hope that he will listen to what I have to say in the same spirit.

When I listened to the hon. Member for Kingston upon Hull, East, I did not hear a single constructive comment.

It was a knocking job from start to finish and his message boiled down to an assertion that the Government were to blame for the tragedy and that cuts caused the fire. He is wrong on both counts but, as we have seen in the past, being wrong does not bother him a bit. Facts must not be allowed to stand in his way when he wants to kick about. The needs of the public must not be allowed to stand in his way when he is searching for a scapegoat.

Ms. Abbott: Will the hon. Gentleman cease his personal attacks on my hon. Friend the Member for Kingston upon Hull, East (Mr. Prescott) and turn to the issues raised by the Fennell report?

Mr. Wilshire: I am most grateful for that intervention. I would have thought that the hon. Member for Hackney, North and Stoke Newington (Ms. Abbott) could have seen my notes here.

So far, we have heard nothing constructive from the Opposition—[HON. MEMBERS: "Get on with it."] If Labour Members are prepared to press their case, I am prepared to examine it in exchange. Labour's case is founded on the concept of the Government being to blame for everything—any Government, not necessarily the present one. Apart from naked self-interest, why do Labour Members say that? The reason is simply that they are still hooked on a Socialist ideology. To a Socialist, when discussing matters such as the King's Cross fire, every problem is the fault of somebody else. To a Socialist, every solution must come from the nanny state. Socialists need to be able to blame the Government to justify the Government taking over and running our lives in future.

Mr. Paul Boateng (Brent, South): Will the hon. Gentleman cease his strictures on the nature of Socialism today and get back to the Fennell report? It is far from him to accuse us of not being constructive when all he has done is to attack my hon. Friends and Socialism. Let us hear about the Fennell report and safety for the people who use the London Underground.

Mr. Wilshire: I find such interventions fascinating. The Opposition are prepared to hand it out, but if someone tries to repay them in kind, they cannot take it.

Building on false foundations, the Labour party's detailed case on the report is equally flawed. Throughout the debate, Labour Members have been citing a lack of money. They have tried to ignore paragraph 3 in chapter 19. I shall quote it once again. It says:

> "In my judgment there is no evidence that the overall level of subsidy available to London Regional Transport was inadequate to finance necessary safety-related spending and maintain safety standards. I accept the evidence . . . that if funds were needed, funds were available."

Throughout the debate, Labour Members have ignored the point made by my hon. Friend the Member for Harrow, West (Mr. Hughes). When the inspector said:

> "I do not believe there was a shortage of money",

counsel for the National Union of Railwaymen said,

> "Quite so, Sir."

Labour Members have also ignored the huge boost in investment by the Government in the Underground system since the Greater London council lost control of it. The best they have been able to do is to try to muddy the water by pointing to subsidised fares in other European countries. Yet subsidised fares simply mean cheaper, not necessarily safer, journeys.

There are some issues in the report that arise out of the question of money. The report refers to the state of mind within London Regional Transport. If those managers began to take the view that there was no more money available, the Labour party should be feeling guilty, because it has been saying over and over again that there is no more money. Labour Members can hardly be surprised when people start to believe them.

The second issue raised in the report is that of under-spending. It is made clear that money was available for spending, but was not spent. That gives the lie to the claim that money was not available and also highlights, yet again, one of the classic weaknesses of public bureaucracies the world over, which is that they find it difficult to meet their spending targets.

Mr. Prescott: Of late, I have heard the hon. Gentleman saying that a privatised airport at Heathrow was not up to dealing with safety. His point about whether money could be saved was addressed by Dr. Ridley himself, who said that he did not spend the full amount of £5 million because of pressures from the board to save and contribute towards cutting costs. The hon. Gentleman would have seen that in the Fennell report if he had read it, instead of taking selected bits and speaking on them.

Mr. Wilshire: I have done my level best to digest all the facts and to listen to the nonsense spoken by the Opposition. The truth is in the report. There are ample instances of under-spending against allocations and a higher level of safety could have been achieved if the money had been spent. That is a classic case of what happens in a bureacracy.

The third lesson that I draw about money is the issue of management criteria. One telling example in the report is the comment made about using train miles as a measure of expenditure when passenger miles might have been a better yardstick. If we are to go down such an avenue and if we, as politicians, are to allow ourselves to be drawn into management details at that level, heaven help the travelling public. It is the worst possible action for politicians to meddle in detailed management.

The second plank in Labour's case is the lack of staff. Labour Members ignore another section of the Fennell report, paragraph 6 of Chapter 19, which says:

> "I found no evidence that the reduction in the number of operating or maintenance staff contributed directly to the disaster".

If there are any issues about staff numbers arising from the report, they concern staff attitudes, skills and training—in other words, they concern quality rather than quantity. Those are the areas covered by some of the most fundamental recommendations in the report.

The only response from the Labour party to such issues is that we should be spending more and that we should be employing more people. It just goes to show how little they have learnt in 10 years of opposition. I also find it interesting to notice what has not been said by the Opposition. What about the thrower of the match? We have heard nothing about him or her from Labour Members because it would not suit them to mention that point. If we start talking about individual responsibility or if we say that individual members of the public should show some initiative, we are doing the opposite of what the Labour party wants in this country. It is equally fascinating that Labour Members have said nothing about the staff who ignored the debris.

Mr. Dobson: I wish that the hon. Gentleman had read the report rather than the extracts supplied by the Government Front Bench. He would note that Mr. Fennell made it clear that no responsibility lay with what he regarded as the humble members of staff for the cause of the fire or anyone's response to it. Before the hon. Gentleman directs his attention to the weakest, the poorest and the most over-worked in his nasty, slanderous and unpleasant way, can he turn a little attention to his hon. Friends on the Front Bench? He should remember that they run a Department and are responsible for a railway inspectorate, which either ought to have known or did know about everything that was wrong with safety on London Regional Transport and which did nothing. That is confirmed in the report.

Mr. Wilshire: The great difficulty with an issue of this sort is that, to try to give it comprehensive coverage, we must tackle difficult and emotive subjects such as individual people and members of staff. Far be it for me to repeat what Labour Members have been saying all day. They are only points about the role of the Government, and they have been made time and again. It must fall to somebody to tackle the issues which, for whatever reason, Labour Members do not wish to be tackled. We must ask questions about individuals who throw matches and ignore smoking rules, and about individual people at work. Individual people at work are capable of showing initiative and of taking responsibility. Again, if people at their workplace do things of that sort, it is the exact opposite of what the Labour party wishes to see.

Mr. Dobson: Is the hon. Gentleman suggesting that, with omniscience denied to the Fennell panel, the thrower of the match has been identified as a member of staff? That is the logic of his argument.

Mr. Wilshire: All I am suggesting is that the Labour party would have us believe that the Government must do something and that no one else need take any responsibility for what happens in this country. That is crazy.

Sixteen months ago, an awful tragedy took place in this country. The whole nation—every single one of us—shares the grief of all those who were bereaved. The whole nation shares the admiration for the rescue services that took part in dealing with the tragedy. The whole nation shares appreciation and respect for Desmond Fennell and the recommendations in his report. But the whole nation also shares my disgust at the Labour party's response to recent transport tragedies. Time and again, we have heard the same response. On transport matters, Labour Members increasingly appear like a flock of vultures, wheeling overhead waiting to swoop, and trying yet again to score cheap party political points. They are almost willing some other tragedy to happen so that they can blame the Government and, if possible, berate my right hon. Friend the Secretary of State for Transport. They should be ashamed of themselves.

8.22 pm

Mr. Nigel Spearing (Newham, South): The hon. Member for Spelthorne (Mr. Wilshire) spoke about individual responsibility. I disagree with the tone and content of his speech. For the first time in the House, I publicly disagree with my hon. Friend the Member for Newham, North-West (Mr. Banks). He rightly praised ambulance men and women, but he talked about the magnificent emergency services. Magnificent they could be, but, alas, the London ambulance service is far from magnificent. As a London Member, irrespective of his party, the hon. Member for Spelthorne has a public responsibility to do something about it.

I have had three Adjournment debates on the chaos that now exists in the London ambulance service. That chaos is caused by a lack of funding and the lack of the responsibility of the Secretary of State for Health. This debate is not about health; it is about the problems that arise from disasters. Individual ambulance men and firemen perform magnificently, but, in terms of back-up to the London ambulance service, for which he has a personal responsibility to the public and to the House, the hon. Gentleman should do something about the chaos. If he does not know about the chaos, I will tell him about it.

That brings me to the subject of the debate. On the terrible day after the King's Cross disaster I had the good or bad luck to put a written question to the Secretary of State for Transport, asking him to list the incidents on London underground railways which had caused risk to human life from electrical, mechanical or human failure. For too long before the King's Cross inquiry, London Members were concerned about the issue and were exercising their individual responsibilities to try to do something about it. I now put to the hon. Member for Spelthorne something which I hope that he will accept as wholly constructive. I also put an oral question to the Secretary that day. At the opening of the Liverpool-Manchester railway, a well-known Member of the House, the then Secretary of State for Trade, was killed. Since that day the House has properly been concerned with railway safety.

During the 19th century, a series of regulations were adopted, first by the then Board of Trade and then by the Department of Transport and its inspectorate, which established a threshold to protect human life. If one did that on the basis of free market economics, it would probably be worthwhile for aircraft operators or London Transport to pay out large sums of money for compensation to balance the additional safety costs. Hon. Members rightly believe that market forces should not operate in such matters. I hope that I take the hon. Member for Spelthorne with me in that respect. I wish to operate in the spirit of cross-party accord. I am sure that the hon. Gentleman would agree with me when it comes to aeroplanes or other forms of mechanical transport.

We are told that safety should have been uppermost in the minds of the operators. It is in the Act, even if it was not in the long, additional and unnecessary instruments which the then Secretary of State, the present Secretary of State for the Environment, the right hon. Member for Cirencester and Tewkesbury (Mr. Ridley), brought forward. As we know from the Fennell report, there was no item on the agenda of any board meeting in which safety was mentioned. That is remarkable. Underground railways are endemically liable to fire. They are full of high tension and low tension electric currents, and insulation can break down. There are accumulations of rubbish and building adjustments—such as those at Tottenham Court road—where fire originates. There are false draughts, chimney effects and the damaging effect of smoke underground. All that has been known for 70 or 80 years, yet, for reasons which I cannot understand, safety was not a regular item of report at board meetings.

That is rather surprising, in view of the number of underground fires. My hon. Friend the Member for Hackney, North and Stoke Newington (Ms. Abbott) said that there were 1,000, particularly on escalators. From the Fennell report we learnt that, in 1944, an escalator at Paddington was gutted by fire. It was known that escalators, particularly the type at King's Cross, were an endemic risk, and sprinklers were fitted to try to minimise it. The Fennell report tells us that sprinklers were originally switched on every day to keep things damp. It was then found that they corroded the mechanism, so the practice was changed to once every fortnight. Paragraph 15 of chapter 7 of the report states:

"As a compromise it became the practice to apply the water fog about once a fortnight. In recent years however the water fog equipment has not been operated regularly."

I was sorry that Fennell did not investigate that matter and ask why it was not operated regularly. I will not say that, if the supervisors at King's Cross knew where the valves were and that if the valves had been operated regularly, it might have been enough to dampen the fire. It was certainly an important link in the chain of the cause and events of the fire. It is a chain of events with about 14 sequences. If any one of them had been broken, the fire would not have occurred. Therefore, I am sorry that the Fennell report does not examine that matter to the degree that it might, particularly as it was recognised after the Tottenham Court road and Oxford Circus fires that passenger safety was at risk.

A report from the London Passenger Transport Research Group—"Passenger Safety and Protection from Fire on London's Tube Railways"—which was published on 15 February 1985, said:

"By definition, inadequate precautions against fire and smoke is unsafe practice. Since Oxford Circus there have been other instances where deep-level LRT tube stations have been temporarily closed because of fires, one of which was in the escalator shaft at Green Park, another busy central London station. This incident blocked the final means of exit from the Piccadilly Line platforms precisely the danger that the London fire regulations seek to avoid by insisting on two means of exit. An alternative way out was fortunately available at Green Park, through a lengthy passageway from the Victoria Line. But if the fire had broken out in the combined Piccadilly and Bakerloo escalator shaft at Piccadilly Circus . . .

In recent years, London Transport, now London Regional Transport, have been extremely fortunate that no lives have been lost in fires on the Underground. There is little doubt that a major catastrophe was averted at Oxford Circus owing to the initiative and quick actions of the Underground's staff.

Luck has a habit of running out."

Well, two years later luck did run out. We have to acknowledge that that was due partly to lax management, for the reasons that I have outlined.

But I suggest to the hon. Gentleman that there was another factor. He may have knowledge of business and may agree that in business—certainly any business that I have known—the people who are listened to and the people who are promoted are the ones who go with the current trend. They may be concerned with installing computers, with a new type of marketing, with some new idea that has come out from some college, or with some technique that has only just been discovered. At any rate, these specialists suddenly shoot to the top. For good reasons or bad, London Regional Transport was being asked to cut costs.

I put it to the hon. Member for Spelthorne that the atmosphere at that time will have been helpful to those with bright ideas about how to reduce costs. Such people will perhaps have been promoted, having been investigating that particular frontier of activity. Those who could produce ideas for cutting costs will have been listened to, and promoted above others, because that was the aim of the organisation at that time. Indeed, the preoccupation of the board was probably not at all with running the railway as it was; the board was looking ahead at financial matters and all sorts of things. I suggest that that is the psychology of the situation that we all experience in one way or another, and I challenge the Minister to deny it.

Mr. Dobson: Does my hon. Friend not agree that information that came to me by way of a leaked early draft of the London Regional Transport business plan made this clear by saying that there was no scope for efficiency savings last year because the money had to be spent on safety?

Mr. Spearing: I am grateful to my hon. Friend for underlining the point. This is where I hope I can take both sides of the House with me.

The Minister will agree that this House, on advice from the railway inspectorate, must set the standards below which public safety cannot be allowed to go. We all agree with the fire regulations in regard to cinemas and shops. At one time there were no such regulations, but we insisted on them. I challenge the Minister to say that the railway inspectorate, or any equivalent, is part of the nanny state. It is not; it is part of the way in which the public protects itself. The public protects itself with an ambulance service and a fire service, as well as sound standards of operation on the railways. I am not sure that at present we have got all three right. In any case, that is not the nanny state; it is just public protection of life. I hope that the Minister is with me on that point.

We now have to ask ourselves whether the lessons of King's Cross have been learned. I am afraid that they have not. On 13 March I pointed out to the Minister for Public Transport the number of shortcomings still existing in London Regional Transport. Indeed, I have heard of some more. I understand—this is subject to checking—that the covering of footbridges, to prevent people from chucking stuff over the top, has been postponed. I understand that walking of the track has been reduced, even in the last few months. Certainly there are threats of still lower manning levels in the central London stations—something that is surely quite wrong. In a detailed letter to the Minister, I referred to the one-person operation of deep tube railways in London. I believe that that is inherently dangerous. It increases risk. It puts another weak link in the chain of the protection of life, and that is something on which Members on both sides of the House can agree.

On 19 November 1987 I asked the then Secretary of State for Transport, who, I am sorry to note, has just gone, a question following his statement on the King's Cross tragedy of the previous day. I said:

"Does he agree that in striking a balance that is always present between efficiency and safety, the regulations and management decisions inherent in that balance should receive the widest possible consent and agreement between those employed on the underground and those who travel on it?", the people who travel on it being us. To his great credit, the Secretary of State immediately said:

"I am sure that as a general statement that must be right."
—[*Official Report*, 19 November 1987; Vol. 122, c.1207.]

But we have not got that. There is not that general consent about the balance between efficiency and safety that any Government, of any party, of any Parliament in the world,

[Mr. Spearing]

surely requires of its public services, whether publicly owned or privately owned. That is one of the problems that the Government have got themselves into.

Until recently the referees were the railway inspectorate, somewhat at arm's length from the Board of Trade or the Department of Transport. It could say to the LNER, or to the Midland Railway, or to London Transport, or to the old Metropolitan Railway, that it must do this, this and this. But now we have people determining the running of the railways on the basis of commercial objectives, as is illustrated by that infamous letter from the then Secretary of State, who was also responsible for setting the standards. I believe that in a democracy that is an unacceptable conflict of interests. It has been suggested that the railway inspectorate might be transferred to the Health and Safety Executive, or at least away from the Secretary of State for Transport. There is an argument for that. It must be possible to demonstrate independence, but I believe that that lesson has not yet been learned. If it had been, there would at least have been a halt in the extension of one-person operation on the deep-level tubes in London, and there would be a better staff relationship.

It must be pointed out that the industrial problems that may emerge yet again on the London Underground are not a matter of pay and conditions, but have to do with the very thing that the Secretary of State left out—investment in human quality. He is right to say that the system is dependent on human beings, but I do not think that the relationship between the management and the workers of London Underground is as it should be. It has declined disastrously, even since King's Cross.

In conclusion, irrespective of our view about management, about funding or about ownership, the standards that we want to see inserted by law, by a technically competent body, in this mode of transport have not been inserted. They must be seen to be inserted and supervised, and they must have the confidence of those employees who operate the service and, above all, of those who represent the travelling public. It is quite clear that, despite what has happened since King's Cross, that confidence does not exist on either side of this House.

8.39 pm

Mr. Robin Squire (Hornchurch): At this stage in the debate there is a danger of repetition, which I shall try to avoid, especially because at least two other hon. Members wish to speak and I do not want to crowd them out.

One of the measures of a civilised city is that it has a good public transport network—I take that phrase to include a safe public transport network. Like most other hon. Members who have spoken, I have Underground stations in my constituency. In fact, I have three and the Underground is therefore a main means of travel for my constituents. They have a natural concern about safety issues, over and above the normal human feeling that we all felt on the night of that dreadful tragedy.

I join virtually every hon. Member who has spoken in congratulating those who produced the Fennell report. This must be one of the rare occasions when we have produced an unusual animal—a popular barrister. However, the praise that has been heaped on Mr. Fennell has been well deserved.

My right hon. Friend the Secretary of State has rightly instructed the new chairman of LRT to give top priority to implementing the new safety measures and again that will be welcomed by all hon. Members. The sum of £266 million may trip off the tongue and has been much quoted, but it is a big sum to be given over the next three years and is ample evidence that safety is a top priority.

First, I want to put a small point to my hon. Friend the Minister for Public Transport. Although I have put it to him previously, this is a good opportunity to repeat it. Several hon. Members who have spoken today—and many others—represent areas that are not in Greater London. Hon. Members who represent Greater London know that rates bills have recently leapt up considerably as a result of the LRT charge, the main element of which related to the improved safety measures. I have no complaint about the improved safety measures nor, I judge, has a single one of my constituents. However, it seems a little perverse to expect the full cost to fall on the residents of the London boroughs and none of it on, say, the people of Epping Forest, Chelmsford or many parts of Hertfordshire, or those who are just visiting London. In addition, as many tourists visit London, the Underground must be regarded as a national rather than a uniquely local system. Therefore, I ask my hon. Friend again to review the spread of the percentages.

The second thing that I want to stress is the whole question of public safety information. Hon. Members will know of my long attachment to the need of promoting access to information both in local government—I refer to the Local Government (Access to Information) Act 1985, which I introduced—and in a whole range of areas, relating especially to safety. Paragraph 21 of chapter 19 of the Fennell report is worth quoting. It states:

> "I view with dismay the suggestion that information gained by a statutory authority which has a bearing on the safety of the public using a system for mass transportation should not be made publicly available. The travelling public have a right to know about the safety arrangements made by transport operators and the safety of places in which they habitually gather."

I emphasise those points because over the years when I have pressed for greater access to information, I have been told, "The public won't know", or "The public won't care", or even, "If you give them that information, they may be alarmed." However, if we want the public to be better educated and to have, for example, a better means of measuring risk, we cannot deny them the means by which they will be better educated. We cannot cosset them and say at the same time that we expect them to be answerable for their decisions because they have no way of being able to know the facts if the facts are suppressed and kept from them.

I take issue briefly with some of the comments made by the hon. Member for Kingston upon Hull, East (Mr. Prescott) who spoke from the Opposition Front Bench. On more than one occasion recently he has said—this was echoed by his hon. Friend the Member for Newham, South (Mr. Spearing)—that there is an exact equation between becoming more efficient and cost effective on the one hand, and cutting safety on the other. There must be no such equation, and in a well-run organisation there will not be one. It is akin to saying that it is impossible to run a profitable manufacturing company if one has to take account of environmental controls. One must take account of environmental controls and doing so is an essential payment for that business, just like heat and light, or

wages. It would be extraordinary if we became hooked on the belief that it is wrong to be cost-effective and to seek to make large undertakings more efficient because along the way they would ditch safety because, particularly in a transport undertaking, safety is a sine qua non of the operation.

I have two main concerns for my constituents and both impinge on safety issues. The first has already been touched on—the existing congestion. We must increase the number of trains and carriages and lengthen the platforms. Perhaps there could be new lines, but above all we need cleaner trains and stations. We want an Underground system to be proud of. We want one that attracts people to travel on it rather than making them feel that they are going through some sort of mangle twice a day just to go about their ordinary work.

My second concern relates to the safety of the individual. Because of its length it is difficult to read the report in detail, but I am appalled when I hear that surveys of travellers have shown a high fear of travelling on trains and on the Underground, especially at night and especially among women. I am not surprised by that, but I find it appalling. It is an unacceptable fear and, in passing, I should add that, financially, it is a silly position to be in. It may well be that people's perceptions do not represent the true position. People tend to exaggerate fear and the true danger that they face may be less, but it is the perception that matters because that is the factor that determines the way in which people do or do not travel. I should like the Underground to do much more in the next few years to increase protection for the traveller. I welcome unreservedly the investment in machinery and in mechanical means, such as personal radios, which have been mentioned. However, we must tackle the ghastly situation which deters women in particular from travelling on our great rail network late at night.

In conclusion—I promised to be brief—I believe that safety was not given sufficient prominence under the previous London Underground management and that that clearly contributed to the King's Cross tragedy. Most of the Fennell report recommendations have already been accepted and are already being implemented to the broad approval of hon. Members of all parties. However, as the report makes clear, it is a gross calumny to suggest that the accident was caused by a shortage of Government funds. It was caused by an excess of bad management.

8.47 pm

Mr. Menzies Campbell (Fife, North-East): The fact that the debate has been dominated so far by hon. Members representing London constituencies should not be allowed to obscure the importance of the accident at King's Cross as being of national rather than simply metropolitan significance. The transport system of the capital city must be safe, not only for its residents but for citizens of the whole kingdom. That is especially the case for a main line railway station that serves the whole of the north and the east of the United Kingdom. Indeed, it is possible to travel direct to King's Cross from my constituency.

In this most lucid report, Mr. Fennell, who does not seem to have been regarded with the same enthusiasm for his remarks as leader of the Bar in response to the Lord Chancellor's Green Paper, expressly said that he was not engaged in a prosecution. However, in effect, he handed down an indictment and had I been prosecuting on that indictment I would not have expected the jury to leave the court before returning a verdict.

In my judgment, the single most important sentence of the report is in paragraph 14 of chapter 1, where Mr. Fennell states:

"it is my view that a disaster was foreseeable."

Foreseeability is a test of negligence and if the events were foreseeable, the absence of steps to prevent them was clearly negligent. When the hon. Member for Erith and Crayford (Mr. Evennett) said that, although a disaster was foreseeable, the scale of the disaster was not foreseeable, he seemed unconsciously perhaps to make precisely the point that ought to be made about the report and about the attitude of London Underground. If the scale of a disaster is not foreseeable, that is all the more reason for taking steps to prevent any accident occurring. The notable feature of what Mr. Fennell found was that London Underground took precautions about outbreaks of fire but did not seem to have a philosophy that compelled it to take steps to prevent fire.

The truth is that the accident could have occurred on many previous occasions and could have caused the deaths of many more people. Why is that? Because London Underground took the view that fires were inevitable and did not take steps to prevent them. As Mr. Fennell found, London Underground had a blind spot about the hazard of fire on escalators. He also found that no one person was charged with overall responsibility for safety. For example, the director of operations and the director of engineering each thought that he was responsible for safety in his own division, but principally for the safety of his own staff.

The accident could have occurred before because specialist safety staff were in junior positions and were concerned with the safety of staff and not passengers. It could have occurred before because there was no system to train staff in fire drill or evacuation procedures. Of course, in London Underground, prior to the events with which the report is concerned, fires were described by the somewhat disingenuous euphemism of "smouldering". It was accepted that describing them in that way inevitably created a false sense of security. All of those defects were exhibited on the occasion of the tragic fire with which we have been concerned, when the response of the staff was described by Mr. Fennell as unco-ordinated, haphazard and untrained.

The purpose of the debate is to consider wherein lay the responsibility for those matters. If money was not a bar to putting into effect appropriate safety procedures, it makes all the more acute the negligence that gave rise to the accident that caused the deaths. Under the London Regional Transport Act 1984 responsibility for safety was laid on LRT. It believed that it could discharge that responsibility by delegating it to London Underground —an action of which Mr. Fennell expressly disapproved.

We are also entitled to ask, what of the Department of Transport and its Ministers? In the letter of 20 July 1984, to which reference has been made several times in the debate, four tasks were laid upon LRT in relation to Underground services—to improve the services, to reduce costs, to involve the private sector and to promote better management—but no mention was made of safety anywhere within the four corners of that letter. If safety is paramount now, why was it not paramount then?

[Mr. Menzies Campbell]

The performance of those tasks must have been monitored by officials of the Department of Transport and also by Ministers. Why did no one ask about safety? Why did no one ask whether those tasks could be accomplished without prejudicing safety? One is entitled to ask what consideration the Department of Transport, through its Ministers or its officials, gave to the safety of the oldest Underground system in the world. If they gave none, in the light of the palpable and obvious defects which Mr. Fennell recites in his report, why did they not give consideration to those issues? If the negligence is as obvious as has been rehearsed in the report, why was it not brought to the attention of Ministers? Why did Ministers not seek out information of that kind for themselves?

It would be churlish to do other than welcome all the improvements that have taken place and that are proposed. But I ask myself again, if these improvements are now so obvious, why were they not obvious before the accident? Mr. Fennell has provided the answer to that question. He said that the accident was foreseeable. The disaster was foreseeable by London Underground, by London Regional Transport, by the Department of Transport and also by Ministers. On the occasion of this solemn debate the House is entitled to ask itself whether Ministers truly discharged the duties which their office laid upon them.

8.54 pm

Mr. Hugo Summerson (Walthamstow): I must first apologise to the House for not being here at the beginning of the debate. Two constituents had appointments to see me.

I want to concentrate on the workings of the Victoria line, which runs through King's Cross and also serves my constituency. Indeed, the last two stations at the northern end of the line—Blackhorse Road and Walthamstow Central—lie in my constituency. When the line was built 20 years ago, it was supposed to be fully automatic, fast and efficient, giving an excellent service from one end to the other. I am sorry to have to say that it no longer provides that fast and efficient service. A sizeable proportion of my postbag from constituents is composed of complaints about the Victoria line.

London Regional Transport is doing its best to maintain the escalators. However, the escalators at both stations in my constituency have been out of action for a considerable time. When I visited the constituency the other day, I was horrified to find that both escalators at Walthamstow Central were out of action. One was even denied the pleasure of trying to run up the downward escalator. If escalators are not working, it has implications for safety. When people have to carry heavy shopping, children and pushchairs down the stairs, there is obviously capacity for trouble. It only needs a toddler to trip on the top step and there may be disaster.

I have had several meetings with officials from London Underground. I have said to them, "Why not be sensible? If an escalator is out of action, you should put up a notice to say why it is out of action and how long it will be before it is fixed." They said, "What a good idea." The next time I went to my constituency they had indeed erected a sign. It said, "This escalator will be back in action on 28 January." It was not. They put up another sign saying, "This escalator will be back in action on 3 February." It was not. The following day the notice disappeared completely. I wish that someone would drive the lesson home to London Underground that if it is going to go through exercises in public relations, it has to get them right; otherwise the public will be cynical, and say, "All their efforts are in vain. Why don't they get on and fix the escalator"?

Overcrowding has been mentioned several times. Overcrowding is highly dangerous. Anyone who uses the tube as much as I do for my journeys to and from Walthamstow Central has to use Victoria station. There is no option; one has to change there to get on to the Victoria line. On one occasion both escalators were out of action and the overcrowding had to be seen to be believed. With the press of people on the platform and trains discharging more all the time, the passengers could not get out of the station. Overcrowding is mentioned in the report. The management of London Underground has not addressed that problem sufficiently.

One more thing about the Victoria line got my goat the other day. I received a press release saying that London Underground was putting one more train on the Victoria line. I read it and said to myself, "Wow, one more train on the Victoria line, great stuff." It also said, "We will no longer be stopping at King's Cross." The usual euphemism is "change" or something similar. In other words, it kicks the passengers off and makes them wait for the next northbound train. It said that that would no longer happen and I thought to myself, "What a good thing." However—the House will not believe it—on my next southbound journey, the driver came on the intercom and said, "Everybody out at Warren Street". I have lived in London for 10 years and never in my experience has a train going southbound on the Victoria line stopped and kicked out the passengers at Warren Street. Clearly, LRT has said, "We will not kick them out at King's Cross, but we will get our own back and kick them out at Warren Street instead".

The state of the Central line is a disgrace. It is the most appalling line. I always try to avoid it if I can. I would much rather use the District line. Sometimes, however, I must use the Central line. I hear the trains arrive with that characteristic iron rattle. They are covered with graffiti on the outside and on the inside. All the people on the inside seem to look revolting as well. I am not sure whether they take on the characteristics of the train in which they are travelling. On one occasion I saw a couple of yobs smoking in the carriage. I thought of saying to them, "You should not be smoking. It is dangerous." Then I had another look at them and thought to myself that I still have all my own teeth so I would not take the chance.

What we need is more staff on the trains to look after the passengers. We do not need the staff sitting in those little boxes collecting tickets, looking thoroughly bored and not caring a damn if someone puts down 20p and makes a bolt for the exit. Staff should be on the trains looking after the passengers, and that, I fear, is where London Underground management is going wrong.

I know that one more hon. Member wishes to speak. I believe that he has been in his place since the start of the debate, so I will sit down at this point and give the hon. Member for Brent, South (Mr. Boateng) the opportunity to play his Brent harp.

9.3 pm

Mr. Paul Boateng (Brent, South): The hon. Member for Walthamstow (Mr. Summerson) missed the opening remarks of the Secretary of State. We have heard the hon. Gentleman's explanation as to why he was not here, and, of course, one accepts them wholeheartedly. I assure him, however, that he did not miss much, because there was nothing new in what the Secretary of State said and still less anything memorable. However, there were some new buzz words, which will last in our memories, if not in fact, for some time. Those words were "safety culture". Of course, the old buzz words were also about culture, about the "enterprise culture". We are debating a report that came out of events which took place sadly and tragically when the enterprise culture had the Underground system in its grip. Of course, in the enterprise culture public ownership is bad, and, if possible, public investment is to be avoided, and public regulation is to be minimised. Those are the characteristics of the enterprise culture.

Second to the enterprise culture—an afterthought coming out of this tragic incident—we have the concept of the safety culture. Our concern is that the safety culture should not be subordinated to the enterprise culture. If there is one thing that we have learnt from these tragic events, it is the deadly danger of subordinating safety to enterprise. In a Socialist definition of enterprise, safety and concern for the environment go hand in hand with efficiency and growth. I say to the hon. Member for Spelthorne (Mr. Wilshire) that the Opposition make no apology for talking about the importance of safety and putting that first, because without safety there is nothing.

If the new buzz words "safety culture" are to mean anything, we would say that they must be based on two critical matters, both of which were highlighted in Mr. Fennell's laudable report. The first, importantly, is the encouragement of workers and management at every level to be involved in and committed to the safety process. The second is information. Information should be made available to the workers, to middle and lower management and to staff at every level within the enterprise of London Underground, but, above all and importantly, information should be made available to the general public. Without that information, there is no way in which safety can be monitored and preserved in the interests of safety first.

We want from Ministers tonight a clear indication that they accept those two basic principles. If they do not, and if they hedge around, those words "safety culture" will be no more than words in the mouth of a Minister under attack and fighting for his political career. We want more than that.

I am afraid that there are indications at this time that the lessons have not been learnt by London Underground. I want to raise one specific matter that is vital not only to the Underground system but, I believe, to the welfare of my constituents. It relates to a matter that is directly of concern to them and to me as users of Alperton station. We are reminded of what Mr. Fennell said about the travelling public's right to know about safety arrangements made by transport operators and of the importance of them knowing about the safety of places in which they habitually gather. One would have thought that that lesson would have been learnt. However, lo and behold, there is now in existence traffic circular No. 11, which was published by London Underground on 20 March. That is London Underground under new management which we have been told has been cleansed and adheres to the lessons of Fennell.

What does that traffic circular say and how, more importantly, is it prefaced? It is prefaced with these words: "PRIVATE: not for publication". No safety document produced by London Regional Transport should ever again be prefaced by those words. Nothing about safety in the Underground should ever be outside the public domain. Unless the Ministers can assure us that there never will be again anything about safety in London's Underground that is outside the public domain, all they have said counts for nothing.

The circular gives details of the arrangements for the inspection of escalators for fire and smoke. Paragraph E12 says:

> "The escalators shown below must be inspected every two hours for signs of fire or smoke. This is because they do not meet a necessary standard of cleanliness."

I see that the Minister is looking perturbed, as well he might. He should give us an undertaking that he will publish that traffic circular and lay it in the Library of the House, because we are entitled to know what it says.

Having listed those escalators that have to be inspected every two hours because they do not meet the necessary standard of cleanliness, the circular gives an even longer list of other Underground stations where the escalators or lifts are either completely out of operation or have had to be reduced because of safety and because of the failure of those stations to comply with the necessary safety standards. After the publication of the Fennell report and these tragic events, why are such circulars still published?

The circular gives another list of stations that have no escalators at all, and that list contains Alperton station on the Piccadilly line in my constituency. I used the escalator in the station just a few days ago, and on numerous occasions I have raised safety issues about its operation. But apparently Alperton station does not have an escalator. For years I and tens of thousands of my constituents have been travelling steadily up towards the platform on something that does not exist. According to traffic circular No. 11 of 20 March, which is private and not for publication, that escalator has no substance. We want answers about why such a document was produced. Either I and thousands of my constituents have been under an illusion about that escalator all these years, or Ministers are under an illusion tonight.

9.11 pm

Ms. Joan Ruddock (Lewisham, Deptford): With a few notable exceptions, the debate has been conducted in the serious and responsible manner that the House expects for a matter of such personal tragedy and public importance as the fire at the King's Cross Underground station. In winding up for the Opposition, I join the many hon. Members who have expressed sympathy to the bereaved and injured and admiration for the emergency services. We especially commend the bravery of Police Constable Hanson and the bravery and sacrifice of Station Officer Colin Townsley whose family live in my borough of Lewisham. Despite the passage of time, I am conscious of the fact that for survivors and the bereaved alike, life can never be quite the same again. Tragically, many may still relive their torment through having to pursue wholly unnecessary court actions in order to gain the compensation to which they are entitled.

[Ms. Joan Ruddock]

As hon. Members have said, in comparison with other modes of transport London Underground is a very safe system. I concede that that is true, especially when compared with the appalling daily loss of life on our roads. At the heart of our debate is the consciousness, perhaps the consensus, that the tragic loss of life and injury in the King's Cross fire could probably have been prevented. As Mr. Fennell said on page 17 of his report:

"it is important to note that the circumstances in which the fire could develop all arose from the condition of the escalator on that night. Thus it is my view that a disaster was foreseeable."

By delaying the debate on the Fennell report, the Government put themselves in a position whereby the Secretary of State was able to come to the House today with a list of the many positive steps taken by London Regional Transport and London Underground Ltd. We do not complain about that. We are delighted that progress has been made, but it would have been quite wrong for that satisfaction to deflect us from a critical evaluation of the report's findings and from the wider issues arising from the tragedy itself.

Anyone who has read the report cannot but be appalled at the complacency of management about the occurrence of fires in the Underground system and the unpreparedness of staff at all levels in the face of an emergency such as that which occurred on 18 November 1987. Today the Secretary of State reminded us of the age and complexity of the London Underground system, 80 per cent. of which is more than 70 years old. It has 260 miles of track and 130 underground stations. Of course those facts are not new. They were well known to the Government when they decided to assume responsibility for the underground system through the creation in 1984 of London Regional Transport.

The Secretary of State's letter of 20 July to the chairman of London Regional Transport, to which a number of my hon. Friends, including my hon. Friend the Member for Holborn and St. Pancras (Mr. Dobson) who made an outstanding contribution, referred, shows a total lack of concern for the safety problems that might arise in a system of that age and complexity and in which passenger demand was already growing. I shall re-emphasise what my colleagues said about the contents of the letter. Improvements were to be made within the resources available. Costs and the call on ratepayers' and taxpayers' money were to be reduced and services were to be privatised. It is quite clear from the Fennell report that at the highest level in London Regional Transport and London Underground Ltd. those objectives were vigorously pursued.

At that highest level was Dr. Tony Ridley, the chairman and chief executive of London Underground. In evidence to the inquiry he described how he set about changing not just the structure but the culture of London Underground when he took over in 1980. Whatever Dr. Ridley's laudable aims might have been at the outset, it seems highly improbable that his objectives were not influenced by Government attitudes from 1984 onwards.

My hon. Friend the Member for Kingston upon Hull, East (Mr. Prescott) was right to talk about a financial climate influencing decision-making relevant to safety. Ministers' attitudes to the financing of London Underground have been paraded annually in the House during debates on London ratepayers' contributions. I remind the House that two thirds of the £286·6 million grant to LRT this year will come from London's ratepayers. In the debates on the ratepayers' levy in 1985, 1986 and 1987 the matter of safety did not once pass the lips of Ministers. They were preoccupied with efficiency, unit costs and savings. In 1986 the hon. Member for Hampshire, North-West (Sir D. Mitchell) said that LRT's aim was

"to secure better services and an improved passenger environment . . . by reducing costs in all areas. Cost-cutting is the key to LRT's success."—[*Official Report*, 28 January, 1986; Vol. 90, c. 902.]

Even more astonishing is the letter sent to London Members just two weeks after the King's Cross fire. In that letter the Minister of State boasted again of the reducing burden on London's ratepayers brought about by cost reduction. He produced figures to show that public subsidy was to be reduced year by year. The significance of all that lies in the style and priorities of management that were created by that financial climate. Nothing in the Fennell report contradicts that hypothesis.

I shall now deal with the escalator evidence about which my hon. Friends have spoken. Mr. Styles, the lift and escalator engineer, told the inquiry that staff were much occupied between 1985 and 1986 in getting the new management system running in preparation for competitive tendering. He acknowledged that he did not succeed in monitoring escalator cleaning standards to his satisfaction and that he did not have enough staff to do so. The maintenance manager said that the organisational changes had the effect of delaying improvements in the arrangements for escalator cleaning. We cannot dismiss, as Conservative Members would have us do, the importance of those statements, because Mr. Fennell found that the condition of the escalators made the tragedy possible. Even so, to anyone who has not read appendix J of the report or heard the speeches of my hon. Friends, it might appear that only through the tragedy of the King's Cross fire have we been able to learn lessons about the escalators. As the Secretary of State knows all too well, that is not so.

Mr. Fennell refers to 46 serious escalator fires on the Underground, and in 32 of them the cause was established or attributed to smokers' materials. But did LRT learn the lesson? Unhappily, it did not. Appendix J shows how devastating its complacency was and how ineffective the inspectorate was in changing London Underground's priorities. The Minister will need to be extremely determined if he is to ensure that there is, as he promises, a lasting change in attitudes in London Underground.

The House should take note of the analysis of six escalator fires which occurred between the major Oxford Circus fire of November 1984 and the King's Cross fire of November 1987. In one case after another, smokers' materials and accumulated rubbish and/or wooden panels were implicated. Time and again, similar recommendations were made about better cleaning of escalators, replacing wood, use of water fog and alerting the fire brigade.

What does the Minister think were the preoccupations of management that they failed to heed those findings? How does he explain the fact that the internal inquiry which followed a serious escalator fire at Green Park in June 1987 found the same probable causes—a discarded

cigarette end or match—and made the same recommendations as were made when fire broke out on the same escalator two years previously?

Mr. Fennell said, and Conservative Members have repeated today, that he found no evidence that reduction in operating or maintenance staff contributed directly to the disaster. Furthermore, he judged, there was no evidence that the overall level of subsidy was inadequate. As we know, he chose not to take all that evidence. But he questioned the priorities of how the available resources were allocated, and it remains our contention that the cost-cutting priorities of the Government conditioned the management ethos of London Underground Ltd.

How else can anyone explain why, when serious escalator fires occurred year after year since LRT's inception, and internal inquiries recommended obvious but costly changes, the escalator manager should say that he did not press for changes because he felt that there was only "a thin chance" of them being authorised? Why, when one inquiry after another implicated smoking materials and waste in escalator fires and recommended better cleaning, does the Minister think the cleaning establishment was reduced? Was it not just to save money, regardless of the consequences? And why, within an aging system carrying unprecedented numbers of passengers, should there have been an underspend of £1·4 million in the lift and escalator department in 1987-88?

Mr. Fennell's report concludes that management complacency towards fires resulted in lack of action. We cannot contest that, but neither can the Secretary of State escape his responsibilities. Why did he not ask just how was so much money being saved?

That brings me to further consideration of the balance of responsibilities between the chairman of LRT, Sir Keith Bright, and the chairman and chief executive of London Underground, Dr. Tony Ridley. As the House will recall, both men resigned on the eve of the publication of the Fennell report. It later transpired, however, that Dr. Ridley for some months after his resignation—until he took up his new post at Eurotunnel—continued to use his executive facilities at London Underground Ltd. Furthermore, in a recent settlement, he received £30,000 and protected pension rights.

I can only deduce from those facts that Dr. Ridley's contract with London Underground Ltd., which provided for such perks, was honoured. That begs the question whether the Secretary of State considered Dr. Ridley to be in breach of his contract. It strongly suggests that he did not. Will the Minister now say whether he accepts that his Department's cost-cutting priorities affected Dr. Ridley's prime duty to run a safe railway? That question must be answered. Who was really responsible?

I come to the question of the implementation of the recommendations of the Fennell report. The Secretary of State welcomed the setting up by London Underground of the safety audit, and we join wholeheartedly with him in that welcome. But as my hon. Friend the Member for Newham, North-West (Mr. Banks) said, Mr. Fennell called for more. He suggested that further consideration should be given to a review of the railway inspectorate. He suggested that perhaps it should become part of a passenger safety inspectorate.

What is the Minister's attitude to that? Does he favour such a proposal, or is it still his view that, despite all that has happened, his Department should continue to be responsible for the railway inspectorate? If it is, what changes does he expect to bring about in the inspectorate to ensure that there is a change of attitude and that never again will that cosy relationship exist between the inspectorate and part of the service that it is supposed to inspect?

Nobody will be satisfied by the attitude that was expressed in the letter, so much quoted today, of the chief inspector to the chief officer of London fire brigade. As that letter has not been read in full, I will quote from it. In the letter, which was with reference to Heathrow central station and its pedestrian subways, the chief inspector wrote:

"You may or may not be correct in your legal assertions"—

dealing with the question of certification for the station—

"and certainly, not to put too fine a point on it, there are those who believe that your definition of 'building structure' etcetera is hardly applicable to a concrete hole in the ground."

That is the kind of attitude that we cannot accept from an inspectorate that is responsible for public safety within the Underground system.

It will be clear to the Minister from the contributions of my hon. Friends that there is still much cause for concern. In the financial year just ended—the figures have been provided by London Underground—there were 4,038 reported fires on London Underground. Of those, 135, or more than two a week, were on escalators, and 36 of those escalator fires were serious enough to have to be put out by the London fire brigade.

The travelling public rightly considers that this is a situation in which real hazards exist. Many feel a deep sense of unease, if not fear, whenever trains stop inexplicably in tunnels or smoke can be smelled at stations. Opposition Members remain deeply concerned about the many changes being brought about by London Underground against this background of perceived and real risk.

A number of my hon. Friends have referred to the Underground ticketing system and the intense level of public concern about safety in relation to the gates. Our confidence was not much boosted when we received the Minister's letter telling us about the possible failure of the emergency system about which previously he had given us much reassurance.

The Minister had been asked repeatedly if all the ticket gates would automatically be opened in the event of a power failure. He said in good faith that that was his understanding. We were reassured then, although we still had objections about the gates. However, in another letter he wrote:

"LUL tell me that a circumstance has come to light in which this might not happen."

On receiving that letter I assumed that someone who was currently reviewing the system had worked out from some first principles of physics that that might occur. It was extraordinary therefore to find that the Minister was not telling us about a theoretical possibility, but about something that really happened.

Mr. Hanley: In the circumstances that the hon. Lady has just described about the gates not being opened, will she admit that one in three of the gates at most might not be able to be opened? Does she accept that there is a full implementation programme to ensure that those gates are fully repaired over the next three months and that there are numerous safety devices to ensure that all gates can be opened by alternative means should the need arise?

Ms. Ruddock: The public will not be reassured by the hon. Gentleman's comments. The prospect of three out of every 10 gates not opening in an emergency is horrifying. Although the hon. Gentleman referred to alternative provisions, he must be reminded that the only alternative is for a human being to be present to observe the situation and to deal with it. Much of our criticism has been aimed at staff cuts and the lack of transport staff eyes and ears to identify a difficult situation.

Mr. Harry Ewing (Falkirk, East): To reinforce my hon. Friend's point, is she aware that this morning at the Barbican station—a station at which the gates have been in operation for only three weeks—three of the gates were inoperable? The staff were busily trying to direct passengers who were arriving from trains through one gate and passengers arriving to catch trains through another. That caused absolute chaos. Those gates are simply very dangerous in an emergency.

Ms. Ruddock: Many passengers travelling on LRT today will have experienced similar difficulties.

I am sure that the Minister is as aware as I am that the fire brigade believes that section 12 of the Fire Precautions Act 1971 is but a stop-gap measure. The fire brigade is looking forward to full certification. Will there be full certification? Will it cover all the stations in the London Underground system? If that means that there will be greater costs for any changes which must be made, will the Government guarantee that the money will be available?

The Minister must acknowledge that urgent action is required because of the way in which the fire brigade could predict these tragic events. Is the Minister satisfied about co-operation and progress with his right hon. Friend the Home Secretary, given that a special working party set up in 1985 to consider fires underground did not meet until a few weeks before the 1987 tragedy? Can he assure us that no fire fighter will now be sent to an underground fire with plastic over-trousers or the PVC gloves which melted so horribly at King's Cross? What progress is being made with the provision of new breathing sets, given that the heat and stress at King's Cross caused fire fighters to exhaust their air supplies in 17 minutes instead of the planned 36 to 40 minutes? Will he now instruct London Underground to hold exercises involving the public, the fire brigade and London Underground itself so that we can be certain that if another emergency occurs the public is fully aware of how best to behave?

It is a measure of both the previous extraordinary state of neglect and complacency about safety within the Underground system and the thoroughness of Mr. Fennell's report that so many recommendations for action should have been placed before the Secretary of State. There will be relief in many quarters that much is being done. However, there will also be horror and anger that repeated warnings, inquiries and recommendations of the kind which have now been accepted were so blatantly ignored for so many years.

The London Underground system is a vital and intrinsic part of the life of this capital city. It is crucial to our economic life and for the social and recreational lives of millions of our citizens. Despite the additional Government and ratepayers' money being applied to implement the recommendations, the Government are still intent upon imposing their reckless ideology on LRT.

My hon. Friend the Member for Islington, South and Finsbury (Mr. Smith) showed how passenger revenues have not made up for the loss of subsidy. The cost is there to be seen by all. Staff cuts are taking guards off trains and people off stations. Those changes will continue to have safety implications, especially given the alarming number of reported fires still occurring in the system. The public have the right to know, and the Secretary of State must ensure from now on that there is no limit on the freedom of information in matters of public safety.

The lessons of the Fennell inquiry are far-reaching for London Underground, but they have wider implications too. We have 38 km of rail tunnel currently being dug under the Channel and British Rail plans to tunnel 19 km under London to secure a new rail link to the coast. Tens of millions more people are to entrust their lives to such systems, and, if British Rail has its way, millions more will be delivered to King's Cross.

The public demand and have the right to expect that safety is the priority of those who provide our public transportation systems now and in the future, and that financial considerations do not stand in their way. I commend the Opposition's amendment to the House.

9.35 pm

The Minister for Public Transport (Mr. Michael Portillo): I begin by picking up a point made by the hon. Member for Holborn and St. Pancras (Mr. Dobson) whose constituency interest was most closely touched by what happened on that night. He referred to reading the Fennell report and finding it a moving document. I concur with him fully in that. He talked about the heroism of the people whose acts that night are depicted in the report and he referred to the number of people who said that they were merely doing their job.

The only matter on which I would go one stage further than the hon. Gentleman is in mentioning also those members of the public who were not doing their job that night but who simply came to the aid of the victims—their fellow citizens. I think of one in particular whom I had the honour to meet, Mr. Palmer, who played a heroic role that night. I felt privileged and humbled to meet those people who conducted themselves so bravely that night.

There have been many interventions during the debate from hon. Members from the south-east, and London in particular, who felt on that evening the chill that was so well expressed by the hon. Member for Hackney, North and Stoke Newington (Ms. Abbott) when she said that there but for the grace of God could have gone any of us.

We have heard many interventions, best put by my hon. Friend the Member for Harrow, West (Mr. Hughes), welcoming Mr. Fennell's report as being so comprehensive. It is in no way sparing in its analysis of the events of that night. Nor is it sparing of criticism where Mr. Fennell believes that to be deserved.

The hon. Member for Kingston upon Hull, East (Mr. Prescott), speaking for the Opposition, to some extent began to struggle with what the Fennell report did not say. In much of what he said, and in the Opposition's amendment to the Government's motion, he was concerned with what he says Mr. Fennell found to be ultra vires. My understanding of the report is that Mr. Fennell did not want his investigation to be side-tracked into a full-blown inquiry into London Underground finance.

That he ruled to be ultra vires. But he was interested in everything that he thought was relevant to the fire. He said:

"I went on to make it clear that I would allow proper questions directed to the underlying philosophy of the management towards safety and how decisions were made, together with the basis upon which they were made, insofar as they related to what happened in the disaster."

I take this to include the financial basis; and indeed that is implicit in the fact that Mr. Fennell considered evidence on finance from LRT and LUL, indeed reproduced much of it in the report, and felt able to conclude that there was no evidence that subsidy was too low, and that there had been a tendency for London Underground to underspend its budget. On that basis, Mr. Fennell heard evidence on financing which is presented in his report in chapter 19 on page 149. That evidence showed that from 1984-85 to 1987-88 the Underground had more subsidy available to it than it spent, and that over the same period investment expenditure increased by about half in real terms.

The hon. Member for Kingston upon Hull, East was also at pains to talk about the culture within London Underground that militated, as he thought, against requests for further investment. I refer him to page 149 of the report, where Mr. Fennell says:

"I accept the evidence of the most senior management in London Regional Transport and London Underground that if funds were needed, funds were available."

The hon. Gentleman was also concerned about cuts in staff. Again, I refer to what Mr. Fennell said, as opposed to what he did not say, on page 152:

"I found no evidence that the reduction in the number of operating or maintenance staff contributed directly to the disaster at King's Cross . . . In my view the issue is not purely the number of staff in stations but rather the need to establish a proper level of safety at each station which can then be met by the provision of either automated aids or the proper disposition of staff."

That is an important point.

The hon. Gentleman and several others have referred to the important issue of fire certification. Mr. Fennell found that there was ambiguity about this and that it should be cleared up. The Government will clear it up by applying regulations under section 12 of the Fire Precautions Act 1971 to Underground railway stations. It is quite clear from the clarification that we have made that an Underground railway station would be required to be certified unless section 12 regulations applied to it. The section 12 regulations will specify the facilities, precautions and practices that are necessary at Underground railway stations.

The hon. Member for Lewisham, Deptford (Ms. Ruddock) asked me whether we envisage certification in the longer term. That is a possibility. Important research should be conducted to determine whether it is appropriate. It will hinge particularly on the control of smoke in Underground stations, which is a complex matter and different from the control of smoke in buildings above ground, for instance. Depending on the outcome of that research we may decide to continue section 12 regulations, or conclude that certification is required in the longer term. In either case, matters to do with the control of fire in Underground railway stations which may have been ambiguous until now will be put beyond any shadow of doubt.

A number of points were made about the criticisms which have been made of the railway inspectorate. I know that every hon. Member has read the Fennell report, in which the criticisms of the railway inspectorate are plain to see. It stands accused of too cosy a relationship with London Underground. There were too few inspectors. It is pointed out that they misunderstood the breadth of their responsibilities under the health and safety at work legislation, which was held by Mr. Fennell to extend to passenger safety. All those points have been accepted and my right hon. Friend has described the means by which the railway inspectorate is being brought up to strength.

Let us be clear that none of these things removes the central point that the responsibility for the safety of an operation must lie with the operator. No matter how active or commendable the railway inspectorate may be, that will always remain the case.

A number of hon. Members wanted to know how the Government will respond to the recommendation about the future of the railway inspectorate that Fennell put forward for consideration. I accept that there is a need for a fresh look at the arrangements for the railway inspectorate. The Government are undertaking a review to determine whether further changes are necessary in the interests of effectiveness across all the functions performed by the inspectorate, and we shall announce our conclusions in due course.

Mr. Prescott: I have read the latest review, established, I think, in 1987. The Minister makes it clear in recommendations to the House that he is not prepared to consider the separation of the inspectorate from the Department, although I believe that there is a conflict of interests. Is that ruled out in the review that the Minister has just mentioned?

Mr. Portillo: No. Nothing is ruled out. We approach the matter with an entirely open mind.

There has been considerable debate about the words that appeared in the London Regional Transport Act 1984, which required the management to be responsible and to

"have regard to . . . economy, efficiency and safety".

Those words have a long pedigree. The Transport Act 1947 imposed a duty on the British Transport Commission in similar terms, although the wording was not precisely the same, and the Transport Act 1962 and the London Transport Act 1969 contain the same words in the same order.

I do not believe that at any time the order of those three words was considered to imply that safety should come last. I think that the way in which the words were put together derived from the understanding that an efficiently organised railway would be run economically, efficiently and safely. It is difficult to imagine a railway being run safely without also being well managed. The dichotomy proposed by Opposition Members between efficiency and safety strikes me as false: it has been recognised by legislators and parliamentary draftsmen for many years that safety, economy and efficiency go hand in hand.

Mr. Spearing: Surely economy and safety do not necessarily go together. Costs could be cut in various ways, which I shall not explain to the Minister, and many measures that were more economical could well be less safe. Safety might be prejudiced by a combination of events hitherto unforeseen. That, surely, is the essence of today's debate.

Mr. Portillo: The hon. Gentleman is a thoughful person; he must not try to parody my argument. I am

[Mr. Portillo]

saying that a management that does not have systems to enable it to control its finances is not a management that I would greatly trust to control its safety. Management systems are required for both functions, and legislation has put them together over the years.

Mr. Dobson: I think that we all accept that a management that was generally efficient would be likely to be efficient in discharging its safety functions, but is not one of the problems that, under pressure from Ministers, LRT experienced a conflict between efficiency and safety? That is why the draft of the business plan for LRT last year, after the King's Cross fire—which came into my possession—contained words to the effect that LRT would not be able to make as many efficient savings because it was having to spend money on safety.

Mr. Portillo: Hon. Members must read the Fennell report and reach their own conclusions, but I believe that many of the advances made in efficiency did not compromise safety. Increased revenue, achieved through the elimination of inefficiency practices, enabled the railway—at a time when it was running many more passenger miles than ever before—to make substantial advances which did not prejudice safety.

Hon. Members have often referred to the letter from my right hon. Friend the then Secretary of State for Transport to Dr. Bright in 1984. It refers to the 1984 Act, which contains those three ingredients. My right hon. Friend was also at considerable pains to refer to

"a programme of investment to modernise the public transport systems",

to

"a steady programme to improve facilities for passengers, including interchanges"

and to better management—which, as I have said, is intimately related to safety.

Since the Fennell report has been published, London Underground has responded to it and has been reporting to my right hon. Friend the Secretary of State, on some occasions through me, on its progress in implementing the Fennell recommendations. The document produced by London Underground in response to the 157 recommendations is remarkable and on the whole has been extremely well received. It is a painstaking review of procedures, structures, organisation and training to which the hon. Member for Woolwich (Mr. Cartwright) referred.

London Underground has accepted the vast majority of the recommendations and is close to schedule on the major projects, although it admits to some slippage on some of its response to the 157 recommendations. The management of London Underground has a tremendous task before it in terms of the capital re-equipment of stations —for example, to strip down the escalators and remove the wooden parts. The public in London sees that happening. My hon. Friend the Member for Walthamstow (Mr. Summerson) painted a graphic picture of the discomfort and disruption that that is causing to passengers. He is right to say that that in itself has safety implications. That is why there is a certain speed at which London Underground can proceed with that vital work. The public in London recognises that the work is being carried out to improve safety.

The £266 million that the Government have allocated for the implementation of the Fennell recommendations has been provided by the Government in accordance with a promise that my right hon. Friend gave that finance would be no barrier to implementation. It was made perfectly clear to the House during the debate on the London Regional Transport. (Levy) Order 1989 that the moneys that were necessary were being raised from the ratepayers of London and the taxpayers of the country. I point out to my hon. Friend the Member for Hornchurch (Mr. Squire) that it is being provided from both sources. My hon. Friend the Member for Epping Forest (Mr. Norris) was right to say that there was no inconsistency at all between providing the £266 million and the Fennell finding that subsidy had not been the problem underlying the King's Cross fire.

There was a tragic blind spot in London Underground in the matter of fire safety. That ignorance was universal, not simply within London Underground. As the Fennell report says, the disaster was foreseeable but the extent of it was unimaginable and the trench effect which we now know about was unknown. The hon. Member for Newham, South (Mr. Spearing) was right to say that it was remarkable that the management had that blind spot, given the dangers of fire underground. But he will appreciate that we all know with 20-20 hindsight very much more than was known at the time.

My hon. Friend the Member for Ealing, Acton (Sir G. Young) was right to say that the lessons of Fennell apply generally to employers throughout the country in various enterprises, and if they were put under the microscope in the way that London Underground has been scrutinised we should not be pleased at what we found.

I understand hon. Members' concern about the Underground ticketing system because its introduction coincides with our new awareness of the risk of fire in Underground stations. We must rely on expert advice and hon. Members are unwise to pick and choose between the expert advice that they like and that which does not fit in with their views. The London fire brigade and the railway inspectorate have repeatedly taken the view that the Underground ticketing system could be installed. Consultants are now considering the operation of that system. My right hon. Friend and I asked London Underground to take that fourth opinion on whether the Underground ticketing system was safe, and London Underground happily accepted our recommendation.

In his amendment to the early-day motion on the Order Paper my hon. Friend the Member for Richmond and Barnes (Mr. Hanley) made a series of very good points referring to the fact that the Underground ticketing system replaces fenced areas and small exits in small numbers in railway stations. Certainly in larger stations the Underground ticketing system offers a considerably larger number of places through which people can pass in an emergency than the fabric which preceded the system.

Mr. Dobson: Will the Minister confirm the statement that the Underground ticketing system was safe or the advice received from the fire brigade, London Regional Transport and the railway inspectorate was received before it was discovered that the system was not failsafe and in certain circumstances failed to danger point? That invalidates any confirmation that has been received from any of the authorities that the Minister has quoted.

Mr. Portillo: The hon. Gentleman may think that he is on to a good point, but he is not. The railway inspectorate

has been back to consider the matter since it was pointed out to me that there was a single phase power failure. The inspectorate noted that not all the gates remain shut but that the majority of them fly open if there is a single phase failure—*[Interruption.]* Hon. Members wish only to knock the inspectorate. The members of the inspectorate are the expert advisers to the Secretary of State. I have no doubt about its expertise in this matter.

In some stations the Underground——

Mr. Dobson *rose*——

Mr. Portillo: I have given way to the hon. Gentleman twice already.

In some stations the Underground ticketing system will release ticket collectors who can give advice and assistance to passengers and look out for problems. After all, a ticket collector has little opportunity to look up from his job of taking tickets to see whether he can give assistance. I am amazed that the Opposition do not want staff to be released from ticket collecting to more interesting and worthwhile jobs where they can give more direct help to passengers. That is what they are enabled to do by the Underground ticketing system.

Mr. Fennell said:

"In my view, the issue is not purely the number of staff in stations but rather the need to establish a proper level of safety at each station which can then be met by the provision of either automated aids or the proper disposition of staff."

LRT staff numbers are now increasing. If the House doubts that, it is reported in the journal of the Transport Salaried Staffs' Association for everybody to see. With the Underground ticketing system and aids such as close circuit television, their effectiveness is increasing. Many of the overseas metro systems which are held up for our admiration by hon. Members use Underground ticketing-system style gates. For example, they are in use in Hong Kong, Singapore, Washington and on the Paris RER.

Mr. Boateng: I asked the Minister specifically whether he would authorise and instruct LRT to publish traffic circulars that related to the issue of safety. Will he do that or will he continue to allow his Department to preside over a situation in which London Transport inspectors are riding up escalators once every two hours because of defective cleaning when, at the same time, cleaners are being laid off? It does not make sense.

Mr. Portillo: I was afraid that when the hon. Gentleman made his speech he was ignorant of LRT's response to the Fennell report. If he looks at the response to recommendation No. 38 he will see set out the position on escalator cleaning which covers the hon. Gentleman's point.

Mr. Cohen: Did not the Minister admit in an answer to the hon. Member for Erith and Crayford (Mr. Evennett) that on any day 18 barrier gates do not open? If the barriers were in every station, 30 gates a day would not open. That is the position while the barriers are new. What will happen when they are old? A much higher number will not open. What confidence can we place on assurances that they will always open in an emergency?

Mr. Portillo: That has been investigated by the London fire brigade and the railway inspectorate. We will shortly have the consultants' report on that. I hope that the report will reassure the hon. Gentleman, but if it does not, action will have to be taken.

The fire on 18 November 1987 was a terrible event and 31 lives were lost. Many others were injured and many hon. Members have referred to the scars that remain for all those who were in any way affected by that event. It was a night of heroic actions and I again pay tribute to Mr. Fennell for the report which enables us to make improvements to safety in the future. He has made a series of recommendations—157 of them—and they have nearly all been accepted. Many of them are now well on the way to being implemented.

The response of London Regional Transport has been remarkable. It was accused of having an unco-ordinated, haphazard and untrained response and it is reacting to that by a series of most important management changes. I am impressed by the determination of the new management to see through the changes necessary. Every person must understand the importance of safety and his or her role within London Underground in fulfilling that. The staff at London Underground are better trained now and more certain of their responsibilities. The priority of safety has been reasserted. Management is giving a clearer lead——

Mr. Derek Foster (Bishop Auckland) *rose in his place and claimed to move,* That the Question be now put.

Question, That the Question be now put, *put and agreed to.*

Question put, That the amendment be made:—

The House divided: Ayes 194, Noes 265.

Question accordingly negatived.

Main Question put and agreed to.

Resolved,

That this House welcomes the thorough and comprehensive report by Mr. Desmond Fennell QC on the investigation into the King's Cross Underground fire; endorses the Government's commitment to invest in the improvement and modernisation of the Underground and its decision to provide £266 m over the next three years for the implementation of the report's recommendations; notes London Regional Transport's constructive response to the report; and looks forward to continuing vigorous action by London Underground to implement its recommendations.

National Health Service (Charges)

10.14 pm

Mr. Robin Cook (Livingston): I beg to move,

That an humble Address be presented to Her Majesty, praying that the National Health Service (Optical Charges and Payments) Regulations 1989 (S.I., 1989, No. 396), dated 8th March 1989, a copy of which was laid before this House on 10th March, be annulled.

Mr. Speaker: With this it will be convenient also to discuss the 11 other National Health Service prayers:

That an humble Address be presented to Her Majesty, praying that the National Health Service (Optical Charges and Payments) (Scotland) Regulations 1989 (S.I., 1989, No. 392), dated 9th March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Dental Charges) Regulations 1989 (S.I., 1989, No. 394), dated 8th March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Dental Charges) (Scotland) Regulations 1989 (S.I., 1989, No. 363), dated 7th March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Charges for Drugs and Appliances) Regulations 1989 (S.I., 1989, No. 419), dated 9th March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Charges for Drugs and Appliances) (Scotland) Regulations 1989 (S.I., 1989, No. 326), dated 3rd March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (General Ophthalmic Services) Amendment Regulations 1989 (S.I., 1989, No. 395), dated 8th March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (General Ophthalmic Service) (Scotland) Amendment Regulations 1989 (S.I., 1989, No. 387), dated 8th March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Travelling Expenses and Remission of Charges) Amendment Regulations 1989 (S.I., 1989, No. 517) dated 20th March 1989, a copy of which was laid before this House on 20th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Travelling Expenses and Remission of Charges) (Scotland) Amendment Regulations 1989 (S.I., 1989, No. 393), dated 9th March 1989, a copy of which was laid before this House on 10th March, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Travelling Expenses and Remission of Charges) Amendment (No. 2) Regulations 1989 (S.I., 1989, No. 614), dated 6th April 1989, a copy of which was laid before this House on 7th April, be annulled.

That an humble Address be presented to Her Majesty, praying that the National Health Service (Travelling Expenses and Remission of Charges) (Scotland) Amendment (No. 2) Regulations 1989 (S.I., 1989, No. 616), dated 6th April 1989, a copy of which was laid before this House on 7th April, be annulled.

Mr. Cook: Twelve prayers relating to the Health Service are before the House tonight and all relate to charges for drugs and appliances. I trust that the House will forgive me if I do not divide my time equally between the 12 prayers. Several matters of substance are raised in the regulations, but I must confess that Opposition Members do not hold strong views about the price of wigs prescribed on the National Health Service. Although I know that the price of wigs is on the way up, I am greatly relieved to note——

Mr. Frank Dobson (Holborn and St. Pancras): Is there a special concession for wigs for members of the legal profession?

Mr. Cook: I think that on this occasion I can give my hon. Friend an assurance on behalf of the Government that wigs for the legal profession are not under discussion.

I am relieved to note that, whatever the rate of inflation for human hair wigs, it is at least not as high as the rate of inflation which appears to be affecting the budget for advertising——

Mr. Bowen Wells (Hertford and Stortford) *rose*——

Mr. Cook: How could I resist giving way to the hon. Gentleman?

Mr. Wells: Does the hon. Gentleman agree that the question relating to wigs should be taken separately?

Mr. Cook: The hon. Gentleman raises an interesting point which, of course, has been a matter of discussion between the Front Benches. I must advise the hon. Gentleman that our difficulty is that prayers, unfortunately, do not get the same protection in terms of time before the House that orders get. If the hon. Gentleman would like to join us in pressing for the same amount of time for debate on prayers as the House provides for debate on orders, I should be happy to ensure that there were separate rounds of debate. I am sure that the hon. Gentleman will have adequate time to deploy his point and if he chooses to seek to divide the House on the basis that the charge for wigs is an unreasonable imposition, I shall give favourable consideration to advising my colleagues to join him in the Division Lobby.

I am relieved that the rate of inflation in the charges in the regulations on wigs, other appliances and drugs is at least not as high as the rate of inflation that the Department of Health has just applied to its own advertising budget, because it has been discovered that the rate of inflation for that for the current year is no less than 87 per cent. Opposition Members urge the Department of Health to apply that uprating to its expenditure on patient care rather than on its expenditure on advertising it.

I do not propose to delay the House further on such matters because the matter of substance to which I wish to draw the attention of the House and to which I shall be directing the remainder of my remarks is the instrument providing for the exemption from the charges for eye tests. That is something of real substance which touches on a matter of great public policy. It has been an issue of considerable controversy in the House, both between the different parties in the House and among Conservative Members.

The particular issue for debate tonight is why the regulations providing for exemption from charges do not provide for exemption from the charges for pensioners. After all, pensioners make up the majority of those coming forward for eye tests. Indeed, pensioners represent 60 per cent. of the people who go to opticians for eye tests. Pensioners are not automatically exempt under the provisions. Tonight I wish to challenge whether, in the light of the evidence that is now available to us about the charges for eye tests, it is right to continue to exclude pensioners from exemption from the charges.

I recall that we last debated this matter on 1 November, when the Secretary of State for Health, whom I am delighted to see has been able to free himself from other engagements to join us on this occasion, made the central point that the charges for eye tests would be so low that it was not necessary to worry about those groups that were not exempt. If I may say so, he was characteristically robust in stating his view. In the course of the debate he asserted that it was his strong opinion that competition would drive down charges for the eye test.

I shall share with the House a couple of quotations from the Secretary of State's speech. He said:

"I do not believe that all opticians will maintain a charge for a sight test which is equivalent to the present NHS fee".

Later he said:

"even in rural areas, I cannot believe that opticians will be too far away from other opticians for such pressures not to exist. Although they may have a slightly protected market, they will not sustain their position if it is clear to their rural customers that in nearby towns such as Leeds or Hull there are no charges for a test."—[*Official Report*, 1 November 1988; Vol. 139, cc. 928, 930.]

That was a clear statement of faith that a number of opticians would charge less than the NHS fee, including, for a curious reason not immediately clear to me, particularly opticians in Leeds and Hull. The NHS fee was then £9·75.

The right hon. and learned Gentleman's second statement of faith was that not only would some opticians charge less than the NHS fee, but a number—at times in this passage of his speech he appeared to think that it would be the norm—would make no charge at all. It was on that basis that he invited the House to approve the charge for eye tests. On that basis the House approved the charge, without agreeing to an exemption for pensioners and in the full knowledge that the regulations before us now would be laid without providing such an exemption.

Last week, my office carried out a survey of opticians in a couple of dozen towns throughout Britain, from Aberdeen to Falmouth, covering twice as many opticians. Nowhere among the 50 opticians whom we sampled did we find a single optometrist offering an eye test free. Nowhere among the ones that we sampled did we find anyone offering a test for less than £10·40. Boots, which caters for 26 per cent. of the market, is charging an eye test fee of £10·50. Dollond and Aitchison, the next market leader, charges £10·40. Between them, those two firms have 40 per cent. of the market, so those are not untypical figures which we specially searched out. They represent the market leaders.

Among the independents, we identified opticians who were charging between £10·50 and £12·50 as a norm. Quite a number of the optometrists that we sampled were charging £15. We even found one optometrist who was charging £17·50. Ironically, I am bound to say that was the optometrist nearest the Department of Health, from whom the Department could most readily have sought advice.

We included Leeds and Hull in our sample. There we found that the eye test was not free, nor indeed was the charge £9·75 or less. The optometrists that we sampled at random in Leeds and Hull were charging between £10·40 and £12·50.

As the Secretary of State knows, I wrote to him giving the results of the survey. *[Interruption.]* If the Secretary of State wishes to intervene, I shall give way. I am unable to follow his sedentary interruption. The Secretary of State replied to me on 10 April. I was rather distressed that his letter commenced, "Dear Mr. Cook". That is a sad comedown from the days of the former Parliamentary Under-Secretary of State, the hon. Member for Derbyshire, South (Mrs. Currie), who always started her letters to me, "My Dear Robin".

In his letter, the Secretary of State admitted that he would not disagree that some opticians had set their charges at £10 and £12. It would have been very difficult for him to disagree. I am sure he will agree that I am a fair-minded man who would not seek to deny him credit where it is due. I will give him the credit that he managed to find one optician, whom he named, who is providing a free sight test—a Mr. N. J. Bailey, an optician in Dover. In the length and breadth of Britain, we have one optician in Dover providing free sight tests. I regret to say that I have not been able to discover the cost of a second-class return rail fare from London to Dover, but I doubt whether the competition of one optician in Dover providing free sight tests will significantly depress the market in central London.

Of course, before my survey we knew that the Secretary of State was well aware of what was happening in the market. We knew, too, that he was aware of the fact that optometrists, contrary to his assurances to the House, were not only charging the equivalent of the full NHS fee, but were actually charging more. We knew that because, on 13 March, the right hon. and learned Gentleman issued a consultative document to the optometrists' profession proposing a cheapie—a quick eye test that would simply test whether the person coming into the optometrist's premises could read without glasses.

My hon. Friend the Member for Strathkelvin and Bearsden (Mr. Galbraith) will be developing the medical points at issue in the proposed two-tier eye test. All I wish to do at this stage is to draw the House's attention to the fact that this circular document, and the proposal contained within it, is in flat contradiction to the assurance that the right hon. and learned Gentleman gave the House when we debated this matter on 1 November. I am sorry to see that the right hon. and learned Gentleman is shaking his head, because I shall read his own words as they are recorded. He said:

> "I believe that the bulk of responsible optometrists and opticians give a full sight test . . . and we have the powers to specify the extent to which the patients and customers are tested. We shall look at the necessity to use them if necessary if we find that people are given quick sight tests and not screening for glaucoma . . . What I said is important and is relevant to the detection and treatment of glaucoma."—[*Official Report*, 1 November 1988; Vol. 139, c. 932.]

Far from using the powers to which he referred in that exchange, the Secretary of State has circulated the profession before coming to Parliament and asking for powers to make it legal not to screen for glaucoma and to introduce a cheap formal eye test that will meet the form of an eye test without meeting any of the substance of the examination of the eye. I serve notice on the Government that, when that order is brought before the House—if they are so ill advised as to persist against the unanimous advice of the profession not to do so—it will be our intention to divide the House and to invite Government Back Benchers, who were taken in by the Secretary of State's assurance on 1 November, to join us in voting it down.

In the meantime, we are left with tonight's regulations, on which I would wish to make three observations arising from the evidence that I have paraded in the course of my speech. My first observation is that it is now clear—certainly allowing for the fact that Boots and Dollond and Aitchison corner 40 per cent. of the market—that the great majority of optometrists' clients are being charged a fee for the eye test that is not only equivalent to the previous NHS fee, but in many cases represents a generous mark-up on that fee.

The conclusion must be that competition within the Health Service, far from forcing prices down—as the right hon. Gentleman promised us only six months ago—has the effect of driving prices up. That is not especially surprising, because what has happened with the passage of the Health and Medicines Act 1988 is that the NHS has given up its advantageous position as the monopoly purchaser of eye tests. Having given up that role, it need not surprise right hon. and hon. Members, with their understanding of market mechanisms, to discover that the effect of the NHS withdrawing as monopoly purchaser has been to allow the market to drive up prices rather than to lower them.

Secondly, we must form some conclusions from the events of the past six months and the assurances given to the House on 1 November about the conduct of the Secretary of State for Health. The Secretary of State has plainly been proved wrong in his promises about what would happen to the charges for eye tests. He has not been merely proved wrong; he has been proved wrong in glorious technicolor panorama. In itself, that is not unique in politics. What is interesting about the Secretary of State's predicament and mistake is that he got it wrong precisely because he refused to listen to the profession that advised him not to persist with abolishing the free eye test. The profession warned him that the charge for eye tests would be between £10 and £15. I remember seeing that advice when we debated this matter last autumn. In his speech on 1 November, the Secretary of State said that he did not believe the optometrists who were offering that advice.

There is a clear parallel between the Secretary of State's refusal to listen to the advice of the informed profession in that case and his current conduct in relation to the White Paper on National Health Service reforms. In the consultative period—there is always a consultative period—on the White Paper, the Secretary of State has again been fond of asserting his strong opinions. He has refused to listen to the detailed, cogent criticisms of the profession which understands better and knows at first hand the needs of the Health Service; therefore, he has every prospect of being equally wrong in the conclusions that he draws from the White Paper debate.

The second and rather more worrying conclusion from the events of the last six months, in particular the production of the consultative document of 30 March, is that the Secretary of State does not keep his word. In November, he assured the House that he would not stand for a reduced-price, quick eye test. In March he proposed to make such a test legal. That is no comfort to those in the

[Mr. Cook]

Health Service and to those who depend on it who are being invited to trust his assurances on the White Paper. To get it wrong was forgiveable but to break a pledge to Parliament is not.

I now come to my last observation on recent evidence. It relates to pensioners who are not exempted by the regulations. In the original debate the House voted by a narrow margin to approve the charges for eye tests. It did than on the assurance that the charges were likely to be less than £9·75 and might well turn out to be free. They have turned out to be anything but free. The charges range from £10·40 to £17·50. I need hardly explain that pensioners cannot readily afford such charges.

Many pensioners will now fail to turn up for regular eye checks. Some of those who fail to do so will put their sight at risk. I regret to tell the House that we cannot amend the regulations. We can only reject or pass them. I cannot advise the House to reject them because they provide for limited exemptions. Regrettably the exemptions do not apply to all pensioners. I invite the Under-Secretary of State to reflect on the evidence that is now available to the House and which was not available in November about the reality of eye test charges. In view of that serious evidence and the assurances of the Secretary of State, I invite the Under-Secretary to come back with further regulations to provide the same exemption to all pensioners. If he does that, he will not only safeguard pensioners but rescue the reputation of the Secretary of State.

10.35 pm

The Parliamentary Under-Secretary of State for Health (Mr. Roger Freeman): The hon. Member for Livingston (Mr. Cook), in opening the debate covering all 12 instruments, dealt selectively with one of them, that concerning the exemptions for sight tests, and I note that he does not intend to advise his hon. Friends to divide the House, presumably on all 12. He made three points, and I shall deal with those before dealing with each of the 12 instruments.

His first point concerned pensioners and the eye test. I remind the House that about 2 million pensioners who are in receipt of income support will have full access to free National Health Service sight tests. Further, as anyone who has taken the trouble to study the measures will see, those with an income of just above the levels of income support will also qualify for assistance for the eye test on a scale which declines according to the income of the individual and the family. So a substantial number of pensioners will qualify for the free eye test.

We believe that a charge of £10 every, say, three years is a reasonable and fair cost for a pensioner to bear, bearing in mind that the income of pensioners as a whole has risen substantially in the last decade and that pensioners, like other members of society, with increased income and increased disposable resources, will be able to make sensible decisions about what to do about taking care of their health.

Next, the hon. Member for Livingston talked about the levels at which private sight test fees were settling. His quotations from the letter from the Secretary of State for Health were selective. He glossed over the fact that it is clearly far too early, as my right hon. and learned Friend pointed out in his reply, to draw any conclusions.

The hon. Member for Livingston and anyone with experience of the interplay of market forces in this, as in any other sphere, knows that it takes time for the participants in that market to make sensible decisions about where to pitch their fees. It is too early to make a judgment, and for the hon. Gentleman to quote the range of from £10 to £17 is not a fair representation of the present position.

Of the largest suppliers, Boots is charging £10·50 and Dollond and Aitchison £10·40. The hon. Gentleman knows that the reimbursement figure for the NHS sight test is £10·40. It is far too early to make a judgment about where other competitors in the market will pitch their fees. They will wish to see what degree of business Boots and Dollonds attract at that level.

Mr. Nicholas Winterton (Macclesfield): My hon. Friend said in answer to the hon. Member for Livingston (Mr. Cook) that he believes that a pensioner will need to have his or her eyes tested once every three years. Why did he select that time scale? I thought that elderly people might need an eye test at least once a year. On that basis, £10 every year for a pensioner is a heavy financial burden.

Mr. Freeman: I would not wish to prescribe what is the correct frequency, and I am sure that my hon. Friend would not do so either. I was suggesting the sort of frequency for those who do not have disease. Under the regulations, those with diabetes and glaucoma, and those related in families to people who are so suffering, will continue to have free tests.

While I was not suggesting the frequency of testing, on average—and we know that there is no such thing as an average pensioner—the Government believe that going for a test, assuming that one is free of disease and free of a history of disease, every three years and paying about £10 is a reasonable expense set in the context of growing disposable income on the part of the retired.

The hon. Member for Livingston then referred to private sight tests and the consultation document which has been circulated by the Department of Health. It is a consultative document and we are still consulting on the possibility of regulating those who choose to have a private sight test and who might not choose to have an examination as part of that test, doing so perfectly understanding that they are not having a full examination of the eye.

These regulations are about increasing the resources for the National Health Service through reasonable charges and sensible policies about the provision of optical services whilst ensuring that people who cannot afford to pay for various NHS services are protected.

It might be for the convenience of the House if I consider the regulations in the order in which they appear on today's Order Paper. There are 12 instruments in all, six for England and six parallel instruments for Scotland. I will begin with the National Health Service (Optical Charges and Payments) Regulations 1989 and their Scottish equivalents.

These regulations provide a new scheme for vouchers to be issued in appropriate cases for help with the cost of a private sight test, increase the value by 5 per cent. overall of existing vouchers for glasses and extend on a statutory

basis the voucher scheme for the repair and replacement of spectacles under certain circumstances. In particular, I would like to draw the attention of the House to the provisions which allow help for those on low income towards the cost of a private sight test. That meets a commitment we agreed during the debate on the Health and Medicines Bill.

Briefly, the regulations will ensure that those who are assessed as being able to contribute from their income an amount less than the current NHS sight test fee of £10·40 will be eligible for a voucher towards the cost of their private test. The actual value of the voucher will vary in each case according to the private sight test fee and the amount of the individual's assessed contribution.

The regulations also introduce arrangements which will allow help under the voucher scheme to extend to the repair and replacement of spectacles in certain circumstances. Children will continue to receive help no matter what the circumstances of the damage or loss to their spectacles. Under these regulations, however, for the first time adults will receive help where the loss or damage has occurred as a direct result of illness. We have deliberately taken a wide definition of illness so that family practitioner committees will have discretion to decide whether or not to allow the claim, after making such inquiries as they think fit. I am sure these arrangements will be welcomed by both sides of the House.

We are, therefore, through this set of regulations giving help with the cost of the private sight test, increasing voucher values and introducing a new repair and replacement scheme for spectacles for those adults suffering from illness who get help under the voucher scheme.

The National Health Service (Dental Charges) Regulations 1989 and their Scottish equivalents fulfil the commitment we made during the passage of the Health and Medicines Bill to extend the system of fully proportional charges for dental treatment to include dentures and bridges, which were previously on a fixed scale of charges. This means that all charges for dental treatment in the general dental services, and the charges for dentures and bridges in the hospital service—the only charges levied in the hospital dental service—are now on a uniform charging basis as a fixed proportion of cost. That proportion remains at the level fixed last April for dental treatment, namely 75 per cent. There is no change in the maximum charge for a course of treatment, which remains at £150.

There is no increase in charges for routine dental treatment as a result of these regulations. They remain at 75 per cent. of the fees payable to dentists, and will therefore increase only when those fees are increased and in the same measure. As a result of bringing dentures and bridges within the same proportional system as other treatment, there is an increase in denture charges of an average of about 10 per cent. to bring them up to 75 per cent. of costs. They were previously charged at a flat rate which was fixed originally at 75 per cent. of the fees. However, they did not go up when fees were reviewed last October, and they are now being brought back into line with other treatment. Charges for most bridges are not being increased because there was very little change in their costs when fees were reviewed last October.

The dental profession has long advocated proportional charging and warmly welcomed our decision to introduce it for routine treatment last year. It also welcomes these regulations inasmuch as they complete the simplification process by bringing dentures and bridges within the proportional system. Consumer interests have also welcomed these measures as fairer and simpler all round.

I should add in all fairness that the profession and other groups have argued that the 75 per cent. rate is too high. That is not an argument that the Government would accept. It is much less than the 100 per cent. that applied to millions of small courses of treatment before April 1988. An estimated 6 million courses of treatment were cheaper in cash terms in 1988-89 than the year before. There is certainly no evidence that the current level of charges is proving a deterrent. The number of courses of treatment in 1988-89, the first full year of proportional charging for most treatment, up to February, which is the latest month for which we have figures, is up by no less than 5·6 per cent. on the corresponding period in 1987-88. We are heading for the largest year on year increase since 1973. That continues an upward trend which has seen the number of courses of dental treatment rise by 19 per cent. in England and Wales since 1979, from 28·5 million in 1979 to nearly 33·8 million in 1987-88.

The cost for a dental examination is £3·15 and that charge should bring in about £50 million in 1989-90 for the benefit of the NHS as a whole. The 75 per cent. rate, with the exemptions which apply to about 40 per cent. of the population, means that the taxpayer is paying about two thirds of the cost of all general dental treatment. The patient pays in aggregate about one third.

Mr. John Greenway (Ryedale): There has not yet been any consumer resistance to the charges, but is my hon. Friend aware that many patients are expressing to their dentists considerable surprise that the examination fee is as little as £3·15?

Mr. Freeman: I am grateful to my hon. Friend for reminding the House that the charge for a dental examination will be £3·15.

The National Health Service (Charges for Drugs and Appliances) Regulations 1989 and their Scottish equivalent introduce a modest increase in prescription charges. They also consolidate the existing regulations with some minor amendments. The prescription charge rose by 20p on 1 April from £2·60 to £2·80—an increase of 7·7 per cent. which will represent about 43 per cent. of the average prescription cost. We believe that it is right for those people who can afford to do so to make a contribution towards the cost of their medication by paying a charge. Equally, we think it is right and proper to increase that charge in line with the increasing costs of the NHS. The increase will provide an extra £10 million in income during this year. Therefore, the extra money raised by the charges represents a real and valuable addition to the total resources available to the NHS.

More than three quarters of prescriptions are dispensed free of charge because of the wide-ranging exemption arrangements. In addition to those on a low income, no prescription charges are paid by pensioners, children under 16, students under 19, expectant and nursing mothers and people who suffer from a number of specified medical conditions. Only people who can afford to pay the charges have to do so. What is more, there are arrangements to protect those even in that group who need a large amount of medication.

[Mr. Freeman]

There are available pre-payment certificates, or "season tickets", which, in effect, set a maximum to the amount that any individual has to pay. Nearly 5 per cent. of prescriptions now go to holders of season tickets. The regulations also increase the charges, roughly proportionately, for the annual and four-monthly season tickets. Season tickets continue to represent excellent value. They will save money for anyone who needs more than 14 items in a year or more than five prescriptions during a four-month period.

There is no evidence that increases in charges deter people from getting the medicines they need. Last April we put the prescription charge up by 20p, just as we are doing this year. Last year 346¼ million items were dispensed in England—an increase of 11 million over the 1987 figure which was nearly 13 million over the 1986 figure. Indeed, apart from the year when we introduced the elected list, the number of prescriptions dispensed has risen regularly since 1981.

The National Health Service (General Ophthalmic Services) Amendment Regulations 1989 and their Scottish equivalent restrict National Health Service free sight tests to certain restricted categories, comprising about 40 per cent. of the population. We concluded last year that it was right that those who could afford to should pay for the cost of a private sight test. The moneys saved, an estimated £85 million a year in Great Britain, are to be used in various initiatives—primary care services such as facilities in general practice, health education and improving the availability and quality of general dental services. Hon. Members will recall that we promised during the passage of the Health and Medicines Act 1988, under which these regulations are made, that those who could not reasonably be expected to pay for a private sight test and those who for medical reasons needed to have sight tests more frequently would continue to benefit from free National Health Service tests. For this reason, the regulations provide that the following groups remain under the umbrella of the National Health Service: children under 16, full-time students under 19, people and their partners receiving income support or family credit, those on a low income who have been assessed as being entitled to full help with National Health Service costs, the registered blind and partially sighted, people needing certain complex lenses, diagnosed diabetics and glaucoma patients and close relatives of glaucoma patients aged 40 and over.

Additionally, people who are required as part of their treatment under the hospital eye service to have regular sight tests, for example, those awaiting an operation for a cataract, will continue to be eligible for free National Health Service sight tests when these are undertaken by a high street optician. These arrangements will, I estimate, cover about 40 per cent. of all sight tests. I have already mentioned that other people whose income is just above the level at which they would qualify for full help with National Health Service costs will be able to get a voucher towards the cost of their private test.

I would now like to touch on the effects of our proposals on those who will have private sight tests. As I said, it is too early to draw conclusions from the fees that opticians are talking about at the moment. But already we can see variety coming into the market, and it will clearly pay the customer to shop around. As I said earlier, the big multiple chains seem to have settled for the moment on a fee of around £10, in line with the National Health Service fee of £10·40 reimbursed to the optician for those who qualify for a free test. But I have to say that, even at a fee of £10, it seems to me unreasonable to argue that a customer is likely to be deterred from having a test about once every three years.

We stand by these regulations. We believe that they are right and that they will ensure that help is given where it is needed most.

Mr. Robin Cook: The Minister has now twice relied on saying that the charge made by Dollond and Aitchison is equivalent to the new NHS fee, which came into effect on the same date as charges were abolished, and which is now £10·40. I remind him that the Secretary of State said on 1 November:

"I do not believe that all opticians will maintain a charge for a sight test which is equivalent to the present NHS fee". —[*Official Report*, 1 November 1988; Vol. 139, c. 928.]

If the Department's view is now that it is acceptable that opticians charge a fee for sight tests which is equivalent to the NHS fee, will the hon. Gentleman at least admit that the Secretary of State's advice was wrong, and that the House was invited to approve the charges for the eye test on the basis of mistaken assurances from the Secretary of State?

Mr. Freeman: I entirely reject that charge. The hon. Gentleman knows full well that the free market takes time to have an effect. He cannot expect market forces in the first week of a new regime to alter charges out of all proportion to those being charged by two of the major suppliers

The hon. Gentleman quoted selectively from my right hon. and learned Friend's reply. He gave the example of a company—Specialeyes—which has 59 outlets throughout the country and which will charge most people £9·25, while offering pensioners sight tests for £2·50. The hon. Gentleman deliberately ignored that large chain in his selective quotation. Replying to the hon. Gentleman, my right hon. and learned Friend concluded:

"I have no doubt that as time goes on we shall see prices reduced to levels lower than the National Heath Service sight test fee."

With patience, and with the full effect of a new and competitive market, we shall see the benefits of competition being reflected in lower prices, to the benefit of all who choose sight tests.

I commend the regulations to the House and invite my hon. Friends to reject the prayers.

10.54 pm

Mr. Ronnie Fearn (Southport): I am extremely pleased that the House has been given another opportunity to debate this tiresome subject—the controversial issue of charges for dental and eye examinations—and to discuss the recent increase in prescription charges. In such circumstances it is difficult not to repeat what I, along with many other hon. Members, have said on numerous occasions here and elsewhere, but as the Government have a tendency to bury their head in the sand it is often necessary to keep digging until the argument hits home.

Charges for eye tests and dental checks contradict an important factor in health care—prevention. The health of the nation will be the poorer for such a move; more

disgracefully, the nation's poor will suffer most. Charges deter people from seeking help and treatment, despite what the Minister has said. I find it remarkable that the Government can brush off the introduction of such charges with comments implying that, because the charge will be only £3·15 every six months or so, it will not act as a deterrent. Even if we ignore the fact that many people detest going to the dentist in any case and that any excuse not to do so will be jumped on, such comments highlight the extent to which the Government are out of touch with what is happening in a large part of our society.

Mr. John Greenway: The Gentleman cannot have been listening to what my hon. Friend the Minister said in his speech, that in 1988-89 the number of courses of dental treatment rose by 5·6 per cent. How does he square that statistic with what he has just said about dental attendance?

Mr. Fearn: Certainly the information given in publicity has induced people to go for tests in the last year, but now that the charges are coming in I am sure that those figures will drop.

When a family's income in take-home pay can be as little as £70 a week, £3·15 is a lot of money—particularly when we add the prescription charge of £2·80 per item and the £10 to £18 which may be charged for an eye test. I know that some categories are exempt from charges, including those in receipt of family credit or income support; but I also know that the take-up rate for those benefits is very poor, despite the recent adaptation of the statistics by the Department of Social Security. A number of factors could account for that. Some people are too proud or too independent; others cannot cope with the interminable form-filling and questions, the long wait—the whole degrading exercise. Yet others have not the wherewithal to make it through the bureaucratic jungle. There is no doubt that they will suffer as a result of the charges.

Then there are the low-income groups who are not entitled to support, but who nevertheless struggle every week to make ends meet. Children, because they are exempt, may not be harmed by the regulations, but parents may well put off visits to the optician, dentist and doctor because their children need a pair of shoes or other article of clothing. Our senior citizens, who have contributed to the health and welfare of the country all their lives, should be entitled to seek the health care that they need regardless of their ability to pay, to ensure a decent quality of life without the hindrance and encumbrance of state administration.

Even those who are allowed to claim may find that they cannot obtain vouchers because—as we have been reading lately—backlogs cause them to be "out of time". Regulations should allow discretion for late claims. The elderly may suffer the most, although they are the people who should be using the services the most. Regular inspection by a dentist can identify pathological changes in tissue and bone structure, and an eye examination can pick up many diseases. Regulation 13B in statutory instrument 1989 No. 395 and regulation 14B in No. 387 (S.41), although welcome in the circumstances, rather miss the point. Many people will be deterred from visiting an optician for an eye test and therefore the diseases which would place them in the exempt category will not be detected.

I mentioned earlier that the Government justified the introduction of dental charges by claiming that the charge was small at £3·15. I recall others claiming that market forces would reduce or even eliminate charges for eye tests. The recent survey, reported in most newspapers, certainly has shown how wrong the Government are to rely on market forces. The letter which the Minister issued as a press release dated 10 April, obviously because he was proud of its contents, shows how unfair, unpredictable and unreliable the market is and that it certainly should not be one of the determinants as to the availability of health care for any particular individual. Not everyone can shop around. The elderly, the disabled, young parents, those who cannot afford fares or those who do not have adequate public transport facilities cannot always do so. Others in rural areas do not have the outlets from which to choose. Unfortunately, not everyone lives in Dover or Witney in Oxon where we are told that charges are below £10. It is quite inappropriate that a crucial factor in the good health of individuals should be left to the whims of the market and could mean that one pensioner pays £2·50 while another pensioner in a neighbouring area may pay as much as £17·50 for an eye test. Does the Minister really believe that the latter will not be deterred from seeking help?

It is never very clear exactly what we are talking about in terms of charges for eye tests. Are we talking about a full eye examination or an eyesight test only? Will consumers be aware of exactly what they are paying for? As I understand it, and I hope that the Minister will correct me if I am wrong, patients who are exempt from charges can be sure of getting a full eye examination while those who have to pay do not have such a guarantee. What type of test will a pensioner who has to pay only £2·50, as per the Minister's press release, receive? Of course the full eye examination is most beneficial as diseases and other problems can be detected during that exercise.

Another group of people who will be adversely affected and do not appear to be exempt are those who receive a disability allowance but are not on income support. Perhaps the Minister will clarify the position of such people. By definition it is more difficult and often more expensive for them to go about their daily business. They are often pushed to make ends meet, but because their allowance is 20p or 40p more than social security regulations state, they are not entitled to income support or other benefit. When they need to have their eyes tested or their teeth checked, will they have to undergo the bureaucratic nightmare of a means test to find out whether they are entitled to full payment, part payment, third payment, quarter payment or any of the other possible combinations?

Statutory instruments Nos. 517, 393, 614 and 616 seek to increase the amount of deductions to be calculated before entitlement, in line with social security upratings. That is yet another example of the Government not living in the real world. They automatically assume that life is hunky-dory, full of happy families who are all aware of and are fulfilling their responsibilities to each other. But life is not like that. Many families have non-dependent relatives living with them who cannot or will not contribute £12·50. In the case of young dependants or others in low-paid work, they often cannot afford to contribute. The parents are keeping their children's heads

[Mr. Fearn]

above water. In other cases family and communications break-downs may have been brought about by poor living conditions and lack of finances.

Why is it that whenever the Government introduce legislation or make regulations, whether to introduce charges or give taxes away, it is always those who are already struggling who are hit the hardest? I believe that it was Sir Keith Joseph who first referred to the "cycle of deprivation" and said that it must be broken. Every move that the Government make adds to that cycle and it becomes a vicious circle.

The good health of individuals is paramount to the wellbeing of the nation. Ill health is a serious restriction on the freedom of any individual. The promotion of good health through prevention, diagnosis and treatment can benefit all collectively and individually. Charges deter people from using the Health Service and contribute to a system in which there is provision for the rich and provision for the poor.

We are told that the total charge for NHS services amounts to £640 million. We know that the present charges are designed to save between £50 million and £70 million. Those are large amounts but represent only 3 per cent. or 4 per cent. of the total cost of the Health Service. I am certain that if the Government so desired they could easily transfer such charges to levies on some industries such as, for example, tobacco, alcohol and many others which could have the added benefit of contributing to good health promotion.

Elimination of the present charges would reduce the administrative burden and make life a great deal easier and healthier for us all.

11.6 pm

Mr. John Prescott (Kingston upon Hull, East): On a point of order, Mr. Deputy Speaker. You will recall that we have just completed a long and involved debate on the King's Cross fire and the Fennell report. The Secretary of State for Transport told us that the delay in holding the debate was because he wanted to give the House the fullest amount of information concerning that terrible tragedy.

During the debate the Secretary of State was pressed by my hon. Friend the Member for Lewisham, Deptford (Ms. Ruddock) on the relationship between the Home Office and the Department of Transport and on matters concerning the emergency and fire services.

During the debate a story appeared on the tapes saying that the Department of Transport has now ordered an investigation into some allegations made in a letter in *The Times* this morning. I read that letter, which was from Sir Keith Bright who was in charge of the services. I considered it to be partly due to sour grapes.

To find out from the tapes tonight that the Department has ordered an investigation is a matter of subtance and concern. If it is true and the Secretary of State withheld the information from the House during the debate, it would amount almost to contempt of the House. I ask you, Mr. Deputy Speaker, through the offices of the House, if you will ask the Secretary of State to make a statement and, if it is not possible tonight, he should make a statement tomorrow because he has a sad history of withholding informaton from the House.

Mr. Deputy Speaker (Mr. Harold Walker): I am not sure to what extent that is a matter for the Chair. Doubtless what has been said will have been heard on the Treasury Bench and conveyed to the Secretary of State. In any case, I shall ensure that Mr. Speaker is aware of what has been said.

11.8 pm

Mr. Michael Carttiss (Great Yarmouth): My contribution to the debate can, I am happy to say, be brief. However, unhappily, I have to repeat that I have not changed the view that I held and expressed in the House last April and when we debated the Health and Medicines Bill. I listened to my hon. Friend the Under-Secretary with great care, but I am still unable to acknowledge that there is not a fundamental principle at stake. I do not intend to enter into arguments about deterrence, what people can afford or what market forces will produce in terms of the eventual level of charges. My argument has always been and is confined to the fact that I was proud that in our National Health Service we had the fundamental right to free inspections of teeth and eyes. I have not opposed, and do not oppose tonight, the increases in prescription charges. I acknowledge that within these regulations there are wide exemptions and that many people will not find themselves in great difficulties. But the issue of people being entitled to have their teeth inspected without a charge is fundamental to the concept of preventive medicine.

The hon. Member for Southport (Mr. Fearn) was interrupted by my hon. Friend the Member for Ryedale (Mr. Greenway), who made the point that some people are surprised that they are being charged only £3. I am not surprised that some people are surprised. But for many people in my constituency, where we still have an unemployment rate of 10 per cent.—well above the national average and dramatically above the East Anglian regional average, which is much lower than the national average—£3 for teeth inspections and £10 for eye tests has an effect. The fact that innumerable of my hon. Friends who represent wealthy areas in south-east England find that their constituents are surprised that the charge is a mere £3 does not have much impact on the elderly folk who come to retire in Norfolk, as well as those who were born and bred there and who live in an area of low average incomes, apart from the high unemployment which I have already mentioned.

The Government have had a most successful economic policy and are talking about repaying billions of pounds of the national debt—for very good reasons. They are now talking about £50 million or so to do away with what has been a fundamental right within the National Health Service. Notwithstanding all the logical arguments advanced by my hon. Friend the Minister tonight and by my right hon. and learned Friend the Secretary of State and my hon. and learned Friend the Minister of State in previous debates, it is still what I called last year a piddling measure. I repeat that tonight and I go further. It is an idiotic measure. I am not surprised that few people in the constituency of my hon. Friend the Member for Ryedale are worried about £3. They are probably so overwhelmed by the general unpopularity of what the Government are doing generally to reform the Health Service that they view the imposition of a fee for teeth and eye inspections as a minor feature of a rather bad story all round.

Before some of my hon. Friends think that I am opposed to the Health Service reforms, I must say that I believe that there is an enormous amount of good in the White Paper. However, the regulations require us as Conservative Members to vote for measures that are unnecessary, ineffective, and merely upset people so that they will not then see the value of the enormous and successful work that the Government are doing.

I must record that I cannot support the charges. If an opportunity were to arise in the ballot for private Members' Bills, the issue that I would want to put at the top of my list of priorities would be to restore the free tests. I hope that even at this late hour my Front Bench colleagues will take back the regulations. It does them no credit to be here at this time of night asking us to support them again.

11.13 pm

Mrs. Audrey Wise (Preston): The press statement issued by the Department said that the regulations were not imposing a charge, but removing a subsidy. That curious use of words typifies the attitude of dissimulation and deceit which surrounds this affair. The Minister has said that it is too early to make judgments about the prices being charged for eye examinations by opticians, but his right hon. and learned Friend the Secretary of State was willing to make forecasts and judgments about that even before the Health and Medicines Bill became an Act.

We were told that market forces take time to operate. But we were not told why on earth market forces should lead people to work for nothing. That does not happen in any other field, so why should it happen in this one?

Why should eye examinations, which may or may not lead to the prescription of spectacles, and which involve a most highly skilled person who has had long and most exacting training, be free? I can conclude only that it exposes ministerial ignorance of anything to do with eyes, eye examinations or optical practice. There is no way that opticians can recoup the cost of eye examinations if they offer them as freebies. If that cost is thrown in with the rest of the transaction, opticians will come a cropper, because there may be no "rest" of the transaction. Between one fifth and one quarter of eye examinations do not result in a prescription for glasses. Therefore, an optician cannot even add the cost to that of the spectacles, yet I have no doubt that that is the basis on which the ministerial forecasts were made. It is impossible for people to offer services or goods for nothing, whether we have a market economy or whatever. It will not happen with optics.

The Minister's statement about three-year frequency was rightly challenged by the hon. Member for Macclesfield (Mr. Winterton). He went on to repeat the claim that every three years is the appropriate frequency. How then can people have the National Health Service eye examination to which they are entitled without question once a year? Why is the normal advice to people without problems that it is a good idea to have an eye examination every two years? The three-year period is simply a device to try to minimise the effect of what the Government are doing.

My hon. Friend the Member for Livingston (Mr. Cook) said that he will not advise Opposition Members to oppose the measure in the Lobby tonight, and he gave one or two reasons for that. However, the overwhelming reason is that it is actually now in operation. It is a peculiar Parliament which discusses the propriety and appropriateness of regulations 12 days after they were put into operation. We should protest about that.

I have one or two more things to say about the date of operation. I do not know whether the Ministers realise it,

[Mrs. Audrey Wise]

but family practitioner committees throughout the country were unable to give authoritative advice to opticians about the date of operation of the change within two weeks of it being due to come into effect. Family practitioner committees were telephoned by opticians within a fortnight of 1 April, asking, "Is it 1 April? When is it? We do not know. We have had no information." The committees had to say, "We do not know. We have had no information either." That is an extraordinary way to proceed.

I have sat through proceedings in which the phrase "removing burdens from business" has been repeated ad nauseam. I am amazed to find that people who use that argument as a justification for removing rights from working people should be so insensitive to the needs of business as to carry out this change in such a way. I will tell the House exactly what has happened. The Minister has not bothered to do so. The date of operation was a dark secret even from family practitioner committees, on whom opticians rely for their authoritative information. Family practitioner committees received the appropriate forms only within a few days of the magic date of 1 April, so in many areas the forms had to be delivered by hand to opticians in order that they might have them when they would have to be used.

When the opticians got the forms they looked at them. What did they find? I do not know how much the Minister knows about this matter. In fact, I am working on the basis that Ministers know nothing, but I thought that someone in the Department would know one or two things. I thought that after more than 40 years of printing forms for eye examinations the Department would know that opticians, and everybody else who has anything to do with eye examinations or with the prescription or provision of glasses—indeed, anything at all to do with eyes—works on the basis of "Right first, left second." Everything is written in that way. This Government, who boast of removing the burdens from business, managed to produce an assortment of forms, all of which were printed on the basis of "Left eye first, right eye second." So the opticians, whom the Minister expects to give their services free, are having to cross out the wrong words and write in the correct words. That is having to be done for every patient in every optical practice—and, having seen the forms, I can tell the Minister that there is not much space.

This is the absolute botch-up, the howler of a procedure that the Government have presided over. Yet they are the Government who propose, within the next two years, to change the whole operation of every hospital in the country and GPs' practices—to do things for which no factual basis has been laid, things which, apart from the fact that they are wrong anyway, cannot be carried out in an efficient way.

This one limited area, involving such simple things as which eye is described first, could be taken as a tiny case study of what is likely to happen. I dare say that surgeons sometimes have to fill in forms and that they have procedures. I should not like them to mix up right legs and left legs, as opticians may be at risk of mixing up right eyes and left eyes.

But that is not the only error. It is not even possible to use carbon paper, so names and addresses have to be written in twice because the form is designed in such a way as to make it impossible to fill it in rationally. That is what the party of business—the party concerned to remove burdens from business—has managed to do to optical practices throughout the country.

But there is worse to come. Having failed to persuade opticians to give "freebies", the Government have introduced the idea of "cheapies". I shall not go on at length about this, though it is certainly relevant to the regulations that we are discussing. For example, if a person does not realise at the time of the test that he is entitled to a free National Health Service eye examination but realises later that he was so entitled, then he will be entitled to a refund of the cost of the test. I do not know what is in Ministers' minds, but if such a person were to opt for a "cheapie" test, if it ever became possible, what refund would he get? Having been entitled to a full eye examination, he would not have received one. So what would happen? The Government are getting into really deep water.

But, on the principle, they are getting into even deeper water. If optometrists or ophthalmic medical practitioners could invite patients to sign pieces of paper to the effect that it is all right if they are not given a full examination, that is tantamount to saying, "Sign to say that it is OK if I am negligent." The idea that that is in any way proper or desirable, or likely to lead to the protection of the nation's eye health, is just ludicrous. That, however, is what is proposed. At least that is the proposal which is the subject of consultation. I was surprised when the Minister told us that consultation is still taking place, but that gave me some hope, as the original time limit has expired. I hope that that example of unusual delicacy means that the Government are having second thoughts. I can tell the Minister that if there are not second thoughts, there will be severe trouble. Surely the Government are not prepared to say to professional people, "Ignore your common law duty of care to your patients; get them to sign to say that it is all right if you do not do it properly." Surely the Government cannot expect that approach to be accepted. As I wish trouble to be saved all round, I hope that the Government will proceed no further with that ludicrous suggestion.

If the Government take the matter further, it will be because they have been caught out after having promised that the cost of an eye examination would vanish into thin air, or that it would be provided as a mere bagatelle, for nothing or next to nothing. They will have been caught out in misleading the public and they will be looking for an alternative. The alternative will damage those who, because of lack of knowledge, or through poverty, succumb to the Government's blandishments. In effect, the Government will say, "It is all right. Assume that you do not really need a proper eye examination. Trust to luck and pay £5 instead of £10." Conservative care of eyes brings us to that.

11.27 pm

Mr. Tony Baldry (Banbury): My hon. Friend the Under-Secretary dealt in detail with the practicalities of the regulations. My hon. Friend the Member for Great Yarmouth (Mr. Carttiss) and the hon. Member for Preston (Mrs. Wise) spoke about the principle that lies behind the regulations and behind charging, and it is on the principle that I wish shortly to detain the House.

Although the National Health Service costs the average family about £35 a week—about £1,820 a year—the service that it provides is all too often seen as costless by both those who use it and those who work in the Health Service. Payment for service is never mentioned. It is not discussed or itemised, and there are many who are unaware of or unconcerned about what the NHS costs. That has important implications for the use of the services that are provided.

It is right that the NHS should be free to those who need its services at the time that they need them, and be paid for mainly out of taxation. That has been the principle of the NHS ever since it came into being in 1948. From almost the first day of the service, however, it became clear that there would be concern about costs. Whenever NHS charges are introduced or debated in the House, or in the country, there is a tendency for the Opposition, and some of my hon. Friends, to treat them as the first charges to be introduced. Charges were first introduced by the Labour Government who introduced the NHS in 1948. By 1949, they had had to introduce charges. They recognised that it was impossible to sustain the costs of the NHS without charges.

One of the criticisms made about the measures that the Government intend to introduce is that they may reduce spending on the NHS. That was one of Beveridge's intentions. He and those who introduced the NHS thought that by having a National Health Service that would improve patient care the amount of money spent on the Health Service would be reduced. The NHS was introduced in 1948 on that basis.

The Labour Government soon found that if there was infinite demand, there was an infinite cost. Therefore, by 1949—only a year later—Cripps, as Chancellor of the Exchequer, was obliged to bring in legislation to introduce prescription charges. They did not become effective until 1951 when Gaitskell was Chancellor of the Exchequer. In the Budget of that year, on what did that same Labour Government introduce charges? I will tell my hon. Friend the Member for Great Yarmouth: they introduced charges on teeth and spectacles. So there is nothing new about charges for some items. They have been in force almost as long as the National Health Service itself.

The charges that were introduced in 1951 did not apply to needy categories of patients who were exempt. I strongly suspect that if we were to check what categories were exempt in 1951, we would find that they do not differ substantially from the categories which will be exempt now.

There is nothing new in the concept of charges for certain items under the National Health Service. That concept was introduced as far back as 1949 by the Labour Government, the very same Government that only a year before had introduced the National Health Service. They brought in the charges because they recognised that there were certain items for which there was a need to raise money; they also recognised that there was a need to ensure that people had some appreciation that those services were not totally without cost.

When we are debating the National Health Service in future I hope that there can be at least a little intellectual honesty about the history of the introduction of the service. Hon. Members should realise that while we are giving a first-class service through the NHS it is on occasions necessary to make modest charges for certain items.

11.31 pm

Mr. Terry Davis (Birmingham, Hodge Hill): Understandably my hon. Friend the Member for Livingston (Mr. Cook) concentrated on the new arrangements for eye examinations and the charges being introduced by the Government. I agree entirely with his comments and with the comments by my hon. Friend the Member for Preston (Mrs. Wise).

I want to deal with a different aspect of the regulations. The Parliamentary Under-Secretary of State emphasised that we are debating 12 separate statutory instruments. I listened carefully to what he said. He stopped, as I thought, in mid flight and unfortunately made no reference to the last four statutory instruments on the Order Paper. I refer specifically to the National Health Service (Travelling Expenses and Remission of Charges) Amendment Regulations 1989. There are four sets of regulations on that matter, Nos. 517, 393, 614 and 616.

The first two of those statutory instruments—Nos. 517 and 393—affect the amount of contribution assessed for a non-dependant living in the home of someone who is applying for a voucher for glasses. The second pair of regulations amend the first two, because the Government got it wrong when they published the original regulations in March.

The hon. Member for Southport (Mr. Fearn) referred to these regulations, but even he underestimated the effect of the increases in the contributions that are assessed for non-dependants living in the homes of people who are applying for assistance for the cost of glasses. He rightly pointed out that there is a deduction for housing costs for the assessed contributions which will affect the amount given to assist someone who has a voucher. The real effect is not just £12·50 at the top of the scale. It could be as much as three times that amount.

If the hon. Member for Southport works through the calculations, he will find that the excess of income over resources for any applicant for assistance is multiplied by a factor of three. It follows that, if income equals requirements—according to the income support regulations and calculations—that applicant will find that he or she is contributing three times the amount of the deduction from housing costs. It can be three times £12·50 in a family where one non-dependant has an income of more than £52·10 per week. A penal contribution can be expected from someone who has a voucher.

The Under-Secretary of State told the House that the value of vouchers has been increased by 5 per cent. and that in his opinion the charges were reasonable. As I have already mentioned, he did not touch on those four statutory instruments and, therefore, he did not give himself the opportunity to point out the amount of the increase in those assessed contributions towards housing costs for non-dependants living in the homes of applicants for help. If he had touched on that, he would have had to tell the House that the Government have introduced a contribution for a non-dependant who is under 25 years old and receiving income support. That new contribution is introduced by these regulations at the rate of £3. That contribution of £3 can be multiplied by a factor of three, so that the parent—who may be a man or woman pensioner—can be asked to contribute as much as £9 towards the cost of glasses as a result of that under 25-year-old person on income support living at home. That, of course, is a new introduction and the increase is

[Mr. Terry Davis]

infinite. However, the increase is more than double for someone in the middle of the scale, because the contribution is being increased from £3·45 to £7·20 for a non-dependant whose income is less than £49·20. At the so-called top end of the scale, for someone whose income exceeds £52·10 a week the contribution is being increased from £8·20 to £12·50, which is an increase of more than 50 per cent. Those are massive increases by any stretch of the imagination or calculation. They are increases that, by definition, are being applied to families who are living in poverty. It is, in effect, increasing a tax that is paid by poor families. It is paid often by pensioners, who are applying for assistance with the cost of necessary glasses, and who happen to have a non-dependant—often a grown-up son or daughter—in their homes.

The Minister did not give himself the chance to tell us how many people are affected by those increases. I hope that, when his hon. Friend the Under-Secretary of State for Scotland replies to the debate, he will tell us how many people will be adversely affected by the increases in the contributions of non-dependants covered by the four statutory instruments.

I want to mention another aspect of the regulations because the House should be concerned not only with what is happening under these regulations, but with what has happened as a result of the regulations that the statutory instruments amend. In other words, the House should be concerned about what has happened during the past 12 months.

My interest in this detailed but important aspect of the regulations arose as a result of a constituent's inquiry. I engaged in correspondence with the Department of Health about my constituent's case. My constituent is a pensioner and his wife is also receiving a retirement pension. Their combined pensions mean that they have an income slightly in excess of the level for income support. Therefore, a voucher is needed for glasses for the husband. Their grown-up son lives in their home and that son did not want to tell his parents—and did not see why he should tell the Government—the amount of his wages every week. Under the old regulations, before the changes that were made about a year ago, he did not have to reveal his wages because the contribution towards housing costs was a standard amount and there was no inquiry into income or means or into the financial affairs of a non-dependent grown-up son or daughter living with retired people. The Government have now introduced a means test for such non-dependants and that son now has to tell the Government and his parents, because he has to put his income on the form, the amount of his weekly income. He refused to do that because he said he did not see why he should have to provide that information.

I wrote to the Minister and asked the reason for the information about income. I received a courteous reply, but the letter did not tell me what I most wanted to know, which was what would happen if my constituent's son still refused to give the information. I received another reply from the Minister who told me that the non-dependant's contribution would be assessed at the maximum rate. The Minister's letter contained detailed figures. When I checked those figures with the assistance of the Library staff, I found that they bore no relation to the figures that had been approved by the House a year ago in statutory instruments. They were on a different scale.

Within 24 hours I contacted the Minister's office and 10 weeks later I received a letter from the Under-Secretary of State for Social Security telling me that the instructions issued to the agency benefit unit were incorrect. That was in the middle of January. For months the agency benefit unit had been assessing non-dependant's contributions on incorrect instructions. In every case, the non-dependant's contribution was assessed at £3 more than it should have been under the regulations approved by the House.

I have already explained how the amount to be paid by a person with a voucher is calculated. The penalty, the excess which someone—often a pensioner—has to contribute, can be as much as £9, three times the £3 mistake. In his letter the Minister was kind enough to tell me that fresh instructions would be issued to the agency benefit unit. The House will be pleased to learn that after 10 weeks the Government took the action that was necessary to correct their inaccurate instructions. Can the Minister say how many people were adversely affected by the mistake? How many paid £3 or £9 or an amount in between which they should not have paid for glasses? What have the Government done to refund the money that those people have paid? I await answers to those questions with great interest.

11.42 pm

Mr. John Greenway (Ryedale): I shall be brief. I should like to make a comment and a plea to my hon. Friends on the Front Bench. My comment is that, in this debate and in the other debates that we had on these charges in November and seven or eight months earlier, it has been said that the amount raised by these charges is insignificant. My hon. Friend the Member for Great Yarmouth (Mr. Carttiss) spoke about a "piddling measure". There is some uncertainty about whether the amount raised by the dental and optical charges will be £140 million or £150 million. That amount is by no means insignificant.

I am sorry that the hon. Member for Livingston (Mr. Cook) has just left the Chamber, because I wanted to remind him and the House of what he said in the Budget debate. He spoke about the likely cost of the tax relief of £40 million a year for private medical insurance for old age pensioners. He said:

> "£40 million is sufficient to pay the annual salaries of 3,000 nurses or 1,000 consultants. It is enough to purchase 20,000 ventilators or 1,300 ambulances. It is enough to meet the operating costs of 35,000 cataract removals or of 17,000 hip replacements."—[*Official Report*, 16 March 1989; Vol. 149, c. 569.]

That is what can be done with £40 million. These measures raise about three and a half times that figure, so we are not talking about an insignificant amount.

The Minister pointed out that the take-up is increasing. It happens when charges are changed—this has occurred for the last 30 or 40 years—that for a month or two there is a small reduction in demand. Over a period—say, when we review the position in a year or two—we will find that there has not been a significant change.

In the three speeches that I have made in the House on this issue I have appealed to the Government to introduce a new contract for general dental practitioners. Members of the dental profession are disappointed that negotiations

on a new contract have not yet commenced. There is fear that perhaps the profession has missed the boat and that the new contract will not appear.

It is appreciated that, with the general practitioner contract being in the forefront of the Government's mind, the dental profession may have to be patient. I hope that the Minister will repeat the assurance that was given as long ago as last June—that the Government are determined to negotiate and introduce a new contract for general dental practitioners.

The present arrangements for remunerating dentists are 40 years old and out of date. We must have a new arrangement which reflects modern trends in dentistry—the reduction in dental decay—and which will be more beneficial to patients and the profession.

When we discussed these issues on 1 November last, I said that the introduction of charges of this type was often an unpopular step. But I urge hon. Members to reflect that an unpopular measure does not always mean that what is proposed is unreasonable. What the Government propose is right and is in the interest of the NHS, and I hope the House will not divide on it tonight.

11.47 pm

Mr. Nicholas Winterton (Macclesfield): At this hour I will be brief and simply put a few questions to the members of the Treasury Bench, and particularly to the Under-Secretary of State for Scotland, who will reply to the debate. My hon. Friends will be aware that I was one of those on the Government Benches who strongly opposed the introduction of charges for dental inspections and eye examinations.

Does not the introduction of charges in these spheres fly in the face of the philosophy of preventive medicine, which I thought was a No. 1 priority with the Government? Preventive medicine can save money. After all, if relatively cheap treatments are carried out early enough, the heavy cost of certain eye and dental treatments can be avoided. In other words, the small sums of money to which we are referring in these charges could be dissipated in other ways.

Is the Minister aware of the co-operation which to date has often existed between opticians and optometrists and eye hospitals in centres of excellence, where competent and able professional optometrists have assisted eye hospitals and taken the pressure off those hospitals, to the advantage of the NHS as a whole? I understand from the profession of optometrists and opticians that, because of the implementation of charges, that relationship is likely to be destroyed or, at best, undermined.

My colleagues on the Conservative Benches often talk about the great benefits of the untrammelled free market. We have seen the problems that can occur with the untrammelled free market in the City and the disasters that resulted from that. It would be constructive, rational and sensible to discuss these proposals with the professions that will be involved, as they are intimately well informed about these matters. The professions should be consulted before the Government introduce measures—and in this case charges—which will affect two very important sectors of the National Health Service.

I believe that the professional services do not always need to be open to the free market to provide the best possible service to the people of this country. As I have said, in certain areas we can see that the Government are forcing the free market upon the professions. The morality, discipline and self-discipline of those professions are disappearing and the public are suffering dramatically as a result. Costs are also rising.

My hon. Friend the Minister said that people will be able to shop around. Should people who require professional skilled help have to shop around? Do they not go to a professionally qualified person and expect to receive good and reliable treatment? If they have to pay for that treatment, do they not expect it to be provided at an acceptable and reasonable price?

I do not believe that costs are involved in the issues that we are considering today. Many people who require help are least able to shop around and take advantage of what my hon. Friend the Minister described as the free market. I speak with some knowledge about these matters as I have served on the Select Committee on Social Services for many years and I have met many people concerned with the professions who have expressed dissatisfaction and unhappiness that the Government are following this road. They do not believe—and I do not believe—that the public and those who require treatment and assistance will benefit.

It is extraordinary that the House should debate a matter at this time of night which involves a maximum, as I understand it, of £60 million, when these measures will result in substantial additional costs on the Health Service in future.

I hope that my right hon. and hon. Friends on the Treasury Bench realise that opposition to the charges does not rest exclusively with the Opposition parties. It is felt very deeply on the Conservative Benches as well—and not because we are dogmatic or trying to appeal to groups outside the House whose votes we may need at the next election. Those of us who voted against the charges during debates on the Health and Medicines Bill did so because we were convinced that the Government had not presented a good case and because going against the philosophy of preventive medicine would not benefit the people of this country.

11.53 pm

Mr. Sam Galbraith (Strathkelvin and Bearsden): I want first to thank the hon. Member for Macclesfield (Mr. Winterton). He dealt with the broad general principles involved with the charges for eye tests and the question of preventive medicine. We have debated those issues before and, as the hon. Member for Macclesfield spoke about them so eloquently, he has removed from me the obligation to deal with them tonight. I am grateful to him for his contribution about the general principles.

As the Minister said, there are 12 sets of regulations before us, half referring to England and Wales and the other half to Scotland. There are no significant differences between those two groups so I shall not confine my remarks to one or the other.

Like my hon. Friend the Member for Livingston (Mr. Cook), I want to concentrate on the regulations which deal with charges for general ophthalmic services and those dealing with exemptions. Having heard the hon. Members for Banbury (Mr. Baldry) and for Ryedale (Mr. Greenway), I take more than a passing interest in the regulations dealing with charges and, in particular, wig charges in the NHS. That is not because of my particular problem in that regard. I take a passing interest having

[Mr. Sam Galbraith]

been responsible for great charges for wigs in a former life because of the nature of my work. It was part of my work dealing with patients who had what is known as traumatic alopecia, which involves having one's head shaved prior to a particular procedure. That was expensive, but I was not aware of the charges at that stage.

The hon. Member for Ryedale pointed out that it was important to know of the charges because that reflected a discipline within those who work in and use the services. I changed my practice so that that expense did not fall on the NHS. I did so with no knowledge of the charges, simply because I thought that it was necessary. My point is that it is not necessary to know of the charges in order to change practice. I also did so without a budget of my own and without my hospital opting out. I think that saved the NHS a considerable amount. That is one reason for my interest in that.

I was interested to hear the hon. Members for Banbury and for Great Yarmouth (Mr. Carttiss) talking about the introduction of charges. When the Health and Medicines Bill was debated in Committee I made a deal with the right hon. Member for Braintree (Mr. Newton) that as long as I accepted that the Labour party was the first to introduce charges, he would never mention the matter again.

However, the important point about charges, which was touched on by the hon. Member for Macclesfield, is that the charges that we are debating are different in concept. Previous charges have been made for the provision of treatment. These charges are for screening processes. If someone has a problem and needs treatment for which there is a charge, there is a deterrent effect, but the treatment is likely to be taken up. However, if someone is told there is probably nothing wrong with him but it would be useful to be screened for which there would be a charge, that does have a deterrent effect. There is an important quantitative difference in charges for screening processes.

The Minister said that he thought that it would be—to use his word—unlikely that charges would have a deterrent effect. When we debated the Health and Medicines Bill in Committee, my hon. Friend the Member for Livingston read out various statements that were made, such as that it was unlikely that the charge would stay the same, that the charge would go down or that it was likely to go down. That has not been borne out by fact.

I have no confidence that, as the Minister suggested, the market will regulate costs and the price will go down. As the hon. Member for Macclesfield said, the market is not quite the same in health care as elsewhere. A colleague of mine in private practice wished to reduce his work load. He thought that the way to do that was to put his prices up. Much to his amazement, rather than reduce it, it significantly increased the number of people who came to him. It is an American philosophy, apparently, of which I was not aware, that the way to attract patients is to put the price up because they think that they are getting a better service. I am not confident that prices will fall. The market does not operate in health care. All our experience of health care systems that operate a pricing mechanism is that prices inevitably rise.

The Minister said that prices will not prove a deterrent. He said that 2 million pensioners will be exempt. He did not mention that that means that 7·7 million will not be. He said that even those who are not exempt will be eligible for subsidy if their income is just above income support level. I hope the Minister realises that, to get the subsidy, people have to fill out a lengthy form. It will surprise such people to be asked on the form

"Are you going to visit someone in prison?"

Pensioners and others who want to claim for an eyesight test will wonder what on earth that has to do with their vision.

This complex application form includes many questions:

"Do you and your partner have a home improvement loan or loan for repairs? . . . We will get in touch with you about this . . . Do you or your partner get housing benefit? Tell us the full amount for rent and rates and the amount for rent after housing benefit is taken away. This will be the actual amount of rent you pay . . . If you or your partner are a council tenant, or if you agree that the council will pay housing benefit straight to your landlord or landlady . . ."

and so on. I hope that the Minister gets the point. These complicated methods of claiming help for those just above income support are a disincentive to claiming.

The regulations on general ophthalmic services list those who will gain exemption. The Minister also read out the list of those who will be exempt; I ask him for an assurance that it will be kept under review. One or two necessary exemptions may not have been included. These exemptions were wrung out of the Government in Committee and on Report. One of the concessions that we obtained was that for people aged 40 or over who are the parents, brothers, sisters or children of people diagnosed as suffering from glaucoma. Grandparents are missing from the list. Will the Minister include them? There are not many of them, and I see no valid reason for their exclusion.

Will the Minister consider exempting patients with cataracts? By that, I do not mean those whose condition has been dealt with—they will be eligible because of their complex optical appliances—but those who have been diagnosed and are having regular examinations.

On Report, the Minister of State gave an undertaking that the uptake of tests and waiting lists in hospitals would be closely monitored. What systems are in place to enable that monitoring to be done? If there is evidence of lower take-up, will the Government reconsider this matter?

The Minister asked for our comments on a matter that is not in the regulations; I am only too pleased to give him mine. I was surprised that the two-tier sight tests were proposed at all. On Report, the right hon. Member for Braintree introduced what is now section 14 of the Act. He told us then that new clause 15 was

"essentially a consumer protection provision".

He said that it differed from the original clause, and had therefore been tabled rather than a mere amendment, in that

"we have decided that it is right to take the power, which curiously does not exist at present, to specify clearly in regulations what duties a practitioner must perform as part of a sight test.

As the House is aware, the sight test is generally understood and expected to include a test to establish whether spectacles are required, and an eye examination in which signs of injury . . . may be detected . . . It is our intention that, under whatever arrangements people receive a sight test, there should be certainty about what they are getting and that it should include a proper eye examination."—[*Official Report*, 13 April 1988; Vol. 131, c. 226.]

The right hon. Gentleman did not say that it might. He did not say that there would be a differential in sight tests. That is what we were led to believe, and that was our understanding. Imagine our surprise when we found that

the proposal was not for a proper eye test, but for a two-tier test. One tier will be for refraction of vision; the other will be the full eye test.

I ask the Minister to consider that proposal very carefully. He said that he might be swayed by argument, and I trust that I will be able to persuade him not to introduce the two-tier test. For ophthalmic medical practitioners it will pose considerable ethical problems, based on what is expected under the General Medical Council's "fitness to practise" rules and regulations, under which it is incumbent on them to do whatever they think necessary.

I understand that under the proposals the ophthalmic medical practitioner or optician will have to state clearly that two sight tests are available, and that one will not include the full examination. What will be the position should a patient present to an ophthalmic medical practitioner or optician and agree to the simple sight test but not to the full examination? In the course of that test, either from the history or from the initial sight test, what will happen if the practitioner feels, on the basis of either the patient's history or the initial test, that a further examination is necessary? Will the patient be entitled to that further examination free, or will he have to pay for it? Can he opt out of having the test at all? That will, as I have said, present an ethical problem; more important, it will present a considerable health problem for the patient.

Throughout the Committee and Report stages of the Bill much emphasis was put on the need for a full eye examination, rather than an examination limited to a test of vision. I hope that the Minister will consider carefully before proposing regulations for a two-tier examination. I assure him that Opposition Members will vote against any such regulations.

12.7 am

The Parliamentary Under-Secretary of State for Scotland (Mr. Michael Forsyth): I am happy to give the hon. Member for Strathkelvin and Bearsden (Mr. Galbraith) the assurance that he sought that the exemptions will be kept under review. I am sure that he will recognise that as we are currently considering the results of consultation on the question of a two-tier test—as he describes it—his comments will have been heard by my hon. Friend the Parliamentary Under-Secretary for Health and will be taken into account.

The concept of asking patients to make a contribution towards the cost of their treatment is not new, and certainly not original to the present Government, as the hon. Gentleman himself acknowledged and as was emphasised by my hon. Friend the Member for Banbury (Mr. Baldry). It is therefore difficult to understand the protests being made about the rational development of that principle. What is even stranger is the challenge to measures concerned with providing relief from charges for those on low incomes.

The hon. Member for Strathkelvin and Bearsden asked me whether there would be proper systems to review the take-up of sight tests, both private and NHS. We will certainly undertake a survey of private tests through NOP in the autumn. He also asked about cataract sufferers, who will be able to obtain free NHS sight tests if they are referred by their hospital consultants.

The hon. Member for Southport (Mr. Fearn) and the hon. Member for Strathkelvin and Bearsden complained about the problems of form filling, particularly for the elderly. I have a certain amount of sympathy with the hon. Member for Southport's complaints about form AG1, which is a daunting prospect for some people, although research has shown consistently that the key element as to how well claimants deal with forms is the clarity of individual pages and not the overall length of the form. However, I dare say that the hon. Gentleman's experience, like mine, is probably not entirely in line with those findings. He will be delighted to know that we are currently reviewing the form to find out how it can be improved. I stress that people receiving income support or family credit get free treatment automatically and others on low income can claim help.

The hon. Member for Southport also asked about the sight tests being provided through British Home Stores at £2·50 for pensioners. He asked whether they were proper sight tests. I understand that they include a full eye examination, so what my right hon. and learned Friend said to the House appears to be taking place.

A number of points were raised by the hon. Member for Southport, the hon. Member for Strathkelvin and Bearsden and my hon. Friend the Member for Macclesfield (Mr. Winterton) about the deterrent effect of charges. It is not accepted and never was throughout the debates on the Health and Medicines Act that charges will have any deterrent effect. When the supply of NHS spectacles ended it was argued that people would be deterred from going to the optician. That has not been the case and spectacle sales and sight tests have increased. My hon. Friend the Member for Ryedale (Mr. Greenway) stressed that point in respect of dental examinations and charges. That did not persuade my hon. Friend the Member for Great Yarmouth (Mr. Carttiss) or my hon. Friend the Member for Macclesfield who were concerned about the apparent contradiction between bringing in charges for dental examinations and our clear commitment to preventive medicine.

The dental examination charge is in no way contrary to the philosophy of prevention set out in "Promoting Better Health". It still pays to visit the dentist regularly. Moreover, the charge will help to release some £50 million, as my hon. Friend the Member for Ryedale pointed out, for positive measures to encourage the prevention of dental disease, including fluoridation, improved and more widespread vocational and postgraduate training for dentists and a new programme to promote dental awareness among young people. It will also help to finance preventive measures in other primary care services.

The hon. Member for Southport asked about backlogs and the use of discretion for late claims for refunds. He is quite right that there have been some delays in processing claims for help with NHS costs. However, I am pleased to say that from a peak of more than 9,000 cases, the agency benefits unit had reduced the stockpile to about 2,500 cases on Monday and had cleared it completely by this morning. People who have incurred NHS costs while waiting for their claims to be assessed will be able to claim a refund and will include those who have purchased glasses or contact lenses following a sight test. The normal one month for claiming a refund will not apply. I hope that that meets the hon. Gentleman's point.

My hon. Friend the Member for Great Yarmouth asked about the cost of dental and sight tests for the unemployed. The unemployed people who are receiving

[Mr. Michael Forsyth]

income support, as most unemployed people are, get free dental and sight tests, free dental treatment and full-value vouchers for glasses as well as free prescriptions.

The hon. Member for Preston (Mrs. Wise) complained about the design of the forms which have been issued. The first two batches of forms from the printers did have reversed prescription details. That error has now been corrected and the forms which are due for delivery to family practitioner committees next week are correct. The hon. Lady was also concerned about a delay in issuing instructions. Revised instructions were issued to health authorities and family practitioner committees to arrive no later than 21 March. That gave them sufficient time to issue them to their practitioners, but I understand that some delayed issuing them until Friday 31 March.

The hon. Member for Birmingham, Hodge Hill (Mr. Davis) complained about the regulations amending the scheme for helping people with low incomes and about incorrect instructions being issued. The amending regulations simply ensure that the scheme for help with NHS costs is kept in line with the income support scheme on which it is based. The hon. Gentleman asked about the number of people who had been affected because for part of the year 1988-89 the agency benefits unit was not assessing claims strictly in accordance with the 1988 regulations. The cases concerned will be reviewed and we will be writing to the people concerned to find out whether they have paid more than they should have done.

Mr. Terry Davis: Given that the letter admitting that the incorrect instructions had been issued was sent to me by a Minister three months ago, surely the cases should have been reviewed by now.

Mr. Forsyth: If the hon. Gentleman would like me to I shall ensure that I write to him to explain the background. It is a complex matter and I am sure that he will understand that every effort is being made to identify the people who may have suffered and to ensure that they are properly treated. I shall certainly write to the hon. Gentleman if that will be of assistance to him.

Mrs. Wise: I am sure that my hon. Friend the Member for Birmingham, Hodge Hill (Mr. Davis) appreciates the offer of a letter but this matter affects us all. The Minister should come to the House and explain how many people were wrongly assessed and tell us specifically when it is put right.

Mr. Forsyth: I understand that about 15,000 claims were affected by the error, but that does not mean that that is the number of people who will lose out. The hon. Lady should be concerned, as I am sure we all are, with the particular circumstances of those affected and I can give her an assurance that everything is being done to put matters right.

Mr. Terry Davis: The Minister would have had more time to obtain the information for which we are asking if his hon. Friend the Under-Secretary had given way during his speech because I would have put some questions to him which might have saved us all some time. The Minister has told us that 15,000 people have been affected. Can he tell us how many cases have been reviewed during the three months since the Government admitted to me that they had made a mistake? After all, it took them 10 weeks to write to me with that admission.

Mr. Forsyth: I have already explained to the hon. Gentleman that we will be writing to the people concerned to find out if they have paid more than they should and that we will ensure that the matter is put right. I would have thought that he would accept that.

My hon. Friend the Member for Ryedale asked about the new dental contract. I can give him the assurance that he sought. Negotiations will begin soon and I can repeat the assurances that have already been given to the profession about that. I am sure that he will welcome that.

I think that I have covered all the points raised in the debate. The regulations ensure that proper exemptions are made and that a balance is reached between obtaining a proper contribution from those who are able to afford it and those who are not. I commend the regulations to the House.

Question put and negatived.

Industry (Subsidies)

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Maclean.]*

12.19 am

Mr. Jerry Hayes (Harlow): The debate tonight concerns unfair competition in the European Community and direct subsidising, which are against article 92 of the treaty of Rome and which deliberately and unfairly undercut jobs and industry in this country. Before going into the general, I want to go into the particular. I am speaking about a company in my constituency, Cossor Electronics, which has been there for a long time. It has a large, dedicated and professional work force who have worked hard to make the company the world leader, not only in electronic components, but especially in air traffic control. As it is the world leader, no one could have been more horrified than myself and my constituents to hear that in the past few weeks it has lost contracts in air traffic control to the value of £80 million, not through lack of keenness, competition or misunderstanding the market, but simply because of unfair competition from abroad.

That has happened in Australia, Thailand, Turkey and central America, and it could happen in other countries. The facts are simple. Two European member states—France and Italy—have been directly and illegally subsidising unfair competition, so much so that on the air traffic control contract that was awarded to the French and the Italians a few days ago in Australia they were able to offer their products at 40 per cent. below their own catalogue prices.

After dealing with the particular, I shall turn to the general. In the run-up to 1992, state aids could be used as an alternative to tariff barriers and other forms of protection. Uncontrolled state aids could be a threat to the unity of the Common Market and to the system of free competition. There is a danger that the combined effect of independently applied national policies would lead to incoherent, contradictory results at Community level. Only further Community control can ensure that any benefits obtained from state aid outweigh the resulting distortions in competition.

An interesting report was issued by the Commission only a few weeks ago. It is a survey of state aids and says that the total annual volume of state aid in 1986 amounted to about £65 billion, which represents 3 per cent. of gross domestic product, or £517 per employed person. The amounts are so high that not only are the effects on competition pronounced, but their macroeconomic impact cannot be ignored. Aids exceed direct taxes on companies, and constitute an important factor in budget deficits in certain member states.

It is worth looking at those countries which are abusing the system. I am delighted that my hon. Friend the Member for Ilford, South (Mr. Thorne) is present. He has been working hard on behalf of his constituent company, Plessey, against unfair practices, as has my hon. Friend the Member for Isle of Wight (Mr. Field), who cannot be present this evening but who supportss what my hon. Friend the Member for Ilford, South and I say.

We must look at the main villains. Italy gives about five times as much as France and Germany. Of the small member states, Greece and Ireland give a significant volume of aid. In 1986, the United Kingdom gave £1·9 billion in aid, France gave £3·6 billion, Germany gave £4·9 billion, and Italy gave £16 billion. In other words, Italy is now giving nearly nine times as much as the United Kingdom. Those results alone must show that a review of policy is essential.

In most member states, grants and straight tax reductions were the most common form of intervention. We must take into account that France and, to a lesser extent, Italy have been using more opaque forms of aid, namely equity participation, guarantees and soft loans. But we are talking about £65 billion of Community money being spent on feather-bedding industries. Of course one must understand that, to a certain extent, strategic industries and industries in difficulty—for example, coal, steel and railways—must be protected. But if one forgets those industries, over £30 billion of member states' money is being deliberately and illegally spent on unfairly feather-bedding industries and undercutting competition.

Just as the United Kingdom has been remarkable for its modesty in state aid, Italy has been remarkable for the extent of the aid that it has given. It has the most expensive regional policy for the less prosperous peripheral regions —one cannot complain about that—and it also has the largest interventionist industrial policy aids and the largest aids granted through public holding companies. In addition, apart from France, it has the largest aids for exports and, apart from Germany, the largest aids for research and development.

Yesterday, I flew to Brussels and had the opportunity of speaking to Sir Leon Brittan, the Commissioner with responsibility for competition policy, financial institutions. I am delighted to say that he gave a significant undertaking. He said that he intends to use much more actively the Commission's powers under article 93.1 to review the important existing aids which, by their nature and volume, adversely affect competition and intra-Community trade. Perhaps most important of all, although the Commission takes a strict line against aids for exports to other member states, no action has ever been taken on aids to exports to Third world countries. There is no doubt that such aids can distort competition inside the Community. The sheer volume of the aids and the large differences between member states make it essential to consider the position afresh.

The feather-bedding of nationalised industries must stop. There can be no room for policies that have the effect —even if it is not always the intention—of discriminating against the private sector. The private sector must be allowed to compete on equal terms. It must be the market, and not state aid, that is allowed to rationalise the industrial structure and determine the number of firms that should be allowed to compete.

Mr. Neil Thorne (Ilford, South): Is my hon. Friend aware that the bid by GEC—Siemens for Plessey will be particularly affected by the fact that, because the German telecommunications industry is heavily subsidised, the real cost of producing equipment in Germany is considerably higher than it is here? Consequently that company will not be able to compete internationally. In those circumstances, unemployment will be created because Japan and other countries would be able to undermine our industry.

Mr. Hayes: My hon. Friend makes his point very well indeed. This is the difficulty. More than £30 billion of Community money, member states' money, is being spent on feather-bedding state industries, at the expense of fair

[Mr. Hayes]

competition. Let us have a free market, let us have a situation in which we can compete, but let us compete on equal terms. Let us have a level playing field. At present the playing field is not level; it is slanted against the companies in my hon. Friend's constituency and in my constituency.

Let us make no mistake: it is not only firms and jobs in Ilford, South and in Harlow that will be at risk; firms and jobs in every constituency will be at risk unless the Commission acts quickly, and unless—and this is where I bring my hon. Friend the Minister in—the Department of Trade and Industry makes it absolutely clear that it will not put up with unfair competition. My hon. Friend will have to say, "Let's have the evidence", but he knows as well as I do that this is going on. If this is what the French and the Italians are doing to British industry now, what on earth will happen to jobs in our constituencies, to the people who have been working hard to make this country competitive and a great exporter again, after 1992 unless the Government and the Commission act quickly?

12.33 am

The Parliamentary Under-Secretary of State for Trade and Industry (Mr. Robert Atkins): I congratulate my hon. Friend the Member for Harlow (Mr. Hayes) on raising this topic. We have come to expect him to show, on any occasion, that he is happy to draw attention to the interests of his constituents. The case that he made tonight, and has made on other occasions, is one that we view with considerable concern. Obviously, I am impressed that my hon. Friend the Member for Ilford, South (Mr. Thorne) is in the House. His presence adds weight to the case that my hon. Friend the Member for Harlow makes.

It is worth dealing specifically with the case of Cossor, which I know is dear to my hon. Friend's heart, and which he raised with Sir Leon Brittan yesterday. My experience of the aerospace industry, both with my hon. Friends on the Back Benches and now as a Minister, leads me to believe that there is quite a lot going on about which we might be concerned. However, my hon. Friend, as a lawyer, will understand better than most that demonstrating proof is very different from having suspicions. We have to consider how best to go about doing just that.

I am aware that Cossor Electronics, which is a fine company—as is Plessey, which is in the constituency of my hon. Friend the Member for Ilford, South—and the United Kingdom ground radar industry generally, is meeting strong competition from other European suppliers and overseas markets. The consequences of a continuing loss of business in this market are of great concern. My hon. Friend the Member for Harlow rightly stressed that his constituency and others will be affected if the loss continues.

As my hon. Friend the Member for Harlow is aware, my Department stands ready to intervene on the company's behalf, with the appropriate authorities, providing that real evidence can be presented on the origin and destination of the alleged subsidies. It is regrettable that at present we have seen no hard evidence, although we may have some suspicions. I am alive to those suspicions becoming hard evidence. If my hon. Friend can give me more information, or if company representatives can do so, I shall be more than happy to act and to encourage the Department to pursue the matter with the Commission. I await that information.

My hon. Friend the Member for Harlow touched on the general principle of state aids, and I shall dwell on it in a more general sense as I believe that the House will value my doing so. One of the Government's basic aims is to encourage and secure an environment in which business can operate freely on the basis of fair competition in an open market. In the European Community too, competition policy has been seen as crucial to securing the Community's basic aims.

With the coming of the single European market, state aids and other elements of competition policy become even more important. Once the single market is established, state aids will be virtually the only remaining instrument of protection available to member states against competition within the Community. Firm and even-handed enforcement of the state aid rules is therefore a vital factor in the creation and maintenance of a genuinely single market. It is essential that barriers to trade within the Community are not replaced with illegal or unjustified subsidies which serve only to protect uncompetitive industry. Indeed, industry in the Community will not win in world markets through that sort of protection.

My hon. Friend the Member for Harlow referred to feather-bedding, and his point was well taken. Efficient companies, which should benefit from the single market, would be prevented fully from using the advantages that they have gained through their efficiency. They may be deterred from exploiting their advantage if they believe that this may provoke distortions of competition in other member states. As a member of the international trading community, the EC cannot only look inwards. It must uphold and respect the rules imposed under other international agreements. It is therefore especially important for the Community, as well as for the United Kingdom, that the state aid regime is enforced rigorously and even-handedly. I should make it clear exactly what that regime is.

The rules are laid down in the treaty of Rome. They concern any aid granted by member states or through state resources which distorts, or threatens to distort, competition by favouring certain undertakings or the production of certain goods. The treaty does not identify what counts as an aid. It can be any form of subsidy, any relief from financial burdens such as taxation or social security benefits or interest on loans, or any other measures with similar effect. All aids are considered to be incompatible with the Common Market in so far as they affect trade between member states, unless they can be justified by providing some compensating Community benefit.

The treaty of Rome lays down those general rules. It also gives the Commission power to enforce them and lays down the procedure for so doing. Member states must notify to the Commission all plans to grant aid or to change their arrangements for granting it. This applies to schemes for granting aid and, sometimes, to individual projects. The Commission is then responsible for scrutinising the proposal to determine whether it is compatible with the Common Market. If it cannot agree following this examination, it can open a formal investigation procedure and consult all member states

about the proposal. The Commission may then agree the proposal, amend it or impose conditions, or reject it entirely.

Member states may not pay aid until their proposal has been agreed by the Commission. If a member state pays an illegal aid, the Commission can order the aid to be repaid —that means clawing it back from the recipients—and it can take member states to the European Court of Justice to have its decisions supported.

The Commission can also investigate aids which are being paid by member states under schemes already in force, either on its own initiative or as a result of a complaint. I anticipate such a complaint from my hon. Friends in due course. If the aid is found not to be compatible with the Common Market, the Commission can order the scheme to be changed or stopped or, in extreme cases, the aid reclaimed.

All that underlines the fact that clear rules exist in the Community to secure fair competition and to ensure that subsidies do not distort trade. The key point is to have the rules enforced by the Commission in a rigorous and even-handed manner. My hon. Friend emphasised that strongly. The Commission has been tightening up markedly over the past few years, and it intends to continue doing so.

My hon. Friend drew attention to the visit and to the comments of our erstwhile colleague, Sir Leon Brittan. He said only a few weeks ago that firm control can ensure that the benefits derived from state aids will outweigh any distortions of competition. He pointed to recent work by the Commission to identify the full extent of aids granted by the different member states. My hon. Friends will be pleased to know that the United Kingdom came out of the analysis relatively well.

Since the early 1980s, the level of United Kingdom subsidies has been on a firm downward trend, while that in other major member states has been upwards, in some cases markedly so. My hon. Friend referred to some of those countries. The Commission believes that little of the aid has been accompanied by positive benefits, that it has simply served to cancel out similar aids in other member states. The Commission therefore intends to review all existing aid schemes, as well as new schemes for which the Commission's approval is being sought. Without a firm and comprehensive policy of this kind, Sir Leon saw little possibility of completing the single market, and he committed himself to allowing undistorted competition to play its rightful role. The Commission's analysis is not yet complete, but Sir Leon has said that it is already clear to him that urgent action is needed, and clear also where changes have to be made.

My hon. Friend made several references to cases and countries that he knows of, and to the figures involved. Sir Leon is addressing the matter in the terms that my hon. Friend has talked about. I trust that in due course, although it may take longer than my hon. Friend and I wish, we will be able to resolve the problem. I can assure the House and my hon. Friends that the Commission will have the Government's full support in its work. The creation of the single market requires no less if we are to secure its benefits.

The position of individual British companies must also be considered when they run up against unfair competition from elsewhere in the Community. It is worth distinguishing here between subsidies which are illegal— that is, those that have not been notified to the European Commission or are not covered by an approved scheme —and subsidies that have been notified and approved by the Commission. In the case of illegal subsidies, the Government will do their utmost to pursue with the Commission the cases of British firms which have suffered because of illegal subsidies granted to their competitors.

My officials are always ready to discuss with firms what it takes to mount a persuasive case. The main requirement is to obtain hard evidence that the European competitor has received a subsidy and that the subsidy is likely to fall outside schemes which have been approved by the Commission. This is an area in which the Commission is particularly concerned, and I have every confidence that it will follow up complaints to the best of its ability. It has at its disposal the range of sanctions to which I referred earlier.

In the case of legal subsidies, the scope for immediate action is more limited, but where subsidies can be shown to put British firms at a disadvantage, we may be able to persuade the Commission that wider Community principles are at stake. As Sir Leon Brittan said, the Commission is concerned about the high level of subsidies which it has itself approved over the years and it intends to review these comprehensively. The Government would certainly urge the Commission to give priority to those which clearly disadvantage British companies as well as distorting trade within the Community more generally.

To sum up, the Government believe that rigorous and even-handed enforcement of the state aid rules is crucial to securing free and fair competition within the European Community. That in turn is vital for creating and maintaining a genuinely single market in Europe. We shall do our utmost to ensure that British firms have the opportunity to share in the benefits which an open market can bring.

Both of my hon. Friends the Members for Harlow and for Ilford, South, who have addressed the House cogently and articulately on the problem, are to be congratulated on the concern that they have shown for their constituents. They have my assurance that I and other Ministers in the Department of Trade and Industry will do all we can to ensure that British companies get a fair crack of the whip on an even playing field or, indeed, according to any other analogy that can be drawn.

I am grateful that my hon. Friend the Member for Harlow has seen fit to draw this matter to the House's attention. If he or a company in his constituency or that of my hon. Friend the Member for Ilford, South can find the hard evidence, I assure them that we shall wage war to the highest possible level to ensure that all is fair in that difficult area.

Question put and agreed to.

Adjourned accordingly at fifteen minutes to One o'clock.

House of Commons

Thursday 13 April 1989

The House met at half-past Two o'clock

Oral Answers to Questions

HOME DEPARTMENT

Community Volunteers

1. **Mr. Morgan:** To ask the Secretary of State for the Home Department whether he will explain the purposes and duties of the proposed community volunteers schemes.

The Minister of State, Home Office (Mr. John Patten): The Government have not formulated proposals for community volunteer schemes in the field of crime prevention. Members of the public are already contributing directly to crime prevention by joining neighbourhood watch and crime prevention panels. We encourage those wishing to give more active support to the police to join the special constabulary.

Mr. Morgan: In the light of the Home Secretary's recent speeches on the matter, will the Minister tell the House the relevance of the proposals for unpaid volunteers and special constables to solve the special problems which exist, such as the fear that women feel when travelling on the Underground at night and the problem of lager louts massing outside pubs and night clubs? Is it not really a matter of training workers without uniforms to do the jobs of special constables without wages?

Mr. Patten: That is quite a good line, but it is totally facetious and fatuous. We need more special constables to join up as active citzens in uniform, to help to relieve the police—as they can do—for their mainstream duties, by carrying out many ancillary duties for them. That will allow better policing. That is why we propose to introduce special constables on the Underground soon. I hope that the hon. Gentleman will welcome that.

Mr. Adley: In view of my hon. Friend's remarks, does he agree that the police are hugely overburdened with road traffic work and that it is about time that we considered establishing a highway patrol so that the police can concentrate on criminal matters?

Mr. Patten: It is the view of both my right hon. Friend the Home Secretary and myself that issues of traffic patrolling are best left to the chief constables in each area, who are operationally in charge of those difficult responsibilities.

Mr. Corbett: Is it not deceiving the still rising number of victims of violence in the west midlands and everywhere else to pretend that community volunteers can stem the alarming increase in crimes of violence? Is it not merely an attempt to powder over the problem rather than put enough feet on the beat to prevent even more people becoming victims of violence?

Mr. Patten: More well-turned lines, but they are very wide of the target. The hon. Gentleman avoids the fact, which I made clear in my main answer, that we have formulated no proposals for community volunteers. The hon. Gentleman could not have been listening. Rather, we encourage more active citizens to join up as special

constables to help the police and the attack on violent crime by relieving the police of the burdens of some of their ancillary duties.

Stocken and Ashwell Prisons

2. **Mr. Latham:** To ask the Secretary of State for the Home Department whether he will make a statement on the arrangements for ensuring that men sent to Her Majesty's prisons Stocken and Ashwell are suitable for category C regimes.

The Parliamentary Under-Secretary of State, Home Office (Mr. Douglas Hogg): Only prisoners in security category C are sent to Her Majesty's prisons Stocken and Ashwell. The prison service takes great care to ensure that all prisoners sent to those prisons are suitable for the conditions there.

Mr. Latham: Does my hon. Friend recall from our correspondence the very real concern of the Prison Officers Association that men are being sent to those prisons who are really suitable for category B? In view of the serious incident which occurred at Ashwell last August, will my hon. Friend ensure that the prison department listens closely to the views of the Prison Officers Association, which represents the people who are at the sharp end every day?

Mr. Hogg: My hon. Friend deserves the congratulations of his constituents for the persistence with which he has acted to ensure that prisoners sent to the two prisons he mentioned are suitable for the conditions there. My hon. Friend will know that he and I are to meet shortly to discuss that particular issue and I hope that what I say then will reassure him.

Mr. Skinner: Will the Minister ensure that places are left available at category C prisons Stocken and Ashwell, ready for Monday's performance at the Royal Courts of Justice when the law-breaking Lords—led by Lord Donaldson, previous head of the national industrial relations court—decide to go on strike? Presumably the Home Secretary and the Attorney-General will band together to take appropriate action against the law-breakers, but will the culprits be sent to category C prisons or to somewhere even harsher?

Mr. Hogg: It is for the prison service to determine whether that security categorisation is right, but persons are sent to category C prisons only if they are not a threat to the public.

Mr. Holt: My hon. Friend recently advised me in a written reply that of the 32,000 prisoners serving sentences of one year or more, 10 per cent.—3,000—of them are foreign nationals. Does my hon. Friend agree that if they were sent back to their own countries to serve those sentences it would make a great deal of difference to both Ashwell and Stocken and lessen the current problems in our gaols?

Mr. Hogg: That proposal goes somewhat wide of the question, though it is an interesting idea. The trouble is that if some of those offenders were sent back to their countries of origin they might not have to serve a period in custody.

Mr. Holt: So what?

Mr. Hogg: They would then not be punished for what they had done.

Mr. Sheerman: Is not this problem of categorisation in a local prison symptomatic of the problems in local prisons throughout the country? Such is the pressure on local prisons that categorisation and allocation is haphazard. Prison officers have certainly brought this problem to the attention of the Opposition. Many prisoners are allocated to entirely the wrong prisons, which bodes ill for the forthcoming summer months.

Mr. Hogg: As I have had cause to say before, the hon. Member for Huddersfield (Mr. Sheerman) is not master of his material. Stocken and Ashwell are not local prisons, nor are they overcrowded or understaffed. In many respects, they are admirable prisons. I recommend that the hon. Gentleman should do a little homework before he next intervenes in questions about the prison service.

Charities

3. **Mr. Andrew MacKay:** To ask the Secretary of State for the Home Department whether he has any plans to reform the law on charities.

The Secretary of State for the Home Department (Mr. Douglas Hurd): I announced in January last year that we intended to bring forward legislation to implement the proposals made by Sir Philip Woodfield in his efficiency scrutiny of the supervision of charities. I hope shortly to publish a White Paper setting out the Government's proposals.

Mr. MacKay: While I welcome the White Paper and hope that it will shortly be published—followed, one hopes, by legislation in the next Session of Parliament—will my right hon. Friend the Home Secretary confirm that the Charity Commissioners can deregister charities found to be fraudulent and remove trustees? Is it not a pity that that does not happen more often?

Mr. Hurd: The commissioners have powers of the kind mentioned by my hon. Friend and are ably led and increasingly well organised. The trouble with the existing law is that it imposes on them a number of secondary duties which make it difficult for them to carry out effectively all the important tasks that they would wish.

Mr. Campbell-Savours: Is the Home Secretary aware that in the past 12 months many members of the Royal Society for the Prevention of Cruelty to Animals have written to me complaining about the running of that organisation—for which we all have great respect? Following the expulsion of the watchdog group of RSPCA members, I convened a meeting and asked those members if they would be prepared to accept me as arbiter between the warring factions. Is the Home Secretary aware that they refused, and that many RSPCA members are making grave allegations against the organisation, about which something should be done? Will he ensure that any reform provides for an inquiry of some sort?

Mr. Hurd: I am sorry that the hon. Gentleman's reputation for calm and impartiality did not serve him on that occasion. It is surely for the RSPCA to sort the matter out. If the question of its charitable status should arise, it will be a matter between the RSPCA and the Charity Commission; certainly it is not my responsibility.

Mr. Favell: Is my right hon. Friend aware that many bank accounts around the country contain money collected for worthwhile projects such as children's playgrounds, sports fields and conservation that have come to nothing? Often the promoters have left or died. Has my right hon. Friend any plans to release that money —which may run into millions of pounds—for other suitable, worthwhile charity projects?

Mr. Hurd: My hon. Friend makes a good point. The Charity Commission is already able to take action if it knows of money having been abandoned in that way. For example, it can appoint new trustees. We propose, however, to strengthen its powers as a result of the Woodfield report. I will write to my hon. Friend with details.

Cocaine

4. **Mr. Tredinnick:** To ask the Secretary of State for the Home Department whether any new initiatives are planned to prevent the importation of cocaine from Colombia and other Latin American nations; what assessment he has made of the extent to which organised crime is involved in this traffic; and if he will make a statement.

Mr. Douglas Hogg: Measures that the Government have taken against the production and importation of cocaine and other drugs include the provision of £1·8 million of drug-related assistance to Latin American countries over the past three years and the setting up of specialist Customs teams to target cocaine trafficking. Organised criminal gangs are often involved with this traffic.

My right hon. Friend the Home Secretary and I will be discussing the threat to Europe from cocaine at the ministerial meeting of the Pompidou Group in London next month.

Mr. Tredinnick: When, late last year, I attended an international conference in Washington which covered drug problems, Colombian representatives told me that they did not think that enough was being done in the United Kingdom and elsewhere to suppress demand. They stressed their own strenuous efforts to curtail supply, which had resulted in the deaths of their Minister of Justice and Attorney-General, more than 50 judges and more than 1,700 police and law enforcement officers in recent years. Does my hon. Friend recognise the efforts made by the Colombians?

Mr. Hogg: Yes, I do. My right hon. Friend the Home Secretary had a meeting yesterday with the Colombian Foreign Minister. It was a very profitable and helpful exchange. My hon. Friend is right to raise the subject of cocaine. In 1988 the Customs seized larger quantities of cocaine than of heroin. We have a range of policies designed to deal with the problems of drug misuse and importation, which of course address the cocaine problem, but in view of the changing figures we are reassessing those policies to establish whether they need adjustment.

Mr. Skinner: When those officers are engaged in stopping the importation of cocaine from Colombia, will the Minister ask them to stop the importation of coal from Colombia at the same time?

Mr. Speaker: Order. I do not think that it is a drug, is it?

Mr. Skinner: Yes, it is. You have helped me, Mr. Speaker. The importation of Colombian coal mined by nine-year-old children is not just a drug but a drain on Britain's balance of payments.

Mr. Hogg: I think that the Leader of the Opposition will become increasingly alarmed at the fact that the sole Opposition spokesman on these important matters appears to be the hon. Member for Bolsover (Mr. Skinner).

Mr. Jacques Arnold: Does my hon. Friend appreciate the importance of intelligence-gathering in dealing with this odious trade? Are we doing enough to stamp it out by working with the authorities not just in Colombia but in Bolivia and Peru where the drug is produced?

Mr. Hogg: That is an extremely important point. The exchange of intelligence and information goes to the root of our ability, and that of European countries generally, to deal with the problem of cocaine importation. We are establishing ever better relations with the Latin American countries and are extending our network of drug liaison officers.

DNA Testing

5. **Mr. Madden:** To ask the Secretary of State for the Home Department when he expects to make an announcement concerning a Government DNA testing scheme to assist those seeking to settle in the United Kingdom.

The Minister of State, Home Office (Mr. Tim Renton): We are considering introducing a centrally run DNA scheme, the cost of which will not fall on the general taxpayer. The use of such a scheme would not, of course, be compulsory for settlement applicants. We hope to make an announcement shortly.

Mr. Madden: Why are the Government dragging their feet about the introduction of a DNA testing scheme? Is the Minister aware that there is a widespread suspicion that the Government are reluctant to introduce the scheme because DNA testing offers reliable evidence to prove the genuineness of applications from families who wish to be reunited in this country and that that is why the Government are wasting so much time? Over the past 12 months, the Minister has been saying that he hopes to make an announcement "shortly" and "as soon as possible", and last weekend, he said that it would be made within weeks. It is high time that the announcement was made and that families were able to take advantage of the scheme to be reunited in this country.

Mr. Renton: The hon. Gentleman is taking his usual blinkered and biased view about anything to do with immigration. In the past four months alone, the immigration and nationality department has accepted 750 DNA test reports showing whether the relationship is as claimed, but of the reports submitted to us some 12 per cent. have shown that the parents and children are not related as claimed. One in eight couples thus find that one of them is not the parent of the child although both had thought that they were. That produces many problems

—in relation to the admission of illegitimate children, for example—which must properly be considered before we take a final decision on the matter.

Mr. Gale: The hon. Member for Bradford, West (Mr. Madden) has shown his faith in the infallibility of DNA —a faith that I share. Given that faith, can my hon. Friend say when he intends to introduce DNA fingerprinting not only for immigration cases but for everyone convicted of crime?

Mr. Renton: As my hon. Friend knows, DNA fingerprinting has already been used successfully in homicide cases. The figures that I quoted to the hon. Member for Bradford, West (Mr. Madden) were intended to show that we are already accepting the test in immigration cases. We are now bending our minds as to how to introduce a centrally run scheme which will be fair to all applicants and will avoid erecting financial barriers which could be a deterrent to genuine applicants, without causing the general taxpayer to pay. That is a difficult problem, but we are setting about solving it.

Mr. Pike: Will the Minister recognise the problem of people paying for DNA testing themselves whereby it has been shown that decisions to refuse entry taken by the Government in the past were clearly wrong? Should not those people be allowed immediate, priority admission to this country—even if they are now 18 if they should have been admitted in the original instance?

Mr. Renton: The hon. Gentleman must consider the fact that when those children were under 18 they applied as dependants. That is the basis in our immigration rules on which children under 18 are normally allowed into this country. The hon. Gentleman must consider whether it is right that those who may already be married, heads of families, with many children living abroad should be introduced with their families into the United Kingdom simply because a DNA test shows that the father is related as claimed. That is the issue to which we must give close attention.

Mr. Watts: Is my hon. Friend aware that his answer deserved a rather more fulsome welcome than it received from the hon. Member for Bradford, West (Mr. Madden)? My hon. Friend is right to believe that such a scheme should be voluntary. If DNA testing became widely available on a voluntary basis at the earliest possible date to establish conclusively the blood relationships which need to be proved in the case of dependants seeking settlement, it would be welcomed by the ethnic minority communities in this country.

Mr. Renton: I accept fully what my hon. Friend has said. We accept DNA testing now when the results have been voluntarily produced, but the cost of producing them is a serious financial burden. That is why we are trying, with the Foreign and Commonwealth Office, to arrive at a scheme that would avoid the burden falling on the ordinary taxpayer but would not financially harm individual families too greatly. We hope to do that and to announce the results as soon as possible.

Mr. Darling: As DNA testing has shown that many people were wrongly refused entry to this country, does the Minister accept that DNA testing could eliminate queues and paperwork and save vast amounts of money and that to impose high charges will simply erect a financial barrier in place of a bureaucratic barrier? The Minister says that the test may not be compulsory, but does he not accept that it may be necessary because of the haphazard and inefficient way in which entry clearance officers work? Will he not reconsider allowing entry to those dependants who are now over the age of 18? A manifest injustice has been done to them. The Minister should not seek to stand in the way of family unity—a cause that I should have expected the Conservative party to espouse.

Mr. Renton: The hon. Gentleman's attack on members of the immigration service was totally unjust, although I would not expect him, from his hideout in Edinburgh, to have great experience of immigration matters. DNA testing will not, as the hon. Gentleman put it, eliminate queues if the Labour party sticks to the policy to which it was committed in 1987 of repealing the immigration and nationality Acts. All the fair but firm immigration controls that we have introduced would disappear overnight.

Juvenile Offenders

6. **Mr. Gill:** To ask the Secretary of State for the Home Department what representations he has received on the subject of making it obligatory for parents to attend court alongside alleged juvenile offenders.

Mr. John Patten: In addition to the recent questions from my hon. Friend, in the past 12 months the Home Office has received about 40 letters stressing the need to involve parents in the consequences of their children's misbehaviour. Some referred to parents' attendance at court with their children.

Mr. Gill: On the very day when it is reported that three children, aged six, seven and nine, carried out a depraved sex attack on an elderly, disabled and defenceless woman, does my hon. Friend not agree that it is high time that society made it clear that it will hold parents entirely responsible for the actions of their children?

Mr. Patten: On the second point, I agree entirely with my hon. Friend that we need to make considerable and rapid strides forward by making parents more responsible for their children's criminal acts. On the first point, I cannot and should not comment on press reports, but I agree entirely with Superintendent Martin Burton—reported in *The Daily Telegraph*, so it must be true—who says:

> "Parents should be responsible for bringing up their children, teaching them to tell the truth, to respect other people's property and to look after those less fortunate. They should be told it is wrong to lie, cheat, steal and bully."

Mr. Bermingham: Perhaps the hon. Gentleman will tell that to other Ministers. In view of his comments today, and more particularly his recent utterances on children and parents in court, does he agree that instead of seeking to punish parents for the acts of their children, whom the parents are sometimes not in a position to control, it might be better to investigate the root cause of juvenile crime and make efforts to provide help for those families which, at an early stage, have problems with their children?

Mr. Patten: I recognise the hon. Gentleman's serious interest in the issue. He is right that parents who, for a variety of reasons, cannot control their children, or who have sought help because of their children's unruly

behaviour, should not be punished by the law. However, it is right that we should follow the signposts provided by the Labour Government's Children and Young Persons Act 1969, which provides that parents can be bound over on a recognisance of £500 to ensure the proper conduct of their children. I look forward to new and imaginative thoughts on the issue in the forthcoming Labour party policy review, though heaven knows what they will be.

Mr. Nicholas Bennett: As parents are already required to go to court in truancy cases, and as most children who are at risk indulge in criminal activities at the age of 14 or 15, will my hon. Friend reconsider the time limit? It can take up to two years to get the parent and the child to court. Will he also reconsider the penalties which can be imposed? Will he ensure that such cases are dealt with as quickly as possible as there is no point in taking children to court once they have left school?

Mr. Patten: My hon. Friend is absolutely right. The best form of justice is the swiftest form of justice, particularly when dealing with children. Such delays are undesirable and I shall bring them to the attention of my right hon. Friend who is responsible for these matters. In addition, I agree that the attendance of parents in court when their children are being tried is very desirable indeed, and I am sure that all of my hon. Friends would wish to see that happen on every such occasion.

Mr. Randall: How would the Minister's much publicised new proposal dealing with the failure to prevent child crime, to which he indirectly referred just now, distinguish between parents who turn a blind eye and those who genuinely cannot cope with the behaviour of their children? Does the Minister realise that his proposal is unworkable and, at best, would increase family breakdown and create even more homelessness? Is he aware that there are already enough powers to make parents accountable for the behaviour of their children? Why, therefore, does he not throw his proposals in the dustbin, where they belong?

Mr. Patten: I answer no to the hon. Gentleman's second and third questions. As to his first question, if he had bothered to read my words he would have seen that in the four or five-page document in which these ideas are presented the methods are very carefully set out. Should we proceed with such an offence, those parents who are not able to deal with their offending children can be separated from the deliberately delinquent parents and the deliberately delinquent children, about whom the Labour party has no ideas at all. If the hon. Gentleman's question is good evidence of the new thinking emerging from the Labour party's policy review, heaven help the Labour party.

Neighbourhood Watch

7. **Mr. Carrington:** To ask the Secretary of State for the Home Department how many neighbourhood watch schemes are now established in England and Wales.

Mr. John Patten: At the end of March 1989 there were 66,423 neighbourhood watch schemes in England and Wales, covering approximately 3¼ million households. This is a new record—28 per cent. more neighbourhood watches than a year ago.

Mr. Carrington: I am very grateful to my hon. Friend for his reply. Does he agree that the neighbourhood watch schemes have led to a reduction in the number of burglaries, particularly in London, and that their proven success in reducing crime is the best way of increasing the number of schemes and of encouraging residents to join and to participate?

Mr. Patten: I agree entirely with my hon. Friend that one of the best ways of accelerating the present happy decline in domestic burglary is to have more neighbourhood watches. Perhaps more district councils could follow the recent example of Brentwood district council, which has appointed its first neighbourhood watch co-ordinator. That could do a lot of good.

Mr. Sheerman: Does the Minister accept that, while Opposition Members support neighbourhood watch schemes, they believe that those schemes must be linked into a positive partnership between the police and local authorities, and that if we are to have proper crime prevention we need to give democratically elected authorities a lead role in crime prevention? Will the Minister and the Home Secretary give those authorities the resources and the powers to do that job constructively?

Mr. Patten: Many Labour-controlled local authorities —in Hull, for example—are very happy to co-operate with the Home Office in the efforts to reduce crime through crime prevention measures. I only wish that the hon. Gentleman would bother to go to a county like Cleveland and advise the Labour-controlled local authority to co-operate with the neighbourhood watch movement instead of attacking it.

Sir Bernard Braine: Is my hon. Friend aware that the success of a neighbourhood watch scheme stems directly from the relationship of the police constable on the beat with the people themselves? In my constituency—where, two years ago, there were 60 break-ins a year in one particular area—since there has been a neighbourhood watch scheme, with a first-class police officer in charge, and co-operation from the local people, we have had no break-ins?

Mr. Patten: I hope that if my right hon. Friend extends an invitation to me he will let me meet the police constable and the people involved in the neighbourhood watch scheme. It is not just neighbourhood watch schemes in areas like Castle Point—my right hon. Friend's constituency—that produce these remarkable results; similar results are being produced in the rather more difficult territories of Islington, Rochdale and many of our great northern cities, and they deserve the support of the Labour party. That is why the hon. Member for Huddersfield (Mr. Sheerman) should go to Cleveland and give the Labour-controlled council there a good talking to.

Autocrime

8. **Mr. Pawsey:** To ask the Secretary of State for the Home Department if he will make a statement on the action taken by the Society of Motor Manufacturers and Traders and the insurance industry to reduce levels of car theft.

Mr. John Patten: The Society of Motor Manufacturers and Traders and the insurance industry have played an active part in the preparation of British standards for vehicle security and for anti-theft alarms. They have also taken steps to increase public awareness of the opportunities for preventing car theft and the insurance industry has established a central register of total loss claims. It is encouraging that, in 1988, theft or unauthorised taking of motor vehicles and theft from motor vehicles fell by 6 per cent.

Mr. Pawsey: I thank my hon. Friend for that complete reply. The 6 per cent. fall in crime will be welcomed by motorists throughout the country. Can my hon. Friend say what further measures might be taken to reduce crime? Does he think that if motor manufacturers improved the locking on vehicles, it would reduce crime?

Mr. Patten: We have some good new British standards on car security. I agree entirely with my hon. Friend that motor manufacturers can do more. Some manufacturers such as the Rover group and Vauxhall are already doing a great deal. Also, the British insurance industry should strain every sinew to try to introduce new forms of discount to promote car security. It is through such measures that we will produce the admirable results we have seen in Warwickshire—to name a county at random—in the past year where car crime has fallen by about 4 per cent. and theft from cars has fallen by 25 per cent.

Mr. Andrew F. Bennett: Is the Minister aware that some of the devices fitted to cars cause crime rather than prevent it? Is he aware that I have heard many complaints from people who have had a car noise device go off close to their home and who, having gone out to check that the car was not being stolen, have been extremely annoyed to find that it is not possible to turn the device off?

Such people often have their sleep or their day time greatly disturbed by those devices. What steps are being taken to ensure that the car noise devices turn themselves off after giving a proper warning?

Mr. Patten: If the car alarms have been properly fitted and conform to the excellent new British standards that we are trying to promote throughout Europe—thanks to my right hon. Friend the Secretary of State for Transport—the problems, which, as the hon. Gentleman said can be a considerable nuisance to local residents, can be obviated. *[Interruption.]*

Mr. Speaker: Order. Will Government Members please desist from holding private conversations?

Terrorism

9. **Mr. Hunter:** To ask the Secretary of State for the Home Department when he will next meet Ministers of other European countries to discuss international co-operation against terrorism.

Mr. Hurd: I shall be attending a meeting of Trevi Ministers under the Spanish presidency in Madrid on 12 May. I shall also be having bilateral talks with my French counterpart on 19 May when our discussions will include measures to counter terrorism.

Mr. Hunter: Bearing in mind that since 1979 in Great Britain alone, leaving aside the carnage in Northern Ireland, 323 people have died and 344 have been injured as a result of terrorist activity, only part of which relates to Northern Ireland and, bearing in mind that increasingly terrorism has an international dimension, will my right hon. Friend ensure that appropriate and adequate measures are being taken internationally to combat such crime? What has been achieved and what does he intend to achieve?

Mr. Hurd: Perhaps I can give three short examples of what we are achieving through the work of the Trevi Ministers. We are ensuring the flow of timely and accurate knowledge between forces of a type that enabled the French authorities to intercept the ship Eksund from Libya, which was loaded with guns and explosives and bound for Ireland. We are assessing the work of terrorist groups in Europe and the extent to which they are helped by states outside Europe and we are looking at the legislation in different countries and encouraging countries to adopt legislation such as that which this Parliament has just passed to deal with terrorist finances.

Rev. Martin Smyth: Can the Secretary of State tell us whether he has convinced any Ministers from other countries to join him in his campaign to combat terrorism?

Mr. Hurd: Yes. That is our common aim.

Mr. Allason: Given the disagreements that appear to have arisen between the various investigating agencies involved in the Lockerbie disaster, would my right hon. Friend recommend the inclusion of the United States in the kilowatt anti-terrorist European group? At present, it seems that the bilateral arrangements between the United Kingdom and the United States do not appear to be working very well.

Mr. Hurd: I advise my hon. Friend not to believe everything that he reads in the newspapers but to rely more extensively on what Parliament is told about the progress of the Lockerbie inquiry by the Lord Advocate, who is the Minister responsible.

As regards the United States, my hon. Friend is on to a fair point. He will be glad to know that the United States has regular and useful contacts at various levels with the Trevi group of European Ministers.

Mr. Ron Brown: Bearing in mind that no Scottish Law Officer is accountable to this House, will the Home Secretary ensure that his colleague Lord Fraser comes to this place, perhaps to a Committee room, to explain to interested hon. Members exactly what is going on regarding the Lockerbie atrocity? Will he do that, bearing in mind that clearly on the Opposition side of the House we believe in open government and in getting answers to very important, pertinent questions that have been raised on both this side of the Atlantic and on the other? Clearly, this has to be addressed and should not be simply a matter for debate in the press.

Mr. Hurd: I do not agree at all with the hon. Member. The Lord Advocate has a very high reputation in these matters and he has gone out of his way to keep Parliament informed.

Drug Traffickers

10. **Mr. Couchman:** To ask the Secretary of State for the Home Department what is the total amount of assets confiscated from convicted drug traffickers in 1989; and what were the comparable figures for the first quarter of 1988.

Mr. John Patten: Our information is that the courts have made confiscation orders totalling more than £5 million since the relevant powers came into force on 12 January 1987. No precise valuation is made of assets frozen pending trial at any one time, but we believe that between £10 million and £12 million is at present subject to restraint and charging orders.

Mr. Couchman: I am slightly disappointed that my hon. Friend has not got more precise figures to offer on this innovative form of punishment for drug pedlars. Drug peddling is an international crime and much of the ill-gotten gains are laundered internationally. Can my hon. Friend say what agreements he has with other countries in terms of confiscation of funds held overseas?

Mr. Patten: Pretty good progress is being made, with some £5 million confiscated and between £10 million and £12 million frozen. We are making good progress with arrangements with other countries. Bilateral agreements have been signed by my right hon. Friend the Secretary of State for the Home Department with five countries, and letters of understanding with two others. We are now seeking to make arrangements with countries such as Jamaica and Nigeria, which will also be very important.

Sir Fergus Montgomery: What happens to these confiscated assets? Can I have an assurance that they will be handed over to the police forces concerned so that all these assets can be used in the fight against drugs?

Mr. Patten: The money, of course, goes to the Treasury in this country. Record allocations are being made to the police at the moment. These have gone up by some 52 per cent. since 1979, and the allocations take into account the severity of the drug problem in different parts of the country.

Prisoners

11. **Mr. Knox:** To ask the Secretary of State for the Home Department how many people were in prison in the most recent count.

Mr. Hurd: At unlocking on Wednesday 12 April 49,274 prisoners were held in prison service establishments in England and Wales. A further 87 prisoners were held in police cells.

Mr. Knox: I welcome the fact that the figure is rather lower than it was, but does my right hon. Friend agree that there are far too many people in prison at the present time? Does he really think that it is necessary or desirable to lock up so many people?

Mr. Hurd: My hon. Friend will be pleased to note that the total prison population is about 800 lower than it was 12 months ago, and that the remand population at the end of February was 1,200 lower than it was 12 months previously. We may be beginning to make some progress in the direction which I know my hon. Friend would like, which is towards having more severe sentences for those who are guilty of serious violent crime but finding disposals other than imprisonment for non-violent offenders.

Mr. Tom Clarke: What steps are the Government taking to reduce the unacceptably high numbers of mentally ill and mentally handicapped persons in prisons, many of them there because the courts can think of nowhere else to send them?

Mr. Hurd: The hon. Gentleman is right. Such people should not end up in prison simply because the other agencies cannot find a place for them. This is something which my colleagues and I are discussing with my right hon. Friend the Secretary of State for Social Services.

Mr. William Powell: Does my right hon. Friend accept that, whether or not we have too many or too few people in prison, we simply do not have enough drug traffickers in prison? Will my right hon. Friend do all that he can to make certain that continuing high priority is given to ensuring that drug traffickers are locked up, and locked up for long periods?

Mr. Hurd: I agree with my hon. Friend.

Shoplifting

12. **Mr. Janner:** To ask the Secretary of State for the Home Department how many, and what percentage of people, who were charged with shoplifting offences and who pleaded not guilty, were acquitted during the last year for which records are available.

Mr. John Patten: Ten per cent. of those prosecuted for theft from shops in 1987 were acquitted. We do not have information centrally about pleas. There was, however, a welcome 12 per cent. fall in the number of cases in 1988.

Mr. Janner: Does the Minister recognise the vast danger of innocent shoppers being arrested for and, in many cases, charged with shoplifting offences? Does he know of the Tesco case, in which two women who established their innocence found themselves with a massive costs burden because of the payment-into-court system? Will he please discuss with the Attorney-General possible ways of remedying that vast danger and injustice?

Mr. Patten: I know of the hon. and learned Gentleman's longstanding interest in these matters. I am aware of the case to which he refers. If those who are caught allegedly thieving from shops can prove that they were simply absent-minded or confused, the case will fall. We must remember that there is no special category of shoplifting as a crime in this country. Theft is theft, wherever it occurs.

PRIME MINISTER

Engagements

Q4. **Mr. Ronnie Campbell:** To ask the Prime Minister if she will list her official engagements for Thursday 13 April.

The Prime Minister (Mrs. Margaret Thatcher): This morning I presided at a meeting of the Cabinet and had meetings with ministerial colleagues and others. In addition to my duties in this House, I shall be having further meetings later today.

Mr. Campbell: Official figures show that the number of people in this country living below the poverty line increased by 55 per cent. in the past 10 years. Therefore, will the Prime Minister call for a commission of inquiry to find out how that happened?

The Prime Minister: The moment we alter the standard of what is called poverty and raise the threshold, obviously it is possible that more people will come in. We have a very good, comprehensive social security system. It contributes to the living standards of a large proportion of the population, and to nearly one sixth of the disposable income of the population as a whole. The £51 billion that we are now spending on social security benefits is more than the Government collect in income tax.

Mrs. Currie: Has my right hon. Friend heard the rumours about increased inward investment in this country, by international firms from Japan, for example? Does she agree that that has nothing whatever to do with Government subsidies or Socialist planning, but a great deal to do with a good work force, single-union deals, and an atmosphere of encouragement for business which only a Conservative Government can provide?

The Prime Minister: Yes. The inward investment record into this country is excellent. Other people have great confidence in the policies that are pursued by this Government, and confidence that they will continue to be pursued without controls in the future.

Q2. **Mr. Michael J. Martin:** To ask the Prime Minister if she will list her official engagements for Thursday 13 April.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Martin: May I ask the Prime Minister during her busy day to consider the plight of one of my young constituents, Mr. Robert McKee, aged seven, and that of his grandmother? Young Robert was born without any arms. When it rains or snows, his grandmother must hold him by the scruff of the neck in case he falls. He has been refused a bus pass and his grandfather is denied a companion's pass. On seven occasions he has been before a tribunal for a mobility allowance. If the right hon. Lady really cares about the poor and the disadvantaged, why does she make people go through such humiliating hurdles?

The Prime Minister: Of course one would be deeply concerned about any case such as that—*[Interruption.]* Of course one would, and every hon. Member would. I assume that the hon. Gentleman has taken the matter up with the appropriate authorities. As I said in reply to the last question, the taxpayer in this country pays about £51 billion towards social security, which is higher than the entire yield of income tax. That is the extent of our commitment.

Q3. **Mr. Steen:** To ask the Prime Minister if she will list her official engagements for Thursday 13 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Steen: Will the Prime Minister spare a thought this afternoon for the frail and elderly living in private residential homes who can no longer make both ends meet because of the limit on the board and lodging allowance which the DHSS has set for 1988? While there must be limits on public expenditure, even for the elderly, may I ask my right hon. Friend to say something to ensure that those living in private residential homes will not be pushed out if there is not sufficient money forthcoming from the DHSS?

The Prime Minister: In accordance with the general uprating, we have reviewed many of the payments paid to those who live in residential care or in nursing homes, and I think that that is the group to whom my hon. Friend is referring. From Monday, we have provided extra help to nearly nine out of 10 people who claim income support to meet residential care or nursing home fees. We are now helping 150,000 people in such homes compared with 12,000 when we took office, and expenditure has risen from £10 million to £890 million. That is because the economy is successful, and it demonstrates—*[Interruption.]* Yes, it demonstrates also the extent of our commitment: £10 million when we took office and £890 million now.

Mr. Kinnock: Why is the Prime Minister continuing to lose the battle against inflation?

The Prime Minister: I notice, as the Chancellor of the Exchequer said in some very percipient replies upstairs, that the level of inflation—it was a miracle that the Labour Government ever achieved it—was a cause of concern for us.

Mr. Kinnock: Why is the rate of inflation in Britain twice the European average?

The Prime Minister: It is not on precisely the same basis —*[Interruption.]* I would add that the level of unemployment has fallen faster in this country than in all of the European main countries put together.

Mr. Kinnock: Will the Prime Minister explain why unemployment, by her reckoning, is still nearly one million higher than it was when she came to power and why, when the rate of inflation was at the average of Europe in 1979, it is twice the average now? Will she give an answer?

The Prime Minister: The rate of inflation in 1979, when the Labour Government left office, was a lot higher than it is now—*[Interruption.]* There are now more than 1·5 million more people of working age than there were in 1979. There are today more people in work in this country than ever before and we have a bigger proportion of our people in work than in almost any other country in the EEC.

Q4. **Mr. Hayes:** To ask the Prime Minister if she will list her official engagements for Thursday 13 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Hayes: Does my right hon. Friend agree that it is outrageous that the French and Italian Governments should be spending vast sums of money every year directly in subsidising their own nationalised industries to

undercut British competition, which is costing this country jobs? Will she add her weight to the campaign to make Europe a place in which there is free and fair competition?

Mr. Tony Banks: So that we can all go down the pan.

The Prime Minister: As my hon. Friend knows, state aid is incompatible with the concept of a common market, which is why we must get permission from the EEC in any case where it is given. If my hon. Friend has any particular cases in mind we shall of course take them up vigorously, because state aids may be phased out before we reach 1992 and they should already be the subject of permission. The Commission has recently said that it intends to make much more active use of its powers to scrutinise existing state aids in all member states, and it has our strong support in doing that.

Mr. Steel: When, in her next Cabinet reshuffle, the Prime Minister is looking for somewhere to send her right hon. Friend the Member for Worcester (Mr. Walker), which is further away than Wales, will she consider Scotland—[HON. MEMBERS: "No."] Yes—where the policies and principles that he outlines will be more acceptable than the present ones?

The Prime Minister: I do not think that the right hon. Gentleman need worry—I should hardly be sending for him—*[Interruption.]*

Mr. Speaker: Order.

The Prime Minister: In fact, Scotland and Wales are doing very well because of the economic policies of this Government. The right hon. Gentleman is aware that Scotland has the second highest average male earnings of the whole of the United Kingdom, thanks to the Conservative Government, and to private enterprise.

Mr. David Evans: Will my right hon. Friend join me in welcoming the decision of the Union of European Football Associations to allow English clubs back into Europe in the 1991 season, subject to Government approval?—*[Interruption.]* Does she agree that the Football Association and the Football League would have had their application turned down had it not been for the Government's intention in the Football Spectators Bill, which will drag English football into the next century?

The Prime Minister: In so far as I heard my hon. Friend's question, I agree that the decision is welcome and I wish English football teams well when they return to Europe.

Mr. Grocott: Is the Prime Minister aware that when, in response to the vision and courage of Mr. Gorbachev, she continues to use the tired old language of the arms race, she is not speaking for the British people?

The Prime Minister: Nonsense. The British people are not as easily taken in as the hon. Gentleman. The British people noted that last weekend, for example, East German border guards shot at two people who wished to enter West Berlin, and they are noticing other things that are taking place in the Soviet Union. They know that we must keep our defences sure and that the nuclear deterrent has preserved peace for 40 years—and Conservatives think that peace is important.

Q5. **Mr. Harry Greenway:** To ask the Prime Minister if she will list her official engagements for Thursday 13 April.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Greenway: While recognising that the Green Paper on the reform of legal services is a legitimate matter for discussion by judges, does my right hon. Friend share my relief that the judges' proposed discussion in work time of that paper on Monday is off?

The Prime Minister: Yes, I understand that the judges will hold their discussion on Saturday, 20 May, at a time when the Lord Chancellor will be able to address the meeting as he wishes. That decision is very welcome.

Q7. **Mr. Fraser:** To ask the Prime Minister if she will list her official engagements for Thursday 13 April.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Fraser: If, during her busy day, the Prime Minister has time to go to the supermarket, how much would she pay for a large white and how would it compare with the price 10 years ago?

The Prime Minister: I am sorry, we do not buy large whites.

Mr. David Davis: Is my right hon. Friend aware that port employers employing 90 per cent. or more registered dock workers have given guarantees today against the casualisation of the docks and, accordingly, there is no need now for the dock labour scheme, which we intend to abolish, and there is no need for the dock workers to go on strike?

The Prime Minister: Yes, I understand that in a major statement issued today, the National Association of Port Employers gave a public guarantee that it will not return to casual employment systems after the repeal of the dock labour scheme in July. The guarantee was endorsed by employers representing over 93 per cent. of Britain's registerd dock workers. It stated:

"This unprecedented promise deals with the major fear voiced by the dockers since the Government made its announcement . . . The historical justification of the scheme was to end casual employment. Today's promise carries forward that principle. As such, there is obviously no case for inventing a substitute or revised form of the Scheme or equally calling a futile and unnecessary strike."

It went on to say that it would of course be prepared to enter into discussions in the coming weeks and months about the scheme and conditions of employment which would supersede the ending of the dock scheme.

Q8. **Mr. Janner:** To ask the Prime Minister if she will list her official engagements for Thursday 13 April.

The Prime Minister: I refer the hon. and learned Gentleman to the reply that I gave some moments ago.

Mr. Janner: Did the Prime Minister see the sad and remarkable television programme by Esther Rantzen last week which revealed the disgraceful under-resourcing of hospitals and facilities for people who are mentally ill or mentally handicapped? Will she give some sign that the Government know and care about those people and that they propose to provide resources not merely to close

down mental hospitals, but to provide facilities for people outside which is better, but which cost much more?

The Prime Minister: With regard to those in hospital, as the hon. and learned Gentleman knows, expenditure has gone up on all hospital services from £8 billion in 1979 to £24 billion this year. With regard to the proposals for community care in the Griffiths report, the Government are considering those and will in due course make an announcement about their decisions.

Business of the House

3.30 pm

Mr. Frank Dobson (Holborn and St. Pancras): Will the Leader of the House tell us the business for next week?

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham): The business for next week will be as follows:

MONDAY 17 APRIL—Second Reading of the Dock Work Bill.

Motion relating to the Housing (Change of Landlord) Regulations.

Motions relating to the Education (National Curriculum) (Attainment Targets and Programmes of Study in Mathematics) and (Science) Orders.

TUESDAY 18 APRIL—Opposition Day (7th Allotted Day, 1st half). There will be a debate on a motion in the name of the Social Democratic party motion entitled "The Commercialisation of the National Health Service".

Motion to take note of EC documents on the single market. Details will be given in the *Official Report*.

The Chairman of Ways and Means has named opposed private business for consideration at Seven o'clock.

WEDNESDAY 19 APRIL—Opposition Day (8th Allotted Day). Until about Seven o'clock there will be a debate entitled "Investing in the Future—The Next Decade". Afterwards there will be a debate entitled "Care in the Community—The Next Decade". Both debates will arise on motions in the name of the Social and Liberal Democrats.

THURSDAY 20 APRIL—There will be a debate on private bill procedure on a motion for the Adjournment of the House. The report of the Joint Committee on Private Bill procedure (HC 625) will be relevant to the debate.

FRIDAY 21 APRIL—Private Members' Bills.

MONDAY 24 APRIL—Progress on remaining stages of the Social Security Bill.

[Debate on Tuesday 18 April
Relevant European Community Documents
(a) 9756/88 Completing the internal market
(b) 10413/88 Information on technical standards and Regulations
Relevant Reports of European Legislation Committee
(a) HC 15-vii (1988-89), para 2
(b) HC 15-ix (1988-89), para 2.]

Mr. Dobson: I thank the Leader of the House for his statement and in particular I thank him for including the report of the Committee looking into private Bill procedure and for providing time to debate that report next week.

When can we expect the promised debate in Government time on the future of the National Health Service? There was a rumour that that would be held over until some reputable body to do with the Health Service came up with an expression of support for the Government's proposals. Will the Leader of the House tell his right hon. and learned Friend the Secretary of State for Health that that is not going to happen and that we cannot wait much longer?

When are we likely to have the long-promised debate on the Government's proposals to substitute student loans for student grants? What progress is being made to bring forward the Bill to outlaw the buying and selling of human tissue? Has the Leader of the House made any progress in the discussions which he set in train with a view to establishing a Select Committee on Scottish Affairs or finding some other proposal which might prove acceptable to the House and in particular to Scottish Members?

Mr. Wakeham: I am grateful to the hon. Gentleman. I agree that Thursday's debate on private Bill procedure is important. It is a complicated subject and I look forward to hearing the views of the House on the matter. The hon. Gentleman asked about the National Health Service. The hon. Gentleman will of course appreciate that it will be possible to raise Health Service matters in the debate on Tuesday—subject to your approval, Mr. Speaker. With regard to the general debate that I have promised, he shares with my right hon. and learned Friend the Secretary of State for Health a desire to have that debate as soon as I can arrange it. Finding the time is causing the difficulty.

As I told the hon. Gentleman last week, there are consultations and discussions going on about student loans. The right time for a debate is after those have finished.

The hon. Gentleman asked about the sale of kidneys. Discussions are taking place through the usual channels about legislation on that matter. I am glad to say that there is considerable support in all parts of the House for the appropriate legislation, and we shortly expect to announce the introduction of a Government Bill.

As the hon. Gentleman knows, I have had discussions with two of his hon. Friends about Scottish affairs. I told them that I did not see an easy solution, although I thought that their contribution to the discussion was helpful. I am working on it to see whether I can come up with some satisfactory proposals.

Dr. Alan Glyn (Windsor and Maidenhead): In view of the opinion of the House about human rights, can the Leader of the House find time for a debate on the matter? Such a debate would reveal that the human rights issue is now international and not just confined to the Soviet Union or south American or to any specific part of the world. If we could have a debate on the subject—contrary to the views of *The Times*—we might be able to establish some sort of international control.

Mr. Wakeham: I recognise that my hon. Friend speaks for many hon. Members in wanting a debate on this subject. If I were able to arrange it in the short term I should look forward to hearing his contribution. However, I am sorry to say that he must be a little patient with me because I cannot find time immediately for such a debate. I recognise that human rights is an important subject.

Mr. James Wallace (Orkney and Shetland): The Leader of the House will acknowledge that another year has elapsed since publication of the Griffiths report on care in the community, yet during that time the Government have miserably failed to come up with a response. Will he congratulate my party colleagues on initiating a debate next week on that subject which will give Ministers an opportunity to spell out the Government's position? Can the right hon. Gentleman clarify the precise status of the decision taken last night by the European Parliament for tighter controls on car exhaust emissions? When will the House get an opportunity to endorse that decision?

Mr. Wakeham: With regard to the first point about the Griffiths report, I welcome the choice of subject by the

[Mr. Wakeham]

hon. Gentleman's party and think that we shall have a useful debate. I do not think that I can say that my right hon. Friend the Secretary of State for Social Security will be in a position during that debate to announce the final considerations of the Government. Nevertheless, we welcome the debate and will have to find another occasion on which to discuss matters further.

The hon. Gentleman asked about car emission standards. We shall, of course, carefully study the European Parliament's vote and decision yesterday, and in due course we shall study the Commission's revised proposals that we expect it to put to the Council of Ministers in June.

Sir Bernard Braine (Castle Point): In view of the implications for both East and West of recent developments in the Soviet Union and the stirrings that are now taking place in eastern Europe linked with new hopes about the awareness of human rights, when can we expect an early debate on foreign affairs?

Mr. Wakeham: I recognise a general interest in this subject in all parts of the House, and the support by my right hon. Friend of the request made by my hon. Friend the Member for Windsor and Maidenhead (Dr. Glyn) is an important addition. I wish that I could find time in the near future for such a debate. I shall look for the earliest possible opportunity.

Mr. Robert Parry (Liverpool, Riverside): Will the Leader of the House state that hon. Members who act as consultants for port companies will not take part in the Committee on the Bill, and will not be allowed to vote in or take part in debates on the operation of the dock labour scheme?

Mr. Wakeham: Statements by me do not govern those matters. They are matters for the House and for my hon. Friend the Chairman of the Committee of Selection and his colleagues on the Committee. It is not for me to make statements on those matters.

Mr. Spencer Batiste (Elmet): My right hon. Friend will be aware that earlier in the week the Attorney-General indicated that the object of the Green Papers produced by the Lord Chancellor was to generate as wide a debate as possible on the future of the legal profession. There has been an extensive debate in another place. The judges are apparently having a debate on Saturday. Everybody except the House has had a chance to debate the Green Papers. Will my right hon. Friend find an opportunity for a debate here before the end of the consultation period?

Mr. Wakeham: I cannot give my hon. Friend that promise. Had he been here at a late hour early in the week, he would have found that there was a debate in which the contributions were, if I may say so, of variable quality.

Mr. David Winnick (Walsall, North): Can we have a statement next week on how the same sort of stories appeared in yesterday's papers saying that the Secretary of State for Wales was likely to be an earlier victim of a Cabinet reshuffle? Did those stories originate with Mr. Ingham? Is the Leader of the House aware that in any such statement next week the point will no doubt be made that it is undesirable for a civil servant, a close member of the Prime Minister's kitchen Cabinet, to have such influence in the country, bearing in mind his dishonourable conduct at the time of the Westland affair?

Mr. Wakeham: The hon. Gentleman uses Parliament to express his point of view. I do not complain about that, but he makes disgraceful and disagreeable remarks that are not based on substance. I do not think that they are worthy of a reply.

Sir Hal Miller (Bromsgrove): Further to the vote in the European Parliament on vehicle emission standards, does my right hon. Friend accept that it would be in the interests of car owners, environmental lobbyists and motor manufacturers alike for a definitive decision to be reached as soon as possible because of the probable expense for the car owner and the technology likely to be involved for the motor manufacturer? May we have an early indication of what the Government seek to achieve on the matter?

Mr. Wakeham: I recognise that it is an important matter and that there are alternative solutions to the problem. The announcement that I made, that the Government will study carefully the decision of the European Parliament and in due coure the Commission's revised proposals, is the most constructive way forward.

Mrs. Ann Clwyd (Cynon Valley): I welcome the announcement that there is to be a debate on the report of the Joint Committee on Private Bill Procedure. Can the Leader of the House tell us why there has been a delay in giving the Government's response to that report? Is he aware that highly controversial Bills, such as the Cardiff Bay Barrage Bill, are going through the House at the moment? The objectors to that Bill are at a grave disadvantage compared to the promoters. Is he aware that the delay in implementing the Government's response to the report, which we hope will be favourable, means that we are continuing to cost the taxpayer hundreds of thousands of pounds?

Mr. Wakeham: I think that the hon. Lady recognises that the subject is considerably more complicated than the way she phrased her question would lead one to believe. Whether or not the Government can come to a clear view on all aspects of the report next Thursday, from many readings of the report it is clear that it would require a substantial amount of primary legislation to enact it. That clearly cannot be done at this stage in the Session. The right procedure is for the House to express its views next Thursday. I hope that the hon. Lady is called to express her view. I hope that hon. Members will use the occasion to debate the principles underlying these important matters rather than deal with particular cases. I hope to learn something from the views of all parts of the House. Then we shall decide how best to proceed.

Sir Richard Body (Holland with Boston): Further to the question of my hon. Friend the Member for Elmet (Mr. Baptiste), will my right hon. Friend reconsider his decision concerning a debate on the Green Papers on the legal profession? Last week in another place, a succession of dinosaurs were trundled through at the behest—we understand—of the Lord Chief Justice, giving a very unfortunate impression of the legal profession. Some of us who are more in touch with public opinion would like to put another point of view.

Mr. Wakeham: My hon. Friend makes a fair point. I attended part of the debate and read it. Some of the analysis was not as accurate as it might be. A considerable number of noble Lords spoke in favour of the proposals. I believe that a majority of those who spoke and who are not lawyers were in favour of them. However, I shall still find it difficult to make time for a debate in the very near future.

Mr. Dennis Skinner (Bolsover): When the judges go on strike on Monday—*[Interruption.]* If there are further developments, and if there is an unofficial strike, will the Home Secretary make a statement in the House? If that demonstration takes place in the Strand, will appropriate plans be made for a road block? If the leader of that gang, Lord Donaldson, ex-head of NIRC, finishes up in gaol, will the right hon. Gentleman make arrangements for the Official Solicitor to fetch him out? If people like me want to attend that spectacle, will passes be needed?

Mr. Wakeham: The hon. Gentleman raises a number of important issues, and I do not have at my fingertips all the details that he will need for his voyage of discovery. However, I can tell the House that a press release about that matter was issued this afternoon and that the judges council has decided to postpone the meeting to a Saturday. I am sure that right hon. and hon. Members will welcome that decision.

Mr. Edward Leigh (Gainsborough and Horncastle): Did my right hon. Friend note the report in *The Scotsman* that the Opposition intend carrying out line-by-line trench warfare against the Bill now being considered in Committee room 12, to give Scottish parents the right to govern their own schools? As Opposition Members who are members of that Committee have already shown that they are more interested in time-wasting than in reasoned argument by, for example, filibustering an amendment that the Minister had already accepted, will my right hon. Friend consider introducing a timetable motion so that the will of Parliament, as expressed on Second Reading, will be carried out?

Mr. Wakeham: I find it hard to agree with my hon. Friend. I thought that any Opposition worth their salt would use reasoned argument in debate. I have not studied in detail what is going on in the Committee, but I shall be extremely surprised if the Opposition are devoting themselves to trench warfare and other ploys, which I am sure would be quite disreputable.

Mr. Jeremy Corbyn (Islington, North): Will the Leader of the House find time next week or in the near future for a debate on the prison conditions and the circumstances surrounding the reference to the Court of Appeal of the Guildford Four? Is the right hon. Gentleman aware that there is continuing concern about the health and condition of all four prisoners while awaiting discussions at the Court of Appeal? There is also considerable concern about a report in *The Guardian* last Monday of a dispute between the Home Office and Somerset and Avon constabulary about non-payment of money by the Home Office for that constabulary's inquiries, and the statement that it has refused to undertake any additional preparatory work in connection with the reference to the Court of Appeal until the constabulary has been paid for the last inquiries that it undertook. Does the Leader of the House agree that that matter is serious and warrants debate?

Mr. Wakeham: It is a serious matter, and I have grave doubts whether it would be right and proper to have a debate in the House at the present time. However, if the hon. Gentleman will write to me with more information, I shall ensure that he receives an answer.

Mr. James Kilfedder (North Down): Will the Leader of the House provide time for a debate on the provision of television licences at a concessionary rate to pensioners living alone, with their spouse, or with another pensioner? That is an important matter, because for some pensioners television is their only form of companionship, and for many of them it provides a window on the world.

Mr. Wakeham: I recognise that it is important to make that concession to some pensioners but I cannot see a way to find time for a debate at present. My hon. Friend might care to raise the matter on an Adjournment debate.

Mr. Andrew F. Bennett (Denton and Reddish): I shall bring the Leader of the House back to the debate on private Bills. It would be helpful if the Government's response to the report were made official because it is difficult for people who are considering promoting Bills to know when the procedure may change. Is he aware that by the time a public notice has been put out about the Bill until the time it is brought forward is about two years? It would be helpful if he could tell us whether he intends to accept the report in principle and whether he expects it to be implemented about this time next year.

Mr Wakeham: We held discussions through the usual channels and felt that it was right and proper to debate this on the Adjournment to enable everybody to put their point of view. The Government will give their initial considerations next Thursday. That is the best way to proceed.

Mr. Jonathan Aitken (Thanet, South): Will my right hon. Friend confirm the leak in today's *Guardian* which says that the Government seem to have suffered a most welcome degree of repentance over their hard-line views on the Official Secrets Bill? Is it true, as the newspaper says, that the very amendments that the Government refused to accept in this House—strengthening the harm test—are to be introduced in another place? Will my right hon. Friend confirm that we shall be given an opportunity to debate these important issues in the House.

Mr. Wakeham: I am certainly not in a position to state what amendments will be tabled in another place. My hon. Friend may already appreciate that if the amendments are accepted in another place, he will be able to debate them in this House in due course.

Mr. D. N. Campbell-Savours (Workington): When the Leader of the House was considering whether there should be debates on the numerous reports produced by the Procedure Committee, was the absence of time a consideration in his mind?

Mr. Wakeham: The absence of time is a consideration in every debate that I organise in the House. We had a debate on the outstanding Procedure Committee reports some time ago. It was not well attended but it was useful, nevertheless. We shall no doubt have to return to the subject again. Time is always a problem but getting the answer right is probably more important.

Mr. Michael Latham (Rutland and Melton): When he answers a parliamentary question next week, will my right hon. Friend explain why the House can act as a legislative sausage machine all the time, but our best minds cannot solve the problems of how to prevent constituents standing in the rain when they wish to go round the Line of Route? Can we solve this problem as soon as possible?

Mr. Wakeham: There are difficulties, and some problems to which there are no easy solutions. However, I take my hon. Friend's point.

Mr. Tony Banks (Newham, North-West): Will the Leader of the House tell us when we last had a Bill as controversial and unheralded as the Dock Work Bill, which the Government are steamrolling through the House in the shortest possible time? It is a controversial Bill and there is no question of it going through with co-operation from the Opposition. Is there a conspiracy between port employers and the Government to try to provoke a strike within the dock industry to cover up the domestic problems now confronting the Government—such as the local elections—and create a domestic equivalent of the Falklands war? Why will not the Leader of the House give us proper time to consider the proposals, reach a conclusion and have a proper debate, rather than merely put a legislative stamp on a piece of nasty conspiracy which is being carried out between them and the employers?

Mr. Wakeham: The hon. Gentleman's views are flavoured by the colour of his tie today. The Dock Work Bill has been introduced in proper time for consideration at appropriate intervals and will be dealt with in a correct and constitutional fashion.

Mr. Nigel Forman (Carshalton and Wallington): Will my right hon. Friend find time at an early date for a debate on the need to reform and tighten the law on trespass, particularly the problems connected with large gipsy convoys and illegal gipsy encampments?

Mr. Wakeham: I know that that causes concern in some constituencies, and I was asked about it by one of my hon. Friends last week. I cannot promise early legislation, but I will refer the matter to my right hon. Friend.

Mr. Max Madden (Bradford, West): May I again ask the Leader of the House if he will make early arrangements for a debate on issues arising from the publication of the book "Satanic Verses"? Does he agree that Moslems living in Britain have a democratic right to have their deep sense of grievance and offence over the book's publication recorded by the House, and should not the general public have a democratic right to a debate in the House on how we can promote better understanding and respect in a multiracial, multi-faith Britain for all traditions, cultures and religions?

Mr. Wakeham: I have a deal of sympathy with what the hon. Gentleman has said. Views expressed by the Government—and, indeed, by a number of right hon. and hon. Members on both sides of the House—have shown the considerable concern aroused by those serious events. I do not, however, feel able to promise an early debate on the subject.

Mr. Tony Marlow (Northampton, North): My right hon. Friend is a democrat—with a small "d"—without parallel. On the subject of exhaust emissions in the European Community, as I understand it, this was the Commission's revised proposal. The Commission, of course, is not a democratic institution and has connived with the European Parliament—an institution of somewhat flawed democracy, as it is seen in this country—to produce this new solution. It has not been agreed by a British Minister—a British Minister who is responsible to the democratic control of this House. What can the House now do about it? Have we had it? Is it all over?

Mr. Wakeham: We cannot do anything about it in Business Questions, that is for sure. I think that my advice to the House was right: we must see the Commission's revised proposals, which we expect it to put to the Council of Ministers in June. We shall then be able to reach a view.

Mr. Peter L. Pike (Burnley): Does the Leader of the House recognise the concern of many hon. Members that the Government have again failed to announce that time will be made available for a debate on foreign affairs next week? Do they not provide insufficient time annually to discuss foreign affairs—at a time when important developments are taking place in, for instance, Namibia and South Africa—so that we must depend on Adjournment debates such as tonight's? Should not the Government provide more time for us to discuss their role of influence in such matters?

Mr. Wakeham: I recognise the hon. Gentleman's view. I do not suppose that I would take him with me if I said that we have a substantial amount of important legislation to get through, but dealing with these matters is always a question of balance.

I have corresponded with a number of right hon. and hon. Members about the foreign affairs debate. There is something that the House can do: perhaps some hon. Members could speak rather more briefly in the foreign affairs debates that we do arrange. I recognise, however, that that is not the sole problem, and I agree that it would be highly desirable to find a bit more time.

Mr. Andrew MacKay (Berkshire, East): Notwithstanding this afternoon's announcement of the retreat of the judiciary, may I join the request from both sides of the House for a debate on the Green Paper proposals on law reform? Many of us believe that the judges behaved very insensitively, but the great majority of our constituents do not now place much credence in their views on the reforms.

Mr. Wakeham: One of the advantages of the postponement of the meeting from a Monday to a Saturday will be that the Lord Chancellor will be able to address the judges. That, I think, is a wise step.

Mr. Eddie Loyden (Liverpool, Garston): May I ask the Leader of the House in all seriousness whether, if the Government want to avoid a national dock strike, it would not be right for them to allow consultations with the union—which have not taken place so far—and for the House to debate the matter before Second Reading of the Bill? I believe that all concerned want to avoid a national dock strike——

Mr. Neil Hamilton (Tatton): We don't.

Mr. Loyden: I heard what the hon. Gentleman said. If there is no response, we are bound to take the view that the Government want a dock strike.

Mr. Wakeham: I am sure that all sensible hon. Members want to avoid a dock strike, but I cannot accept the proposition that a democratic House of Commons cannot discuss legislation introduced in it by a Government with a clear majority in a proper constitutional fashion.

Mr. Roger Gale (Thanet, North): My right hon. Friend will be aware that as of today 272 hon. Members, including many Conservative Back-Benchers, have signed an early-day motion calling for the introduction of a dog registration scheme. My right hon. Friend will also be aware that on each day since the motion was tabled, 1,000 dogs have been put to death, which amounts to 100,000 dogs. I appreciate that it is not a matter of burning international importance, but it concerns many people. Will my right hon. Friend either find time for the House to debate the matter or, at the least, draw the significance of those figures to the attention of our right hon. Friend the Secretary of State for the Environment?

Mr. Wakeham: My right hon. Friend is, of course, aware of early-day motion 348 and the strong views of hon. Members. Nevertheless, the Government have made it clear that they do not consider that a registration scheme would do anything to assist dog welfare or control. I regret that there are no plans to implement section 37.

Mr. Ray Powell (Ogmore): I appreciate the fact that the Leader of the House has to allocate time to certain Bills and has to define priorities. However, he might have listened to the question put by my hon. Friend the Member for Liverpool, Garston (Mr. Loyden) during which the hon. Member for Tatton (Mr. Hamilton) said that he would like to see a strike being called by the dockers. Why was priority given for the Bill on the dockers to be discussed next week, where there are more important items and Bills waiting to be discussed in the House, such as the Children Bill? Why do the Government delay such Bills just to get legislation they want on to the statute book?

Mr. Wakeham: The hon. Gentleman is not being fair or reasonable. The arrangement of business in the House is done through the usual channels and there are discussions about the most convenient days for business. I have already announced the programme agreed and it is the best way to proceed.

Mr. Robert Adley (Christchurch): For many years, I have pestered my right hon. Friend for some action to bring to a satisfactory conclusion the future of the Settle to Carlisle railway line. May I take the opportunity formally to thank my right hon. Friend and his ministerial colleagues for a historic decision, which has been universally acclaimed in the House and far beyond? Does my right hon. Friend recognise that the decision made by our right hon. Friend the Secretary of State for Transport is historic? There has never before been a refusal of a closure of that nature. If it is a U-turn by the Government, it merely refutes those who say that the Government are always inflexible and never listen. In view of the rising environmental clamour, which we all understand and support, and which points to a happy future for the railways, will my right hon. Friend find an early opportunity to debate the investment criteria that the Treasury lays on British Rail?

Mr. Wakeham: Until the last sentence, I was going to say that that was a nice question from my hon. Friend. I am grateful to my hon. Friend for most of what he said and I shall convey his congratulations to my right hon. Friend the Secretary of State for Transport. I do not see myself able immediately to find time for a debate on the subject of the investment criteria for British Rail. However, it seems that there may be several occasions in the not too distant future on which the subject could be brought into the debate.

Mr. Neil Hamilton (Tatton): Will my right hon. Friend find time for an early debate on the hypocrisy of the Opposition Front Bench? Is he aware that the Labour party has an industrial policy group, which is charged with the responsibility for evolving a policy opposed to privatisation without frightening off the voters? A leak of documents from that committee has been roundly condemned by the hon. Member for Dagenham (Mr. Gould) as mischief-making and disloyalty. He has said that he will have strong words with the leaker at the national executive meeting or the industrial policy group meeting this afternoon. Can we assist him by offering the use of the special branch or the police to investigate? Is it not extraordinary that the Opposition are delighted to welcome leaks when information is leaked from the Government, but when their own information is leaked, they are all in favour of secrecy?

Mr. Wakeham: I do not think that I can find time for a debate on that important subject during the coming week, but my hon. Friend makes his point in his own way and it will be noted.

Points of Order

4.5 pm

Mr. Max Madden (Bradford, West): On a point of order, Mr. Speaker. We have heard that the Second Reading debate on the Dock Work Bill is to take place next Monday. Before the debate, I should be most grateful if you could advise the House about the position of hon. Members who stand to benefit if the Dock Work Bill is passed and the national dock labour scheme is abolished. Ought they to be allowed to vote at the end of the Second Reading debate? The Register of Members' Interests suggests that a number of right hon. and hon. Members have directorships or parliamentary consultancies that are connected with the docks. The abolition of the national dock labour scheme would directly benefit the interests that they serve in the House It is important that you should consider giving advice as to whether it is proper that such Members should vote on Second Reading.

During Business Questions there were exchanges, particularly involving my hon. Friend the Member for Liverpool, Riverside (Mr. Parry), about the selection of members for the Standing Committee, if the Bill is given a Second Reading on Monday. The Leader of the House said that that is a matter for the Chair of the Committee of Selection. I am advised that the Chair of that Committee—who is up to his eyebrows in commercial interests, but I leave that on one side—cannot take into account Members' interests when he selects the members of Standing Committees. As the Chair of the Committee of Selection is not allowed to take such matters into account when selecting members of Standing Committees, it must therefore be a matter for you. It is for you to consider whether it is appropriate that hon. Members who will directly benefit from the abolition of the national dock labour scheme should be selected to serve on the Standing Committee.

I ask you to look at the Register of Members' Interests. I have looked at it this afternoon and found that it is littered with the names of hon. Members who have a very direct interest in this matter. The hon. Member for Tatton (Mr. Hamilton) was clearly heard by a number of Opposition Members to say a few minutes ago that he wants a national dock strike. It is interesting to note that the hon. Member for Tatton is a consultant to the National Association of Licensed Opencast Operators. Opencast operators will benefit if more profits are to be made in dockland by the abolition of the national dock labour scheme. Those are the interests that the hon. Member for Tatton serves.

Mr. Speaker: I think that I can deal with this matter. It has always been in order for hon. Members to vote on a matter of public policy. That is an established principle. It is not just the Chairman of the Committee of Selection but the Committee of Selection as a whole that decides who should be nominated to serve on the Committee.

Mr. Tony Marlow (Northampton, North): Further to that point of order, Mr. Speaker. I accept your ruling about the precedent for the selection of hon. Members, but I have a great deal of sympathy for the hon. Member for Bradford, West (Mr. Madden). It is an important issue. As we know, the Transport and General Workers Union has a great deal of interest in the outcome of the Bill. If we were to consider the position of a few of my right hon. and hon. Friends, would it not also be in order to consider the position of a great many Opposition Members who are sponsored by the Transport and General Workers Union, not least the Leader of the Opposition?

Mr. Speaker: The same principle applies. It is a matter of public policy, and it has always been in order.

Mr. Neil Hamilton (Tatton): Further to that point of order, Mr. Speaker. I am sure that you, like me, have always admired the skittish sense of humour of the hon. Member for Bradford, West (Mr. Madden), exhibited once again this afternoon. In respect of the point that he made about my own interests, declared in the Register, it certainly would not be in the interests of opencast coal producers in this country to encourage imports of coal. Therefore, unlike the hon. Gentleman, I can hardly be said to be a slavish follower of my own pecuniary interests.

I support what my hon. Friend the Member for Northampton, North (Mr. Marlow) has said: it is appalling that Labour Members should seek to impugn the integrity of other hon. Members, in whatever part of the House, for outside interests that are properly declared. I hope that, in speaking about the various policies that we have to debate, we do so untrammelled by personal interests. For instance, I do not impugn the hon. Member for Bolsover (Mr. Skinner) for accepting a roof over his head from the Transport and General Workers Union, nor the hon. Member for Kingston upon Hull, East (Mr. Prescott), whose roof is provided by the same body. I certainly do not believe that, in their opposition to the Government's proposals for the docks, they are influenced in any way by the financial advantage that they gain from union sponsorship.

Mr. Speaker: I do not think that we can profitably carry on this exchange.

Mr. Dennis Skinner (Bolsover) *rose*——

Mr. Speaker: Is it on the same point?

Mr. Skinner: Yes, Mr. Speaker.

The hon. Member for Tatton (Mr. Hamilton) has now said that he is happy to associate himself with the proposed dock strike that is being organised by the Prime Minister and her Front Bench. Everybody in the country —at least most people—recognises that it has all been set up. As the hon. Gentleman seems so keen to declare his association, as he does not deny my hon. Friend's comment that he relishes the idea of a dock strike, and as he is quite happy to talk about the declaration of interests, of which I have none, perhaps he would be happy to tell us how much money he gets from all his interests.

Mr. Michael Jopling (Westmorland and Lonsdale): Further to that point of order, Mr. Speaker. Two seconds ago you heard—indeed, we all heard—the hon. Member for Bradford, West (Mr. Madden) refer in disparaging terms to my hon. Friend the Member for Shipley (Sir M. Fox). It used to be the custom of the House that, when one Member wished to say something disparaging about another, he gave that Member notice. I wonder if you can tell us whether that is still the convention and will you invite the hon. Gentleman to say whether, in this case, he did give notice to my hon. Friend?

Mr. Speaker: That is the convention, and in that connection may I say to the whole House that I hope that

all hon. Members will read the recent report of the Select Committee on Procedure on this matter and on the question of the conventions and of good order in the House. So far as the Bill is concerned, I trust that the debate on Monday will be carried on in the best parliamentary traditions.

Mr. Madden: Further to that point of order, Mr. Speaker. I gave general notice to the hon. Member for Shipley (Sir M. Fox) in early-day motion 702, which points out that the hon. Member, who is Chairman of the Committee of Selection, holds seven directorships and four parliamentary——

Mr. Speaker: Order. That is not in order now.

Orders of the Day

Road Traffic (Driver Licensing and Information Systems) Bill *[Lords]*

Order for Second Reading read.

4.14 pm

The Minister for Roads and Traffic (Mr. Peter Bottomley): I beg to move, That the Bill be now read a Second time.

Driver licensing is designed to improve safety and reduce casualties. May I quote "Another Voice":

"Others have lost sisters before. Every day people lose husbands, wives, parents, children and friends they have loved, whose loss reduces every perspective to dullness, misery and pain. In many cases they carry the pain around with them for the rest of their lives. At moments like this, one realises that under the surface of a polite society there is a great well of sadness and bereavement, an aspect of the human condition which is as inescapable as it is seldom remarked, yet looming larger in many people's lives than any of the things they pretend to think important. The only excuse for allowing my own howl of anguish to be heard is to give those as yet unbereaved a glimpse into the hellish blackness lying under the surface of their lives before they sensibly turn away and think of something else."

Those words, written by Auberon Waugh, come from the *Spectator* of 15 February 1986.

This Bill, introduced in another place at the beginning of December, makes provision for a number of improvements in road traffic law. It should again be widely welcomed as a sensible and largely uncontroversial piece of legislation. This debate will give the House a chance to discuss broader issues of transport policy. Some were highlighted during our consideration last Friday of the Parking Bill. We welcome each opportunity to publicise the Government's sensible policies for traffic management.

The Bill is in two main parts. I shall start with the reduction of road casualties which is relevant to two proposals in part I.

My right hon. Friend the Secretary of State has today announced provisional road casualty figures for 1988. These show a fall of 2 per cent. in deaths compared with 1987 and a 1 per cent. drop in serious injuries. To put that in a more historic context, since 1975 there has been an average reduction of deaths on our roads of 30 a week. With just over 5,000 people killed on our roads last year and over 63,000 seriously injured, that reduction is not enough.

Over 400 children under 14 were killed last year, with nearly 8,000 seriously injured. Of those aged between 15 and 59, more than 3,200 died and nearly 47,000 were seriously injured. Of those aged 60 and over, nearly 1,400 were killed and over 8,000 seriously injured.

Parents, relatives, neighbours, colleagues and friends shared the tragedy of over 68,000 loved ones lost through death on the roads or with lives wrecked by serious injury. Over a quarter of a million more people of all ages were slightly injured. More than 320,000 people suffered directly last year as a result of accidents on our roads.

In July 1987, my right hon. Friend the Secretary of State set the target of reducing road casualties by one third by the year 2000. Overall, deaths are now down 10 per cent. on the 1986 figure of 5,600 a year. That is encouraging when set against a 25 per cent. increase in

[Mr. Peter Bottomley]

traffic over the same period. Overall, for deaths and serious injuries, casualty rates have fallen by 20 per cent. but we still have a long way to go to meet the target in the year 2000.

Clause 6 deals with training for new motor cyclists. It will make a significant contribution. Motor cyclists are one of the most vulnerable groups of road users. Motor cyclists' casualty rates are the highest for any type of vehicle. Motorcycles and mopeds make up less than 2 per cent. of road traffic. A seventh of all deaths and a fifth of all serious injuries are to motor cyclists. In 1988 that meant that over 670 motor cyclists died and over 12,000 were seriously injured.

Lack of skill, lack of experience and inadequate defensive riding techniques are the reasons. I do not want to hide the fact that in many accidents involving motor cyclists another road vehicle is involved and the driver of that vehicle often was a contributory fault. In the past five years some 40 per cent. of all motor cyclist casualties were under 20 years of age. That means that over 100,000 families have been affected.

There is no requirement for motor cyclists to take any training at all. Learners can ride for two years on a provisional licence. If they wish to carry on riding, they must pass both parts of the motorcycle test. In practice, many riders take neither training nor tests. They simply give up riding after two years—or sooner, if they have a serious accident.

Clause 6 will make training of new motor cyclists compulsory by introducing new limitations on the condition of use of provisional motor cycle and moped licences. It will become illegal to ride on the road unless the motor cyclist has successfully completed the prescribed basic training course or is in the process of being trained.

This proposal has been widely welcomed by road safety organisations and the police, by motor cycle manufacturers and dealers, by training centres, individual motor cyclists and by motor cycling groups and their representative bodies. We are discussing the content of the new course with training groups. We shall introduce the new system as soon as possible.

Our road safety record may be the best in Europe but it is still not good enough. Accident rates are falling but not fast enough. This proposal will make one good contribution to the reduction of deaths and injuries on our roads.

Clause 2 deals with a different road safety issue. It provides that in future licences to drive any prescribed class of goods vehicle or fare-paying passenger-carrying vehicle will generally need to be renewed every five years once drivers pass 45 years of age. Drivers of more than 65 years of age will need to renew their licences annually. A medical report will be needed with each application for renewal. This change will ensure that drivers of large vehicles are subject to regular medical checks. It will reduce the risk of the driver of a lorry or a bus collapsing behind the wheel and endangering a great many lives.

The remainder of part I paves the way for a new unified driver licensing system in Great Britain.

At present, the familiar car licence is issued by the Secretary of State through the driver and vehicle licensing centre at Swansea. Licences to drive heavy goods vehicles and public service vehicles are issued through independent traffic commissioners in 11 traffic area offices. One professional driver can therefore have two or even three separate licences and is answerable to two different licensing authorities—the Secretary of State and the traffic commissioners.

Professional drivers who go abroad can face problems. Authorities in other Economic Community countries are not used to the idea of dual licensing. Virtually all other member states use a single licence showing all driving entitlement.

The Bill provides for the United Kingdom to introduce a single licence showing all driving entitlement. The Secretary of State will become the sole licensing authority. All driving licences will be issued centrally from Swansea. Professional drivers who go abroad will have the benefit of an internationally recognised licence. All drivers will benefit from a more efficient streamlined licensing system, because the DVLC's lower costs will be reflected in the fees charged for all licences.

The introduction of the new licence will enable the United Kingdom to meet its commitments under the first Council directive on driver licensing. The Economic Community initiative to harmonise driver licensing systems was fully debated by the House on Tuesday night. As I explained then, this Bill does not compromise our position on the Commission's proposal for a second directive to complete harmonisation.

In particular, this Bill enables us to maintain our opposition to the proposal that drivers of minibuses and light goods vehicles should take two tests and meet higher medical standards. I repeat that we are distinguishing here between professional drivers of minibuses with fare-paying passengers and the non-professional drivers of minibuses whose passengers do not have to pay fares.

We shall continue to press the Commission strongly on this issue. The firm support which the House expressed for the position will be helpful. The Bill is drafted on the assumption that we shall win the arguments in Brussels. If we were unsuccessful in Brussels and had to adopt any of their proposals, we should need to come back to Parliament before we could implement further changes. I am not contemplating failure.

Part II of the Bill provides for the licensing and regulation information systems. These are systems which give drivers, through special in-vehicle equipment, route guidance and warnings on traffic conditions. The best known example of a driver information system is autoguide. Some hon. Members have had an introduction to autoguide through the demonstration scheme which the Department of Transport is now running in the Westminster area. I take this opportunity of inviting other hon. Members who would like to see the demonstration to let me know. We believe that autoguide and systems like it can do much to ease congestion and speed up traffic.

Road spending has increased substantially under this Government. Provision in this financial year for motorways and trunk roads is over £1·2 billion. New roads alone will never provide the complete answer to congestion.

Mr. Greg Knight (Derby, North): Can my hon. Friend tell the House now, or ensure that it is told in the winding-up speech, the answers to the following questions? First, in the explanatory memorandum at the beginning of the Bill, page iii, under the heading "Financial Effects of the Bill", in the second paragraph,

should not the reference be to clause 10 and not clause 9? Secondly, on the subject of clause 10(8), can my hon. Friend tell the House why the Government feel it necessary to regulate the charges that may be made by a licence holder to motorists for information from a driver information system? Does this not smack of Socialism? What is wrong with a free market operating in this area?

Mr. Bottomley: I am tempted to remind my hon. Friend of the various other Bills and Acts of Parliament which have gone through recently and which seem to me to do a bit more on regulating charging by various larger bodies which do not face an enormous amount of competition. But it may be better to take his invitation to answer his questions in winding up.

Mr. Gary Waller (Keighley): On the second of the two points which my hon. Friend the Member for Derby, North (Mr. Knight) raised, am I right in thinking that it is planned that the Government will make a choice of which system is to operate, that it would be very difficult to have competing systems operating in this country and that therefore it is inevitable that there should be some kind of regulatory regime?

Mr. Bottomley: My hon. Friend is right to say that it is not likely that two people will set up a pilot scheme in London, or a full scheme in some part of Derbyshire, for example, or on the Airedale route. I do not think that I am regarded as one of those who are most likely to want to regulate the price of these things. Perhaps it is a detailed point which, if not today, could be discussed in Committee. Perhaps we can reach a conclusion if the House gives the Bill a Second Reading today.

I was saying that new roads alone will never provide the complete answer to congestion. Scope for new roads in the middle of towns and cities—where congestion is worst—is strictly limited. New roads will not solve the problem of the lorry that overturns on the motorway and causes a 10-mile tailback.

Autoguide was conceived in the United Kingdom by the Government's transport and road research laboratory. TRRL has estimated that an autoguide system throughout London could help drivers to reduce their average journey times by about 10 per cent. and reduce mileage by about 6 per cent. The system has the potential to make even better use of existing roads and cut congestion. The success of autoguide will depend on co-operation between a number of different interests. The Government have been involved in the early development of the system and in promoting this legislation. Under clause 9, my right hon. Friend will be the licensing authority for autoguide and other driver information systems.

The future development and financing of autoguide will fall to the private sector. The success of the system depends on commercial development and marketing. It should therefore be promoted and financed by the private sector. My right hon. Friend has invited the private sector to make proposals for a large-scale autoguide pilot scheme in the London area. If the scheme were successful, the operator would have the right to upgrade it to a fully commercial system to which the public could subscribe. Proposals are due to be submitted to the Department by 21 April.

The autoguide pilot scheme will involve participation by local authority associations and the police. They will want to be sure that the system will not prejudice road safety or good traffic management. So will the Government. A special group is being set up, comprising representatives of local government, the police and the Department of Transport, to oversee the monitoring of the pilot scheme.

Autoguide involves collaboration with our European partners. There is already an Anglo-German draft standard covering an important part of the technology. Discussions with other member states are starting. An experimental autoguide-type system is already operating in West Berlin. Trade barriers within Europe are disappearing. In time, and with further successful collaboration, it may become possible to drive from London to Paris, Rome or Berlin, receiving route guidance all the way.

The fact that part II of the Bill is concerned with autoguide-type systems does not mean that we are pursuing advanced technology at the expense of other approaches. The Department of Transport is engaged in a number of initiatives to improve information to drivers. At the other end of the technology spectrum from autoguide, we are doing a major review of the statutory traffic signs regulations. We have designated 1989 the "year of the sign".

Part II of the Bill is necessary for two main purposes. An operator of autoguide—and possibly of other types of driver information system—will need powers to install roadside beacons and certain other apparatus. Much of the infrastructure will be installed by the existing public telecommunications operators—currently British Telecom and Mercury. Other parts will be installed by the operator of the system, using the new powers in clause 12.

Legislation is also necessary to ensure that the introduction of advanced driver information systems can be properly controlled. Clause 10 will enable my right hon. Friend to attach conditions to licences to operate driver information systems. A licence could, for example, provide that a particular system could direct traffic only on certain roads or classes of roads. The proposed autoguide pilot scheme will give us a good idea of what licence conditions are necessary for a commercial system.

Perhaps I could take this opportunity to spell out our policies for transport in London. It is our policy to improve the quality and capacity of rail and underground links into and around central London. It is our policy to secure more reliable bus services which are better matched to the needs of customers. It is our policy to make the best possible use of existing roads, through good traffic management, support for enforcement of parking controls and the use of advanced technology such as autoguide and like systems, now being extended to most of outer London, which give buses priority at traffic lights. It is our policy to provide through traffic with good alternative routes around London. It is our policy to build new roads to relieve the very worst congestion black spots and to provide for better orbital movement and better access to poorly served and developing areas.

It is equally important to state what are not our policies. It is not our policy to drive new motorways through London. It is not our policy to build any new roads unless they can be justified within the normal planning procedures which provide for consultation with local residents and others. It is not our policy to pander to those who wish to commute to central London by car in

[Mr. Bottomley]

traffic jams when they could get to work more easily and safely by rail. It is not our policy to write a detailed master plan which would be out of date before the ink was dry.

The more vociferous commentators and pressure groups should take note of these policies. In particular, groups such as the Association of London Authorities should stop misleading people with visions of a new motorway box being cut through leafy suburbs. That is emphatically not our policy.

Mr. John Prescott (Kingston upon Hull, East): The Government must be sensitive about that.

Mr. Bottomley: It is not just a question of being sensitive.

Mr. Prescott: They have to be sensitive on that one.

Mr. Bottomley: If the hon. Gentleman would listen with his ears rather than with his mouth, he might hear what I am saying. Radio stations such as LBC, which cannot distinguish between motorways and other roads, needs to listen clearly because its listeners are interested, and I suspect that many others in London are interested as well.

We can consider the details of the Bill in Committee. This is not a major piece of legislation. Its provisions will be of benefit to many road users. Drivers of lorries and coaches will be able to obtain their licences quicker and at lower cost, new motor cyclists will be properly trained and less likely to be killed or injured and all road users will benefit from less traffic congestion and fewer delays when systems such as autoguide are in use.

I hope that the House will agree that the Bill should be given a Second Reading.

4.31 pm

Ms. Joan Ruddock (Lewisham, Deptford): I thank the Minister for his explanation of the Bill's provisions. As he knows, I am quite new to this brief, though I am having to learn quickly this week. Indeed, such is the speed of political events, if not of the traffic around Westminster, I thought that I should have to ask for a statement this afternoon.

I am delighted to learn that the Department has today denied that it has ordered an inquiry into Sir Keith Bright's allegations about the London emergency services which so sullied the debate on the Fennell report yesterday. We believe that Sir Keith's allegations had more to do with his contract than with anything else, but I shall be writing to the Secretary of State about the matter.

As I said, I am new to this brief, but even as a lay person I had grasped what were the major transportation concerns and problems of this country, and certainly of London. In my naivety, when I saw that the Government were introducing a new piece of legislation, I thought it just had to be the Road Traffic (Integration of Transport Policy) Bill that we had all been waiting for. Might it, I asked, be the measure to set in motion the backlog of proposals necessary to bring some order to our transport chaos? But that was not to be. We are delivered instead of the Road Traffic (Tinkering with the Problem) Bill, not to mention the Road Traffic (Private Funding Solution) Bill.

None of the measures in the Bill is necessarily objectionable and, as the Minister pointed out, its provisions, by excluding non-commercial minibus drivers, protect our common position of opposition to regulation of the voluntary sector. Most of the measures are commendable, but we have grave reservations about aspects of part II. Together, however, the measures are unlikely to have more than a marginal effect on our transport problems, particularly in London, which will be the location of the pilot scheme for autoguide. I hope the Minister can give an assurance that, as parliamentary time is being made available to facilitate commercial transport schemes, it will be made equally available to provide for and resource public transport improvement.

The first part of the Bill is consequent on the EC directive on the Community driving licence and will centralise the issuing of drivers' licences, bringing all forms of licence entitlement together in one document. This part of the Bill also lays down more stringent requirements for the renewal of vocational licences. Drivers with those licences will have to seek renewal from the age of 45 every five years and from 65 annually, accompanied by mandatory medical checks. In general, we support this part of the Bill, although I have some questions for the Minister.

The Government estimate that savings of 100 jobs or £1 million per year will be made by centralising the process at Swansea. I questioned the Minister about that on Tuesday but as he failed to give a concrete answer, I shall ask him again. Will he take the opportunity to increase the number of staff at Swansea so that delays in obtaining licences are reduced?

My second question relates to the medical tests proposed for all holders of vocational licences. I am aware that many drivers already complain about the appeal system and I foresee apprehension among drivers about the new proposals. Perhaps in Committee the Minister will give us some comparisons about how such procedures are carried out in other European states. It is clear from the proposals that some drivers who undergo more rigorous medical tests may find that they are debarred from driving and thus lose their livelihood.

The Minister will remember that, in 1984, his Department's medical advisory committee recommended paying compensation to drivers who were prevented from working because they failed medical tests. What is the Minister's attitude to that? As he has not taken this opportunity to introduce compensation arrangements at the same time as imposing more severe requirements on drivers' ability to do their jobs, what does he plan to do? We shall return to this question in Committee if we fail to receive a satisfactory answer this afternoon.

I turn now to clause 6, which implements one of the Government's proposals on motor cycling as set out in their White Paper, "Motor Cycling Safety". As the Minister said, increasing motor cycle safety must be a top priority. Motor cycling has by far the worst accident risk, as the Minister outlined so clearly. However, many motor bike accidents result from other drivers paying insufficient attention to bike riders and there is clearly a need for car, bus and lorry drivers to be made more aware of road safety in relation to bikes.

One of the encouraging signs for us—and I am sure for the Minister—and one which we applaud is the way in which the motor bike organisations are now encouraging riders to take training courses. I hope that the Minister will consult the motor bike organisations thoroughly, because we politicians often disregard too easily the needs, problems and aspirations of young people. The fact that

those organisations opposed the introduction of crash helmets in the past and that they were clearly wrong to do so has meant that many of us have perhaps not given them enough credit for a more positive attitude today. I understand that the motor bike groups, as well as safety organisations, are readily supporting the Bill's compulsory training course to replace part I of the motor bike test. We are delighted that that is so and wholeheartedly give our support to the measure.

However, concern has been voiced by the organisations that are responsible for safety and for running the courses which the Government failed to meet in the debate in the other place. I take this opportunity to raise those concerns here, although, again, we shall doubtless return to them in Committee. First, there is concern about the number of training places available. In the other place an assurance was given that there are over 900 training centres. However, an informal survey shows that the centres are by no means evenly distributed throughout the country and there are gaps, especially in rural areas. In some places, therefore, aspiring drivers will be unable to take the course that would allow them a provisional licence. Does the Minister agree that the scheme should not come into effect until it has been ascertained that there is adequate national provision for the courses?

Secondly, I hope that the Minister will give the House an assurance also that the instructors on the courses will be of a sufficiently high standard. The instructors have an examiners' role, so they should be tested themselves. I understand that every training centre must be authorised by the Secretary of State and I suggest that a scheme similar to that for car examiners should be introduced, with every examiner having to be qualified. It is important at the outset of a scheme to ensure that the highest standards are obtained and that there is uniformity of testing throughout the country. Perhaps the Minister can tell us what arrangementss he is making for regular monitoring of the training centres.

Has the Minister any ideas about the likely level of charges? He has the power to set the maximum charge for the course. Perhaps he would like to comment on an unofficial suggestion that a course might cost up to £50. As he will realise, that is a lot of money for a young person, and the course lasts only one day. As no minimum figure is set, the cost is likely to be less in areas where there are more training centres according to the rules of supply and demand, but in rural centres the cost may be near the maximum permitted figure.

I am sure that many motor cyclists who read the reports of our debate will want to know what sort of figure the Minister has in mind. Clearly, it will be desirable for motor cyclists to continue training beyond this inevitably cursory one day. What steps is the Minister taking to encourage more people to take up advanced training courses? Will the Minister give us an idea of the likely time scale for the changes in the length of the provisional licence, the right to carry pillion passengers and the entitlement of car drivers to ride motor bikes?

We have some disagreement with the Government over autoguide. The Minister has explained to the House how autoguide operates and I do not propose to repeat his explanation. I acknowledge that autoguide could have some useful effects in helping drivers find a quick, less congested route to a given destination. It would doubtless be useful, as the Minister suggested, for longer journeys and for journeys throughout Europe. It would be especially valuable for diverting motorists from accidents on motorways, and it could therefore clearly contribute to preventing the motorway snarl-ups with which we are all so familiar. I am aware that the Transport and Road Research Laboratory in its original research suggested that autoguide could result in 500 fewer casualties a year and a saving of journey time of about 10 per cent.

Naturally, the Opposition, like the Minister, are in favour of such reductions. However, I suggest that it is impossible to judge the effects on casualty figures of one specific proposal in isolation. Ministers have not always favoured schemes because casualty figures would be reduced. I remind the House of the Government's attitude towards the GLC's low fares policy which was specifically designed to take people off the roads and put them on public transport to reduce accidents, which it did.

Where is the Minister's strategic plan for dealing with the chaos and congestion on our roads? We have heard nothing about that today. It is extraordinary that, of all the measures which the Minister might have brought to the House, he has prioritised this measure. As the impact of autoguide will be felt principally in London, at least in the first instance, I want to consider its likely effect here while accepting that it will be useful on long-distance journeys outside the capital city.

The scale of the traffic problem in London can scarcely be over-estimated. According to Government figures, about 160,000 people commute into London every day by car. About 3 million vehicles are registered in London and the home counties. People sit in traffic jams every day, get impatient and try to make progress by driving via residential roads and rat runs. They park illegally, thereby aggravating the problems and the dangers. In 1986, about 500 people were killed and 50,000 injured on London's roads. The emergency services are now severely affected by delays, sometimes with fatal results. In 1975, the average speed of an ambulance was 25 mph. Now it is little more than 11 mph.

Public transport in London has become less reliable and more overcrowded. The Minister talked about his hopes for improvement. I was delighted to hear that, and I look forward to those hopes being realised. Because of the difficulties with public transport, especially with buses, people are tempted to drive to work, and that leads to increased congestion. There is widespread agreement between the Government and the Opposition that urgent action is needed. A recent Confederation of British Industry report said that London was "strangling itself to death". That report draws special attention to the need to move quickly on repairing roads, on completion of road works and on cracking down on parking offenders. The difficulties caused by such matters could be eased by proposals that are already drafted and agreed by the relevant organisations and that are waiting in the queue for parliamentary time.

The Minister says that autoguide will help to ease London's traffic problems. I doubt it. There is even a danger that autoguide will encourage greater use of the car. That was denied in the other place, but will a measure designed to aid the motorist through London not encourage more people who might previously have decided to make the journey by public transport to attempt car journeys? The Minister must assure the House that, if it appears from the pilot project that more people will be interested in using their cars as a result of the autoguide, he will reconsider authorising its use. At the

[Ms. Joan Ruddock]

very least, autoguide will do nothing to discourage the use of the car and the Minister has said that there must be such discouragement.

I accept that, in their consultation documents, the Government have acknowledged the danger of encouraging the use of rat runs. I appreciate that the Secretary of State has the power to tailor licence applications to the needs of particular areas. We think that that safeguard is insufficient, especially given the lack of prior consultation and participation by local authorities. I shall return to that matter.

The Minister will be in something of a dilemma when he comes to license different routes. He will be under pressure to agree as many roads as possible. If only the main trunk roads are authorised, the usefulness of the scheme will be severely limited, but there are major problems in authorising the use of unclassified roads in London. The primary problem is safety, to which the Minister gives top priority.

Several organisations have already expressed concern about the safety aspect of autoguide. The Department of Transport document entitled "Transport In London" draws attention to the fact that about 48 per cent. of accidents here were among the most vulnerable road users —pedestrians, cyclists and motor cyclists. The majority of child pedestrian accidents occur within 400 m. of home. That means that they occur on residential roads. Any measure that increases the likely use of residential roads increases the possibility of accidents on those roads, even if accidents on trunk roads were to decline as a consequence.

A further danger may arise from the expectations of people who purchase autoguides. The motorist who buys it will do so in the expectation that he—I expect that the majority of purchasers will be men—will have a quicker journey. That will give rise to the danger of cars speeding down unsuitable roads and the drivers paying less attention to road safety than they would have done if they had not been directed to a specific road. There are ways to control the use of residential roads and the Parliamentary Advisory Council on Transport Safety and local authority organisations have said that the involvement of the highway authority is absolutely crucial.

Our concern has been heightened by reports emanating from a recent consultation by GEC, which is a member of the RAC consortium, with London boroughs. I understand that the boroughs were told that autoguide would be commercially viable in London only if it included roads other than categories A and B and aimed at 20 per cent. of the traffic flow. Perhaps the Minister will tell us if that is an accurate assessment and just how many vehicles that would be.

In my constituency I am dealing with a strong residents' protest movement in Gellatly road where residents face the passage of 15,000 vehicles a day. It is a typical south London rat run. Lewisham council and I are desperately seeking a solution to the problem, but we see it immediately being exacerbated by autoguide. The Minister must tell us how he would view such a case.

The response of a local authority to a newly created rat run is likely to be environmental measures to slow down the traffic and restraints to limit it. What will happen when a local authority publishes a traffic order to that end and autoguide objects? Arguably autoguide could show traffic going back to the designated network, thus bringing the Department of Transport into the argument. How does the Minister propose to adjudicate in such cases when the Department is so wholeheartedly behind the autoguide proposals?

I give notice to the Minister that in Committee we shall seek to give the highway authority statutory involvement in the planning and monitoring of the system. Only in that way do we think that the needs of ordinary people can be protected from the development of more rat runs and more danger in their neighbourhoods and more difficulties in their homes. At least the rights of the authority should be guaranteed. The minimum should be the right of an authority to intervene if something goes wrong. We shall table an amendment to that effect. I hope that the Minister will take on board the concerns of local authorities in that respect.

I have explained in detail our misgivings about the autoguide system. We are aware, of course, that a similar project is being carried out in Berlin, but there is one crucial difference. That project is being carried out as part of a set of traffic management measures, financed predominantly by the public sector and integral to already existing traffic management schemes. That is not the case here. None the less, despite our misgivings, I assure the Minister that my hon. Friend the Member for Kingston upon Hull, East (Mr. Prescott) and I will take the opportunity that he has offered us to see autoguide in operation for ourselves.

There are other measures in the pipeline that could have a real and lasting effect on London's transport problems. We welcome the publication of the White Paper, "The Road User and the Law", following the North report. I hope that legislation will be brought forward on that in due course. However, the Minister will be aware from the debates in the other place that there is a strong feeling on this side of the House that no more time should be wasted before bringing forward legislation on the Horne report.

New street works legislation becomes more vital every day as the level of building activity in London increases. New legislation is needed desperately to deal with the problems caused by holes in the road. Hon. Members will appreciate the irony of giving priority to the measure before us rather than to street works legislation. By providing the operator of a private information system with power to install apparatus in the highway, the Bill will add to the problems and complexities that the Horne recommendations are designed to tackle.

I have concentrated on our differences in approach and on the contentious points in the Bill. No doubt we will return to those in Committee. It will help the whole House if the Minister can give a further account of the Government's attitude when responding to the points that I have raised.

4.53 pm

Mr. Michael Jopling (Westmorland and Lonsdale): I want to concern myself with one part of the Bill, clause 6. I think that everyone is in favour of training for young learner motor cyclists. I have had discussions recently with the Motor Cycle Association of Great Britain Ltd., so I think there are various points that it is important to raise at this stage. I begin by declaring an interest; I think that I am one of the few Members who ride a motor cycle

regularly—in the summer months, I hasten to say. I often use a motor cycle to go to and from the House during that period.

Motor cycles, especially big ones, are potentially very dangerous machines unless they are treated with the greatest respect and concentration. If one rides a motor cycle, one soon learns that there is very little between oneself and the road, and one remembers that an accident is nearly always more damaging to a rider of a motor cycle than to a driver of a car.

I well remember being in the Isle of Man, and riding with the marshals around the 37½ mile track between races, "sweeping up" after a great parade of the champions of the past. I came to Braddon bridge after one of those great heroes had spurted oil all over the track. I found myself arriving at the bridge at 50 miles an hour on my bottom, an extremely uncomfortable experience. I think that I was Chief Whip at the time, so that was probably the least that some hon. Members would have liked to happen to me.

We must always remember that riding a motor cycle is one of life's most exhilarating experiences. I hope that no misplaced zeal by any Government will reduce further the enormous pleasure that motor cycling brings. I applaud very much the Government's desire to encourage better training through clause 6. According to the explanations that we have had up to date, the provisions of clause 6 will lead to serious problems in rural areas. The hon. Member for Lewisham, Deptford (Ms. Ruddock) said that it has not been made clear how many training centres will be established. I have heard a similar figure to the one that she heard.

Let us say that there are to be 1,000 training centres around the country. I understand that that would be one for every 80 square miles. Even then, in many parts of the country there would be only one for every 150 square miles. I shall be surprised if many people in my constituency, for instance, do not live more than 20 miles from a training centre. That will cause a major problem for those who have to travel long distances to training centres from their homes or from wherever they purchased their motor cycles.

I am told that the courses may last between four and six hours. No doubt at certain times of the year it will not be possible always to fit in the course in one session. If there have to be two sessions to complete a course in a rural area, a considerable distance may have to be travelled within the triangle of place of purchase, training centre and home. Especially, there will be the problem of the person who fails to satisfy the examiner and who finds himself, perhaps fairly late at night, more than 20 miles from home, with no public transport available. What is he to do? It is a serious problem to which the Minister must address himself.

The Motor Cycle Association of Great Britain believes, as I do, that there is only one solution. There must be a special exemption for those who live, let us say, more than five miles from a training centre. There is a dispensation in the MOT test for cars when the previous MOT certificate is out of date. The Government will have to think about making a similar dispensation in respect of motor cyclists travelling directly, on a single occasion, within the three-cornered route that I described.

An amendment was made to clause 6 in another place to allow certain exemptions. That may be the means by which the Government will be able to meet my point. It is important that, during the Bill's passage, the Government make their intentions clear. They have already said that they understand the problems of islanders, and have promised to consult on that point. However, the Government must give specific answers. If that is not done, the situation will become impossible for many young people in rural areas, many of whom have low incomes.

A motor cycle provides the young man living in a rural area with the only reasonable method of getting around, but it could become an impracticable option—especially if the cost of the test is prohibitive. The hon. Member for Deptford was right to ask about that aspect. I heard that the cost might be nearer £25. Even so, that is a large sum of money for a young man living in a rural area who has already laid out money for his motor cycle.

I am very bothered by those aspects. I hope that the Government will grant exemptions of the kind that I have described. My hon. Friend the Minister might reflect on the fact that many young men in rural areas in particular learn to ride motor bikes at 10 or 12 years of age. My own sons could ride a motor bike around my farm like demons when they were aged about 10. Many young men in the country learn to ride off the roads and are perfectly competent. They have much greater opportunities to learn the basics of riding a motor cycle than do young people in the towns. I hope that my hon. Friend will be able to respond sympathetically to the points that I have made.

5.1 pm

Sir Philip Goodhart (Beckenham): The clauses dealing with the proposed unified driver licensing system are sensible enough. However, I note that there were two substantial debates in another place on amendments relating to eye testing of drivers. Substantial arguments were made for requiring regular eye checks for older drivers and for extra resources to be made available for research into how many road accidents are attributable to bad eyesight with a view to amending driver licensing legislation the next time around.

My belief, based on personal experience and on private anecdote, is that regular eye tests are an important factor in road safety in respect of older drivers. I am sorry that the Minister in another place was not more forthcoming. I hope that, before the Bill reaches the statute book, the Department will be able to say that more resources will be made available for research. I note also that we shall have to return to this subject in the comparatively near future, because of the European harmonisation programme and the regular system of consultation with our European partners. Several member states have more stringent eye tests in the granting of driving licences than we have. We shall inevitably be compelled to return to that aspect in 1991, if not before.

I welcome those provisions of the Bill that deal with the training of motor cyclists. I recognise, as do all right hon. and hon. Members, that motor cycling can be exceedingly dangerous and that a motor cyclist is 14 times more likely to be killed or seriously injured than the driver of a motor car. That was brought home to me when I was a duty Minister in Northern Ireland about nine years ago. One weekend, nine motor cyclists were killed on the roads of Northern Ireland. Had nine residents of Northern Ireland been killed in a terrorist attack, on Monday afternoon there would have been a statement in the House and everyone would have expressed concern. But because

[Sir Philip Goodhart]

those killed were just motor cyclists, no one bothered about them, and those deaths were barely reported this side of the Irish sea.

I welcome also the Bill's provisions for training. It is ludicrous that we have gone for so many years without making any requirement for training motor cyclists. However, I would not place too much store by this measure. About 45 years ago, in the Army, I was given excellent training by former TT riders. We learned to ride faster than otherwise we would have done, and very exhilarating it was. However, I am not sure that we became much safer riders.

The Bill's provisions will result in a cut in the number of casualties, but I attach more importance to the proposals, to which my hon. Friend the Minister has referred before, for limiting the engine size of motor cycles that young, inexperienced riders can use. My hon. Friend referred to limiting engine capacity to 400 cc for riders with only two years' experience. I hope that a measure will soon be introduced giving force to that recommendation. However, in that respect we are being held back by European consultations, because not all our EEC partners agree on that proposal, which has been around very much longer than our membership of the Community. I hope that my hon. Friend will be able to confirm that action will be taken.

I welcome also the Government's proposals for autoguide, which is an exciting and important potential development. I notice that the Government say that the system will have to be linked to an urban traffic control centre and that the pilot scheme will take place in London. I hope that means that we shall soon have a proper urban traffic control centre in London, because one of the glaring deficiencies in London at the moment is the absence at the highest level of a London traffic management unit. I hope that the introduction of this autoguide pilot scheme will mean that we shall soon have a traffic management unit at a high level.

The great majority of drivers will certainly not have autoguide before the end of the century. I hope that more effort will be devoted to warning ordinary motorists about road works which may lie in their path. Earlier this afternoon, I drove up the M3 from a meeting in Southampton; warning signs about road works ahead were admirable in size and placing, and motorists were warned well in advance of any problems that lay ahead.

In London, in the course of last week, I wasted more than an hour in traffic jams that were caused by road works, for which absolutely no warning was given in time for motorists to take evasive action. I hope that the Department of Transport will take this matter seriously, because it affects traffic flow in London.

It would be churlish not to congratulate my hon. Friend the Minister on the fact that road traffic casualties have reached a record low for 34 years. I do not always agree with my hon. Friend on these issues, but he has done a great deal to raise the political visibility of this issue. The Bill is another small step towards improving road safety. I hope that, in the next Session, a much bigger Bill will be introduced to implement the sensible recommendations of the North report and the Government's White Paper.

5.12 pm

Mr. Gary Waller (Keighley): I welcome the Second Reading of the Bill, which contains some extremely valuable proposals. With regard to part I, I am sure that my hon. Friend the Minister will be aware that the road freight industry is entirely in favour of the change to a unified system. Even if that had not been a requirement of the European Commission—a directive laid down for us to follow—we would have been wise to get rid of our present system and adopt the system proposed in the Bill. The present system is extremely confusing, and can be described as an anachronism. The new system will be an improvement for employers and drivers because it will make life simpler for them and improve their relationship.

We should consider a number of consequences which flow from the change. The licence system for heavy goods vehicles and public service vehicles will be brought into line. There is nothing in the Bill about how the provision for medicals will operate. As I understand it, that will be incorporated in regulations. It would be helpful if, when winding up, my hon. Friend the Minister said a word or two about the system of medicals, which is important for drivers.

The changes that implement the first European Community directive—the proposals in the Bill—can be related to the further draft directive debated in the House on Tuesday. During that debate, concern was rightly expressed about a requirement for a new threshold requiring drivers of minibuses used by voluntary groups to be tested, and for there to be a requirement to obtain a licence to drive public service vehicles.

The new draft directive also requires a change in the threshold from the present 7·5 metric tonnes to 3·5 tonnes for heavy goods vehicles. Identical concern has been expressed by those who operate smaller goods vehicles, and this is something we should consider when talking about the proposals that are incorporated in the Bill. I hope that my hon. Friend the Minister will take as vigorous a view on that point as he has said he will on many other matters in the second draft directive. If implemented, the change would double the number of drivers needing heavy vehicle tests and put an additional strain on resources. We must ask—as with so many other issues—whether that is justified in road safety terms. Is this merely a matter of harmonisation which in itself is good only if it achieves a valuable objective? The consequences of that change will be much more severe in Britain than in other Community member states.

All organisations—as I do—welcome the proposal for training motor cyclists. A report recently published by the Institute of Motorcycling entitled "Characteristics of Urban Motor Cycle Accidents" has just come to my notice. It draws some interesting conclusions.

My hon. Friend the Minister conceded that other road users were sometimes to blame for accidents. It is interesting to note, that on the basis of the 9,600 accidents in the Greater London area investigated by the researchers, 62 per cent. of accidents involving motor cycles, mopeds and scooters were primarily caused by other road user groups.

Mr. Peter Bottomley: That does not wash. It is about that proportion of accidents that involve another vehicle. It is incredible to believe that every one of the crashes and collisions is the fault of other vehicles. The plain truth is

that some vehicles do turn right without their drivers making the life-saving check in the mirror to see whether a motor cyclist is overtaking. At T-junctions drivers look left and right, do not notice a motor cycle and pull out in its path. However, that is only one part of it. It is easier to find examples—especially in urban areas—of motor cyclists taking action which does not allow other motorists a chance to escape unscathed. I think that what we need to deal with is mutual risk-taking. I hope that my hon Friend will forgive me, but he was saying something that has been said by a number of motor cyclists—a diminishing number, I hope.

Mr. Waller: My hon. Friend interrupted me before I was able to qualify what I was saying. I certainly maintain that a large proportion of accidents are caused primarily by other road users. Of course, by riding defensively motor cyclists can sometimes, perhaps often, avoid accidents that would otherwise be caused by the actions of other road users; an experienced rider will be able to anticipate those actions and thus escape disaster.

I urge my hon. Friend to read the report. The research was carefully carried out and shows that 35 per cent. of accidents were caused by motor cyclists themselves. The findings are based on statistics from the Metropolitan police, and I do not think that we should ignore the report's conclusion that, at the very least, a substantial proportion of accidents involving motor cyclists are attributable primarily to other road users. I hope that my hon. Friend will continue his Department's efforts to make those road users more aware of motor cyclists. At one time leaflets were included with car licences——

Mr. Bottomley: That is still being done.

Mr. Waller: I am glad that the practice continues. Because of the nature of their machines, motor cyclists are peculiarly vulnerable.

I pay tribute to my hon. Friend for the way in which he has listened to what motor cycle organisations have to say. That goes for the British Motorcyclists Federation and for the Motorcycle Action Group, which is not always kindly disposed to my hon. Friend: indeed, the way in which it has directed some of its diatribe at him has been very regrettable. I welcome my hon. Friend's willingness to consider again such matters as leg guards. His attitude contrasts with many motor cyclists' picture of a Department that is deaf to any representations that it may receive.

I share the concern of my right hon. Friend the Member for Westmorland and Lonsdale (Mr. Jopling) about aspects of the training system. We need to be satisfied that training facilities will be adequate to meet demand, and also that arrangements will be made to ensure that training standards are high enough. All motor cyclists will of course be required to undergo and complete a training course, but I wonder what would happen if a trainee, having completed the course, nevertheless gave indications of unsuitability to ride safely on the roads. There seems to be no requirement for a test to be passed at that stage.

There is also the practical difficulty, referred to by my right hon. Friend the Member for Westmorland and Lonsdale, of the motor cyclist who needs to get to the training centre. Often suppliers of new machines will arrange for the machines to be delivered to the centre, which is a responsible approach, but many motor cycles are bought second hand and dealers may not be able to deliver them, especially if long distances are involved.

My right hon. Friend mentioned the MOT test exemption. If the keeper of a vehicle needs to get it to the testing centre, because in such circumstances he may not possess a tax disc, special provision is made. That demonstrates that a certain amount of flexibility has been used in the past to deal with practical difficulties. To deal with another such difficulty, it could perhaps be arranged for the trainer to meet the new possessor of a motor cycle somewhere other than the training centre and to accompany him to it. In any event, I hope that further thought will be given to the problem, which will no doubt apply to many new motor cyclists. Like my right hon. Friend, I do not wish to put any obstacle in the way of those who are keen to embark on motor cycling, as I share his enthusiasm.

Mr. Jopling: I have listened carefully to what my hon. Friend has said, but I do not think that that last suggestion would work. If two young men wished to attend a training centre and each was more than 20 miles from it, for someone to collect them individually would involve a round trip of 40 miles. That really is not a runner, particularly late at night.

Mr. Waller: My right hon. Friend has a point, although I do not imagine that such a problem will arise in the case of all participants. A certain amount of flexibility would help the minority who may have a problem.

Autoguide is a welcome development. I think that it will be particularly helpful to motorists who are unfamiliar with an area, especially in overseas countries. I hope that it will be possible to obtain a measure of co-operation from other countries—perhaps through the European Community—to ensure compatibility and interchangeability of roadside and car equipment.

There is no doubt that autoguide is not a solution to the problems of congestion. Like many others, I believe that an expansion and acceleration of the road programme must be an important facet of our approach to the problem—which, as we know, costs the country many billions of pounds a year through the companies that operate within it. Nevertheless, autoguide can play its part. It is, of course, only one of many current developments; another is the digital radio system, which I am sure will be used in the next few years by many more drivers than have access to autoguide.

Autoguide, however, has the great benefit of being an automatic and interactive system. It does not necessarily require information to be fed into it, involving the intervention of individuals, as is required for announcements to be given out to motorists through the digital radio system. It is one way in which we can approach the solution of many problems which cost this country dear each year and it should, therefore, be pursued.

I regret the rather negative approach of the hon. Member for Lewisham, Deptford (Ms. Ruddock) to autoguide. She is, of course, right to say that we have to pursue other solutions as well and I agree that autoguide is not the only answer. But that should not preclude us from seeking a system which has a great deal of novelty and value. The hon. Lady was concerned about rat runs. I understand that the Automobile Association, the Royal Automobile Club and the two consortia involved are very

[Mr. Waller]

much aware of that concern and are determined that they will not go in for rat runs as a way of enabling motorists to avoid congested areas. We should turn our faces against the idea that one should introduce rat runs through residential areas.

Ms. Ruddock: Can the hon. Gentleman explain to the House how it is possible to avoid creating rat runs in residential areas, as most people in London live in areas where there is a great deal of overcrowding already and autoguide will transfer many people from one road to another? In theory, at least, it is difficult to see how one would not create new rat runs by that procedure.

Mr. Waller: To the best of my knowledge, the consortia are determined that they will not adopt that approach. It is important that we should not allow the scheme to be strangled by red tape. Although we should be aware of the problems and difficulties, we should not allow a preoccupation with bureaucracy to prevent it from taking its place within a reasonable time scale.

The hon. Lady said that she regretted that we were not adopting an integrated transport system at this stage. To me, such a system involves direction rather than choice and that is the difference between the approaches of our two parties to transport. It is interesting to note that, although the Labour Government gave themselves powers to direct freight transport operators, they did not use those powers. Powers of direction are often quite impracticable, however much one may like to theorise about them. The Government are in favour of giving choice to the consumer of transport services. Nevertheless, it is the task of Government to provide the framework in which road transport is safer and more convenient, so that individuals can exercise their choice in a way that is more satisfactory to themselves. The Bill meets those criteria and I welcome it warmly.

5.32 pm

Mr. Roger Moate (Faversham): I was intrigued to hear my hon. Friend the Minister say that 1989 would be the year of the sign. He should be aware that motorists, especially angry motorists, are capable of more than one kind of sign and, in his experience and mine, many of them have been directed at the Minister for Roads and Traffic. It would be interesting to know just what the year of the sign will entail. If we are talking about driver information services, a great deal of anger is caused when the road-signing system appears to break down. It would be helpful to know about the programme that will be of benefit to motorists during the year of the sign.

I very much welcome the Bill and the constructive approach from the hon. Member for Lewisham, Deptford (Ms Ruddock) and the Opposition. Despite the fact that my hon. Friend the Member for Keighley (Mr. Waller) found the hon. Lady's approach rather negative, I thought that it was fairly positive. She brought to the Dispatch Box an element of charm, a weapon not often deployed by the principal Opposition spokesman on transport, the hon. Member for Kingston upon Hull, East (Mr. Prescott). I expect that she will be more successful than he is at persuading the House of the merits of the case.

However, when she talked about the autoguide system, she was on somewhat dubious ground, first weeping crocodile tears for the poor motorists caught in traffic jams every day. She then said that she hoped that autoguide would not be a means of attracting more motorists into the capital or other cities. But presumably the object of autoguide is to avoid congestion and to make life easier for motorists, in that they will not be so frustrated. The hon. Lady is trying to have it both ways. If autoguide works —and we hope it will—it will undoubtedly make life better for motorists and perhaps will attract more of them into cities. The hon. Lady must make up her mind whether she espouses the policy of discouraging motorists through congestion or the policy of helping them by making their lives easier.

Ms. Ruddock: The hon. Member will know that whenever there is an easing of congestion it attracts more motorists. If motorists perceive that autoguide will give them a smoother passage, they may exercise the choice about which hon. Members have spoken and instead of making the journey by public transport, which they may perceive to be slightly difficult, they may decide to make the journey by car because of autoguide. That point must be taken on board.

Mr. Moate: The hon. Lady is simply repeating the dilemma, but she has not solved the problem. Autoguide is designed to make life easier for motorists. She is either for or against. I choose to believe that she is in favour of it, judging by her fairly constructive remarks.

I went to see the autoguide experiment at the Transport and Road Research Laboratory. I went in a sceptic, but came out an enthusiast. I want to pay a compliment to the laboratory. It is not often that Government establishments are complimented on the work they do. The laboratory has produced a scheme that is admirable because it is technically advanced. The cost of applying autoguide even to the whole of Greater London seems to be relatively small in capital terms and the system could become available to motorists in a relatively short time scale. It is practical and economical and could contribute greatly to reducing traffic delays, journey times and costs. It is a welcome development and it is also an exportable system which will bring valuable benefits for this country. Equally, it is not a panacea and it is not meant to be. It is simply one method of easing the problems of motorists.

This country has not yet realised that congestion has nothing to do with party politics or the success or failure of past or present transport policies. This country has not taken on board the scale of congestion we shall face in years to come. If we look at the forecast growth in vehicle traffic on roads for the next few years, not just in the number of vehicles but in the extent of the usage of those vehicles, we ain't seen nothing yet. Our streets will become grossly more congested and none of us has yet come up with the method of tackling the problem, whether in London and our other cities or in our smaller towns. Some pretty painful nettles will have to be grasped in the years ahead. For the moment, we should welcome autoguide, as it will undoubtedly be of help, it will work and it could turn out to be most popular.

The next aspect of the Bill to which I shall turn is uncontentious, but of considerable importance to the motorist. This is not an insignificant or unimportant Bill. The driving licence, for example, carried in 31 million pockets, wallets and handbags, is precious to all motorists. If one tries to take it away from a motorist, one realises

how precious it is to him. The format of that driving licence is almost as important and delicate a matter as the format of the passport, which is another contentious matter. Like many others, I deeply regret the passing of our old driving licence, that rather nice, maroon, stiff-covered document that could be tucked away and did not become too tatty. It was replaced by a rather tatty green bit of paper in an awkward plastic container. I believe that the newest licences are pink, but mine is green. They are tatty, bureaucratic pieces of paper.

I welcome in principle a unified licence and a common format for Europe and for the whole world. However, the international driving licence never caught on. A unified driving licence would have great advantages, but I plead for a return to a decent format. We should persuade Europe to adopt a driving licence that drivers would be proud to carry rather than these poor, tatty pieces of paper. Alas, if one has to produce them too often or if one has to have them endorsed too often they soon become very tatty indeed.

On the question of a common format and a unified licence, I understand that it is difficult to endorse the licence of foreign drivers. It is vital, therefore, in the interests of justice, fairness and of the irate victims of foreign drivers that there should be powers to deal promptly with foreign drivers, including the confiscation of their licence, if necessary. I hope that the Minister will say what powers the courts will have to take stringent action against foreign motorists and the drivers of heavy goods vehicles from the continent who infringe our laws and are involved in accidents. Our powers to deal with them are limited.

I am pleased that my hon. Friend the Member for Beckenham (Sir P. Goodhart) referred to eye tests. The Bill provides for more stringent medical tests for the drivers of heavy goods vehicles and passenger service vehicles. However, I am not clear about how much more stringent the tests will be. That should be spelt out, either now or in Committee. Millions of people need a driving licence for their job. I hope that the Minister will tell us whether the requirement that drivers of heavy goods vehicles must have a medical test is to be extended to the drivers of smaller, lighter vehicles—3·5 tonnes as against 7·5 tonnes. How many more people will be affected by the new requirement? If they are to be required to have regular medical checks, that is an important matter for them. We ought to be told about the scale of a change of that significance.

Mr. Waller: In case there is any doubt about the matter, I can assure my hon. Friend that the proposed change will take place only if the second draft directive of the European Commission is implemented. However, there would be a knock-on effect if it were to be implemented in that form. It would have an effect on the medical examinations that are provided for in the Bill.

Mr. Moate: I am grateful to my hon. Friend. He has made an important point. A number of draft directives affect our licensing procedures. We are entitled to know what chance we have of persuading the European Community to adopt our point of view about minibus and heavy goods vehicle licences and other matters. If we are not successful in persuading the Community, what powers do we have to resist the directives? If we have no power to resist, is it inevitable that these changes will be made? They are not necessarily bad and they are not necessarily wrong, but the implications for British drivers ought to be spelt out.

I do not believe that regular medical tests or eye tests are against the interests of the motorist. They are designed not to hinder but to help him. If the driver of a heavy goods vehicle has regular eye tests, the intention is not to push him off the road but to ensure that he wears glasses, if he needs to do so, or has adjustments made to his glasses. The tests are designed to help drivers to stay on the road without causing accidents.

The Minister knows that I have strongly urged the introduction of regular eye tests for motorists. I should like such a provision to be included in the Bill. However, the Minister and his Department have been somewhat sceptical about eye tests. Their case is that there is no evidence that a significant number of accidents have been caused by poor eyesight. However, one knows from experience that that is wrong. Police forces have carried out eye tests. They believe that bad eyesight causes accidents. A strong case has been made out for regular sight tests.

I am delighted that a few days ago Swinton Insurance —one of the largest motor insurance brokers in the country that arranges insurance for about 1 million motorists—announced that it had issued a notice to all its motorists saying that they ought to have regular eye tests, otherwise they would be in danger of invalidating their insurance.

Stringent Government action would not be needed and it would not involve them in any expense. All that the Government need to do is to encourage the British Insurance Brokers Association to tell all motorists that they are in danger of invalidating their insurance policies if they do not have frequent medical and eye tests. That would help the Minister in the tremendous campaign that he has waged so consistently over the years to reduce the number of accidents on the roads.

While I have been a Member of Parliament I have spoken in debates on various transport Bills. Each time we have referred to new tests for motor cyclists. However, we have not achieved the desired objective. There is to be another requirement. I hope that it will work. I have been visited by groups of motor cyclists in my constituency. We have disagreed from time to time about crash helmets and other related matters, but generally speaking they have adoped a responsible attitude and have been very responsive. I hope that if new tests are to be introduced we can give to motor cyclists the message that training facilities will be made available for them. It would be frustrating to impose restrictions that caused long delays and made it difficult for new motor cyclists to obtain a licence.

My right hon. Friend the Member for Westmorland and Lonsdale (Mr. Jopling) was a member of the Cabinet when these groups of people came to see me. That helped me greatly. They thought that Conservatives do not like motor cycles and never ride them, but I was able to tell them that the Minister of Agriculture rode a motor cycle. That was a very persuasive argument. Unfortunately, I do not agree with my right hon. Friend that it is an exhilarating experience. I tried it only once. I thought that I was using the brake, but it turned out to be the throttle and I ended up in a rose bush. It was all very painful. Four wheels are very much safer than two. However, I accept that many people gain much satisfaction from riding

[Mr. Moate]

motor cycles. If we are to introduce regulations that affect motor cyclists, we must ensure that improved training facilities are provided for them.

My hon. Friend the Minister wandered slightly away from the provisions of the Bill. Perhaps I may do so also. He referred to his general policy for transport in London. We have talked a great deal about congestion. Much emphasis has been placed on the rail study. The Government assume that that is the last word to be said about new railway services in London. I do not believe in an integrated transport system. It never works. We shall make a serious mistake if we believe that these rail proposals are the last word.

One part of London directly affects my constituency in Kent, but there are no Underground services in south-east London. The rail study said virtually nothing about easing the congestion on the roads and on British Rail by providing new Underground services to that part of our capital city. It deliberately ignored that matter and argued that its brief and remit did not extend to trying to relieve congestion on the roads, that it was simply a matter of trying to ease the existing congestion on the central railway line. I hope that my hon. Friend will very soon tell us a little more about what studies the Government intend to launch into the question of extending the Underground rail system to other parts of London to reduce some of the congestion, which is massive at present but will increase in intensity in years to come.

With those remarks, I welcome the Bill very much. I am glad that it appears to have the support of all parts of the House.

5.50 pm

Ms. Ruddock: By leave of the House, I would like to respond to a number of points that have come up in this debate and to reiterate briefly some of those that I made earlier.

The right hon. Member for Westmorland and Lonsdale (Mr. Jopling) talked very effectively about the difficulties in rural areas. Like him, we are particularly concerned about the provision of training centres. It is very clear that young people in these areas need motor cycles. We all know that there is often a lack of public transport suitable for getting a younger person, for example, to a first job, so a motor bike becomes essential to that young person's future. I think the hon. Member referred only to young men. These days, many young women too want to use that cheaper form of transport to help them have a reasonable life in rural areas. I reiterate that the Minister should not begin this scheme unless he can assure us that there will be sufficient centres and that everyone, no matter where he or she lives, will have a choice as to mode of transportation, where that is not in direct conflict—as, in this case, it certainly is not—with community interests as a whole.

It is particularly important that the training proposals be supported. As I said earlier, Opposition Members are very much in favour of mandatory training for motor bike users. However, I am sympathetic to the points that were raised by the right hon. Member for Westmorland and Lonsdale and by the hon. Member for Keighley (Mr. Waller) about how a young person might be enabled to take the test on his own machine. That is desirable, but within the provision at the moment it would seem to be very difficult. I hope the Minister will be able to help us on that point.

The question of eye tests and the possibility that they will become more stringent was raised. By introducing charges for eyesight tests, the Government have created a particular disincentive to people doing the best for their own eyesight, and we are very fearful that more stringent, difficult and lengthy tests would attract even higher fees.

The hon. Member for Beckenham (Sir P. Goodhart) expressed regret about the lack of an urban traffic control centre. I reiterate that what this capital city needs is a strategic planning authoritiy. Nothing will deal with the present chaos unless we can plan strategically and take account of all possible modes of transportation and all possible solutions to the problems that we encounter.

The question of roadworks and the difficulties that people have in circumventing them was raised. That is bound to bring to the Minister's attention just what will be the nature of the roadworks involved in the provision of the autoguide scheme itself. They might be considerable, but we ought to know. Let me reiterate what we are in favour of. We are very much in favour of the harmonisation of the licensing scheme; we are very much in favour of better training for motor bike users; and, of course, we support the Minister in everything he does to bring forward measures to improve road safety. Equally, we reserve our right to be critical of measures which come in isolation—autoguide is an example—when other methods and other measures might produce even better results.

I am delighted that the hon. Member for Faversham (Mr. Moate) appeared to support our case that, because of the potential immense growth in car ownership and usage, we can solve these problems only by greater and better provision of public transport.

As I said at the outset, we believe that, while autoguide may be very useful in other parts of Britain, there is no justification for piloting it in London as though it might provide a real solution to London's transportation chaos. I suspect that the results will be marginal. I have yet to encounter in London a road that does not have a lot of traffic, and I believe that the possible problems and risks are very considerable. I know that my consituents in south London will be extremely concerned at the possible creation of rat runs—a question which I believe has not been dealt with adequately in this debate, though I have great hopes for the Minister's response, which is about to come. Perhaps he will tell us specifically whether autoguide routes can be restricted to A and B roads. If so, he will put a somewhat different complexion on these proposals and on the information that I gave him, which I believe came from a meeting involving GEC—a member of one of the consortia—which stated categorically that it would not be profitable if only A and B routes in London could be used.

5.56 pm

Mr. Peter Bottomley: By leave of the House, I thank all Members who have taken part in this debate. Their contributions may make matters easier. It may make it easier to prepare for the Committee stage to have some of the detailed points available and ready. I shall do what I can now to answer many of them.

I am rather surprised that there are no Liberal or SDP Members here. We seem to be missing some of the

nationalists also. I am grateful that we are back to two-party politics. It has always struck me that liberals like myself ought to be dominating each of the major parties——

Mr. Greg Knight: On that point, is it not a fact that there is a good case for making the pilot autoscheme available, free of charge, to Liberals and Democrats so that they might on occasions find their way to this Chamber?

Mr. Bottomley: It is true, as you, Mr. Deputy Speaker, probably recall, that on Tuesday we were talking about how they could all fit into a minibus. It looks as though they did not have the autoguide system to bring them into the Chamber at the right time.

The hon. Member for Lewisham, Deptford (Ms. Ruddock) did well to ignore totally the beguiling talk of my hon. Friend the Member for Faversham (Mr. Moate). It is not a lack of charm but intemperance that we have noticed in her hon. Friend the Member for Kingston upon Hull, East (Mr. Prescott). His storming into the Chamber just after 11 o'clock last night to tell the House what it should or should not be doing, based on a badly sub-edited report from the Press Association, destroyed much of what had been a fairly important debate. The more often that the hon. Lady is allowed to take these debates for the Opposition, the better we will move forward. It may be that her hon. Friend will be promoted back to the Department of Energy fairly shortly.

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer): No, no.

Mr. Bottomley: I welcome my hon. Friend's comment.

I want to turn to some points that have been made in the debate. An important point concerned other Bills that could come before this House in the future. The Horne report will be moving towards legislation and we fully accept the case. Obviously it is not possible to give a commitment to a date of introduction, but the time has not been wasted. The utilities, the statutory undertakers, the highway authorities and the Department of Transport have been doing essential development work on fleshing out the Horne report, and agreement has been reached on contentious issues. That means that when the legislation comes before the House it should be possible to consider it in detail without too much dissension. It is important to recognise that the Horne report and the replacement of the public utilities and streets works legislation should lead to cost reductions both for the statutory undertakers and utilities and for the highway authorities, and should lead to a better deal for those who pay the charges of the utilities, those who fund the local highway authorities, and should provide better movement through the streets for bus passengers, car drivers and, for that matter, pedestrians on the pavement.

There has been a reference to the North committee. The response to the North committee report was published recently. It shows the Government's commitment to improving the contribution that the law can make to road casualty reduction. Legislation will be brought forward when parliamentary time can be found for the major package of reforms. There are some details outside the North committee report on which the Home Office is still expecting responses to its consultations about some police powers.

We need to recognise that it is not legislation that has brought about the dramatic reduction in road casualties in this country. Legislation can contribute but the major change has been a new culture on the roads in which people expect co-operation, care and courtesy and in which people recognise that we all make mistakes and that room must be made for the mistakes of others.

My hon. Friends who have spoken on behalf of motor cyclists rightly said that they are more vulnerable than others, are involved in crashes more often and that the consequences of each crash are worse for them. We should all try to remember that pedestrians and motor cyclists are human beings. Because we are in a one tonne steel vest —a motor car—whether we are commuting or using it as a sales representative or an engineer, we must not forget that we share the responsibility for those more vulnerable than ourselves.

The hon. Member for Deptford asked about the time scale for some of the other measures mentioned in the motor cycle safety package. We hope to announce decisions shortly on some of the other elements. We have done the best we can to bear in mind the views and responses we have received. The Motorcycle Action Group has done a great deal to promote defensive riding techniques and it concentrates on important issues. However, I am not sure that it is necessary for the group to advertise a

> "Loadsatrouble (Riders' Rights Day) T-shirt—as worn by your Transport Minister! Still available. Black on Grey only. £4·99 plus 30p postage and packing."

It is available from PO Box 750, Birmingham, B30 3BA.

The serious point made by *Mag News* on defensive riding techniques is that the road user, who is often at fault —not always—usually manages to pick on an inexperienced motor cyclist with whom to tangle. The ratio of risk for motor cyclists up to the age of 20 used to be 20 times as great as for motor cyclists aged 25-plus—that describes my hon. Friend the Member for Westmorland and Lonsdale (Mr. Jopling)—and it is now a ratio of 13:1. Therefore, there has been an improvement in safety for the younger motor cyclist. That is important, but the risk is still too great and must be reduced.

I can give an illustration of the importance of training. Research shows that three quarters of motor cyclists do not use their front brake for straight line braking. That is perhaps the biggest single mistake we are making and it shows that the training has not been adopted into the habits and practices of motor cyclists. It also demonstrates the importance of initial basic training so that we do not simply rely on someone's experience as a cyclist. We need them to understand that motorised two-wheel movement —mopeds and motor cycles—is different. It is important to keep what is good about motor cycling rather than to accept that it should be eliminated. No one wants that to happen. I would be happy to see much more motor cycling —there used to be more in the past—as long as the casualty rate keeps coming down. That is the real test for motor cycling.

The hon. Member for Deptford asked about the motor cycle training course fee. It is important to realise that we are not necessarily talking about compulsory basic training as a one-day course or any other fixed format. We want to ensure that people become competent as soon as possible. Some may be able to do that in a day but others may take longer and some may want to train in a collection of hours put together. However, that is not for us to dictate

[Mr. Bottomley]

immediately. There may be a range of provisions. We do not have a preconceived idea of what the course fee is likely to be. We hope that it will not be necessary to fix a fee. The powers given by clause 6 are to safeguard the position of trainees so that they will not be faced with exorbitant charges.

We hope that training organisations will offer full packages of training of which the basic element is only one part. It is important that people taking up motor cycling should realise that it will not be a matter of, "Come and see us for a day and then do not bother to come back until the end of the time during which you can ride on your L-plates." It is better to follow the line taken by motor cycle retailers, manufacturers, training organisations and riders groups who say, rightly, that if one is to take up motor cycling, one should have full training in order to gain experience and skill with good instructors and experienced motor cyclists. I pay tribute to many in the police, road safety organisations and other groups who give their time to provide that training for new motor cyclists.

The hon. Member for Deptford also asked whether there would be enough training sites to meet demand. That point was rightly picked up on behalf of the rural interests by my right hon. Friend the Member for Westmorland and Lonsdale. There are now 190 different organisations authorised to provide training and the part 1 test. They operate from over 900 approved sites throughout Great Britain and employ more than 4,000 instructors. If all those training sites and instructors were to operate the new compulsory basic training, there would be enough to cope with likely demand. We are currently conducting a survey through local authority road safety officers to find out how many instructors are based at each site, whether training machines are available and to discover the current and potential throughput of trainees. The survey will identify approved sites which are not currently being used and parts of the country that are not well served by training facilities. In those areas, local motor cycle dealers may have a role to play in providing training facilities if they wish to continue to sell learner machines.

As assurance was given in the other place that the scheme will not be introduced until adequate facilities exist. I am happy to repeat that assurance now. We will take full account of the special problems of rural areas. I do not want to be led into giving too full an assurance that exemptions will be given simply on grounds of distance. We would need to find a way to overcome that problem. It is important to obtain safety for new motor cyclists whether they live in rural or built up areas. We need to recognise the widespread nature of the population and the absence of a town or city in which one could obtain a good throughput of trainees on a regular basis.

I was asked about the monitoring of standards of motor cycle instruction. The Department is already responsible for the appointment of training bodies and those who sign part 1 test certificates. The Motor Cycle Association—I pay tribute to its work in discussing the proposals—has made tentative proposals to set up a body to monitor and train the training instructors. I expect to meet the director general of the MCA on 3 May to discuss training and I hope to hear the MCA's proposition. I would not want to prejudge the reaction to the proposals until I hear from the experts how they think we should move forward. We want to move forward together.

My hon. Friend the Member for Keighley (Mr. Waller) made the important point that motor cyclists could experience the course and demonstrate to the instructor, rather than the examiner—that is a better way of putting it—that he cannot ride safely. Trainees would successfully complete their basic training only if they demonstrate that they are able to ride unsupervised. I do not want people to believe that we are substituting a new test. We simply want people to demonstrate that they can ride competently. I may be splitting hairs, but that is not supposed to be seen as a test. Hopefully, trainees will accept that they should go on to further training and try to pass the proper test as soon as they reasonably can. The days are gone when people should expect to ride around on L-plates year after year without having to ride a motor cycle under an examiner's eyes for half an hour or more.

My hon. Friend the Member for Keighley also mentioned lorry and bus licensing and many hon. Members have made the same points. We are trying to bring lorry and bus licensing into line. The first full licence will run to the age of 45 and renewals for professional drivers will be every five years until the age of 65. Thereafter, an annual renewal will be needed. Medical reports will be required on each application. The medical profession generally agrees that the mid-forties is the time when serious medical conditions begin to appear. The incidence of medical conditions affecting drivers aged between 18 and 45 is small. That assertion is borne out by the cases coming before the medical advisers at Swansea. In reaching decisions on the fitness of applicants the Secretary of State will be guided by advice published by medical experts as well as by the honorary medical panels.

The hon. Member for Deptford raised the issue of compensation for time lost at work because of more frequent medical checks. I want to take this opportunity of reminding every licence holder that it states on every licence, whether it is a green or a pink licence:

> "You are required to tell the Drivers Medical Branch, DVLC, Swansea, SA1 1TU at once if you have any disability (includes any physical or medical condition) which affects (or may in the future affect) your fitness as a driver if you expect it to last more than 3 months."

That is an obligation on each of us.

I welcome the fact that many drivers notify Swansea. They are not always disqualified if they raise a question. In fact, it provides an assurance for the driver just as much as for anybody else. I suspect that many elderly people who notify Swansea of an eyesight or other medical condition are pleasantly surprised when they discover that they can continue driving. They may be subject to continued regular medical checks, but this is an assurance for the driver as well as for the rest of us. So people should not be worried about notifying conditions to Swansea. They certainly will be committing an offence if they hide a condition that should be notified.

We realise that some people in professional driving are worried about the possibility that they may have to give up driving midway in their career. The medical standards are applied to protect other road users from the consequences of collapse at the wheel of bus, lorry or other large-vehicle drivers. It is important that drivers who are not able to meet the standards do not drive such vehicles.

The provision of compensation is not a matter for Government; it has to be worked out through normal employer-employee relationships.

Drivers whose work depends on meeting certain strict health standards may also insure against unexpected deterioration in their health. It is important to recognise that this applies equally to someone who may be a service engineer or a sales person in that their job may depend upon having a driving licence. People should have the opportunity of anticipating whether their health will determine their work, and it is well worth considering insurance and, in organised groups, seeing if that can be part of negotiated contracts of employment. Otherwise individuals can do it.

The hon. Member for Deptford asked about appeals. The vast majority of reconsidered decisions are decisions taken on medical grounds and the medical adviser is the best person to apply the standards in individual cases. The courts are the most appropriate appeal forum in general. They are in the best position to give the necessary weight to additional factors that may be introduced. The ordinary licence holder has no reconsideration procedure. There is no indication that this has resulted in any unfairness, although, as I have said, the loss of an ordinary licence can be just as severe for those who depend on cars for their livelihood as the loss of a vocational licence can be to a lorry or bus driver.

The driver licensing systems and judicial processes in other European Community member states are quite different. We shall be looking closely at their arrangements.

The hon. Member for Deptford asked again, as she did on Tuesday, about the staff implications of the transfer to the DVLC in Swansea and the effect on the speed of service. Vocational licences are currently issued manually by staff in traffic area offices. When these licences are issued in Swansea it will be through the fully computerised facilities there. By replacing a manual licensing system by a computerised system and unifying vocational and ordinary driver licensing within a single system, with the economies of scale at Swansea, we shall both save staff and improve the quality of service. There may well be some increase of staff at Swansea.

The staff and administrative savings have been estimated at about £1 million a year. The turn-round times for dealing with lorry and bus driving licence transactions will be speeded up by about 40 per cent. or more. So we ought to get both a more efficient system and one that provides more advantages to the person applying for a licence or a variation of one.

I turn now to the autoguide system. The hon. Member for Deptford asked whether this would lead to rat-running. I believe that it will lead to a reduction in rat-running because often many of the rats are continuing to move but are taking longer to get to their destination. It is important that the designated roads, the main roads, are the ones that carry the through traffic. I have given strong support over the years to traffic management arrangements, whether they involve physical restraints or efforts to ease the junctions which at present encourage rat-running. That is why we have in London designated roads and some trunk roads. We want to make sure that there are not changes which lead to greater chances of rat-running.

There is no reason to think that autoguide will increase the overall volume of traffic. The main roads generally offer quicker journey times and certainly should. The proposed large-scale pilot autoguide system will allow local authorities, the police and the Department to evaluate in detail the likely effects of a commercial system, including the effects upon minor roads. The Secretary of State would be able to impose licence conditions about the roads on to which the system could direct traffic. This power is in clause 10(8)(b).

It is quite important not to set down in advance that local authorities should be able to have a veto. When the hon. Member for Deptford was talking about integrated transport authorities, I was reminded of the county London Plan 1943, the Bressey report 1938 and "History of the London County Council 1889-1939", by Gibbon and Bell. From those we see that it was local authorities that banned the expansion of the trolley bus system in London because they did not want to see overhead wires. We must regret those decisions; it would have been nice to see an expansion of the trolley bus system.

It is important that we get the experience of the pilot autoguide system. Then we shall have better information on whether my assertion is right that we should end up with less rat-running, or whether the fears which the hon. Lady has quite rightly expressed are justified.

My hon. Friend the Member for Derby, North (Mr. Knight) raised the question of the private sector and whether the Secretary of State would use his powers. We hope that he will not have to use his powers, but we have to make provision in legislation to cover eventualities. Some of us may remember the little difficulty we had on Friday in getting the cashless parking Bill through. That was to provide primary legislative cover for local authorities to charge for off-street car parks without using cash. It would be ridiculous to lose this opportunity of giving the Secretary of State the necessary powers, but we hope it will not be necessary for them to be used.

My hon. Friend the Member for Keighley and also, I think, my hon. Friend the Member for Derby, North asked questions about clause 10 and the conditions which the Secretary of State might seek to include in licences for the operation of autoguide and other systems. As I have said, we hope that it will not be necessary to use these powers.

The hon. Member for Deptford asked about the effect of autoguide and similar systems on road safety. It is quite plain that if people know where they are driving—this applies to autoguide as well as to conventional signing and to the digital radio system to which reference has been made—they get there more quickly and by a shorter route and do not have to cover unnecessary parts of the route. That reduces the exposure to risk. It also means that they can concentrate on their driving instead of wondering whether they are going in the right direction. So all the ways of improving signing are important, including variable message signs on motorways, the BBC's radio data system and a review of the traffic signs regulations.

I mentioned that 1989 is the year of the sign. We reissued our little booklet and also a traffic advisory unit guide to road signs last week in Brighton at an exhibition. We are making major moves forward. Anyone who wants can go and look at the demonstration sign project in Guildford or the A3 signing which is coming forward and will see some of the improvements. We hope shortly to announce new ideas for signing in London and autoguide will fit in with the system, subject to Parliament. I ought to say perhaps that as a result of the agricultural crisis we

[Mr. Bottomley]

have changed the name of the illustrative motorway service area from "Good Egg" to "Good Food", in order to keep up with the times.

My hon. Friend the Member for Beckenham (Sir P. Goodhart) has reminded us again of his enthusiasm for a London traffic management unit. At the moment we have organised control of the traffic system. In King's building we have the Metropolitan police with their supervision. My hon. Friend has made various suggestions following up his Adjournment debate in December and more recently there have been reports in the papers of steeper parking fines, red lines on important routes and better parking enforcement generally. All this has been very much welcomed—except by those who have been caught. I met a group of bus and coach operators this morning who also mentioned my hon. Friend's proposals.

The hon. Member for Deptford talked about autoguides and Berlin. Berlin is a scientist's dream. There is no commuting traffic; people cannot drive in from the suburbs. The traffic management arrangement is significantly different from London's. We shall continue with the close Anglo-German co-operation.

There is much support in Europe for the British approach, which places the investment responsibility with the private sector and control and licensing in the public sector with the Secretary of State.

I will finish by referring to the eyesight point. Most of the people who have the highest involvement in injury accidents have the best eyesight. The problem in general is not people's quality of vision but the processing of the information they get through their eyes. It can be befuddled by drink or misguided by youth and inexperience. I can see that the hon. Lady does not agree with me. Perhaps we had better have another meeting with the college of opthalmologists—if that is the appropriate group—and see if we can find scientific evidence from this country or other countries showing that eyesight makes a major contribution. I suspect that if one could get younger drivers to see a psychiatrist one would be able to spot the ones who will have real trouble.

My hon. Friend the Member for Faversham referred to motorists from other European countries and that is a point that we can perhaps take forward. As I said on Tuesday, there is no provision for endorsing foreigners' licences. Most countries do not have that kind of system. People in many more countries are interested in our systems and are going to Swansea to see how they work. In time, the European Community may move forward to our system, so that people cannot wantonly commit offences in other countries. However, courts have power to seize the licences of foreign drivers when they commit serious offences.

My hon. Friend the Member for Keighley talked about light goods vehicles. That point follows the consideration of minibus driver licensing as well. My hon. Friend the Member for Faversham talked about the format and durability of drivers' licences. We think that they are reasonably good, but we will see whether we can improve the plastic wallets for licences.

Having heard hon. Members' comments, I welcome the general support for both parts of the Bill. Whether we are concerned with the future of motor cycling, of autoguide or the other provisions, I hope that we can move forward and increase safety and provide a better service for those who use the roads.

Question put and agreed to.

Bill accordingly read a Second time, and committed to a Standing Committee pursuant to Standing Order No. 61 (Committal of Bills).

ROAD TRAFFIC (DRIVER LICENSING AND INFORMATION SYSTEMS) BILL *[Lords]* *[Money]*

Queen's Recommendation having been signified—

Resolved,

That, for the purposes of any Act resulting from the Road Traffic (Driver Licensing and Information Systems) Bill *[Lords]*, it is expedient to authorise the payment out of money provided by Parliament of any expenses incurred by the Secretary of State in consequence of that Act.—*[Mr. Kenneth Carlisle.]*

ROAD TRAFFIC (DRIVER LICENSING AND INFORMATION SYSTEMS) BILL *[Lords]* *[Ways and Means]*

Resolved,

That any Act resulting from the Road Traffic (Driver Licensing and Information Systems) Bill *[Lords]* may—

(a) authorise the inclusion in licences for operating driver information systems of terms requiring the rendering of payments to the Secretary of State; and

(b) provide for the payment of those and other sums into the Consolidated Fund.—*[Mr. Kenneth Carlisle.]*

Atomic Energy Bill *[Lords]*

[Relevant document: Third Report of the Energy Committee of Session 1988-89 on British Nuclear Fuels plc: Report and Accounts 1987-88 (HC 50).]

Order for Second Reading read.

6.20 pm

The Parliamentary Under-Secretary of State for Energy (Mr. Michael Spicer): I beg to move, That the Bill be now read a Second time.

A prime purpose of the Bill, defined in clause 1, is to raise the financial limit imposed on British Nuclear Fuels plc by the Nuclear Industry (Finance) Acts of 1977 and 1981. The limit is currently set at £1,500 million, and clause 1 proposes that it should be increased to £2,000 million.

The financial limit consists of payments for shares in the company, the principal on outstanding Government loans to BNFL, and the guarantees given by the Government in support of BNFL's borrowing from commercial sources. We need to raise the limit so that BNFL can borrow with Government guarantees the sums required to complete its current investment programme.

To keep its place in the forefront of the nuclear fuel cycle industry, BNFL must invest for the future, and it has in hand a massive capital programme amounting to more than £5 billion to the end of the century, mainly in support of its waste management and reprocessing business at Sellafield.

The company raises its finance in the private sector, backed by Government guarantee, and under successive Governments has been classified as a private sector body for public expenditure purposes. Its borrowing is therefore not part of the public sector borrowing requirement. Guarantees are issued only for specific loans, and each application for a loan guarantee is scrutinised by the Department of Energy, the Treasury and the Bank of England before we agree to accept the liability.

BNFL expects to breach the existing statutory limit in 1990. As acknowledged yesterday by the Energy Select Committee, the main reason for this is BNFL's need to finance, up to 1992, £500 million worth of extensions and improvements to the low active waste treatment plants at Sellafield. Those plants ensure that active effluent discharges are kept as low as reasonably practicable. Radiological effluent is already less than 5 per cent. of what it was in 1978, and with this further expenditure should be reduced to near zero by the mid-1990s. Expenditure on the scale required to achieve that level was not envisaged when the current limit was set in 1981.

It is expected that BNFL's total borrowings will peak at around £1,700 million over the next four years, provided that all present income projections are realised. In the mid-1990s, as the plants now being built come on stream and start to generate funds, BNFL expects to have sufficient funds available internally to meet its capital expenditure requirements and progressively to pay off its borrowings.

BNFL has been consistently profitable since its inception, and has provided the Government, as shareholder, with a dividend for the past 12 years. In 1987-88, the dividend payment amounted to £36 million. There is no current expectation, therefore, that we would need to seek any further increases in the limit.

Clause 2 of the Bill will enable the costs of nuclear safety research which the Health and Safety Commission sponsors to be recovered from nuclear site licensees and licence applicants. The House will be aware that the Secretary of State for Energy announced last year that the role of customer for much of the safety research currently sponsored by his Department would be transferred to the Health and Safety Commission as from 1 April 1990. That will enable the commission to ensure the future adequacy and balance of nuclear safety research programmes. The programmes will be managed by the Health and Safety Executive on the commission's behalf.

The principal objectives which the commission will be asked to fulfil will be set out in agreed guidelines provided by the Secretary of State for Energy. The commission will be charged with ensuring that adequate and balanced nuclear safety research programmes continue to be carried out, and that the results of the research are disseminated to maximise their contribution to safety. This will, of course, require the commission to maintain close collaboration with the nuclear industry and the UKAEA so as to be fully aware of what safety-related work the industry is doing on its own account. The commission is establishing machinery to do that.

The commission will, however, also need to sponsor research on its own account to ensure that the totality of research is adequate and it will need to see to it that a sufficient independent nuclear safety research capacity is maintained.

The present cost of the research being transferred is about £20 million per year. The effect of the transfer will therefore be to reduce Government expenditure by that amount. Clause 2 will enable the Health and Safety Executive to recover the costs which it incurs in connection with its licensing function from nuclear site licensees and applicants for licences.

Costs relating to a licence application are not at present recoverable until a licence is granted, and cannot be recovered at all if the application is refused or withdrawn. The new provisions will enable the Health and Safety Executive to recover its costs before, and whether or not, a licence is granted.

Clauses 3 and 4 make technical amendments to the rules on insurance cover for meeting third-party compensation claims in the event of nuclear incidents. Section 18 of the Nuclear Installations Act 1965 sets out the method for determining the maximum contribution which the Government might make towards meeting the cost of compensation claims. Factors which have to be taken into account are those amounts which are available from nuclear operators' insurance arrangements, and any contributions which may be available from other Governments under relevant international conventions.

At present the UKAEA, because of its position as a public sector body, is not required to cover its liabilities by commercial insurance arrangements. However, following the Atomic Energy Authority Act 1986, the authority's operations are now being undertaken on a more commercial "trading fund" basis, and occasions may arise —for instance, when a trading partner is involved—when commercial insurance is considered a more attractive option than the self-insurance which is normal for Government bodies. This clause will remove any doubt which might exist about whether funds available from any such commercial insurance should be taken into account when computing the Government's contribution. It also removes any possible doubt about whether insurers would have a liability to pay.

[Mr. Michael Spicer]

Clause 4 is designed to overcome an unintended defect which has come to light in the drafting of the Nuclear Installations Act 1965. It will avoid the need for new insurance cover to be taken out when a new nuclear site licence has to be issued for purely technical reasons—for instance, where the boundaries of an existing site are extended.

Clause 5 makes the necessary changes to our domestic law to enable the United Kingdom to ratify the international convention on assistance in the case of a nuclear accident or radiological emergency, widely known as the mutual assistance convention. That is one of two conventions negotiated under the auspices of the International Atomic Energy Agency following the accident at Chernobyl. The other relates to early notification.

We need to make no changes to the law in respect of the early notification convention, but we intend to ratify both conventions at the same time. The Government have already agreed to act as though bound by the two conventions.

Before ratification of the mutual assistance convention, two changes to our domestic legislation are required. Clause 5 makes the necessary financial provision to enable payments to be made in the event of the United Kingdom responding to a request for assistance and to receive payments if we decide to seek the reimbursement provided for in the convention. It also provides the necessary cover for affording certain privileges and immunities to persons from a state which is providing assistance. The United Kingdom was one of the first signatories to those conventions, which have been in force for some time. It is important that we should be able to ratify them as soon as possible, and the provisions of clause 5 will enable us to do that.

This is a largely technical but nevertheless important Bill. I have made my opening remarks about it essentially factual, but I will answer any points that hon. Members wish to raise if, with the leave of the House, I speak again at the end of the debate.

I should make two comments about the report of the Energy Select Committee which was published yesterday and which Mr. Speaker has ruled is debatable today. The first concerns the question of BNFL's costs. The Committee's report focuses attention on the eightfold increase in costs at the low level disposal site at Drigg. That has been interpreted by some commentators as a general criticism of cost control at BNFL. Clearly, that is a misinterpretation of the facts put forward by the Committee. The Government believe that a privatised electricity industry, in which nuclear costs in particular will be much more clearly exposed, will motivate BNFL further to improve its cost controls, especially as the switch is made from cost plus to fixed price contracts.

Secondly, I believe that the Committee has been grossly misrepresented on the question of the dumping of foreign nuclear waste from the pre-1976 contracts. All contracts for the reprocessing of spent fuel signed after 1976 are subject to clauses requiring the return of waste to the countries of origin. Reports in the press have talked today of 1,500 tonnes of waste from the pre-1976 contracts requiring storage in this country. That has resulted from a misreading of the Committee's report. In fact, the 1,500 tonnes is spent fuel, 97 per cent. of which is recovered in the form of plutonium and uranium.

About 100 cubic metres, or two bus loads, of high level waste—rather different from 1,500 tonnes—will arise from that reprocessing, which is a small portion of the total waste arising up to the year 2000. All contracts signed since 1976—in particular the vast majority of the £2 billion worth of business signed up with the Japanese, which makes THORP the largest earner of yen in the country—require the repatriation of waste.

Should the House wish me to do so, I will elaborate further on the Government's initial views on the Select Committee report.

6.34 pm

Mr. Kevin Barron (Rother Valley): I thank the Minister for explaining the provisions of what appears to be an innocuous Bill. As he said, they are designed primarily to raise the borrowing limits of British Nuclear Fuels plc, to tidy up current legislation and to bring us into line with Europe so that we may comply with the convention to which he referred. Opposition Members have no wish to oppose any of those aims. Indeed, from the point of view of the convention and the tidying up of current legislation, we regard the Bill as a step forward.

We applaud the timing of the Bill, for two reasons. First, the measure relates to the privatisation of the electricity supply industry; secondly, it forces us to reiterate many of the doubts that were raised in the report of the Select Committee on Energy which was published yesterday and which Mr. Speaker has ruled is relevant to this debate.

We are told that the borrowing limits must be increased to finance the completion of THORP, the thermal oxide reprocessing plant at Sellafield in Cumbria. The history of that construction, like that of much of the nuclear power industry, is littered with increases in costs and time scales.

When permission was first granted for the THORP plant in 1978, it was to take nine years to complete, at a cost of £300 million. By 1983, the time scale had been extended to 12 years and the cost to £1·2 billion. By the beginning of this year, the start-up was expected to take place 14 years after permission was first granted, at a cost of £1·1 billion more than the first estimate of £300 million. There has been a truly incredible increase in capital cost and time scale. Some, if not all, of those additional costs have occurred as a result of the nuclear installations inspectorate having examined the original plans and decided—presumably because of lessons that were learned about the nuclear industry—that it was necessary to alter the plans substantially.

While all that has been going on, the cost of reprocessing oxide fuels has risen sharply. As a result, there will be an operating loss, certainly on the earliest contracts that were made on a fixed cost basis, a subject to which the Minister referred and to which I will return. May we be told how much the loss is likely to be on those early fixed-price contracts? Who will shoulder the burden of that loss—BNFL, as a result of this measure, or the taxpayer?

BNFL reports that the cost of the construction of THORP will be recouped by about the year 2000, taking into account the early contracts that were signed with the British nuclear industry and some foreign companies.

What the future holds, after those contracts have been completed, one cannot say. After all, the reprocessing plant has a potential life of 25 years. The potential for acquiring contracts after those already signed have expired is questionable because, by that time, there will be continental reprocessing plants bidding in competition. It is clear that, at that stage, BNFL will not be seen as the only organisation capable of handling nuclear waste. Clearly, a number of question marks hang over the future of the reprocessing plant.

In the home market, the CEGB—which will become National Power if the Government have their way and nuclear generating is handed to the private sector—and the successor company in Scotland to the SSEB suggested, have no contracts for reprocessing. There is also doubt about whether fuel from the AGRs and PWRs to be built at Sizewell and Hinkley should go for reprocessing.

Nobody questions the fact that Magnox waste must be reprocessed because of its dangerous condition and deterioration after its useful life in a reactor. We must therefore take action on it. Whether or not the reprocessing of AGR and PWR fuels will be necessary in the future has been questioned in the Select Committee's report and several times previously by people who are eminent in this subject, who believe that dry storage of such fuels would perhaps be a safer and cleaner way of handling them once they have come to the end of their useful lives in nuclear reactors.

The market to which reprocessing was to sell its plutonium—the fast breeder reactor market—has currently been suspended by the Government. No doubt the hon. Member for Caithness and Sutherland (Mr. Maclennan) will want to mention that later. It was envisaged that THORP might be a place where fuel could be prepared for the fast breeder reactors, and not just in this country—we do not limit ourselves—because we might have found a market elsewhere in the world. Although it was envisaged that THORP might have played a useful role, the report has brought that into question.

The world price of uranium is lower than the cost of reprocessing recycled uranium, and is likely to remain so. The report also highlighted the fact that, in the past decade, there has not been the increase that people thought there might have been in the cost of uranium. Although the availability of that type of fuel can be limited, at the moment it is still plentiful on the market and hence there has been only a reasonable increase in its cost, which is not as excessive as that of some other fuels.

As the Select Committee report states:

"The public perception of the safety record of BNFL and the well-known difficulties here and abroad of accounting accurately for plutonium stocks have not helped the environmental case for reprocessing."

It is interesting that the Minister has said that his Department has scrutinised each and every contract entered into by BNFL. One would think that that is only right because the Government are the only shareholder of the company, but if there has been scrutiny at the level that the Minister suggested we must question why we have not had any proper explanation about increasing the cost of the THORP project.

More importantly, there is also a question mark over the further use of THORP because the first contracts that were signed on what, until the debate started, we were led to believe was a cost-plus basis have ended and, over their time scale, have presumably paid for all the extra expenses involved in the construction of THORP. As we are being asked to grant permission for BNFL to borrow more money, it is only right that we ask the Government to justify their already massive investment and that involved in their future plans, especially in view of what I have said about the likely use of the THORP project.

The experience of THORP does not bode well for the planned large-scale thermal mixed oxide fuel fabrication facility that is currently being contracted and built at THORP. From the Select Committee report, we understand that neither the CEGB nor, presumably, its successor, which will comprise the same people in the same business—National Power—nor the SSEB, nor its successor in the Scottish nuclear power industry, has any plans at this stage to use the mixed oxide fuel, which is also known by the abbreviation of MOX. While BNFL says that there will be a price advantage over conventional fuel, the electricity generating companies say that there will not. The fact is that £50 million may seem a small amount now but that money is currently being expended and, as the report rightly points out, there is some doubt about whether the project will produce fuel for the nuclear electricity market in years to come.

As the report stated, perhaps the Government will assess who is correct before the proposals are advanced. That point is worthy of an answer at a later stage in our proceedings on the Bill, if not tonight. I think that we shall wish to take the Bill into Committee, perhaps for just a short time. Hon. Members who served on the Committee on the Electricity Bill will be pleased to know that. Nevertheless, the report has highlighted many questions that need answering and I hope we shall receive answers to them.

Perhaps there will be an opportunity for the Minister to tell us who is to take over the ownership of the stocks of plutonium and whether the private sector electricity companies will police that. In our earlier debates on the Electricity Bill, I used the phrase, "selling off the family plutonium". Without question this important issue concerns many people.

I am sure that people are well aware of the trade in weapons-grade plutonium throughout the world. If we can believe much of the international debate, many countries that we, as a country, feel are unstable are handling such fuels. We have heard on several occasions that publicly owned or part publicly owned companies have not always been too good at handling weapons-grade plutonium. Indeed, we are led to believe that it has left these and other shores that are supposed to be responsible when handling it and that it has ended up on shores which we may not like to be used as a basic material for nuclear weapons. We are concerned about that, and this debate gives the Minister an opportunity to tell us what the Government envisage will happen in the new framework.

That issue also begs the question of some of the strong rumours that we have heard, that BNFL itself may be a candidate for privatisation in the years ahead. If the present ideology continues, perhaps the only thing that is likely to be saved from privatisation is the air that we breathe—*[Interruption.]* Well, perhaps the Government are considering it, because the Minister is nodding his head. As some of the people who currently advise the Government probably are considering it, we shall have to wait and see what happens. If BNFL were to go into the private sector, that would again raise the question of

[Mr. Kevin Barron]

exactly who will look after plutonium in the future. We hope to hear one or two comments from the Minister on that at some stage.

As the Select Committee report stated, it seems that the Government have maintained

"the profitability of BNFL, a Government-owned plc, but" reduced

"greatly the profitability of the public corporations which the Government is about to privatise."

The Minister will remember the famous draft letter of January—one of many to which we referred in our proceedings on the Electricity Bill—written by Mr. John Baker, the chief executive-designate of National Power, who had grave concerns about privatised nuclear electricity generation and about who would have to pick up what has become, week by week, a growing and expensive bill. That fact was highlighted in the Select Committee's report. Back in January, in the letter that was drafted but not sent, Mr. Baker warned the Government that the flotation of National Power was at risk and that one of the reasons for that was the prices charged by BNFL for the nuclear fuel cycle.

Mr. Baker stated:

"we do not see how National Power with an arms length contract with BNFL is in any position to put additional incentives on BNFL . . . if HMG as its shareholder cannot."

It appears that Mr. Baker won the argument at the time. At least, we can assume that, because we have not had a statement from the Government. However, on 23 March, *The Guardian* stated:

"The Government signalled its willingness to provide a nuclear indemnity after ministers were told that financial institutions would not invest in a venture with as many financial uncertainties as nuclear power."

Therefore, if, according to Mr. Baker, the newly privatised National Power is only to meet the costs of nuclear power which, as *The Guardian* put it, are "within management control", what will be the status of its contracts with BNFL?

At the moment, contracts are made on a "cost unknown" basis at the time of signing. Have those contracts been renegotiated as the CEGB and the SSEB have wanted for a considerable number of years? If so, what effect will that have on the reprocessing plant at Sellafield? If those contracts have been renegotiated, how much will the Government give BNFL to buy out the existing contracts? That is very important, because someone will have to pay if the cost-plus contracts are being bought out.

People interested in the nuclear industry, and British taxpayers, will want to know how the change in cost-plus contracts will take place. If they have been renegotiated, are the Government content to see the contracts continue under their present terms? I understand that the overseas contracts have also been made on a cost-plus basis. Will there be a change in the British element in THORP, but no change in the foreign element? The Bill gives us an opportunity to debate those matters and seek answers to those questions.

If we give the Bill a Second Reading, we should also scrutinise the process which has been established for the costs of decommissioning. BNFL's customers' liability for BNFL decommissioning costs has risen more than fivefold despite a 58 per cent. reduction in the present value of the total liability by the use of a 2 per cent. a year discount. However, that is based on present prices. By the time decommissioning takes place, depending on when the very expensive third phase is finished, the costs are bound to have risen considerably. The history of the nuclear industry suggests that that will happen and that back-end costs are likely to rise in the same way as front-end costs have risen.

We can only assume that BNFL is postponing decommissioning to avoid the costs today. By putting off for 100 years the non-productive high cost end of the nuclear fuel cycle, BNFL reduces the cost for its customers today.

I hope that the hon. Member for Havant (Sir I. Lloyd), who was the Chairman of the Select Committee on Energy which sought oral evidence from BNFL in November last year, will be able to clarify a point for me. I believe that it was the hon. Member for Littleborough and Saddleworth (Mr. Dickens) who asked Mr. Neville Chamberlain a question, part of which was:

"Since the nuclear industry has always claimed that decommissioning presents no technical or safety problems, could you perhaps take this opportunity of reassuring the Committee that this delay is not designed to boost short-term profits?"

Mr. Chamberlain replied:

"We can certainly give the assurance that it is designed to boost short-term profits."

There may be a printing error in that memorandum to the Select Committee. For the year under consideraton, there would have been a difference in terms of annual profits involving £14 million. If BNFL believes that spreading decommissioning over a long period helps its annual costs, we can assume that the CEGB and the SSEB—and presumably National Power—are thinking along the same lines. Their policy will be much the same.

My next points relate to the Electricity Bill, which has just completed its Report stage in this House. The Select Committee on Energy and many other people have suggested that the time scale for decommissioning may be brought forward, while Mr. Chamberlain has said that the time scale is an important accountancy factor. Bearing those two points in mind, schedule 12 to the Electricity Bill might be triggered.

In Standing Committee, when we debated clause 88, we asked how the money in schedule 12, which is not Government money, as the Prime Minister often tells us, but taxpayers' money, involving billions of pounds, could be triggered for use in the nuclear industry if the regulatory body or the Government decided to change the time scale.

Mr. John Baker's draft letter revealed his deep unhappiness at having to buy the nuclear part of electricity generation along with a substantial tranche of fossil fuel plants. If Mr. Baker is now satisfied that he will not incur any additional costs, has his satisfaction been gained through the possible use of the triggering of schedule 12 of the Electricity Bill? Has that trigger made Mr. Baker happy about taking on board the nuclear industry, because he was deeply unhappy about it last January? Post-privatisation—in a few years' time—will there be a change in the time scale for decommissioning? Will that trigger schedule 12 and bring taxpayers' money into this very expensive nuclear industry to satisfy the people who will take it over?

We welcome certain aspects of the Bill. We welcome the involvement of the Health and Safety Executive with the nuclear installations inspectorate and the United

Kingdom Atomic Energy Authority. Hopefully, that will improve people's perception of nuclear safety. Obviously, spreading the financial responsibilities is welcome.

We welcome clauses 3 and 4, which relate to insurance cover. We assume that the proposals are the right way to proceed, although we hope that the provisions are never put to the test. However, we never know with this industry. There are large questions marks hanging over the nuclear industry, although thankfully not because of anything which has happened on a large scale in this country. But there are questions about liability should a major incident arise on the scale of Three Mile Island or Chernobyl.

Clause 5 provides that the mutual assistance convention should be ratified. While the Opposition are pleased about that, we hope that it is not undermined in a way that was described in *The Independent* today. A civil servant was giving evidence to the Select Committee on Defence yesterday about the scuttling of nuclear submarines. I think that "scuttling" is the correct term, and I should know because my father served in the Navy for a considerable time during the war. I had understood that the London dumping convention to protect the environment would cover such scuttling and the Government claimed that the signing of that convention was a victory and a major step towards cleaning the world's environment.

However, Mr. Nigel Paren, a senior MOD official, is quoted in *The Independent* as saying:

> "The Royal Navy's decommissioned nuclear submarines could be dumped at sea, despite the international convention against sea-disposal of vessels and harmful waste."

If that is the case, I hope that, as soon as the convention in clause 5 is ratified, the Minister will tell all his civil servants exactly what that means. I hope that the convention will never need to be used, but these plans need to be made in case there are more incidents of the type that we saw in America and the USSR. I hope that the Government have a strong commitment to the convention. I shall be interested to see how our nuclear submarines are removed. I understand that one of them is in dry dock.

I hope that the Minister will attempt to answer my questions either during the debate or later in Committee, because these issues are important for the industry and the British taxpayer. Our electricity generating industry and BNFL have been in public hands and perhaps that means that things are not as transparent as they will be in future.

No matter what happens in future, we are talking about considerable nuclear costs. All the rights given by the Government to BNFL to borrow more money should be accompanied by instructions to use the money in a proper way. Whether or not we build new generators, Britain's nuclear industry will be with us for decades. We must make sure that it is soundly based and that investment in it is for good reasons. We must not invest in forms of technology that do not have a useful life. It is not our intention to move against the Bill, but perhaps we shall discuss it at greater length in Committee. We support much of the Bill, but some of it begs many questions.

7.1 pm

Sir Ian Lloyd (Havant): Once again, when one surveys the vast expanse of naked green on both sides of the House, one realises that when the House is tempted to discuss technical matters it is rather inclined to rear like a temperamental horse overtaken by an unsilenced motor car in a country lane. Perhaps that is not surprising in view of the many technical terms and facts in the Bill and the issues surrounding it. I shall come to that.

I know that the hon. Member for Rother Valley (Mr. Barron) prides himself on two apprenticeships that he served in the energy industry. The one in which he probably takes the most pride was his experience as a coal miner. The second, in which I hope he takes some pride, was his service for a time on the Select Committee on Energy on which we were very glad to have him. I was, therefore, pleased to hear him say at the end of his speech that he accepted the undoubted fact that the nuclear industry will be with us, and probably worldwide, for a long time. If some of the preliminary evidence that we have seen on the greenhouse effect, not only in this country but in virtually all the major industrial countries that are examining this issue, proves to be what is suggested, it looks as if there could be a dramatic and major expansion of the nuclear industry.

I am grateful to my hon. Friend the Under-Secretary of State for Energy for raising the two points on which he thought my Committee had been misrepresented. I accept without hesitation or qualification that we were rather misrepresented on the question of the so-called dumping of nuclear waste. That is a highly emotive phrase, and unfortunately when it appears in any Government document or Select Committee report it tends to be the first thing that the press seizes on because I think that it shares the rather limited public perception of what exactly is meant by the results of the reprocessing of all kinds of nuclear materials.

I cannot go all the way with my hon. Friend the Minister on costs. He suggested that my Committee made an innocent—I think that was the word he used—misinterpretation of the situation at Drigg. That may or may not be so, but later I intend to deal with cost increases that my Committee and I regarded as serious matters. In a sense, the discussion on the Bill, which will increase the borrowing limits of BNFL by £500 million, is purely financial and technical. However, it raises much larger problems and graver issues.

The task of the Select Committee on Energy is to examine annually the major energy industries in the public sector. Our report was both relevant and timely, although I concede and fully understand the dismay that it may have caused to British Nuclear Fuels Ltd. I have the greatest respect for BNFL both as a company and an organisation and for what it is trying to do in and for Britain. I have also the greatest respect for its management. However, if I cannot escape the obligation of scrutiny, BNFL cannot escape its consequences.

To some extent, both the Committee and BNFL were the victims of tendentious selection in the way that our results were presented. For example, as my hon. Friend the Minister has said, it has apparently been widely reported in the press that the Committee recommended the renegotiation of contracts. We did not do that at all. What we said was carefully considered. We said that we would strongly favour a recommendation that BNFL should renegotiate those contracts "were that practical." That phrase was quite deliberately inserted. We see no prospect of BNFL customers wishing to receive waste when they have entered contracts under which BNFL has undertaken to look at that matter. That is the first and quite serious misrepresentation.

[Sir Ian Lloyd]

We were told that BNFL has been criticised for accepting contracts that made the United Kingdom a dumping ground for nuclear waste. The Committee strongly supports what BNFL is doing and believes that it is doing it well. There are some aspects of costs, with which I shall later deal, but BNFL's technical capacity is undoubted. We understand that it is immensely profitable for BNFL and for the United Kingdom for BNFL to do this work. However, we call, I think with some justification, for circumspection or caution over contracts that allow the United Kingdom to become, in the words of the Committee,

"a repository for waste generated abroad."

That was a deliberately low-key phrase and I emphasise the low-key intention of the Committee in reporting it in that way. The reason for that is that BNFL cannot handle it safely and profitability in the public relations sense if the public perception of all the problems surrounding the storage and proper technical handling of nuclear waste are such that the appropriate solutions cannot be adopted for what has often properly been called the "not in back my backyard" syndrome. That is a powerful syndrome when it comes to dealing with anything in the nuclear industry. It is because this public perception of the risks involved is seriously flawed that the Committee reached the conclusions that it did. We have advised caution.

In terms of radiation we all live on one planet. It is in the interests of the whole human race for nuclear waste to be skilfully handled by those who have the technical competence to do it, and not many have. About three or four major countries can do it and nothing would be more disastrous than to encourage countries that do not have the skills or technologies to set out on their own.

BNFL believes that we have been inaccurate in referring to very large price increases. That brings me to the point made by my hon. Friend the Minister. BNFL quoted Drigg in its press release this morning. Let us look at the facts. All these are taken either directly from BNFL's evidence or from the evidence that the Committee received from the Central Electricity Generating Board or the South of Scotland electricity board. I shall give the first example by quoting from page 9 of our report.

Mr. Michael Spicer: In my speech I did not in any way criticise the Committee for its interpretation of the facts. I said that it concentrated on particular costs and that people outside then generalised on the Committee's arguments.

Sir Ian Lloyd: I am obliged to my hon. Friend and I accept what he says.

I shall now turn to the specific instances that justify my Committee's conclusions. On page 9 of the report the CEGB evidence suggested that in three specific areas the increases in price over a short period were 129 per cent., 20 per cent. and 27 per cent. On page 34 of our report there is a memorandum from the South of Scotland electricity board which drew attention to another area where the increase was 75 per cent. On page 36 the United Kingdom Atomic Energy Authority in its memorandum gave the amounts that Harwell paid BNFL for the disposal of low-level waste at Drigg. For the year 1985-86 the cost was £26 million, for 1986-87 it was £29 million, for 1987-88 it was £145 million and for 1988-89 it was £260 million. The percentage increases available from those figures are 10·8 per cent., 388 per cent. and 79 per cent. Those are dramatic increases. On page 37 of the report the United Kingdom Atomic Energy Authority pointed out that the decommissioning charge for 10 years had been estimated in 1986 at £85 million, but by 1987 it had gone up to £164 million.

I turn to BNFL's own submission to raise much more serious issues. Evidence was taken from BNFL by the Select Committee on 10 December 1986. It estimated the total cost for decommissioning the nuclear facilities in the United Kingdom at £143 million; for Calder Hall and Chapelcross the cost was £30 million per station, and for the CEGB £60 million per station. When we considered the question again in 1987 the CEGB upped its estimate to £330 million and the evidence suggested that the figure lay between, at the most optimistic estimate, £185 million, and, at the most pessimistic, £1,000 million. My Committee recommended that the CEGB clarify its costings.

Meanwhile, roughly at the same time, the Select Committee on the Environment reported. I shall return to that because the inference of its report has been quoted in defence, understandably, by BNFL. BNFL's own figures appear in annex 1 on page 27 of our report. They show that the total liability for decommissioning has grown from £438 million to £4,605 million. Those figures are my major concern. I wish to examine them. The Select Committee has sought, and will be seeking, more information on them.

I should like to give the House a benchmark by which we can perhaps validate my and other judgments on the matter. The Organisation for Economic Co-operation and Development produced an extremely interesting report in 1986 on the decommissioning of nuclear facilities. What comes out of it is an interesting range of costs for decommissioning what one might describe as standard pressurised water reactors and boiling water reactors. It is £140 million to £150 million per reactor. The figures are available for anyone who would like to see them.

The most informative analysis, which is also contained in that report, is from the United States, understandably, because that country has the largest civil reactor industry. Therefore, its analysis is most complete. Here we find some extraordinarily interesting information. The surplus facilities management programme of the Department of Energy in the United States plans to decommission 350 nuclear facilities over 20 years from 1986 to 2006 at a cost in total of $1·4 billion, or roughly $4 million per facility. The 1986 United States budget provision for that was a mere $56 million.

There are three other interesting figures. The stabilisation of uranium tailings piles is to cost a total of $745 million, or $30 million per pile. The West Valley reprocessing plant will cost $136 million to decommission. The Shippingport reactor, which is the world's first commercial reactor to be decommissioned, will cost $98 million.

Now I come to a very interesting table which sets out the total picture for the United States. We glean the following facts from the table. There are 77 reactors in a large sample, of which the costs of 65 are known and the costs of 12 are unknown. The total known cost of decommissioning that large amount of nuclear power is estimated at $3·7 billion, or $57 million per reactor. If we take an average of $57 million for each of the 12 plants for which no figures are known, we achieve a total cost for the

whole of this major segment of the United States nuclear industry of $4·42 billion or—I deliberately translate it into sterling—roughly £2·6 billion. That is over the period from 1984 to 2119. It is remarkable that we should even be contemplating anything for 2119 when obviously no one here will have much interest in what is happening. I want to draw the attention of the House to the scale of that: £2·6 billion is roughly the cost of a major new nuclear facility such as Sizewell.

Let us turn to BNFL's figures for the United Kingdom. They have risen from £438 million to £4,605 million. That is a total of $7,800 billion at $1·7 to the pound. Now comes the crucial comparison. Let us consider the size of the respective nuclear industries in the United States and the United Kingdom. Because statistics are so often carefully selected by those who choose to achieve one result or another, I have deliberately taken three bases of comparison—the use of oil equivalent, that is, conversion of nuclear power to oil; megawatts, electric capacity; and terawatt hours. The figures for the first are 124 million tonnes and 11 million tonnes; for the second, 101 million MWe and 14 million MWe; and for the third, 455 TWh and 48·9 TWh.

So the United Kingdom has roughly one tenth of the United States' nuclear capacity and one third of the nuclear capacity which is summarised in the report of the OECD; the decommissioning costs have been estimated at a total of $4·42 billion. That third is now forecast to cost $3·42 billion more than the total estimate for the United States programme, which is three times as great. That is an astonishing figure. It suggests that we are proposing to spend on decommissioning resources of the order of two Sizewells, the Channel tunnel or the Severn barrage. I use those figures to give the House an idea of the scale.

I come now to BNFL'S explanation. It says that it responded to a suggestion made to it by the Select Committee when it appeared before us that it should look more carefully at decommissioning costs. We certainly made that suggestion. BNFL would probably plead in its defence that it took even more seriously two suggestions by the Select Committee on the Environment. That Committee recommended that the industry should do better than the shoestring approach, and then said that the industry should really embrace the concept of a Rolls-Royce solution. It would be very easy to say, "Some shoestring"; I prefer to say, "Some Rolls-Royce".

The whole issue is complex, confused and, because of its scale, alarming. Britain cannot expect to agonise over the budgetary constraints, as we do in virtually every Department of state, and vote almost £4,000 million on the nod of the basis of the information that we have. That is why we must discover much more about the scope and cost of that programme and what raised the estimate by £4 billion.

As my Committee warned, the City's judgment of the whole privatisation procedure is bound to be affected by those figures. How can it be otherwise? Some months ago in the House I warned my right hon. and hon. Friends in the kindest possible way that I suspected that those costs would provide a major obstacle to what I believe they were trying to achieve. I cannot help but conclude that they will prove to be just such a major obstacle.

As to the carriage by air of plutonium, the Select Committee on the Environment made a specific recommendation, which I endorse—particularly after Lockerbie. The Committee stated that that practice should be prohibited. Has it been prohibited? If not, has the whole question been considered? If it has been considered, what conclusion was reached? My judgment is that if plutonium is to be transported between this country and Japan, or to any other distant part of the globe, the only way that should be done is in a triple-hull, unsinkable ship escorted by a frigate. Even that would present certain dangers.

We are in a sense considering the long-term implications of our current nuclear industry, which could grow dramatically if, as a consequence of analysis of the greenhouse effect, the developed industrial world—all power-using countries—decides that there must be a significant increase in the use of nuclear power. If that occurs, all the known problems and the whole analysis on which they are based will become dramatically more important.

Public and other misconceptions will arise and grow naturally, and they will often be fed by vested interest groups of one sort or another. Sometimes, the public are fed those misconceptions with great irresponsibility. Nevertheless, those misconceptions must not be allowed to foreclose the nuclear option. That is why we must insist on the most accurate, verifiable information that can possibly be obtained, and that it be made available to the House, where it can be fully discussed. Where there is risk assessment, it must be thorough and realistic. There really is no alternative.

7.22 pm

Mr. Robert Maclennan (Caithness and Sutherland): The hon. Member for Havant (Sir I. Lloyd) made an extremely important speech to which the whole House will have listened and, more importantly, will read with great attention. However, it must be said that this occasion is not wholly suitable for considering the wider implications of the Select Committee's important report. It is in a sense unfortunate that the debate follows within 24 hours of the report's publication. That may explain to some extent the phenomenon to which the hon. Gentleman drew attention —the emptiness of the Chamber this evening.

The hon. Member for Havant rested his speech on the frail support of this relatively modest Bill—although one recognises that the terms of the Select Committee's report were specifically allowed by Mr. Speaker, and that is welcome. The hon. Gentleman began his speech by drawing attention to the consensus in all parts of the House that the nuclear industry is here to stay and that, whatever decisions may be taken about the commissioning of new power stations, we shall continue to be affected by it for many decades to come. The hon. Member for Rother Valley (Mr. Barron) concluded his speech on that important point.

The Bill deals with three principal, discrete matters—the first of which is the increase in British Nuclear Fuel plc's borrowing powers. That is to some extent a technical matter, but it allows one to raise the wider question as to whether the reasons for BNFL's increased costs are as have been stated by the Minister. I hope that the hon. Gentleman will comment on the argument made by his hon. Friend the Member for Havant about decommissioning costs. However, I realise that the Government must give a considered reply to the Select Committee's report and will not be able to answer in full this evening all the points that have been and will be made.

[Mr. Robert Maclennan]

I want to reinforce a question asked by the hon. Member for Rother Valley. So many questions have been asked that the Minister may be tempted not to deal with them all. However, he ought to say something about the extraordinary report that appeared in today's issue of *The Independent* of a proposal by a Ministry of Defence official that nuclear submarines could be scuttled as a way of dealing with the decommissioning problem. I hope that the Minister will reassure the House that such is not the Government's intention, because that solution is neither acceptable nor in accordance with our international agreements.

The first principal subject I want to address that is directly related to the Bill is the need for a commitment to long-term nuclear research and development, which arises directly out of clause 2. From 1 April 1990, the Health and Safety Executive will, under the terms of the Bill, assume responsibility on behalf of the Health and Safety Commission for managing certain nuclear safety research currently undertaken by the United Kingdom Atomic Energy Authority and financed by the Department of Energy. It is vital to have a long-term programme of nuclear safety research and development, and it is insufficient to contemplate fire brigade action—turning out a task force of scientists and engineers to respond only when a nuclear safety problem rears its head. Instead, a dedicated team undertaking long-term research is needed, whose advice on safety matters would be immediately available if required, and whose foresight would ensure that sources of concern about nuclear safety are averted.

That view was expressed by the House of Lords Select Committee on Science and Technology, which stated in volume 1 of its report of 22 December 1987, entitled "Research and Development of Nuclear Power":

"Companies in commercial production often feel the need to cut back on activities that do not show immediate commercial returns. Long-term research and development is by definition such an activity, but it is nevertheless essential. If the privatised industry fails to make its own arrangements, the Committee believes that the Government should make arrangements for them. It is ultimately the Government who are responsible for the long-term security of the nation's supplies of energy. Privatisation does not change that."

Legislation, or at least firm Government policy, may be needed in the context of current plans to privatise the electricity supply industry in order to preserve intact vital long-term research and development programmes. The Minister spoke of a £20 million reduction in Department of Energy expenditure. All the Government propose is a change in the route by which funding from the industry reaches the authority. I fear that that direct use of industry money to fund research and development programmes may dangerously distort long-term safety research programmes, and starve vital projects of funds in that way.

My next point concerns an omission from the Bill that is both surprising and significant. I refer to the lack of any provision to make good a defect in the legislation under which the UKAEA handles contracts and consultancy work and the fruits of its research and development. The staff of the Atomic Energy Authority represent a unique national resource—comparable with our resources of coal, oil and gas. It not only founded a major industry in this country, providing half the electricity in Scotland through nuclear power stations but now it is increasingly expanding its non-nuclear research and development activities. It is able to offer the benefits of its research and development to British industry.

The authority should be able to derive full commercial benefit from the results of the research and development programme which it is permitted to carry out in non-nuclear areas. Its main enabling statutes—the Atomic Energy Authority Acts 1954 and 1986, and the Science and Technology Act 1965—restrict the ways in which the authority can pursue this commercialisation. It is not permitted to carry out non-nuclear manufacturing or commercial service activities based on its research findings, which is a major disadvantage. The Government have known of this for some time.

The House of Lords Select Committee on Science and Technology clearly saw this matter in the same light as I did. Volume 1 of its report on research and development in nuclear power says:

"The UKAEA now operates on a trading fund basis. The Government wishes the UKAEA to be managed as far as possible commercially: but it proposes to continue the statutory restrictions which prevent the UKAEA from participating directly in the commercial exploitation of its expertise. The Committee feel this is inconsistent and they recommend that these restrictions be relaxed, providing there is no element of subsidy in tendering for commercial contracts."

Why has the opportunity not been taken to include in the Bill that modification of these constituting Acts to allow the Atomic Energy Authority to engage in that commercial activity directly? It seemed the ideal vehicle by which to do so.

I shall turn to a wider, third issue—the Bill does not reflect a national policy or strategy concerning the generation of electricity from nuclear power stations. The atomic energy industry is in disarray as a result of the Government's disaggregation of the supply industry—proposed through privatisation and the setting up of new companies. Formerly, the Central Electricity Generating Board had taken upon its shoulders the business of formulating and promulgating a national strategy.

However, present signs are that National Power, the biggest of the companies in the disaggregated supply industry, is not prepared to take the same responsibility for formulating and promulgating a nuclear electricity strategy. The Government recognise this difficulty because they have ring-fenced the nuclear industry. However, that is a sterile, and inevitably temporary, measure. They define the industry as one which has the present size and type of nuclear installation, and offer no plan for adding to, or substituting for, those installations in a systematic way. That is sterile because, as Ministers have acknowledged, the ring fence will remain in place for only a few years. What will happen after that? Ministers have been vague about that in debates on the privatisation Bill. They seem to imply that nuclear power will have to stand on its own feet at the end of that period, or perhaps for 10 years. However, we all know what that is likely to mean—a process of erosion where, as reactors are shut down, they are replaced by whatever is the economic flavour of the day. At the moment, that would be stations fuelled by natural gas.

This is not a strategy, a policy or even a proper response to market forces in an industry in which planning and constructing a nuclear power station takes a decade, and the station may operate for half a century. A national energy policy is needed. Although I cannot expect the

Minister, in replying to the debate, to outline such a policy, the fact that the debate is conducted in this vacuum is striking. The proposals in the Bill do little to show even the way in which Ministers are thinking.

The Minister will remember, because he alluded to it during debates on the privatisation Bill, the views of the County Emergency Planning Officers Society about the need for composite off-site emergency planning. I understand that, in November, the Department of Energy set up a liaison group as a national forum for considering public protection aspects of nuclear emergency planning. When the Electricity Bill was considered on Report, the Minister said that the lack of formal responsibility on local authorities to produce emergency plans for nuclear installations, such as exist for the chemical industry, had been noted. He said that legislative help was on the way for the integration of plans.

The Bill has not been chosen as the vehicle for such help. What prospects are there for such legislation? The Bill ratifies the international convention on assistance in the case of accident or radiological emergency. It seems odd that these further safety measures, which are certainly cognate with the convention, have not been included in the Bill. When will the Minister's deliberations be completed?

The Bill is broadly acceptable and its passage through the House should be supported. I hope that the fact that it has been linked tonight with some debate on the report of the Select Committee on Energy does not mean that this will be the sole opportunity for the House to debate the report of the hon. Member for Havant and his colleagues, because the subject that it covers goes beyond the ambit of the Bill, is important and should not be addressed in a short debate with the short notice that we have been given.

7.39 pm

Sir Trevor Skeet (Bedfordshire, North): Having listened with considerable interest to my hon. Friend the Member for Havant (Sir I. Lloyd), I believe that he has adequately dealt with the escalation in costs. In defence of British Nuclear Fuels, I say only that it has had to maintain high standards, set by the nuclear installations inspectorate, and to deal with waste disposal to the satisfaction of the Select Committee on the Environment. A Rolls-Royce solution was much too expensive for the low level waste, but it seems to have adopted one. It has also done a remarkable job in cutting down effluent discharges. Those activities have, cumulatively, escalated its costs. In a press release it indicated that one of the principal increases was due to the additional expenditure at Drigg, which is understood.

Paragraph 51 of the report says:

"Under the new policy, the estimated current cost of decommissioning all BNFL plant and facilities is £4·6 billion".

A little further on it says:

"Despite this 58 per cent. reduction due to discounting, customers' liability for BNFL decommissioning costs has risen more than fivefold. Furthermore, BNFL's percentage share appears to have decreased significantly from approximately 23 per cent. to approximately 10 per cent. of the total."

That means that over the years money flows into the coffers which could be spent on new plant and equipment. It is paid now, but the liability for BNFL will come a long time later. BNFL has been able to spread some of the risk among its customers.

That is one way of looking at the matter, but there is another way. In the *Financial Times* of 12 October 1988 it was reported that Dr. Harry Lawton, a former head of the laboratories at Sellafield, had said at an international conference that

"Decommissioning and disposing of nuclear power stations might cost the equivalent of up to 20 per cent. of the electricity generated over their lifetime."

The cost is enormous, and we must not overlook it.

Nuclear waste is another source of high expenditure. By the year 2000 the cost of disposing of the quantity of high-level waste, at £495,000 per cubic metre, will work out at £1·6 billion. The disposal of intermediate-level waste, at £18,000 per cubic metre, will work out at £1·08 billion. Because of the Rolls-Royce method of burial at great depth, used for low-level waste of which there is a vast quantity but which tends to be much lower in radiation, disposal will work out at £1·5 billion. The total bill for disposal of British nuclear waste will be £4·2 billion.

Those are big liabilities, and the policy has largely been to pass them on to customers. I agree with my hon. Friend the Member for Havant that the road ahead is nuclear, provided that we do not have to experience technological changes that may require a movement of resources. The way ahead, in my view, involves the fast reactor and, ultimately, fusion. But let us take a hard look at the costs and make them clear to the public.

On cost-plus trading, Mr. Harding said in evidence to the Select Committee:

"I am absolutely certain that we will be needing to look at different terms of trading with the privatised National Power, Power Generation and the Scottish boards. We did in fact take some initiative something like two years ago before privatisation was announced to open up discussions."

Why, if negotiations were started two years ago, has so little happened? I appreciate that the contracts cannot be completely renegotiated; that would be too expensive, as paragraph 25 of the report makes clear. On the other hand, if it is open to BNFL to pass on most of its costs, that will not be in the interests of efficiency. I think that BNFL will have regard to that. Unless a complete answer can be found, the flotation will be greatly impeded.

What man will put his money forward for the flotation of, say, National Power if he feels that some of the commitments are so substantial and uncertain that profitability could later be reduced? We considered that question in the Committee stage of the Electricity Bill; indeed, I brought it up myself. It looks as though lavish expenditure will take place well in advance to ensure that the public are safeguarded against financial risk.

I am satisfied that THORP is a great concept. It has ample orders for the next 10 years, and hopes in the years after that to obtain orders from a number of countries in Europe and probably beyond. It will be able to do that only because the plant will be largely paid off and liberal discounts will be possible. But what are the likely prospects for the United Kingdom industry? What organisation in the private sector will build a nuclear power station above 300 MW? We have been told—we were told in Committee—that at least four nuclear power stations are to be built: Sizewell B, which is in the course of construction; Sizewell C, involved in a planning inquiry; Hinkley Point C, which it is hoped will be available in 1998; and Wylfa, each with a capacity of 1,175 MW.

What will happen if the first is built and the second goes ahead? That will mean that we are not replacing the

[Sir Trevor Skeet]

electricity derived from nuclear power. We now have Magnox stations with 4,793 MW and AGRs totalling 5,870 MW. That makes a total of 10,663 MW. But there will have to be some retirements. The Magnox reactors which will be moving out in the 1990s have a capacity of 3,500 MW. Hinkley Point B has a capacity of 1,120 MW, making a total of 4,620 MW. Replacements will be needed, and those replacements will be the new power stations to which National Power is committed, totalling 4,700 MW. If those stations are not produced, there will be no decommissioning or reprocessing at a later date.

I think that the Government have made a big mistake in not keeping the nuclear side in Government hands, where investment could be looked after carefully. I cannot see the private sector building nuclear power stations above 300 MW. I envisage the electricity from nuclear power stations falling from 20 per cent. of the total to between 10 and 15 per cent.

Mr. Maclennan: Earlier, the hon. Gentleman made the welcome assertion that he believed that eventually fast reactors and perhaps even fusion would be the basis of our nuclear programme. Does he base that belief on the expectation that at some stage there will be a change in Government policy? Is that what he is working towards?

Sir Trevor Skeet: I am entirely persuaded that the Government will change their mind later because they will have to do so. If the amount of electricity derived from nuclear sources is to fall, that will mean less work later for THORP. As I said, the whole logic of THORP was the reprocessing of the fuel elements from the newer stations —the advanced gas-cooled reactors and the pressurised water reactors—for two purposes. One was to recycle a waste product, to take out uranium which could be recycled in a way with which we are familiar. The other was to take out the plutonium, not simply to put it into store, but to use it in fast reactors.

What have the Government done? They say that there will be no fast reactors for the next 20 to 30 years and that we do not, therefore, need to spend such amounts on research. Thus one of the biggest planks for THORP has gone, unless it is brought back again.

The Opposition need not be too jocular. Everyone in the United Kingdom is together in fighting the same problem. Some say that the money could be spent on other things, but dispensing with the fast breeder reactor is not in the long-term interests of United Kingdom energy policy or in the interests of the constituency of the hon. Member for Caithness and Sutherland (Mr. Maclennan), who has a local unemployment problem. It is much more important for the United Kingdom that we should carry on with the policy of developing the fast reactor.

We have the possibility of being able to use the plutonium in store, or we can keep the 26 tonnes in there for ever. I dare say a part of it could be used for military purposes, but not from the peaceful purposes stockpile. It was said in evidence to the Select Committee on Energy that it could be used in mixed oxide fuel, but, as has been said before, there is no market for that in the United Kingdom. It is quite unsuitable for AGRs. It may be used for PWRs, but how many will we have here? One is in the course of construction, but it will be some time before the programme materialises. I do not know how many more we shall have. There is no mixed oxide plant in the United Kingdom, although the process is thoroughly understood.

It has also been said that there may be a small European market for such fuel. However, West Germany is nervous about such matters, Sweden intends to close down its industry entirely by the turn of the century, Italy has virtually no nuclear power and although Belgium is a big producer of nuclear power it does not look as though a market will develop there. The Japanese are keen on the method and may use some of their own plutonium in PWRs. I fully support reprocessing because it recycles waste materials. One can draw out uranium and use it again in further fuel charges. One can draw out plutonium and then divert it, as a sensible policy, into fast reactors. One can take out the actinides, turn them into solid compounds and take them out of danger to civilisation. At present, however, we are stockpiling the stuff in large quantities. The report and the Government recommend that some of it should be passed over to National Power. I believe that it should never be passed over to the private sector, but should be under the control and scrutiny of the state. It is right for the defence of the realm that it should be so held.

I shall support the Bill. There are some interesting clauses, such as clauses 2, 3 and 5, which will excite much argument in Committee. The Government are doing a major job, but it behoves me to concentrate on clause 1, which deals with British Nuclear Fuels and is an important aspect of the Bill which may need to be refined. British Nuclear Fuels is a spendid and profitable company. It has great confidence in THORP for the future—far more than I have, even though plant will be written off and there will be heavy discounting to secure more contracts. Through its European connections, it has been securing many valuable contracts and earning foreign exchange. We are told today that it is the biggest earner of yen in this country, which is a signal achievement in itself.

Being able to do well today, however, does not mean that a company will be profitable tomorrow. Technological changes can bring abrupt changes of course which may be disastrous to companies. Let us hope that British Nuclear Fuels has a remarkably good course. It is asking for a further £500 million. Let us hope that it never comes back to the House again for additional money and that it will keep to the ceiling of £2,000 million. The coal industry never fails to come back to the House for more because it is greedy for extra money and once it has received the cash it begins to waste it.

7.56 pm

Dr. Kim Howells (Pontypridd): I have the advantage of not having to be as generous in my assessment of the management at British Nuclear Fuels and its performance as the hon. Member for Havant (Sir I. Lloyd), whose contribution I admired greatly, as I did the contribution of the hon. Member for Bedfordshire, North (Sir T. Skeet).

Clause 1 asks the House to approve another £500 million of taxpayers' money being made available to bail out the management of a company which, over the past decade, has regrettably become a haven for smugness, complacency and arrogance, a management encouraged, moreover, by the willingness of successive Ministers

throughout the period to sign virtually open cheques in lieu of that rarest of modern British commodities, hard cash for energy research and development.

I shall give one small but immediate example of the incompetence of the management at British Nuclear Fuels. On page 10 of the minutes of evidence in the report of the Select Committee on Energy, the chairman of BNFL, Mr. Harding, is reported as saying:

"The price of raw uranium moves in a fairly direct relationship with the world price of coal and oil. The fact that both those have come down has brought down with it the price of uranium."

Yet on page 25 of the same report, a memorandum from British Nuclear Fuels in answer to the Committee says:

"BNFL is not aware of any direct links between uranium prices on the one hand and coal or oil prices on the other hand."

Considering the short time lapse between the delivery to the Committee of those two opinions, it is difficult to avoid the conclusion that the management at BNFL has either undergone one of its sudden and apocalyptic reassessments of operational costs or that its senior managers are not speaking to each other—or perhaps both. Whatever the real reason, it is clear that a lame duck rescue such as the one we are being asked to approve here has encouraged in BNFL an air of smugness instead of vigilance, complacency instead of readiness to respond to the realities of a changing world and arrogance, which derives from the sure knowledge that its cost—plus contracts, which the Central Electricity Generating Board and the South of Scotland electricity board delayed signing until 1982, would cushion it from the real world.

The whole point of BNFL being set up was to recover uranium for thermal reactors and plutonium for fast reactors. As the hon. Member for Bedfordshire, North stated most eloquently, recent developments pose serious questions about those aims. Fuel prices, both existing and projected, have therefore played a crucial part in any assessment of BNFL's business. They are a crucial assessment in terms of our judgment of the Bill. If it appears that we in this House judge that traded world uranium prices are unlikely to rise significantly in real terms over the next 20 years, or that our nuclear stations are unlikely to require the service capacity offered by BNFL, or that the much-lauded BNFL foreign contracts are unlikely to prove the kind of bonanza that BNFL tells us they will be, then there is little point in stuffing another £500 million into the mouth of that company.

Perhaps, however, the Government do not care about the odd £500 million. Perhaps they have failed to notice that BNFL's own graph in the Enregy Committee's report shows clearly that, in constant money values—indexed to the starting date of the graph, 1973—uranium ore prices are lower now than they were over 15 years ago, averaging at the moment around $12 to $15 per pound on the spot market. Perhaps they have also failed to notice that for a number of reasons the world's available reserves of uranium yellowcake are ample to meet current and projected demand and highly unlikely to decrease markedly in the foreseeable future.

Part of the reason for low prices and abundance of supply has been the failure of the nuclear industry worldwide to expand as people expected it to expand, in the aftermath of the Three Mile Island and Chernobyl accidents. In this country we have witnesed that failure of expansion first hand and, with it, the raison d'etre for much of BNFL's operations.

Let us examine for one moment the performance of the advanced gas-cooled reactors—our AGRs that were mentioned by the hon. Member for Bedfordshire, North and upon which rest so much of the THORP project's hopes and aspirations. The CEGB has four AGR sites —Hinkley, Dungeness, Hartlepool and Heysham. However, a closer examination of that list reveals that only Hinkley B and one of the Dungeness reactors have put any electricity into the national grid. Hinkley is credited with a load factor of just 49·6 per cent. and the Dungeness reactor with a minuscule 1 per cent.—a kind of electronic spasm and a little like the Minister's hand as I imagine him signing the cheques for BNFL, year after year. The other Dungeness reactor is still not working after construction overruns that seem to have lasted decades. The state of the Hartlepool and Heysham reactors is as ropey as ever it was —Hartlepool especially.

So where is all BNFL's business to come from? Is it to come from the Scottish AGRs? Well, it had better, but it is by no means a certainty that it will. The conspicuously un-knighted chairman of the South of Scotland electricity board, Donald Miller, has made his views about BNFL's performance perfectly clear by signalling the premature closure of the Hunterston A station and at the same time by spreading the word that the SSEB's operational profits were nullified by the increased charges that he was forced to pay BNFL under the terms of its cost-plus contracts. Donald Miller's tactics may have given us an insight into the frosty state of relations between the generators and BNFL, but it will not have done his chances of a knighthood much good.

So where is THORP's great future to come from? From its foreign contracts, we are told. But what degree of certainty do we have that even they will prove to be anything other than a means of turning this country into the world's nuclear dustbin? The West Germans, for example, have decided that they do not need a nuclear reprocessing plant, despite the size of their nuclear generating industry. The Wackersdorf reprocessing plant project is being abandoned and there are well-founded rumours that the West Germans will use France's Cap Hague facility and not BNFL's THORP plant at Sellafield for future requirements.

The nuclear generating industries of the United States of America, Canada and Sweden have all decided that they will not go down the road of reprocessing. They have opted for direct storage technologies. The Swedes especially, with a much smaller economy than ours and an electricity supply industry that supplies, proportionately, a much larger amount of electricity to the grid than does ours, have taken some hard and revolutionary decisions that will no doubt make them world leaders in the planning and practice of handling depleted nuclear fuel and waste.

What decisions are we being asked to make in considering the Bill? We are being asked to pour more good money after bad—and for what? So that we can continue to draw upon ourselves the opprobrium of the world for irradiating the Irish sea with Japan's nuclear waste? So that we can continue to find our requests kicked into touch every time we approach a foreign Government about allowing over their territories future flights by BNFL's plutonium-carrying aircraft? What a joy that little procedure has been. The Canadians have indicated their unwillingness. The Governor of Alaska has refused

[Dr. Kim Howells]

permission. I am sure that if polar bears could communicate with BNFL, they would refuse permission, too.

It is hard to imagine any species on earth daft enough to argue that plutonium should be flown from Prestwick to Japan. After the flight has headed north and over the pole, avoiding Iceland, Greenland, Ellesmere island, Alaska and eastern Siberia, of course, it heads south—past the Soviet Kamchatka missile bases and those of Sakhalin and the ones littered along the coast near the huge Vladivostok naval installations—before swooping down towards the Japanese mainland, one of the most densely populated areas on the face of the earth. What an eventful voyage each of those little beauties would have. I can just imagine the Soviet missile commanders not noticing the odd half tonne of plutonium drifting towards them every time there is a high easterly wind blowing in from the Pacific.

Why is BNFL not keen on transporting its plutonium by sea? Is it because it thinks that the Japanese may want it in a hurry when business starts up? That is highly unlikely, I should have thought. I cannot imagine that the Japanese want to manufacture miniature nuclear bombs. One cannot use plutonium for much else if one does not possess a commercial fast breeder reactor, or if one is not prepared to compromise the economics of thermal reactors by running them with some version of a mixed oxide fuel. Knowing the Japanese reputation for business acumen, that is highly unlikely.

Why, therefore, the BNFL proposal to fly it out? I would hazard a guess that it has dreamt it up as a means of cutting costs and of preventing yet another escalation of projected prices. If plutonium is sent by sea, the USA and other nations will demand, as they have already demanded, that it is escorted by an armed vessel that is capable of warding off attacks by hostile nations or terrorists or of aiding a ship that has got into difficulties so that there is no repeat of the tragedy that we have just witnessed in Alaska—but the tragedy of a plutonium escape, not oil.

There are Administrations throughout the world, such as the American Administration, who have become extremely concerned at reports of missing parcels of nuclear fuel and who will continue to insist that, no matter what the financial cost, no more should go missing. It is obvious that the cost of seaborne cargoes will be very high indeed if each one has to be guarded by the Royal Navy or by a privatised version of that service.

BNFL's motives are clear. It favours airborne transportation of fuel because it imagines that it will be cheaper than seaborne transportation. I warn the Minister not to trust BNFL's judgment. Its judgment has not been very good in the past. The accumulated risks and the potential costs of the kind of airborne error that we have witnessed all too often and all too tragically lately will be beyond calculation. BNFL's transportation ventures until now have been far from distinguished. Its peripheral involvement—however innocent it may have been—with the notorious Nukem-Transnuklear affair in West Germany has done nothing to improve its international image, however blameless it may have been over the whole issue.

It is a company that deals in the most dangerous substances known, and particularly in plutonium. Perhaps its plans to rush plutonium away from these shores by air are governed by an overwhelming desire to rid itself of the material as quickly as possible rather than because of Japan's desire to receive it. It already possesses 25 useless tonnes of plutonium at Sellafield. Nobody wants it. After all, what can anyone do with it, except spend millions on storing and guarding the stuff throughout the next millenium? The chairman of National Power does not want it. Mr. Baker's leaked letter makes that perfectly clear.

I have no doubt that the £500 million that we are being asked to underwrite in clause 1 will serve only to encourage BNFL to continue to underuse and waste the enormous reservoir of talent that it has assembled at Sellafield and at its other stations. I urge the Minister to exercise financial prudence, which this Government have done so often over the past 19 years in their administration of our other major energy concerns. For the sake of both common sense and responsible government, he should consider withdrawing clause 1, which provides for this extra funding.

8.10 pm

Mr. Harry Barnes (Derbyshire, North-East): I apologise for not having been present for the entire debate and, in particular, for having missed the contributions of the hon. Members for Havant (Sir I. Lloyd), for Caithness and Sutherland (Mr. Maclennan) and for Bedfordshire, North (Sir T. Skeet), especially that of the hon. Member for Havant, who was Chairman of the Select Committee that produced the report which is relevant to this debate.

The Minister and the hon. Member for Havant, whose first few words I did hear, described the Bill as technical. As someone who cannot change a light bulb or a plug, or keep his own accounts, I think that the term "technical" is liable to make people like me dive for cover. Actually, there are two different interpretations of the word—it can be used to create two different impressions. The first is that the issue being described is minor and non-political. Clearly, this Bill is not that; it is concerned, in the first clause, with extending the borrowing requirements of the nuclear industry by one third, and with advancing that industry's capability and capacity. If provisions such as clause 1 were not agreed to, the industry would be halted in its development. If the industry could not borrow, it would not be able to live quite as well as is intended.

Then there is the other interpretation of "technical": that matters so described are non-understandable, that the issues are too complex for people such as me, and are understood only by civil servants and accountants and that we should therefore let it go through. But this is clearly not the case, for it is understandable—if not in terms of some of the detail, clearly in terms of the principles involved. At least it provides those of us who do not have a technical bent an opportunity to make some anti-nuclear noises.

The borrowing requirement is to be extended for the thermal oxide reprocessing plant at Sellafield—THORP. Permission for its construction was given in 1978, when it was estimated that the cost would be £300 million. The plant was to come into operation by April 1987. By 1983, the capital costs had risen to £1,280 million, and the start-up was put off until December 1990. BNFL now says that the capital costs will be almost £1,500 million and that the start-up date will be late 1992. Are we sure that the borrowing requirements will not need to be raised? The

record is not inspiring, and as greater account is taken of safety measures, extra costs may be imposed on the industry.

Added to this, although estimates have undoubtedly been partly involved in it, is something that is likely to be extended in the future—decommissioning processes for the whole industry. Paragraph 41 of the report says:

"future potential customers, when placing new reprocessing contracts, can hardly find very attractive the rise of THORP's costs in real terms and the delay in its start up. NII requirements were the principal reason on both accounts. Customers must wonder whether safety requirements in the future will occasion even more delays and cost escalations."

I hope that that will be the case, and that we are becoming more and more safety conscious, for reasons such as those spelled out by my hon. Friend the Member for Pontypridd (Dr. Howells).

The commercial insurance factor in clause 3 is quite fascinating. What actuarial considerations are involved? "Actuarial" is a technical term, but what we are concerned about are the factors that have to be considered and the chances of various things going wrong. In the context of the nuclear industry, there are the meltdown possibilities, problems of prevailing winds, and problems of airborne disasters, which were mentioned by my hon. Friend the Member for Pontypridd.

If a disaster involving plutonium in transit were to occur in a place such as Malta, which is a small island, it could be disastrous for the whole nation. At present Malta is going for the development of new power station provisions. Thankfully, because it is such a small nation, nuclear power is not financially feasible. If an accident were to occur in such an area, it would devastate not only the island but the whole of the Mediterranean. That consideration must be extended to our own island. Although our area and our population are vastly greater than those of Malta, this is still an island. What liabilities have to be taken into account? What, for instance, about dead sheep? How is the accountancy aspect going to be related to that?

Should we not be putting a brake on nuclear development, given that at present there is a great deal of scientific speculation about nuclear fusion—what methods of fusion can be used, and whether these can take place, for instance, at room temperature? I do not know whether, if we were to be told that it could take place at room temperature, we would give the impression that it was as safe as a front room. Or will we have the same problems as I imagine are associated with the current industry—except that some of the problems of meltdown then begin to disappear?

The hon. Member for Havant criticised press interpretations of the Select Committee's report. It is not surprising that the press has responded to the report in what some people may see as a sensational fashion. Paragraph 46, which deals with the transporting of plutonium to Japan by air or sea, states:

"We are concerned about the proposal to fly plutonium to Japan in future, and especially about the use of Prestwick airport . . . In the wake of the Lockerbie disaster, the consequence of a similar air accident—or terrorist outrage—involving plutonium are too horrific to contemplate."

The movement of toxic, hazardous and nuclear waste across national frontiers and seas, in particular, seems to me to be especially worrying. A nuclear equivalent of the Karin B, oil spills or of the Lockerbie air disaster is well understood by ordinary people. The thinking may be sensational, but there are very good reasons for having sensational considerations of that type very much to the forefront of our minds. We must be worried by provisions in this Bill. They are technical, but they are technical forms of treachery so far as the wellbeing of people is concerned.

8.19 pm

Mr. Barron: I do not intend to delay the House long, but I ought to comment on one or two of the speeches that we have heard.

The hon. Member for Caithness and Sutherland (Mr. Maclennan), who is not in his place at the moment, shares with me the view that people are slightly alarmed by the newspaper report about the scuttling of a nuclear submarine. Although I know that the Minister has no departmental responsibility for defence, he may want to comment on that.

The hon. Member for Bedfordshire, North (Sir T. Skeet) never ceases to amaze me by his support for the nuclear industry. The industry must be terrified every time he gets to his feet. I am even more amazed by his thoughts on low-level nuclear waste. Only a few years ago the hon. Member for Bedfordshire, North was a major voice in the "Bedfordshire Says No" campaign when it was proposed to dump nuclear waste in that county. I am told that he led that campaign well. He now says that the Rolls-Royce solution which has increased the cost is not the answer. When the Select Committee on the Environment published its report on that matter, I am not sure that it was totally convinced by the solution. My opinion, for what it is worth, is that it is better than what was happening at Drigg at that time. It is now in concrete trenches in steel boxes and is retrievable if anything goes wrong.

That has increased the cost to BNFL or at least to its customers since most of the contracts are on a cost-plus basis. However, it makes people in that area and in the country in general more confident about the disposal of low-level nuclear waste.

The rest of the speech by the hon. Member for Bedfordshire, North consisted of his customary promotion of the flotation of National Power. He pointed out what everybody knows and what will make John Baker and others happy, which is the tie-up of the cost of the nuclear fuel cycle as it is at present.

The hon. Member for Havant (Sir I. Lloyd) and my hon. Friends the Members for Pontypridd (Dr. Howells) and for Derbyshire, North-East (Mr. Barnes) raised an important question about decommissioning. I should like to ask the Minister about the increased cost of decommissioning. As I understand the information in the report, decommissioning is now the total liability of BNFL and will cost £4·6 billion for the new decommissioning policy. Under the old policy, the total liability was £438 million. As I understand it, most of the costs in the cost-plus contracts are passed on to the customers of BNFL which at present are the CEGB and the foreign companies which are sending waste here.

I am interested to note that that does not deal with the decommissioning of all generators in Britain. It is the cost of decommissioning BNFL's plants, and BNFL has only two generators. Therefore, the decommissioning costs of Magnox and other power stations when they come to the end of their life will be in addition to that £4·6 billion. Therefore, we are talking about a much greater threat to the public purse. I do not expect the Minister to comment on that immediately, but I give him notice that we will

[Mr. Barron]

want to probe that issue further. We will want to discover the total cost of decommissioning Magnox and AGR power stations, and PWR stations if they are fuel-fed in years to come.

The hon. Member for Havant and my hon. Friends mentioned the transportation of plutonium. I understand that it is a major issue in the Prestwick area. I believe that the hon. Member representing that area is the Secretary of State for Defence. In some instances he has no argument about plutonium flying around in airborne craft. I wonder what his position is in relation to the concept of moving tonnes of plutonium to the other side of the world by aircraft flying out of his constituency.

I agree, as I am sure do many others, with the comments made by the hon. Member for Havant about his Committee's feelings on the issue. Perhaps it is an issue on which we should go no further than we have already. However, we still do not have an answer to the question raised by my hon. Friend the Member for Pontypridd about what we shall do with the tonnes of reprocessed fuel that we have on our hands now. We are told that a clause in the recent contract says that the waste should return to the country of origin. At present, we have no programme for the movement of that fuel so that we can complete that clause in the contract. It would be interesting to hear the Minister's comments on that.

8.25 pm

Mr. Michael Spicer: In his opening remarks the hon. Member for Caithness and Sutherland (Mr. Maclennan) asked whether the Government intend to make a full response to the Select Committee's report. I can confirm that that will be the case. In the meantime, the House might wish me briefly to give our initial answers to some of the points that have been raised.

The hon. Member for Caithness and Sutherland asked about long-term research. In my opening remarks I said that the Health and Safety Commission will need to sponsor research on its own account to ensure that the totality of research is adequate. Therefore, there will be research independent of the immediate requirements of, for example, the nuclear installations inspectorate doing its safety checks and the research associated with that. There will be ongoing research in parallel with that.

The hon. Gentleman asked about my comments during the Report stage of the Electricity Bill on emergency planning procedures. The Health and Safety Commission has asked the Health and Safety Executive to bring forward regulations which will require local authorities to have plans available for dealing with emergencies at nuclear installations. Those regulations will be made under the Health and Safety at Work etc. Act 1974 after full consultation with interested bodies. Therefore, an intense consultation process is taking place. It is for my right hon. Friend the Secretary of State for Energy to bring the regulations forward. There is a promise that those regulations—GMAH-type regulations—will be brought forward.

The hon. Gentleman also asked about the relationship between the Atomic Energy Authority and the private sector, whether there could be an extension of that relationship and why it had not been done in the Bill. That is an extremely difficult issue which poses problems that we are currently considering. It raises the question of how far one can allow a public sector body to trade in the private sector. There are arguments both ways. No doubt we shall tell the House our thoughts when we have considered that matter further.

Mr. Maclennan: I thank the Minister for those answers. Can he give me any idea of the time scale he has in mind for considering that matter?

Mr. Spicer: No, I cannot. Obviously, with the changes that have taken place in the AEA, the issue is likely to be in the front of our minds when we think about its future. It would be implicit in the changes that are taking place in the organisation as a result of the various decisions we have taken in the past few months.

The theme of the debate was raised by my hon. Friend the Member for Havant (Sir I. Lloyd), the hon. Member for Rother Valley (Mr. Barron) and particularly by the hon. Member for Pontypridd (Dr. Howells). In the context of the additional finance limits for which the Bill makes provision, the hon. Member for Pontypridd said that the Bill represented a lame-duck rescue. I do not think that he could have been in the Chamber when I said that BNFL has been consistently profitable since its inception, had paid dividends over the last 12 years and aims to pay off all its borrowings by the mid-1990s. He made a comparison with the coal industry. I only wish that it was a true comparison, because, if that were the position facing the coal industry, a lot of our problems, certainly with respect to the coal industry, would not exist. It was a speech that was unusual for the hon. Gentleman. It was full of hyperbole and not, I think, fully worthy of him.

Mr. Dennis Skinner (Bolsover): The hon. Gentleman did not like it.

Mr. Spicer: The hon. Member for Bolsover (Mr. Skinner) has just rushed into the Chamber and is coming to the defence of the coal industry. It is not a question of not liking it; I was not passing a value judgment on it. It was factually inaccurate to talk about a lame-duck rescue. The hon. Member for Bolsover backs his hon. Friend's judgment no doubt because he shares his prejudices. The hon. Member for Bolsover is full of prejudices; he is riddled with them. Therefore, it is wholly unproblematic that he would support his hon. Friend the Member for Pontypridd's prejudices. I am not surprised that he backs his hon. Friend against me. In fact, I would be rather unhappy if the hon. Member for Bolsover's prejudices were on my side.

I turn now to the question of costs at BNFL because undoubtedly there have been cost overruns in the past. I concede that to my hon. Friend the Member for Havant, who particularly raised this point, but I think that my hon. Friend the Member for Bedfordshire, North (Sir T. Skeet) also raised it. Because of cost-plus contracts, the effect of these overruns has been the almost automatic increase in prices paid by the CEGB; and because of the monopolistic position of the CEGB in the market place it has in turn been able to pass these cost increases straight through to the electricity consumer.

With the passage of the Electricity Bill—which is relevant in this context, Madam Deputy Speaker—all this will change. The privatised successor companies to the CEGB will no doubt wish to put far greater pressure on BNFL when contracts are struck between them for further

reprocessing and related work. What is more, these contracts will be fixed price in nature. BNFL will therefore be under pressure to continue the process of tightening the control by its management of the vast capital projects in which it is currently engaged. And, in answer to my hon. Friend the Member for Bedfordshire, North, the Government will ensure that the contracts finally signed are fair as between BNFL and the electricity supply industry. It will be a difficult operation, I concede.

Sir Trevor Skeet: I am heartened by this. These will be fixed price contracts from now on. From what date will this be so? They will not antecede the current date covering the past? This is where the generating companies could fall into difficulties.

Mr. Spicer: The practice of entering fixed price contracts has already been started, so they are nothing new. All I am telling my hon. Friend and the House is that, particularly as the ESI prepares for privatisation, the contracts it will need to strike for its reprocessing arrangements will in all probability be on the basis of fixed prices.

Mr. Barron: I think that the Minister has nearly answered my question, but I want to ask it again. What the hon. Member for Bedfordshire, North (Sir T. Skeet) is asking and what I am asking is this: is the Minister saying that any fuel that is currently under the old cost-plus contract signed for reprocessing will be moved to a new contract with the flotation of the electricity supply industry?

Mr. Spicer: If what I say now is wrong, I will certainly write to the hon. Gentleman about it. The answer really depends on the precise terms of the contracts, I suspect. I do not think it will be possible simply to renegade on the existing contracts; they will be part of the assets and liabilities of the successor company.

Mr. Skinner: Renegade? Does he not mean renege?

Mr. Spicer: The hon. Member for Bolsover is on form this evening. I fully concede that he is absolutely right; I used the wrong word at that point. I hope that will be the only point on which I shall have to agree with him for the rest of the evening.

I have to say in response to my hon. Friend the Member for Havant that the rise in unit prices in BNFL's main businesses over the past three years amounted to less than 7 per cent. annually for enrichment, were virtually nil for Magnox fuel manufacture and were 8·5 per cent. annually for reprocessing. In fact, AGR fuel prices decreased between 1984 and 1987.

As to the cost increases in the THORP project, increased costs of £200 million to a total of £1·8 billion were due to a requirement to meet more rigorous safety standards and to escalations arising from a delay of over two years in the project. BNFL has now carried out a major review of the THORP project and is increasingly confident of its ability to complete the plant within the latest costs estimate. The first stage receipt and storage facility is now on stream and the main plant is on schedule for completion in 1992.

As to the anxieties which have been expressed by, in particular, the hon. Member for Pontypridd but also by my hon. Friend's Committee about THORP's long-term business prospects, all I can say is that I would not mind having a business which had 10 years' profitable contracts in the bag amounting to some £4 billion. As the House knows, by far the largest component of these contracts is contracts with Japan, which amount to around £2 billion and will make THORP the largest earner of yen in the country. The Japanese contracts are even contributing to the present development of THORP, which will have been fully written off by the time the first 10-year contracts come to an end.

I turn next to the second major point which has been recurring throughout this short but, I think the House will agree, interesting debate, the question of the significant misrepresentation which, as my hon. Friend the Member for Havant has acknowledged, has been given to the Committee's report on the question of the dumping of foreign nuclear waste in this country.

All contracts, for the reprocessing of spent fuel signed since 1976 have contained clauses for the return of waste. Nowhere in the report is it suggested that the pre-1976 contracts should be renegotiated. They were freely entered into and it would be impossible for any Government to step in now and attempt to get them amended retrospectively. Paragraph 30 of the report of the Committee has been particularly misrepresented in this context. The report talks specifically of waste from 1,500 tonnes of spent fuel as being the result of pre-1976 contracts. In the newspapers this morning this has become 1,500 tonnes of waste. In fact, 97 per cent. of this is recovered in the form of uranium and plutonium. About 100 cu m of high-level waste—that is, as said earlier, about two bus loads, which is rather different from the 1,500 tonnes mentioned in the press today—will arise from the reprocessing. This is less than one tenth of the expected high-level waste arising to the year 2000. The vast majority of the billions of pounds of business which lies ahead will be subject to the condition that the waste is returned to the country of origin.

Turning to another set of questions, about decommissioning, which hon. Gentlemen have raised during the course of the debate, a question was raised in particular —I think by the hon. Member for Rother Valley—about the wisdom or otherwise of leaving nuclear plant for a long period after it has been shut down before it is removed. Our primary concern is always to ensure that nuclear plant, whether operating or closed down, is safe in terms of both men and the environment. I will come to the specific question about the triggering of schedule 12 to the Bill in a moment, but there is no doubt that it is technically possible to decommission plant on a much shorter time scale than the industry at present plans. Indeed, we are demonstrating this with the Windscale AGR. However, the difficulties of doing that are considerable. In any reasonable commercial terms, it makes much more sense to leave dismantling work until radioactive decay makes it easier to meet required standards of worker and environmental protection.

The NII and the various authorities are quite clear that 100 years is the best period. Were somebody suddenly to impose a new regulation upon the industry to carry out the third stage of decommissioning sooner, it is quite possible that the provisions of schedule 12 might be triggered off and implemented.

The Select Committee made the interesting suggestion that the companies legislation should be amended to make decommissioning costs the first charge in the event of

[Mr. Spicer]

liquidation. I certainly cannot be expected to make an immediatc response to that suggestion today, but I have noted it.

Sir Ian Lloyd: Have the Government received what my hon. Friend would describe as a convincing and complete explanation of the vast difference between the two figures which I gave, the original figure of £468 million and the current figure of £4,600 million?

Mr. Spicer: My hon. Friend was the Chairman of the Select Committee which recommended that the definition of "decommissioning" should be changed from plant on site to a return to a green field site. That redefinition of what was implicit in decommissioning has been a major reason behind the escalation in the provisions for decommissioning which BNFL is now making for its plants. My hon. Friend may have to pursue that point.

Several questions have been raised about the ownership, control and transportation of plutonium after privatisation. I assure the House that the privatisation of the electricity supply industry will make no difference to existing strict controls which govern the ownership and use of all civil materials. Plutonium and other nuclear materials will continue to be subject to Euratom safeguards and the terms of the United Kingdom-Euratom-IAEA safeguards agreement. Reports on plutonium production are supplied to the safeguards authorities by the reactor operators when the irradiated fuel is sent to reprocessing plants. Further reports are made at each stage as the plutonium works its way through the nuclear cycle.

Those procedures are administered by Euratom, whose safeguards inspectors have access at all times to the facilities in question to check that the reports are correct. The present restrictions on the transfer of nuclear material abroad will also continue after privatisation. Civil plutonium can be transferred abroad only on assurances covering its peaceful use, physical protection and controls on retransfer, and it will remain subject to the safeguards arrangements that I have already mentioned.

Sir Trevor Skeet: Who is to pay for the storage of plutonium? The companies cannot use it. Mixed oxide fuels are not used in the United Kingdom. Plutonium will be stored somewhere.

Mr. Spicer: When I refer to ownership, I may implicitly answer my hon. Friend's question. The hon. Member for Rother Valley also referred to ownership. I stress that it is normal international practice for generators of nuclear power to own the products of their reactors. Therefore, it becomes their responsibility and their cost. At present, plutonium derived from United Kingdom generating boards' fuel is stored at Sellafield, and that is likely to continue to be the practice after privatisation.

My hon. Friend the Member for Havant and the hon. Member for Pontypridd were particularly forceful about transportation. I will draw the attention of my right hon. Friend the Secretary of State for Transport to the comments that have been made.

Nuclear materials in transit are subject to very rigorous international safety standards and regulations laid down by the International Atomic Energy Agency. Those international regulations require substantial safety margins to be built into containers so that they can withstand even the severest accident without causing a significant public hazard. A recent study by the advisory committee on the safe transport of radioactive materials concluded that the safety and security risks in transporting nuclear materials were negligible. BNFL and other nuclear operators have been transporting nuclear materials, including plutonium, safely and securely for over 30 years.

I re-emphasise that the Government are committed to retaining nuclear power to provide essential diversity in fuel supplies. The Government's proposals for electricity privatisation should secure a healthy future for BNFL, at least until the end of the century. BNFL's prospects in the longer term will depend on how competitive it can make the services it offers, including reprocessing. The Select Committee's report is relevant in that context. Negotiations are currently under way between the company and the generating boards on new fixed price trading arrangements. That will undoubtedly mean increased risks for BNFL, but it will enable the company to reap the benefits of improvements in efficiency and revised work practices which it is introducing.

From the Government's point of view, it has been an interesting debate. We shall further consider the technical and detailed points and certainly give full attention to the Select Committee's report, which reached us only yesterday.

Question put and agreed to.

Bill accordingly read a Second time, and committed to a Standing Committee pursuant to Standing Order No. 61 (Committal of bills).

ATOMIC ENERGY BILL [LORDS] [MONEY]

Queen's Recommendation having been signified—

Resolved,

That for the purposes of any Act resulting from the Atomic Energy Bill *[Lords]*, it is expedient to authorise—

(1) the payment out of money provided by Parliament of any expenses incurred by the Secretary of State;

(2) the payment of sums into the Consolidated Fund; and

(3) any increase in the sums payable under any other enactment out of money provided by Parliament or out of the National Loans Fund or in the sums so payable into the Fund or the Consolidated Fund, being an increase attributable to any provision of the Act substituting a financial limit of £2,000 million for that imposed by section 2(1) of the Nuclear Industry (Finance) Act 1977 in relation to British Nuclear Fuels plc.—*[Mr. Michael Spicer.]*

STATUTORY INSTRUMENTS, &c.

Motion made, and Question put forthwith pursuant to Standing Order No. 101(5) (Standing Committee on Statutory Instruments, &c.)

LEGAL AID AND ADVICE (SCOTLAND)

That the draft Advice and Assistance (Financial Conditions) (Scotland) Regulations 1989, which were laid before this House on 23rd March, be approved.

That the draft Civil Legal Aid (Financial Conditions) (Scotland) Regulations 1989, which were laid before this House on 23rd March, be approved.—*[Mr. Fallon.]*

Question agreed to.

Namibia

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Fallon.]*

8.47 pm

Mr. Paul Boateng (Brent, South): The House has an opportunity tonight to debate Namibia, at a critical time for that war-torn and long-suffering country, when the outcome of debates such as this is important, not only in the House but in the Houses of Parliament of permanent members of the Security Council who hold the fate of Namibia in their hands. The outcome of such debates will determine the concerns at the end of the road on which Namibia has been set under resolution 435. The debate is important when we have seen waged a battle which has not only included the usual combatants—soldiers, guerrillas, troop carriers and guns—but is also very much about public relations. South Africa has waged a relentless public relations war against SWAPO. It is important that we should think of the human casualties and consequences of what is happening in that country.

I have in mind a young boy whom I and my German parliamentary colleague, Professor Dr. Klaus Osswalld, who recently travelled with me to Namibia, saw in the military base-airport—for it is both—of Oshikati. That little boy did odd jobs and ran errands and, by that means, supported himself, his parents and his grandparents—a whole extended family—in that region which, of late, has come to be entirely dependent for its economy on the presence of the military. The old traditional basis of Ovamboland's economy has all but disappeared and the area has become absorbed in the great military battle that is taking place in that area.

The little boy supported his extended family by running errands for the soldiers who guarded the airport—perhaps getting them a cold coke from the only refrigerator for miles around—and they would give him the odd cent or two and, during the course of the day, doing such little jobs as he could, he would collect sufficient rand to meet his needs and those of that whole family, who no longer had their land, their traditional means of support, to sustain them.

I wonder as we discuss Namibia what has happened to that little boy and his family in Ovamboland, in an area of the country which has become in certain parts a free fire area for the South African defence force. One suspects, if the little boy is still there, that he is making more rand than ever because of the extent of troop movements in the area and the many hundreds of troops now based around the airport there. He is probably still running errands for them, if he is there and if he has the heart—bearing in mind what might have happened to his family—to continue his efforts.

As we debate this issue, we must have in the forefront of our minds the future of that young boy and his family. What sort of future will he have in an independent Namibia? While it is important for us to consider current events and what led up to them, our major task must be to ensure that we move forward steadily and with resolution to the satisfactory implementation of resolution 435. We must build up in Namibia an economic and political infrastructure brought about as a result of free and fair elections. Such an infrastructure must be capable of maintaining, supporting and developing a non-racial democracy in that country. That will prove that there is another way, a real alternative to apartheid South Africa, the nation on which Namibia will inevitably have to rely for some time for much of its needs if its economy is to survive.

We have an opportunity in Namibia to create a showcase for the people of South Africa, to show them what life can be like after apartheid. That is why it is vital for us to get it right. But we must be under no illusions about the forces that are working against such a peaceful settlement and the existence of that type of showcase.

I do not want to dwell tonight on what has happened in the past, but the version of events that has been put out by South Africa in recent days—the version of events that, I am afraid, has been reflected here in the utterances of the Prime Minister in replying to the hon. Member for Inverness, Nairn and Lochaber (Sir R. Johnston)—gives cause for concern. It is not enough to pillory SWAPO over the events of 1 April and what has happened subsequently—to put SWAPO in the dock and blind oneself to the reality of what the South Africans have been doing. Mistakes have undoubtedly been made on all sides, but South Africa cannot be proud of its role in this matter. Indeed, its role is worthy of condemnation by the international community.

We saw in the recent events in Ovamboland what was almost the inevitable result of a process that has never sought to include SWAPO in the decision-making. To this day—the recent meeting on Mount Etjo was an example of this—the process has not treated SWAPO as an equal party that must be consulted and involved in decisions about the future of that country.

We are seeing the consequences of not involving SWAPO, of a peace process that all too often has been based on protocols, conventions and understandings which are not formulated in one place, along with resolution 435. It is not possible to put one's hand on a bundle of documents and say, "This is the peace plan and this is what is to happen." The United Nations has not been able to do that, and it seems that nobody is able to look at the whole body of protocols and so on in a combined way, thereby creating the peace plan building on resolution 435. Hence, it is a flaky and nebulous agreement in too many ways, and we should not be surprised at what happened.

The version of events given by South Africa cannot be accepted without critical analysis, and that analysis must be based on what we hear and on eye witness accounts of what took place on the ground on 1 April. Those accounts deserve more credence than they have been given. I give an example from a witness of the churches in Namibia. He is from the Evangelical Lutheran church based in Ovamboland. He reported on an incident which occurred about 35 km north of Ongwediva.

Christian pastors who moved into the area shortly after the events I am describing came across five children. Children are the greatest victims of the struggle, not only in Namibia but throughout southern Africa. We must have special regard for them as victims because they are completely innocent, whatever their parents or relatives might be or might have done.

Those five children told of how they had to flee from the bullets, as they described it, and spend the night hiding in a bush. They took the delegation to a site where evidence of fighting was found. The delegation found blood and traces of bodies that had been dragged along the ground. They found items of equipment and foodstuff. They

[Mr. Paul Boateng]

interviewed civilian eye witnesses, one of whom told of how he had spoken to a man—one of a group of 50 men, he said—who told him that they were from SWAPO and that they were regrouping and had not come there to fight. The witness said that while they were speaking he heard the sound of approaching Casspirs, meaning armoured troop carriers. He said that the guerrilla told him to run away.

This is what the witness said then followed:

"All of a sudden people were fleeing, bullets were flying, and the guerrillas took cover. The people who shot first were the SADF"—

that is, the South African defence force. That was the evidence of one eye witness who saw men being fired on, initially by the South African defence force. Those men sought to defend themselves and fired back. The men had not gone there for the purposes of engaging in or renewing a war, but to establish bases and to surrender to the UNTAG troops.

The evidence of that witness was to be repeated in a variety of incidents throughout Ovamboland. One must give that sort of witness some credence. It is no use dismissing it as SWAPO propaganda, as unreliable and not to be believed. We must weigh such evidence in the balance and we must then say, as all fair-minded and honest people do say, that there is some doubt and more than a question about whether SWAPO was there for any belligerent purpose. Indeed, the United Nations Secretary-General made it clear that it was not possible to say that SWAPO were the belligerents in this matter.

However, when the Prime Minister came hot-foot from Namibia to answer questions in the House, she gave the impression to the hon. Member for Inverness, Nairn and Lochaber that it ws all SWAPO's fault, that they were the ones to blame. In so doing, she lent credence to the South African regime and to its version of events. She provided it with a massive public relations coup, which it has been seeking to exploit ever since.

The Prime Minister must understand when she goes about her travels that she cannot hope to be perceived in the world or in Africa as the midwife of Namibian independence while she continues to act as if she were the wetnurse of apartheid. The two are inconsistent. If the Prime Minister cares about the future of Namibia—one must hope and pray that she does care—it is absolutely vital that she seeks to be, and is, even-handed between the parties.

One does not for one moment suggest that the Minister of State has been anything other than even-handed, but it is for the Prime Minister to give a lead in these matters and we are entitled to look to her for that lead. Only then will Britain be able to play a role in the resolution of this conflict and ensure that we fulfil our responsibilities not only in the Security Council, but our historic role and responsibilities in that part of Africa, which are real, great and heartfelt. We have a role to play and we must play it to the full.

But be that as it may, current events have cast a massive doubt on the sincerity of South Africa's commitment to the peace process. We have read today in the newspapers about massive gatherings of troops outside those areas where SWAPO guerrillas have been told to surrender their arms. Once again, the authorities have turned to the churches for support and have asked them to provide places where people will feel safe to gather. However, the churches have reported today that gatherings of South African soldiers close to the churches have deterred SWAPO guerrillas from going there, as inevitably they would. When one hears the news today from OXFAM representatives in the area that a South African base was established 40 yards away from an assembly point, and that a South African soldier stood at the entrance to an UNTAG assembly point, can one be surprised that the number of SWAPO guerrillas who have surrendered is as small as it is? We have also been told today that four SWAPO soldiers, who presented themselves to a Finnish Lutheran mission at Oniipa, told the mission that they did so because they did not feel able to go to the United Nations assembly points without the missionaries' protection because approaching those points was too dangerous.

That is the reality of what is happening now and it does not say much for the bona fides of the Administrator-General, Mr. Piennaar, who now maintains that he was misunderstood, that SWAPO guerrillas should be interrogated at the time of their surrender and before their removal to Angola. But interrogated by whom? The answer is, by SWAPOL, the South-West African police force. Recently I asked the Minister of State at Foreign and Commonwealth Office Question Time to give us some assurances on this. Clearly, she could not do so then, but I hope that she will be able to tonight. It is believed that up to half the members of that force are former members of Koevoet, which is Afrikaans for crowbar, a notorious, cruel and inhumane paramilitary counter-insurgency unit, which was supposed to be disbanded under resolution 435 but which, it would seem, has been integrated into the ordinary police force of the territory.

Yet SWAPO guerrillas are supposed to surrender themselves for interrogation by those people. It beggars belief that that can be the basis of any genuine peace or trust between the parties in this conflict. We need a practical assurance on the role of SWAPOL and Koevoet within it—and on that of battalion 101. At one stage in the debacle that followed the events of 1 April, when UNTAG was caught unequipped and unprepared in terms of its military numbers and any form of strategy—we are told that its members did not even know how to contact SWAPO because the lines of communication did not exist—the number of UNTAG forces in the region was such that things came to such a pass that it was necessary to use battalion 101 to police the conflict. Battalion 101 is another hated and loathed offshoot of the South African army.

None of that inspires trust or confidence. It does not hold out any hope for a lasting peace or for a smooth and steady transition, through the electoral process, to ultimate independence. We want some signs of the bona fides of the Administrator-General and South Africa in this matter. South West Africa territory force members should be confined to their bases and UNTAG should be increased to such a level that it can be relied upon to police the settlement.

The situation demands a re-evaluation of the Security Council's initial response to the requests from the Secretary-General for 7,500 soldiers to form part of UNTAG instead of the 4,650 that he was ultimately allocated. That allowed a saving of $284 million in a budget which was cleared only on 1 March. When, on 31

March, my German parliamentary colleague and I asked when the force would be operational, the director of the special representative's office, Mr. Cedric Thornberry, said that it would take six weeks.

There is a clear argument for increasing the forces at the disposal of the special representative and we look to the British Government to give the clearest possible indication that that is the line which we should be pursuing in the Security Council. Someone must make that demand and we look to this Government to make it. That demand is eminently reasonable and vital if we are to move in the right direction.

We need those assurances from the Government and we look to the Minister of State to provide them to the House and to the country tonight. However, we must also reflect on what we expect UNTAG to do. We must reflect on what we expect those men, women and soldiers to do in Namibia and what we expect the dedicated international civil servants to deliver. We must consider what attitude and approach is required of them in the implementation of resolution 435.

We can envisage no way forward in that territory which requires UNTAG to perform a reactive role or to act simply as a court of appeal, distanced from the hurly-burly and day-to-day resolution of conflict, without a hands-on approach which is proactive as well as reactive. If the special representative, Mr. Martti Ahtisaari, does not adopt that approach, UNTAG will not have the confidence of the people and it will be obliged to rely on the Administrator-General, Lois Piennar, for support and assistance.

How can we ask the United Nations in Namibia to perform the task which the international community has set it, namely to take Namibia out of the clutches of apartheid and from the control of South Africa, using the same office which for all these years has kept Namibia in the thrall of apartheid? That is not on. There must be a willingness to be proactive and get out and actively engage in the issues and resolution of conflict which will inevitably present themselves daily to the parties in Namibia given the difficulty and delicacy of the task.

I hope that all hon. Members appreciate the delicacy and difficulty of the position in Namibia. We are not talking about Zimbabwe, or Rhodesia, where Britain had sole responsibility and where there was a governor-general of the calibre and quality of Lord Soames. We must also recognise that unless we adopt the words "control" and "supervision" which relate to the electoral process contained in resolution 435 and become concerned not simply with supervision but with control, it will not be possible to move Namibia through the electoral process to independence. There must be resources and the political will to control the situation and come out from under the wings of the Administrator-General. That is vital for the confidence of the people in UNTAG and for the resolution of the conflict.

Let us consider the task which Mr. Ahtisaari set himself when he arrived on 31 March. He detailed what he described as the essential preparations. First of all, he said:

"All Namibian political prisoners and detainees, wherever they are held, must be set free."

That is a requirement of resolution 435. However, there is an immediate problem there. I have met lawyers involved in human rights cases in Namibia and I have met representatives from the Churches responsible for ministering to the families of detainees.

I have been told—and I believe this to be true—that there are no lists of detainees giving details of where those people are being held or who they are. The Administrator-General does not know how many people are detained and he is not aware of how many are detained by the South African security forces which are not directly answerable to the Administrator-General in their operations. There will be some detainees in South Africa and some in Namibia. The United Nations must meet the lawyers, Churches and other groups working with prisoners in order to compile a list.

No such meeting had taken place by 31 March. If we are waiting for the Administrator-General to deliver up those people, that would show an optimism about the good faith of the Administrator-General which simply is not justified. There is a need for a sufficiently resourced team to set about that work in a way that does not cause it to have to rely on the Administrator-General.

Mr. Ahtisaari said that those in exile

"must have the chance to come here, to their native land."

I visited the director of the RRR committee which is a partner organisation of the United Nations High Commission for Refugees in Namibia. That committee is responsible for the reception, resettlement and rehabilitation of those people—that is what the three RRRs stand for. It had not received a penny from the UNHCR. It relies entirely on money from the World Council of Churches and the Lutheran World Federation. The RRR committee is not a great organisation. It consists of a small group of Church people from the denominations in Namibia who are seeking to provide the infrastructure for those three aspects of the process—reception, resettlement and rehabilitation.

I urge the Government and the Minister of State to make urgent representations to our ambassador at the United Nations to make sure that we put pressure on UNHCR to deliver the money now. We are talking about movements of people, the numbers of which can vary. Estimates range from 40,000 to 80,000, but it is thought that a realistic figure is between 58,000 and 68,000. Many of those people are children under the age of 11 who leave the camps but have no schools to attend.

Where are the returning people to live? There are already problems about accommodation, and huge infrastructure problems will hit that country in the next few months. The timetable is clear and says that by mid-May, which is just a month away, refugees and detainees should begin to return to Namibia. At this time the infrastructure needed to receive them is not in place. We need to give aid now for that process. We must not take the view that we should wait and see until independence. We need to get in there now.

Mr. Andrew Hunter (Basingstoke): I thank the hon. Gentleman for giving way, not least because I committed the discourtesy of missing much of what he has said. He mentioned a matter which I raised in a recent parliamentary question. I support the basic principle that there should be additional infrastructure support for Namibia before the independence process reaches its conclusion.

Mr. Boateng: I am obliged to the hon. Gentleman. His intervention is a sign of the way in which these issues unite all strands of opinion in the House. This is not a matter of party political controversy and I am sure that the Minister of State will take that on board.

[Mr. Boateng]

The need is there now and we cannot afford to wait, because if we do massive harm will be caused to the country and its people. The special representative went on to say:

"Laws which could interfere with free and fair elections will be abolished."

In Namibia a huge edifice of discriminatory law of one sort or another has been created. It is designed to break up the country into various ethnic homelands of one kind or another. There are 13 different ethnic education authorities, each with responsibility for an ethnic group. That is a totally unworkable and bizarre system, but the matter goes beyond that to a law designed to stifle the free dissemination of information and expression of opinion under the Police Act and various Defence Acts.

I was concerned to discover that two of the leading lawyers that I met in Windhoek were not aware of any member of the legal profession or anybody concerned with human rights in Namibia who had been consulted by the United Nations about identifying those laws. Is the United Nations to rely once again on the Administrator-General, the very person who put those laws in place and who has been administering them all this time? Will he be asked to detect and identify the laws? That stretches the bounds of credibility, but that is not all.

While I was in Namibia, two days before 1 April Gwen Lister, the editor of *The Namibian*, and Anton Labowsky, a distinguished trade unionist and lawyer, were summoned under the Police Act for disseminating information about security forces two years before. The summonses were issued under one of the laws that will have to be repealed after 1 April, and the same Administrator-General who is apparently to be relied upon to identify and repeal those laws issued the summonses. He did that to stifle, suppress and hold back Gwen Lister and Anton Labowsky during the course of the independence process.

We cannot rely on the bone fides of such a man and the United Nations and UNTAG must be empowered and emboldened to take a stance that will enable them to draw on all available sources of information and action to bring about the repeal of those laws. Without such repeal it will be impossible to move to a successful settlement.

We are all agreed that there must be an end to violence and intimidation from whatever source. We addressed that matter earlier in the debate. Such violence and intimidation are never acceptable but we know the difficulties about containing them because they were experienced in Zimbabwe-Rhodesia. But it must be done. Every political party, whatever its belief, must have a chance freely and fairly to put its case to the people.

While I was in Namibia I met Church men, laity and people who are active in the political process and people who are not. They all expressed concern that there would be difficulties unless UNTAG had people on the ground and until the United Nations was able to disseminate free, fair and impartial information. As in Zimbabwe-Rhodesia, we need United Nations information vans to tell the people the truth. We cannot rely on the South West Africa Broadcasting Corporation or on the overwhelming majority of the printed press in that country to do that. Most of the media has clearly taken sides, and that was clear simply by watching television even if one could not understand every word. There is a heavily biased media in favour of South Africa and its interests.

I met one pastor who gave me personal testimony about the army going into the schools and seeking to explain to the children the meaning of resolution 435. When a headmaster called on the Church to come in and explain and to put its view, the Church did not even have a professional video unit. It is not rich in the resources needed to explain and to convey information. It is desperately crying out to the international community for such resources, and one hopes that that cry will be heard. When the pastor went to that school, someone from the local education authority came in and challenged the headmaster and said, "Why are you asking this Church man to explain resolution 435 to the children? Why have you not asked a member of the defence force?"

I have no reason to doubt stories that I heard of South African army personnel going from village to village, ripping the shirts off villagers who supported SWAPO and requiring them to wear DTA shirts, or of army personnel going from village to village carrying pictures of Ethiopia and saying to the villagers, "If you vote for SWAPO, this is what will happen to your country." The telegrams from Oxfam representatives and the fax information from the churches in Namibia show that that is happening now. It is not a figment of SWAPO propaganda; it is the truth. There has to be an answer and a counter to that. I hope that the Minister will ensure that we put the case for an enhanced information presence amongst the UNTAG forces in the Security Council in the days and months ahead.

I hope, too, that the Minister will recognise the extent to which already the election campaign is being fought in Namibia by those who have the closest possible connection with South Africa. It must be said that the DTA is South Africa's surrogate. No one believes for a moment—certainly South Africa does not believe—that anyone other than SWAPO will win the election. After all, SWAPO has been the flag carrier of independence and has been at the forefront of the armed struggle. The people know why they have the prospect of independence. In Namibia they will no more vote for the DTA and its allies than the people of Zimbabwe did for Bishop Muzorewa. People are not that gullible. They will vote for SWAPO.

What South Africa seeks to ensure, by fair means or foul, is that SWAPO will not get two thirds majority necessary for it effectively to write the constitution. That is the concern of South Africa. That is why it is waging a massive propaganda war and why it sought to use the Prime Minister in the way that it did, both at Windhoek and subsequently in the House when she gave the answer that she did to the hon. Member for Inverness, Nairn and Lochaber. The hon. Gentleman was told that all the information would be available to him and that he should read what the Secretary-General had said. Then it emerged that the Secretary-General's statement was confidential and was not available. I have news for the House—it is available, and as from tonight it will be in the Library. I have a copy here and I will put it in the Library. It shows that the Secretary-General made it crystal clear that it was not possible to say that SWAPO had an offensive intent. The whole House will be able to see the document in the Library later tonight because it is right that it should be in the public domain.

That is all part and parcel of the campaign of misinformation and the attempt to manipulate the media and the political process that are being fuelled and funded by South Africa. I saw it with my own eyes when I

attended the beginning and end of the DTA rally in Windhoek on 1 April. It was an interesting experience. The comparison with the SWAPO rally, which I also attended, is worth making. The DTA rally was to take place at a ground which had been chosen as an act of provocation —immediately adjacent to the ground that SWAPO had originally chosen—but SWAPO withdrew because there was a danger of violence if the two rallies took place side by side.

The DTA rally took place on a ground that was well equipped with pavilions and tents. It had a massive stage and a huge amplification system. The SWAPO rally, on the other hand, took place without any tents or pavilions. The SWAPO leadership and speakers spoke from the back of a van. Even my local party would not have been happy with the communications system. Nevertheless, the SWAPO rally attracted about 25,000 people, while the DTA attracted only about 6,000. That is the difference between the two parties on the ground. It is interesting that the DTA should attract so few people, despite all that expenditure, which included a horse show. The DTA is noted for its horse shows, which are used to draw people in. I also witnessed the free distribution of shirts at the start of the DTA meeting. One wishes that one's own party were in a position to throw T-shirts off the back of a lorry, as the DTA did to reward people for attending that rally.

Free transport was also provided. SWAPO members in Windhoek told me that they had come down from the hinterland in free transport provided by the DTA. They boarded the van and then changed their T-shirts once they arrived at Windhoek. However, it was not just a matter of handing out free T-shirts at the beginning of the rally. Had I not seen it with my own eyes, I should not have believed it, but the DTA also handed out corned beef at the end of the meeting. If one attended from the beginning, one had the chance of a free T-shirt, but if one stayed to the end —not always easy to do on any political occasion—there was a can of corned beef as well. Should there be any doubt about that, I have photographs of the corned beef being distributed and carried away. I took those photographs myself, when I attended the end of the DTA rally that afternoon. They show Herero ladies in beautiful costumes based on Victorian and German costumes of the period, smiling and waving, and carrying away their cans of corned beef. Although I took those photographs myself, I think that they should be deposited in the Library so that right hon. and hon. Members have evidence of the corned beef reward for those who withstood the DTA's rhetoric. They will therefore be placed in the Library with the Secretary-General's report for Members of Parliament and other interested persons to examine.

The question that must and will be asked by those concerned with the peace process in Namibia is where the beef lies in the resolution and determination of UNTAG to see that process through, and in the resolution and determination of the Security Council to provide the means and the resources to achieve that. It is no use simply blaming UNTAG. The fact remains that all too often UNTAG finds its hands tied by a lack of resolution and of will on the part of the Security Council. The challenge to the House and to the international community is to put the beef into the peace process, and in so doing to give that little boy in Oshikati and the rest of his family in Ovamboland, together with all the other little boys and girls in Namibia and their families throughout that territory, the chance, hope and opportunity to enjoy a peaceful transition out of the bonds of apartheid and into the international community as a non-racial democracy within the Commonwealth. That is what they want. We have seen the trust of the people of Namibia betrayed in the past. We must not be a party to their betrayal in the future.

9.40 pm

Mr. Michael Knowles (Nottingham, East): I thank the hon. Member for Brent, South (Mr. Boateng) for his courtesy in allowing me to speak in what is very much his debate. It is kind of him to let someone else speak, particularly when he knows that I shall not agree with everything that he said. It is partly a product of our system I agreed with and can accept that much of what he said, but inevitably I shall concentrate on the issues on which I disagree.

The hon. Member for Brent, South was absolutely right about the personal tragedies—especially that of the small boy in Namibia. It is a tragedy for any small boy caught in such a war anywhere—be it Namibia, or anywhere else in Africa, in Afghanistan or in central America. Little more than a generation ago it was also true of many young children on this continent. That is always the effect of warfare. A bloody guerrilla war has been going on for a long time in Namibia, and the hon. Gentleman rightly drew attention to the fact that South African forces undoubtedly bear this in mind.

Nevertheless, I find it hard to accept the hon. Gentleman's version of 1,800 SWAPO guerrilla troops straying across the border and practically carrying election literature and ballot boxes. That does not seem likely and I know from accounts from Namibia that, even according to the kindest of interpretations, it did not happen in that way.

I can well believe that SWAPO thought that it should be an equal partner in the agreements, but it was not—and deliberately so. The agreements were between outside powers. SWAPO is now one party among many standing for election. It is not the sole representative of the Namibian people. If that were so, an election would not be necessary. The African National Congress stance on South Africa comes to mind that all that need to be discussed are the modalities of the transfer of power. However, SWAPO has to compete with other political parties in the election market.

Mr. Hunter: The hon. Member for Brent, South said that chance, hope and opportunity were what the Namibian people should be given, as should all people of southern Africa. Will my hon. Friend the Member for Nottingham, East (Mr. Knowles) extend his argument to include or expand the proposition that SWAPO is not the vehicle to give chance, hope and opportunity when it so manifestly abuses the peace process that is being implemented?

Mr. Knowles: My hon. Friend must bear with me. I can believe that many individuals among the SWAPO troops were under the misapprehension that they could return to Namibia, and some paid a high price—indeed, the ultimate price—for that misapprehension. Who issued the orders to them? Eighteen hundred troops do not cross a border in such a solid way by chance or misapprehension. It was a deliberate move and the higher command of SWAPO must have issued the orders.

Mr. Hunter: Perhaps it was Nujoma.

Mr. Knowles: It may well have been Nujoma.

At the last count I saw 42 parties were to run in the elections, although I expect that it will boil down to six or seven. One advantage that Namibia has, and will have when it becomes independent, is that its black politicians have been in place for a long time, so when it gains independence it will not be a direct transition from colonialism. The fact that there are black administrators who run large enterprises will be an advantage. As the hon. Member for Brent, South knows, there is a considerable infrastructure in Namibia, including road networks and industries. The cost of the war has been appalling, but there is much left on which to build.

The difficulty with the Council of Churches in Namibia is that it is often seen, whether fairly or unfairly, as a mouthpiece for SWAPO. The point has been made that we need much more aid for Namibia, especially to back up the democratic processes. It was pointed out, for instance, that there was not enough money for the UNHCR.

My right hon. Friend the Minister will be aware that a large tranche of aid was voted by the European Parliament the other week to help the democratic process. We must ensure that the money is used for precisely that purpose —that it does not disappear into holes and is not misappropriated. That responsibility will lie primarily with the European institutions, but I do not doubt that my right hon. Friend will have a say in the matter, as indeed she should.

The hon. Member for Brent, South rightly said that this settlement is entirely different from the position reached in Zimbabwe. He made a point which must, I believe, always be made about any circumstances in southern Africa— that, however much it may be deplored, the truth is that the economy of southern Africa as a whole depends entirely on South Africa, its railway systems and its ports. Most ironically of all, even on Namibia's independence its main port, Walvis Bay, will still legally be an integral part of South Africa because of a settlement reached in 1896, when the British occupied it and it was passed on to the Cape colony. A final irony is that when Namibia rescinded some of the apartheid laws, people who broke the Immorality Act in Walvis Bay would be arrested and tried in South Africa but put in gaol in Namibia, where breaking the Act was no longer a crime—a truly bizarre situation. Matters will not necessarily become easier with independence, and in some respects they may even become more difficult.

I support what the hon. Gentleman said about increasing the size of UNTAG. More troops are needed on the ground, as well as more administrative support. Of course, that will not ultimately overcome the problem of dependence on South Africa—both on its administrators and on its supply routes—as the hon. Gentleman hopes because to get equipment through to support the United Nation troops requires the use of South African facilities. That is another example of the complexity of the problem and the difference between Namibia and Zimbabwe. Nevertheless, I believe that the extra cost of bringing in administrators and troops will be worth while because the alternatives are worse—either the settlement will break down and we shall go back to where we were, or find ourselves in a worse position and if independence breaks down we shall end up with a second Congo, which would be horrific. There must be a right to return for the exiles and all those who went into exile must be accounted for. The hon. Member for Brent, South commented on the South African record, but one must also comment on the SWAPO record. There are some nasty rumours about what has happened to some of the exiles and detainees in SWAPO hands.

The solution will not be easy. We know all too well that the concept of the nation state, which has been foisted on Africa as a whole, is a western European concept based on the boundaries drawn by the colonial powers and does not accord with the reality of the stage of development in many countries. The idea that political parties are anything other than expressions of national or tribal feeling is nonsense. When many make the prediction that SWAPO will win the election, it is based on the simple statistic that the Ovambo people, who are SWAPO's main support, now constitute about 52 per cent. of the population. In 1980, they were about 46 per cent. of the population. Many Ovambo were previously in Angola because of the colonial division drawn through the middle of their territory but have now come to Namibia, so there is an additional 6 per cent. of Ovambo who are refugees from Angola. There is no way to distinguish between those who are theoretically Namibian citizens and those who are theoretically Angolan citizens.

As 52 per cent. of the population support SWAPO, it is likely that SWAPO will gain a majority, although I am not sure that it will gain the two thirds needed to set up the constitution. As the hon. Member for Brent, South said, that is currently the key argument about the settlement. We need more resources in Namibia now to ensure that a settlement takes place. The alternative of a breakdown after independence, which would be a replay of the Congo or Angola where there were nearly equally balanced power blocs, is too awful to contemplate. Every hon. Member would agree with that point of view.

9.53 pm

Mr. Bernie Grant (Tottenham): I congratulate my hon. Friend the Member for Brent, South (Mr. Boateng) on raising this debate. He has brought a measure of sense into the debate that did not, I am afraid, exist when the Prime Minister spoke in the House a week ago last Tuesday. I also want to congratulate him on going to Namibia and being there at a time when the situation was very dangerous for him and, of course, for the people of Namibia.

The hon. Member for Nottingham, East (Mr. Knowles) mentioned to me some time ago that he had been invited to South Africa by the South African Government. He admitted to me that he had been shocked by apartheid in practice, but clearly he was not shocked enough to be able to change sides and join us in opposing the apartheid system perpetrated by the South African Government. I shall not be as friendly as my hon. Friend the Member for Brent, South. There are a number of culprits who need to be named and the first and chief culprit is the Prime Minister herself. She has been aware for some considerable time of the situation in Namibia.

On 31 January 1989 I asked the Prime Minister this question:

"Is the Prime Minister aware that the United Nations secretary-general has been compelled by the five permanent members of the Security Council, including Britain, to propose a reduction in the number of United Nations troops in Namibia from 7,500 to 4,650 during the transition to independence? Has she heard the views of President Mugabe

of Zimbabwe, who has stated that the five permanent members of the Security Council have been fiddling with the moralities of resolution 435? In view of the fact that she will shortly be visiting Zimbabwe and that South Africa continues to support armed bandits and assassination gangs, will she review Britain's position in this matter and insist that the original numbers of troops be maintained?"

That was a pretty straightforward question. In reply the Prime Minister said:

"I should have thought that the hon. Gentleman would wish to uphold a decision of the five permanent members of the Security Council. We shall honour it. The agreement was an excellent one and was obtained by the co-operation of those five members plus the co-operation of South Africa and Angola. I believe that we should do everything in our power to see that it is fulfilled. As far as this country is concerned, we pay our full subscription to United Nations peace-maintaining forces everywhere."—[*Official Report*, 31 January 1989; Vol. 146, c. 163.]

As usual, the Prime Minister avoided the issue, but there is no way in which she can say that she was not warned about the position.

We talked in great detail about the reduction in United Nations troops. I asked the Prime Minister whether Britain, as one of the five permanent members of the Security Council, would intervene and insist that the original number of troops should be maintained. She refused to do so. The Prime Minister owes the House an explanation not only because she refused to take any notice of that point, but also because of her subsequent actions.

My hon. Friend the Member for Brent, South referred to the fact that the Prime Minister quoted from the so-called confidential document. I am pleased that she has taken the initiative and that that United Nation document is to be placed in the Library. However, we still need an explanation from the Prime Minister about the matter. After her evasion of the truth, in her usual arrogant way she sent along the Leader of the House to apologise for her. She did not and she could not bring herself to apologise in person.

The Prime Minister also said that SWAPO was guilty of "a most serious challenge to the authority of the United Nations."

There is no provision in the United Nations plan that prohibits the entry of SWAPO personnel into the country prior to the commencement of the plan. The real challenge to the United Nations was the breach of the ceasefire. There is no evidence that SWAPO opened fire first. All the evidence from independent sources blames the South African police and Koevoet for launching unprovoked attacks against SWAPO. We challenge the Prime Minister to produce evidence that SWAPO was the first to breach the ceasefire.

Mr. Hunter: Is the hon. Gentleman asking the House to accept that the United Nations process for the implementation of resolution 435 includes armed—I stress the word "armed"—SWAPO guerrillas entering Namibia after 1 April? Does he understand that that was part of the agreement?

Mr. Grant: As far as I am aware, United Nations resolution 435 does not prevent SWAPO guerrillas from entering the country. That is what is important. If there is nothing to prevent SWAPO guerrillas from entering the country, they are at liberty to do so. It is, after all, their country. It is not the United Nations' country or South Africa's country. They have a right to enter the country whenever they wish.

The Prime Minister also said that SWAPO had committed itself to the Geneva accord. The words "Geneva protocol" would have been more correct. Under that accord, SWAPO is required to stay north of the 16th parallel in Angola. SWAPO was not a party to the accord, as my hon. Friend the Member for Brent, South mentioned, nor has it ever endorsed it. The only undertaking that SWAPO gave was to agree to a unilateral ceasefire in accordance with the protocol. Nor does this protocol form any part of the United Nations plan. Again, we challenge the Prime Minister or her right hon. Friend the Minister of State to produce evidence that SWAPO has ever committed itself to the Geneva protocol.

The question with which I and, I am sure, other Members on both sides of the House are left is this: why was the Prime Minister so gullible? Why was she so easily taken in by the propaganda of the South African forces? I hope that the Minister of State will answer some other questions. Why, for instance, did she not make a statement to the House when she returned——

It being Ten o'clock, the motion for the Adjournment of the House lapsed, without Question put.

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. John M. Taylor.]*

Mr. Grant: Why, for instance, did she not make a statement to the House after her visit to southern Africa, as she did last year after she had been to Nigeria and north African countries? What was she afraid of? Was she afraid that her statements would be put to the test? Could she not have answered the questions that we wanted to put to her? Why was she afraid?

There is another question: why did she seem to get everything wrong? Why was she so eager to accept the South African position? Did she not read—as I did—the report of the United Nations' representative in Namibia, which said that SWAPO did not have any hostile intent? Did she not think, "Maybe I can give them the benefit of the doubt"? Certainly not. I suggest to the House that the Prime Minister is, indeed, a true friend of the racists and that she cannot stand the idea of Namibian independence. That is the fact of the matter.

I should like to go on at length, but we want to hear an answer from the Minister. However, I have to say that there has been another party to this misinformation—the press, the media. I was shocked when I read reports emanating from Windhoek, from the chief reporter of *The Independent*, who not only accepted the South African position, hook, line and sinker, but went on to attack Sam Nujoma, the Secretary-General of SWAPO, in terms that made it clear to me that *The Independent*, through its reporters in Windhoek, was basically acting as the agent of the South African defence forces.

We demand that the Prime Minister come before the House and make a proper statement about her visit to Namibia, about the fact that she interfered in the peace process there, about the fact that she refused to do anything about the cut in the UNTAG forces put forward by the Security Council, of which the United Kingdom is a member. We demand that she come here to give an explanation about the confidentiality of the report of the United Nations Secretary-General. We demand that she give evidence as to why she thinks that SWAPO has broken any agreements—and we want her to produce those agreements.

[Mr. Grant]

Many hon. Members and many people outside who are paying attention to our deliberations want answers to at least some of those questions. I hope that the Minister will be able to answer some of them this evening, but the Prime Minister should certainly be here.

10.4 pm

Mr. Andrew Hunter (Basingstoke): I shall disregard much of what we have heard because I believe it to be wrong and irrelevant to the process of independence in Namibia. The essential point is that the process must work because there is so much at stake. So much can go wrong in Namibia and the implications of things going wrong are fearful to predict with regard to other parts of southern Africa.

SWAPO is no angelic force and its leader, Sam Nujoma, is no angel. It has committed monstrous crimes in the name of its pursuit of freedom and independence in Namibia. We must not forget that in past years there have been many people—black skins, white skins and people from many origins and races—trying to create a basis for a genuine democratic state in Namibia. They must succeed.

I shall say no more other than to stress the fact that one must dicount the proposition that SWAPO is a redeeming force any more than one can say that the African National Congress is the redeeming force for South Africa. There are other forces of moderation and compromise which are seeking a way to create a genuine democratic society. That must be the way.

Miss Joan Lestor (Eccles): Will the hon. Gentleman give way?

Mr. Hunter: No, I have finished.

10.6 pm

The Minister of State, Foreign and Commonwealth Office (Mrs. Lynda Chalker): I welcome the opportunity that has been provided by the hon. Member for Brent, South (Mr. Boateng) to speak about the latest developments in Namibia and the first two difficult weeks of the implementation of the United Nations plan for the transition to independence. These are events of major regional and international importance.

As my hon. Friend the Member for Basingstoke (Mr. Hunter) said, independence must be made to work in Namibia. The process must succeed. It is vital to Her Majesty's Government and everyone who wants to see peace in Namibia that we do everything we can to make the process succeed. As the hon. Member for Brent, South said, success is vital to the Oshikati boy and all the other young people, let alone those who have suffered a great deal in recent years.

That success can take place only if all parties adhere to the United Nations plan. It is also crucial that the authority of the United Nations is upheld. Therefore, I hope that, despite one or two remarks we have heard tonight, the House will unite in emphasising that Britain will give unstinting support, as it has already, to the efforts of the United Nations Secretary-General, his special representative in Namibia, and all those who are working for peace in that much benighted country.

I shall respond to the remarks made about my right hon. Friend the Prime Minister by the hon. Members for Brent, South and for Tottenham (Mr. Grant). My right hon. Friend condemned SWAPO on the basis of information which had been given to the Secretary-General of the United Nations. It is clear that her judgment, on Tuesday before last, of the events that had occurred was correct. It was not only her judgment but it was shared by the United States, Cuba, Angola and the Soviet Union. I happen to know that it is shared by some African nations which are as concerned as anybody in the House to see peace in Namibia.

When the Secretary-General's report to the Security Council was delivered on 3 April it was delivered in confidence, although much of its content was known. I am surprised that the Secretary-General should use the hon. Member for Brent, South as his channel of communication. Nevertheless, the information has been known to all of us, if not the exact wording. When hon. Members have the chance to see the exact wording they will know exactly why my right hon. Friend the Prime Minister and I have spoken about the incursions in the way we have.

Enough of that——

Mr. Boateng *rose*——

Mrs. Chalker: I would like to get on, if the hon. Gentleman will allow me. He did speak for some 52 minutes. That is his right, I know, but he gave me a lot of things to answer, so perhaps he will let me continue.

The hon. Gentleman made a very interesting defence of SWAPO in his contribution tonight, but he failed to disguise two vital points. First, none of the bloodshed, the deaths that my hon. Friend the Member for Nottingham, East (Mr. Knowles) referred to and many others have so wept over, would have occurred if SWAPO had not violated the agreement it indeed had come to with the United Nations.

The Prime Minister's intervention in Windhoek on 1 April saved the peace process from complete collapse. I do not think there is any doubt in this country or in any of the other permanent member countries of the Security Council that without that intervention there could have been a far worse situation in Namibia.

I want to move on to what happened on the first——

Mr. Grant *rose*——

Mrs. Chalker: No, I will not give way at the moment. The hon. Gentleman has already spoken.

I want to move on from the first day of the agreement because throughout recent months this country has been thoroughly active in support of the United Nations plan. In recent days our Signals unit of about 170 people arrived in Namibia and was immediately deployed to the north. It is playing a leading role there, not only carrying out its signals task but manning the nine assembly points to which the SWAPO insurgents are due to report. In the light of the need to speed up deployment of the United Nations transitional assistance group, Britain made available to the United Nations at under two days' notice 55 Land Rovers and 12 4-ton trucks, which were airlifted earlier this week to Namibia. We have already contributed half a million pounds to UNHCR for the repatriation of Namibian refugees.

I should like to say to the hon. Member for Brent, South that I will look into why that money is not already

passing through to RRR and the Churches. Certainly it has been paid over because, as in all other cases, the United Kingdom pays its dues promptly to the United Nations and intends to go on doing so.

In addition to that, let me just remind the House that the financial contribution from Britain to UNTAG is about £14 million. In other words, we are determined to do all we can to establish peace in Namibia. That is true of those people who collect through their Churches to send goods out to Namibia right through the whole of our population, including the Prime Minister. I refute absolutely what the hon. Member for Tottenham said. He made a number of very foolish statements tonight. I hope that I shall not have to haunt him with them in the years ahead.

Let me say one other thing about the tragic blunder that SWAPO made in sending over 1,800 troops south across the border into Namibia in contravention of the United Nations plan. I do not want to dwell on it, but there is one point that I think is very important.

Mr. Grant *rose*——

Mrs. Chalker: Perhaps the hon. Gentleman will just let me finish my sentence.

Some commentators have claimed that the five permanent members of the Security Council were somehow at fault because the total numbers deployed by UNTAG are fewer than originally envisaged in the 1978 United Nations plan. This is nonsense. It was the United Nations Secretary-General who decided, on the basis of expert military advice which was gathered in Namibia, the size of the force required for UNTAG. He formed his report on the basis of information gathered at the end of 1988 and it was presented to the Security Council on 23 January this year.

The five permanent members of the Security Council, including ourselves, supported him immediately, but the Security Council as a whole accepted the Secretary-General's recommendations finally only on 16 February. The General Assembly then delayed its approval until 1 March.

By telling the House those dates, I seek to explain why 4,650 persons were not deployed on 1 April. It was because we had gone through a regrettable delay, caused by the filibustering of those who disagreed with the Secretary-General of the United Nations. The six weeks that were lost at that point were crucial.

Even if all the UNTAG troops had been in Namibia on 1 April, they could not have prevented the bloodshed in the north. The House should remember that UNTAG was never designed to engage in a pitched battle with armed insurgents. It was to keep the peace and to take Namibia through the transitional process to its elections on 1 November.

Mr. Grant: The Minister emphatically said that SWAPO broke the United Nations agreement. Will she give us chapter and verse about any agreement that SWAPO made with the United Nations on this matter? Will she give us the facts, if not tonight then at some other time?

Mrs. Chalker: There was no excuse for misunderstanding by SWAPO. We accept that the United Nations plan is not a single document. It consists of a settlement proposal, followed by a large number of subsequent agreements and understandings which date back as far as 1978. The facts are as follows. The document to which Opposition Members have sought to refer today and on previous occasions was the then Secretary-General's report back in February 1979. That is the only document that has ever proposed that any SWAPO forces would be in Namibia at the time of the ceasefire. That proposal was made without consultation with the contact group, and it was overtaken in 1982 when SWAPO agreed that the clause should be disregarded. An agreement was reached on monitoring by UNTAG of SWAPO bases which would be in Angola and Zambia.

It is clear from the Secretary-General's report of 23 January this year that UNTAG's military tasks, which are listed in paragraph 43, were without reference to SWAPO bases inside Namibia. Further to that, it was made clear that, in August last year, SWAPO forces would be deployed to the north of the 16th parallel in Angola. That matter was known and acceped by SWAPO. SWAPO told the Secretary-General in August last year that it unilaterally accepted the Geneva accord. Early this year, in New York, it was again reminded of the exact arrangements. There was no excuse for it not to know.

The actual deployment of which I have spoken and which was so delayed is most important. We have always pressed for the speedy deployment of the 4,650 men. The Finnish battalion went with the airlift of equipment from Britain and will take up position on Saturday 15 April. That will mean that all three battalions will be fully deployed by 20 April.

My hon. Friend the Member for Nottingham, East and other hon. Members have referred to reinforcements. We have said from the beginning that we and other Security Council members will promptly consider any request by the Secretary-General of the United Nations for further reinforcements of the 4,650, but there is no sign that that request will necessarily be forthcoming. If it is forthcoming, it will be carried out quickly. There is also no need for further United Nations troop numbers if we can keep the United Nations plan on track. Observers, of whom there are increased numbers in the 4,650, represent a more important way of proceeding in this matter.

Since 1 April, when we have been more active than perhaps could have been anticipated in getting the United Nations plan on track, our representations have concentrated on encouraging each party to honour the agreed United Nations plan. As the House knows, the Joint Commission of Angola, Cuba and South Africa met urgently last weekend at Mount Etjo. It produced a declaration which we strongly support.

That set up a process for restoring the ceasefire and putting the United Nations plan back in being by setting up a mechanism for monitoring SWAPO assembly and withdrawal to Angola. Our embassies in Capetown and Luanda and the British liaison office in Windhoek are active in supporting the implementation of that Mount Etjo declaration.

It would be wrong to pretend that there are no problems; some of them we have heard about tonight. But let us not forget that the arrangements to assist with this withdrawal exercise could not have been prepared in advance because such arrangements would never have been necessary if we had not had the movement by SWAPO over the border from Angola into northern Namibia on 1 April in contravention of the United Nations plan.

[Mrs. Chalker]

That incursion was the root cause of many of the problems that we have since seen. It is now vital that SWAPO should withdraw north of the 16th parallel in Angola, that its bases there should be monitored by the Angolans, as previously agreed, and by UNTAG, and that all sides should show restraint.

That brings me to an important matter raised by the hon. Member for Brent, South and to a question he asked me yesterday. We believe that not only must SWAPO return north of the 16th parallel and its forces be under effective supervision, but that South African forces, too, must return to the position of 31 March—that is, to be confined to base and to be monitored by UNTAG: even-handed completely.

The declaration at Mount Etjo envisaged SWAPO reporting to UNTAG, but there was also provision in the declaration for a South African presence at the assembly points, and indeed for the Angolans to be present at the seven of nine assembly points which are on the border. We would naturally expect that the South African defence force and the south-west African police presence could not be on such a scale or deployed in such a way as to inhibit SWAPO reporting there.

We were also concerned about reports that the security forces wished to interrogate or even to photograph or fingerprint SWAPO forces. We made our concerns known to the South African Government at a high level. The House will have noted that since then the South African Foreign Minister has said that any questions about the identity of those reporting to assembly points will be asked by UNTAG, and he has confirmed that UNTAG will supervise the agreed procedure.

Mr. Pik Botha has also stated that there is no question of SWAPO members being interrogated and that the South African Government would not object to an extension of the period for SWAPO members to present themselves to the assembly points. It is also important that members of SWAPO should not seek to hide their arms in caches and merge themselves into the civilian population in Namibia. Our concern is that all concerned—I repeat, all concerned—must abide by what was agreed at Mount Etjo.

Another important point raised by the hon. Member for Brent, South was about Koevoet. South Africa has been disbanding the Koevoet counter-insurgency units. Certainly, some of them have been absorbed into the south-west African police. He knows that we hold no brief for Koevoet, and in the past we have raised their excesses with the South African Government.

No fewer than 500 United Nations police monitors will now be there alongside the Signals regiment from Britain, and others. Those police monitors deployed in Namibia —an increase of 140 on the 1978 level—will be there to monitor and see exactly what is going on. All the South African police and defence forces will be subject to monitoring under that plan by the observers who are being sent there.

I remind the House that the sooner SWAPO forces withdraw to Angola, the sooner effective police monitoring by the United Nations of the South African forces and police force can begin. It is obvious that the task of the monitors will be easier in conditions of peace, which is what their presence was designed for, than it would be if a bush war were raging.

Only when the withdrawal process has operated properly in Namibia can the United Nations special representative and the Administrator-General carry out their original tasks as set out in the United Nations plan. They will then be able to decide on the repeal of discriminatory legislation, which is vital, and on an agreed electoral system. It is crucial that there should be no more breaches of the United Nations plan by anyone. We will be monitoring implementation very closely and giving our full support to the United Nations. We also hope to work closely with other missions on the ground. The front-line states have a particular role to play and we welcome their decision to establish an office in Windhoek and will be working with them.

The hon. Member for Brent, South raised three other general points of genuine concern. On the first, refugee reception is a priority and we are anxious that it should go smoothly. I have already mentioned the £500,000 for UNHCR and we shall look into what the hon. Gentleman said about the RRR committee. We urge all the parties involved to agree to a system to assist the return of refugees efficiently and humanely.

The hon. Member for Brent, South also referred to the importance of political prisoners being freed. I agree. Political prisoners on both sides must be freed. Let us not forget that SWAPO has admitted holding over 100 political prisoners in Angola. We are concerned not only about those who have been prisoners of the South Africans; we look to SWAPO too to implement this important part of the agreement.

On human rights, we understand that the United Nations is already planning to talk to human rights groups. We are concerned that the United Nations special representative should have access to information from a wide range of sources, including SWAPO, and we have already raised this point in the Security Council. I am confident that the United Nations will have thorough discussions to meet all the concerns that the hon. Member for Brent, South mentioned and that others, including myself, will mention.

The hon. Member for Brent, South was in Namibia during the first days of the process. In the next seven months, there is a three-month period for the repeal of discriminatory legislation and for agreement on the electoral system. A four-month election campaign will start at the end of June. Under the agreed plan, the South Africans were under no obligation to negotiate on the legislation or on the electoral system before 1 April. However, that must happen now and those are the things that we want the Administrator-General and the special representative to get on with.

We have been giving aid to Namibia since 1976 and we shall be giving further aid. We hope that as peace is established, we shall be able to give further economic assistance both bilaterally and through the European Community.

We shall be watching most carefully to see that there is maximum freedom of information during the electoral process and minimum intimidation. We must be realistic. It is impossible to rule out all intimidation and I think that the hon. Member for Brent, South accepts that. We know that there will be problems and that there will have to be maximum restraint. However, the first priority must be for

us and all other nations that want peace in Namibia to support the authority of the United Nations and help it to get on with its job.

Yes, we want to put an end to violence and intimidation and we want to make sure that the political parties can put their case over. I spoke only this morning about the media, and especially the radio, becoming involved in the process.

It is true that the process started badly—indeed, it started very badly with the insurgency from the north—but provided that the Mount Etjo decision and agreement is speedily and completely implemented, I believe that the process of peace will not only be put on the track but kept on the track. It goes without saying that a successful move to independence is vital for Namibians of all parties and all ages, from the Oshikati boy to the oldest Namibian who wants to see his country free.

However, I believe that the implications go even wider than that. A successful transition to independence for Namibia will have a major impact on the prospects of peace in Angola and on the stability of the region as a whole——

The motion having been made at Ten o'clock and the debate having continued for half an hour, MR. SPEAKER *adjourned the House without Question put, pursuant to the Standing Order.*

Adjourned at half past Ten o'clock.

House of Commons

Friday 14 April 1989

The House met at half-past Nine o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

PETITION

Chiswick (Road Proposals)

9.34 am

Sir Barney Hayhoe (Brentford and Isleworth): I beg leave to present a petition signed by 11,793 people living, working and visiting in and around the Chiswick area of my constituency who are vehemently and determinedly opposed to the damaging, new major road proposals for this lovely part of west London.

I pay tribute to the dedicated work of Michael Robinson, Nigel Birch, Steve Brook and others, who have gathered these many signatures from those stating:

That we are opposed to any new proposals which include major road building in Chiswick and in particular to the new major roads proposed in options 3, 4 and 7 of Stage 2a of the West London Assessment Study.

Wherefore your petitioners pray that your honourable House urges the Right Honourable Paul Channon MP, the Secretary of State for Transport to dismiss from further consideration all proposals for major road building through Chiswick in the light of the destruction of homes and major damage to the environment and local community life these new roads would cause.

And your petitioners, as in duty bound, will ever pray.

I hope that the House will note, and the Secretary of State will act in accordance with, the petition.

To lie upon the Table.

Orders of the Day

Control of Smoke Pollution Bill

Order for Third Reading read.

Mr. Speaker: I have selected the two verbal amendments in the name of the hon Member for Basingstoke (Mr. Hunter), and it will be convenient to discuss them together.

Mr. Ivor Stanbrook (Orpington): On a point of order, Mr. Speaker. It is unusual for the Third Reading of a Bill, for which amendments are printed, to appear on the Order Paper. For the enlightenment of those of us who are not well acquainted with such matters, will you explain this?

Mr. Speaker: These are verbal amendments—of words. If the hon. Gentleman looks at the amendment paper he will see that they are small amendments to the words in the Bill and do not affect the sense of the Bill. This is unusual, but not unprecedented.

Mr. Ray Powell (Ogmore): Further to that point of order, Mr. Speaker. Will we be allowed to speak on the verbal amendments when they are announced—which will, I assume, be at the start of the speech of the hon. Member for Basingstoke?

Mr. Speaker: Yes, of course there will be a debate on the amendments. However, the hon. Gentleman will see from the Order Paper and the amendment paper that it will be a narrow debate.

Mr. Dennis Skinner (Bolsover): Further to that point of order, Mr. Speaker. You said that these amendments involve changes of words, but I thought that all amendments were changes of words. I took it for granted that if someone put down an amendment to a motion, it would change a word or delete some words. Do I take it that, in future, if someone wants to amend Bills on Third Reading—this is purely for the benefit of future exercises—they will be able to amend them on the basis that they are merely changing a few odd words here and there? Is that in order?

Mr. Speaker: Of course, I look at any amendments on the amendment paper carefully and it is not unprecedented to have verbal amendments. The hon. Member for Orpington (Mr. Stanbrook) asked for an explanation. I used the word "verbal" meaning "of a word" rather than "by the mouth". Is that clear?

Mr. Skinner: Yes, right.

Mr. Ray Powell: Further to that point of order, Mr. Speaker. This is important—you mentioned that this would be a narrow debate. In fact, it will embrace the Clean Air Acts, and, therefore, could be a wide-ranging debate. My hon. Friend the Member for Bolsover (Mr. Skinner) asked about submitting amendments—we are on Third Reading and I assume that we shall discuss the debates which have taken place prior to this.

Mr. Speaker: The hon. Member may have a somewhat wider debate when we come to Third Reading, but the first debate is on the Question, That the amendment be made. I think that we should now move to that.

Title

9.39 am

Mr. Andrew Hunter (Basingstoke): I beg to move, amendment No. 1, in title, leave out 'repeal' and insert 'amend'.

I understand that I may also speak to amendment No. 2, in title, leave out 'to amend'.

Perhaps I should explain that the only controversy about a vote on the Bill has been whether its modest objectives constitute the repealing of the Clean Air Acts or their amendment.

The debate has swayed backwards and forwards. When the Bill was drafted I was advised that it was a repealing measure. Subsequently, informed opinion decided that the modest contents of the Bill amounted to an amending of the Clean Air Acts. No matter of substance arises from the amendments and I commend them to the House.

Ms. Joan Walley (Stoke-on-Trent, North): As my hon. Friend the Member for Bolsover (Mr. Skinner) has said, it is extraordinary that we should have reached this stage of a Bill with so little debate. It is a small Bill but it is an important amendment to existing legislation. There has been no discussion of the Bill until this stage, and it is only now that it has come to light that the amendments are necessary. That is because the Bill, as it has been compiled by the parliamentary draftsman, or whoever, overlooks the fact that it deals with the amendment rather than with the repeal of legislation.

I look forward to the Third Reading debate because the Bill is important in the context of air pollution. Until now, we have had only a few words of discussion about the Bill in the House. It is extraordinary that the Bill has got so far without the House examining it in more detail. *Hansard* deals with the Bill in seven lines:

"**CONTROL OF SMOKE POLLUTION BILL**

Bill read a Second time.

Bill committed to a Committee of the whole House.—*[Mr. Hunter.]*

Bill immediately considered in Committee; reported, without amendment.

To be read the Third time on Friday 14 April."—[*Official Report*, 3 March 1989; Vol. 148, c. 571.]

It may well be that all legislation is important in terms of the speed and urgency with which it comes to the House. However, I wish that the Secretary of State had the same sense of urgency about bringing forward the green Bill and dealing with the many very important related issues of air pollution. I may not be here at the end of the debate because I have other urgent engagements. However, I have brought these matters to the attention of the House. In case I am not here when the Bill is passed, I should now like to congratulate its promoter on having introduced it. I regret that such an important, albeit minor, change to existing legislation should have got so far without debate. I urge the Government to treat the whole matter of environmental protection with much greater urgency.

9.45 am

Mr. Stanbrook: I am grateful to you, Mr. Speaker, for your assurance that the amendment is in order. However, I am still somewhat mystified about how on Third Reading we can get such a drastic change in the wording of the Bill. The purpose of the Bill is:

"To repeal section 16(1)(a) of the Clean Air Act 1956 and to amend section 1 of the Clean Air Act 1968."

The amendment seeks to amend section 16(1)(a) of the 1956 Act and to repeal section 1 of the 1968 Act. The original intention of the Bill was to delete section 16(1)(a) of the 1956 Act and to leave something in section 1 of the 1968 Act after the legislative process. We are now told that that was not the intention, but that it was to leave something of the 1956 Act and to delete section 1 of the 1968 Act.

How on earth is it possible for a Bill to come before the House and go through all its legislative stages with such a decisive and fundamental flaw? Did no one discover that nothing would be left of section 1 of the 1968 Act? Has that only just been discovered? We ought to have some sort of explanation, if only for the satisfaction of the legal draftsman.

Mr. Ray Powell: I am still rather confused about how amendments could have been allowed to be tabled. I do not have the legal knowledge of the hon. Member for Orpington (Mr. Stanbrook) and I should like to be assured that the amendments are entirely in order. I have no doubt, Mr. Speaker, that you have examined them in detail.

Amendment 1 seeks to leave out "repeal" and insert "amend". There is a profound difference in the meanings of the two words. If we repeal something, we take it away, but if we amend it we merely add to or subtract from what is already there. Those of us who have studied in great depth the Clean Air Acts and the repercussions of any repeal of their clauses or amendments to them, realise that that needs to be thoroughly examined. This morning we have been presented with two verbal amendments—a term that I have not heard before in the House. We have always had amendments that we can study in conjunction with the Acts to see their repercussions. It appals me to think that on a Friday we are discussing such far-reaching effects as are to be found in the Bill.

Smoke has always been prevalent in my area, because it was a mining area. In 1979 there were 7,000 to 8,000 miners in my constituency, all of whom were entitled to receive an allocation of free coal. That meant that coal was the fuel used throughout my constituency. When one stood on Bwlch mountain and looked down over the four valleys of my constituency, on a lovely morning such as this one could see smoke coming from practically every chimney. I arrived in London at the tender age of 17 and lived in Minet drive in Harlesden. I worked at Old Oak common in Acton and used to walk to work, because even in those days I could not afford to take the tube. No one was worried about riding in the tube in those days.

I am not all that old, Mr. Speaker, but perhaps I am a little older than you. In those days, many of us who had come to London used to tie a strip of gauze around the nose and mouth when we were going for a walk and when there was smoke or fog about in London. When I arrived in Acton, which was only about a 20 or 25-minute walk from Willesden and Harlesden, I would find a smear as black as coal on my mouth and on the gauze across my nostrils. That was caused by the pollution in London at that time.

We know, too, of the effect of pollution on this building. We cannot see a number of the statues at Westminster Hall because they were destroyed by pollution. It is therefore essential that at this stage we get right any measures that control air pollution. That is why

I strongly object to amendments being thrown in on a Friday morning without Members who have taken an interest in the matter being able to look at them in detail.

Mr. Win Griffiths (Bridgend): As my hon. Friend will know, I am a new Member of the House. I heard it said that this was an unusual procedure. Can my hon. Friend tell me how many times this procedure has been used and when was the last time that amendments have been presented in this way?

Mr. Powell: I cannot reply to that point, but I posed the same question in a point of order before I started my speech. I realise that my hon. Friend might have been delayed because he was seeking out the amendments to the Bill. I missed Prayers, in fact, because I was informed, as I was coming into the Chamber, that there were amendments to the Bill. I appreciate my hon. Friend's problem, and probably you, Mr. Speaker, can inform him of what has happened.

Mr. Skinner: My information is that the last time that this was done was 18 years ago, but it was done in completely different circumstances. As my hon. Friend the Member for Ogmore (Mr. Powell) has been explaining, we have before us today a Bill whose several stages were rushed through at the end of business one Friday. The Bill was probably planted on the hon. Member for Basingstoke (Mr. Hunter). I am not too sure about that, but all the signs are that a Government Whip went along and said, "Shove this forward for a particular Friday in order to block something else." That is what usually happens and, therefore, those very weird circumstances have taken place. It is conceivable that the hon. Gentleman himself was not sure what the issue was all about. It went through on the nod and the result is that we have a Bill that in many ways is so cock-eyed that it should have been taken back.

My hon. Friend the Member for Ogmore is on to a very good point. I am certain that the way in which the Government have pushed through the measure has been an embarrassment to the authorities of the House.

I think, too, that there is another reason for us having this mess, which is that the Prime Minister went green—or mouldy, as some would say—some time ago, and she had to prove that she meant business. So what better than to say, "Let's look as though we are going green on the Clean Air Act and beef it up a bit"? A Whip therefore looked for a participant on the Tory Benches and said to him, "Here you are, we can make it look as though the Tory party is carrying out its green proposals." However, because it is not really a party that is in favour of collective green action, the Government got the whole thing wrong.

Mr. Powell: I agree with my hon. Friend. I understand what he says about the progress of the Bill from stage one. However, I do not know whether I could go as far as to suggest that Whips on either side of the House would have been involved in such matters. I very much doubt whether they would have been involved in any sort of intrigue. You yourself, Mr. Speaker, will accept that Whips would not become involved in such actions.

I shall return to the first amendment, concerning the word "repeal", and what my hon. Friend the Member for Bolsover said about the Prime Minister. What appals me is the fact that my secretary and agent—who is a councillor of some 35 years' standing and a justice of the peace, who has received an MBE and is well-respected in my constituency—was appointed to the national Clean Air Council. She is a miner's widow. She had a great interest in pollution and she regularly attended the meetings. She reported to me regularly about the discussions at those meetings.

Then in 1979, there was an election and the green goddess got to number 10—although she was not as green as she is now. She walked up the yellow brick road and she got to number 10 Downing street. Overnight, the right hon. Lady abolished the Clean Air Council. She dismissed the services of my secretary and agent, Councillor Mrs. Muriel Williams, MBE, JP, with her 35 years' experience in local government and in other areas.

Now, 10 years later, because a big conference was to be held in London, involving 124 representatives from all over the world, the right hon. Lady has become interested in the Clean Air Act 1968. It is a pity that she was not interested in 1979 or 1980 and she did not retain the services of my secretary-agent of 70 years of age to look after the interests of the people in my constituency and in Wales.

Mrs. Gwyneth Dunwoody (Crewe and Nantwich): Is it not a fact that, because the Government—for example, under planning laws—have made it much easier for people to develop in areas where previously it was not acceptable, that there will be more pollution rather than less? This sort of amendment will have a direct effect on the quality of life of all our constituents.

Mr. Powell: My hon. Friend is right in saying that there are some considerable problems. I shall illustrate one planning problem and the difficulties caused to some Members of Parliament. We are looking—especially in parts of Wales—for industrialists to come into our areas to invest, because we want industry and we want jobs. Whether they come from Japan or anywhere else, we seek them out to provide jobs in our areas. My hon. Friend the Member for Cynon Valley (Mrs. Clwyd), has a problem, because she has a phurnacite plant in Abercwmboi, which produces smokeless fuels. However, the production of those smokeless fuels, causes a tremendous amount of pollution.

Mr. Speaker: The amendment concerns the changing of two words. I believe that what the hon. Gentleman has said is more appropriate to the Third Reading of the Bill.

Mrs. Dunwoody: On a point of order, Mr. Speaker, which is related precisely to the wording. It appears that "to amend", which in this case is a verb without any qualifying wording, could create considerable difficulty for the House. I should have thought that the parliamentary draftsmen, who are so careful about the use of the English language, would have told us that such a verb, without any qualification, could create considerable difficulty. Is it not the case that "to amend" must by implication give some indication of the manner in which, how and to what extent it amends? A verbal amendment of this kind will lead my hon. Friend the Member for Ogmore, for example, who is developing specific points about smoke control, into considerable difficulty if he does not know in which way the Bill is to be amended and to what extent.

Mr. Speaker: The House sometimes finds itself in difficulties when a Bill goes through all its stages without any debate. The House will know that the Chair is in difficulty, and that it deprecates that practice. However,

[Mr. Speaker]

such a difficulty has arisen today and that is why, exceptionally, the House must consider amendments on Third Reading.

10 am

Mrs. Dunwoody: Further to that point of order, Mr. Speaker. I would never dream of arguing with you, as I know that you are only following precedent—that you will have been given advice and will be aware that such a precedent has been established. The difficulty lies in debating a narrowly drawn amendment that seeks to substitute only one word, but that will basically change the Bill without the House knowing in what manner the Bill is to be changed. While I have no desire to argue with the Chair, the amendment creates enormous problems. If the debate on the amendment is narrowly confined—obviously the Chair will want the right hon. and hon. Members to keep well within the rules of order—the House will have to agree or disagree to the amendment without being perfectly clear as to its exact meaning. The problem is not the amendment itself but the enormous implications that it has for the Bill.

Mr. Speaker: I say again that we are in this difficulty because of what happened. However, the House must observe the rules of order. The debate on the amendment is narrow, but the Third Reading debate is much wider.

Ms. Walley: Further to that point of order, and to my introductory remarks, I believe that you, Mr. Speaker, have been placed in a very difficult situation. Obviously there is no way in which the situation can be redeemed in respect of the Bill and of the whole issue of smoke control and related matters of air pollution. However, I wonder whether you could discuss the situation with whoever has responsibility for such matters, to ensure that the House will face a similar situation again. Then at least something constructive would come out of the Government's clear attempt to ensure that the Prime Minister has some sound evidence to show the nation that she has gone green.

Mr. Speaker: It is not unprecedented for a Bill to go through all its stages on a Friday. However, I repeat that that practice is always deprecated by the Chair. Even small measures should never go through the House of Commons without debate.

Mr. Skinner: Further to that point or order, Mr. Speaker. Normally, it would be difficult for my hon. Friend the Member for Ogmore (Mr. Powell) to speak at range over the whole compass of the Bill. However, the Bill passed through all its previous stages in a shabby fashion several Fridays ago, because it was planted in the fist of the hon. Member for Basingstoke (Mr. Hunter) by the Whips, and he did not know what he had been given. That is the bottom line. That meant that the Bill could not be debated.

Mr. Speaker: That is in the hands of the House. As the hon. Gentleman well knows, it requires only one right hon. or hon. Member to object, and a Bill cannot immediately proceed.

Mr. Skinner: If I had been present, an objection would have been made. The fact that the hon. Member for Basingstoke has not spoken to the Bill at any length today creates another problem. He has given little or no indication of the Bill's purpose, which leaves the House in a predicament. On the first occasion that the hon. Gentleman is given an opportunity to speak to the Bill, he hardly opens his mouth. As a consequence, the House is left in a quandary.

In the absence of proper discussion, you, Mr. Speaker, would be correct to be more liberal in your interpretation of what can be said on this occasion, as compared with the situation in which full and frank discussion had earlier taken place. In the absence of full and frank discussion, my hon. Friend the Member for Ogmore must surely have the right to expand on his argument as to what effect the amendments would have in certain circumstances. In that context, my hon. Friend travelled down a reasonable path.

Mr. Speaker: We are all bound by Standing Orders. The hon. Gentleman in his other incarnation, when he has the difficult responsibility for chairing meetings, is bound by his standing orders.

Mr. Skinner: I get things through on the nod as well.

Mr. Speaker: That is not a very wise thing to do. I may point out that the hon. Member for Basingstoke (Mr. Hunter) has the right of reply.

Mr. Powell: On only one occasion, at midnight some years ago, have I ever failed to respond to your ruling from the Chair, Mr. Speaker. I well recall the incident, because within two minutes I was going through the front gates. I do not want to do that this morning.

The first amendment seeks to leave out the word "repeal". The argument I was developing about the phurnacite plant at Abercwmboi is important in that respect, because if we repeal the Clean Air Acts of 1956 and 1968, that will have wide implications for the Cynon valley and for the plant. It will allow developers to take certain action which, if we amend the legislation rather than repeal it, they would not be allowed to take. Those are the reasons, Mr. Deputy Speaker, why points of order were earlier raised and developed.

The products of the phurnacite plant are designed to protect the environment, so any amendments to the Bill would directly affect that plant. I presume that you, Mr. Deputy Speaker, share the views expressed earlier as to how the House should deal with the two amendments, and as to whether right hon. and hon. Members are in order to develop further arguments about the Clean Air Acts and about the Bill itself. I appreciate that we are not having a Third Reading debate, so I shall not prolong the arguments. Nevertheless, because of the amendments' far-reaching effects, and until such time as the Chair brings me further to order, I shall cite one area of complication that affects my own constituency.

The Rockwool factory produces insulating fibre used in lofts and walls, which has a direct effect on energy conservation in the buildings in which that product is used. The factory produces a lot of smoke. In the Heol-y-Cyw and Pencoed areas, the community council, Ogwr borough council and the county council have been all involved in numerous objections about smoke emissions. That factory produces fibre that is used in energy conservation.

One of the dilemmas that face Members of Parliament, whatever their constituencies, is whether to join forces with the community and the borough or county council in objecting strongly to the pollution of an area or whether, in order to safeguard—in this instance—some 400 jobs, to

try to pacify some of the objectors. Those of use who are concerned about clean air take care to ensure that industrialists who come into such areas at least receive guidance.

All possible precautions have been taken. My hon. Friend the Member for Bridgend (Mr. Griffiths) will have taken action at community level to try to stop the pollution in the area——

Mr. Skinner: My hon. Friend is developing a reasonable argument about smoke and pollution. He may not yet have made up his mind about whether he favours "repeal" or "amend", but if we get on to that ground we shall, I think, be able to discuss the matter at some length and try to ascertain the truth. The crucial issue is whether my hon. Friend is in favour of the amendment or against it. I should like to hear the answer from him, because I am still in some doubt. Once we have heard whether he considers this a good or a bad amendment, we shall be able to dig a few tons of coal.

Mrs. Dunwoody *rose*——

Mr. Deputy Speaker: Order. Has the hon. Member for Ogmore (Mr. Powell) finished his speech?

Mr. Powell: No, Mr. Deputy Speaker.

Mr. Deputy Speaker: I cannot take an intervention on an intervention.

Mr. Powell: I accept what has been said by my hon. Friend the Member for Bolsover (Mr. Skinner). This is an important point.

I have considered the matter carefully. Having tried at the same time to arrive here, read the amendments, listen to the objectors from the league of representatives on the Conservative Benches and be guided by them, by Mr. Speaker and by the Clerk of the House, and having then participated in the debate, I have found it difficult to decide between "repeal" and "amend". You, Mr. Deputy Speaker, with all your experience in the Chair and on the Front Bench, will know the problems with which we are sometimes confronted at this time on a Friday morning. I have decided, however, that I do not want the Act repealed, so I shall support the amendment.

Mrs. Dunwoody: I am a little worried by what my hon. Friend has just said. I went out of the Chamber just now because I was concerned about the narrowness of the amendment. Having obtained a copy of the Oxford English dictionary and looked up the definition of "amend", I think that we are going to get into some difficulty.

The definition gives the French and Latin roots of the word, which I cannot use because, in using a foreign language, I should be out of order. It goes on, however, to explain the various meanings:

"to free . . . from faults, correct . . . convert . . . To rectify . . . To emendate. 1483"—

I had not encountered that. The dictionary also defines "amend" as to make alterations in a Bill before Parliament, to repair, to restore, to heal the sick, to improve, to better and to make amends for an offence.

That seems clear enough, until we begin to consider exactly what is meant here by "amend". Are we to amend specific parts of the wording? Are we to change or make better, and if so in what manner? Before my hon. Friend accepts the amendment and its implications so readily, will he consider that?

Mr. Powell: My hon. Friend has made a valid point. She said that she could not give definitions in French or Latin because she would be out of order in doing so, but perhaps if she had given a Welsh definition that would have given me some guidance.

10.15 am

Mr. Skinner: I do not accept the point often made in the House that hon. Members cannot speak in other languages. The Prime Minister has several different languages of her own. She has changed her voice so many times that it is unbelievable. When Gordon Reece came along, he said to her, "You have got to lower your voice", so she came in here one day—not long after she had become Prime Minister—with a different voice. Then there is her stentorian-type voice.

As for foreign languages—for I see that you are shuffling in the Chair, Mr. Deputy Speaker—lawyers often use Latin in here.

Mr. Harry Greenway (Ealing, North): On a point of order, Mr. Deputy Speaker—as this is an intervention on an intervention. Do not the rules of the House lay down that any language used here must be understood by other hon. Members? In that case, a foreign langage would not be ruled out. A language such as Welsh——

Mr. Deputy Speaker: Order. I think that the practices of the House are sufficiently well known for us not have a debate on them. We are in danger of having a debate about the use of language rather than about the amendments. Can we get back to them?

Mr. Greenway: I am asking for information.

Mr. Deputy Speaker: Order. I suggest that the hon. Gentleman consults "Erskine May". That is why we put copies out.

Mr. Skinner: My hon. Friend the Member for Ogmore (Mr. Powell) should use the phrase "ultra vires". The whole thing is ultra vires.

Mr. Powell: All this discussion has come about because something has happened that I understand has not happened for 18 years. I was not a Member 18 years ago, but I am sure that other hon. Members will recall the incident. In all probability, if we looked it up in the *Official Report* we should find that there was just as lengthy a debate then on the introduction of "verbal" amendments on the Floor of the House.

We have been placed in this position because someone thrust these amendments in front of us five minutes before we came into the Chamber, stopping us from attending Prayers. It makes me wonder whether the House should have been adjourned for 10 or 15 minutes for us to consider whether to insert "amend" or retain "repeal". My hon. Friend the Member for Crewe and Nantwich (Mrs. Dunwoody) had the chance to go out and seek advice, and then to pass on that advice to us, for which I am grateful. Having listened to her interpretation of "amend", I am in a dilemma as to whether to accept her advice.

Mr. Stanbrook: I think that the problem is even more difficult to solve than the hon. Gentleman supposes.

[Mr. Stanbrook]

Clause 1 clearly amends section 16 of the Clean Air Act 1956, whereas the wording in the title speaks of repealing it. It seems to be common sense, therefore, to change "repeal" to "amend". After all, clause 1 says:

"there shall be inserted the words".

That is clearly an amendment rather than a repeal.

However, clause 2, which we are invited to say is a repeal, simply states:

"In subsection (1) . . . after the words . . . there shall be inserted the words".

Clearly, that is an amendment, not a repeal. In other words, those who are bringing forward these provisions have got them the wrong way round in any event. Whereas one could agree that clause 1 is an amendment to the principal Act, one cannot agree that clause 2 is a repeal of the other principal Act. The wording by itself is an amendment, and that is our difficulty.

Mr. Powell: I have now been advised by a professionally qualified legal representative from the Conservative Benches, the hon. Member for Orpington, and I think that the Chair should be asked to consider this matter. I accept entirely what has been said, and my hon. Friend the Member for Crewe and Nantwich has been concurring with that. If what has been said means that the wording should be turned around and, as on our arrival this morning we found these verbal amendments, perhaps we can seek advice from the Chair or the Clerks to see whether the amendments could be put the other way round. In view of what the hon. Member for Orpington has suggested, if we "repeal" as he suggested and "amend" as in the first amendment, would there be any opportunity for you, Mr. Deputy Speaker, to consider whether we would then be in order—or would we be more in order if the amendments were to be reversed? Perhaps the hon. Member for Basingstoke (Mr. Hunter) who promoted the Bill will agree to the amendments being reversed so that we can get on with debating the amendments. I ask for your guidance on this, Mr. Deputy Speaker, before I continue with my speech.

Mr. Deputy Speaker: If the amendments had not been in order, they would not have been selected.

Mr. Powell: We accept that if they had not been in order, they would not have been selected, but it has been pointed out to us that, to be in order and to carry the meaning that I believe the promoter of the Bill intended, they should be reversed. Is it possible for them to be reversed at this stage as they were tabled only this morning?

Mr. Deputy Speaker: The hon. Gentleman is asking me a question rather different from the one that he posed in the first place. It is the question not whether the amendments are in order in terms of their admissibility under our Standing Orders and the usual test, or whether they would improve the structure of the Bill. The second point is not a matter for me. If the hon. Gentleman is asking whether it would be procedurally possible, the answer is that it may well have been possible at the outset of our proceedings, when the amendments were first brought to the attention of the House. Hon. Members may have sought then to seek to amend the amendments, but the choice now before the House is to accept or reject the amendments. That is what we shall have to do at the end of this debate.

Mrs. Dunwoody: On a point of order, Mr. Deputy Speaker. The House is grateful for that clear statement of the position and, of course, we would not dream of arguing with your superior knowledge. However, the problem that we face is that on all Bills one of the first jobs of all hon. Members is to consider the title. As you know, Mr. Deputy Speaker, the wording of the title is very precise for all Bills and is of considerable importance to the main section of the Bill. That is why any attempt to alter the title must inevitably have consequential effects not only upon the amendments on the Order Paper, but upon the Bill as it is debated. The hon. Member for Orpington (Mr. Stanbrook) highlighted the fact that this problem has a direct effect, not just upon the wording, but——

Mr. Deputy Speaker: Order. Is the hon. Lady making a point of order to me or a speech?

Mrs. Dunwoody: I am concerned, Mr. Deputy Speaker, because I want to know from you whether, if we proceed to debate the amendments in the order in which they have been presented to the House, in effect we shall not only be taking a major decision, but reversing our decision by discussing the second amendment—in other words——

Mr. Deputy Speaker: Order. If the hon. Lady feels that she should advise the House that the amendments would have a far reaching effect on the remainder of the Bill or on parts of the Bill, it is up to her to seek to deploy that argument and so persuade the House. The question whether the title should have been as it is printed or as it is proposed to amend it was the question before the House when, in its wisdom or otherwise, it decided to give the Bill a Second Reading, which it did. The House gave the Bill an unopposed Second Reading and the Bill has been dealt with by the House in Committee, and these matters could have been dealt with then. We now have an amendment on Third Reading. Nothing is out of order.

Mrs. Dunwoody: With respect, I was not in any way suggesting that it was technically out of order; I was simply saying that the problem has arisen because these are verbal amendments. If they had been printed amendments in the normal fashion and if the House had had the opportunity of recognising the real technical difficulty that is incorporated in the way in which the two amendments have been tabled, undoubtedly we should have——

Mr. Deputy Speaker: Order. This is very similar to a point of order that was raised with Mr. Speaker at the outset of our proceedings when Mr. Speaker dealt with the question of admissibility or otherwise, and whether the procedure that we now have is reconcilable with our practice and with Standing Orders. Mr. Speaker has ruled on that. We should now get back to discussing the merits of the amendments. I call Mr. Ray Powell.

Mr. Powell: Thank you, Mr. Deputy Speaker. We are discussing in detail and the amendments their effects. As you suggested, if the House feels that we should not accept either amendment, we should reject them.

However, could you advise me, Mr. Deputy Speaker, on whether, if we reject them, we would have a vote in the House on rejecting them, and on whether, if the vote were

carried by just one vote, we would accept that and reject them all? Hon. Members who are not in the Chamber now to hear the debate because they are in their offices carrying out their parliamentary work, will have eight minutes from the time that you call a Division for us to explain the amendments to them. We have been here since 9.35 am discussing their merits and whether they should have been tabled in the first place. If we accept your advice and call a Division on this, how would we explain to 649 elected representatives what they were about to vote for? That is the dilemma that some of us face. We should look at this in far more depth and detail.

Mr. Skinner: I wonder whether we should have to wait for other hon. Members to come in to the House. Not many are here on a Friday because it is a bit of a dead day and many Tory MPs are in the law courts. Some of them were to have been demonstrating, but the Government have caved in, in contrast to the way in which they have behaved with the dockers. As there will not be many hon. Members here, we shall be able to approach them individually and, like shop stewards or Whips, we shall have to say something like, "There was a cock-eyed situation in Parliament this morning. An hon. Gentleman brought forward a Bill that had never been discussed before. It had been shoved in his hand by one of the Tory Whips. He was not too sure what it was about and not only had he got it all wrong, he had got the title wrong." That situation is relatively new in Parliament. Although this Government are capable of doing anything, it is a bit much that they have got the title wrong. After all, this is really a Government Bill——

Mr. Deputy Speaker: Briefly, please.

Mr. Skinner: I am trying to explain this because it is an important issue. Indeed, it is an important issue for people in your area, Mr. Deputy Speaker, because it is all about smoke and pollution.

I suggest that we say, "The Government have brought in this measure but they do not know A from a bull's foot. We have tried to explain to the few colleagues who were in the Chamber what it was all about and they are aware of the circumstances. Although you might be in favour of the generality of the Bill, there is good reason to consider whether we should vote the matter down because the whole thing is technically absurd." A question arises on——

Mr. Deputy Speaker: Order. I wonder whether the hon. Member could contain himself until perhaps he catches my eye. Then he could make the speech that he is seeking to make now in an intervention. Interventions should be brief.

Mr. Skinner: The matter is important. This is not just any ordinary day. Mr. Speaker explained that it was very unusual. He went even further: he said that he did not like it. Then he left. Now you have got it. To be honest, I think you are in a predicament. Whereas normally Members of Parliament vote on the principle of a measure——

Mr. Deputy Speaker: Order. The predicament is the length of the hon. Gentleman's intervention. Perhaps he will save some of it up for when he catches my eye.

10.30 am

Mr. Stanbrook: On a point of order, Mr. Deputy Speaker. There is a point of substance here. It is, with respect, one for resolution by the Chair. If we are being asked to say that a section of an Act should be repealed when in fact we are only amending it, what is to cure that obvious error at this stage?

Mr. Deputy Speaker: The hon. Gentleman surprises me. The word "repeal", which is in the Bill as it stands, has already been approved by the House on Second Reading and it has not been challenged until now.

Mr. Stanbrook: On Second Reading, the wording was the other way round. We are being asked to change the order of the wording.

Mr. Deputy Speaker: The Bill that is before the House was approved on Second Reading. It says that it is a Bill

"To repeal section 16(1)(a) of the Clean Air Act 1956 and to amend section 1 of the Clean Air Act 1968."

The amendment that we are debating is to leave out the word "repeal" in the original Bill and to replace it with the word "amend." The word "repeal" was in the Bill that was before the House on Second Reading and it was approved by the House.

Mr. Donald Anderson (Swansea, East): Further to that point of order, Mr. Deputy Speaker. I am genuinely trying to be helpful. I have listened to what appears to be a substantial degree of confusion. My starting point is that legislation in haste and without adequate notice is often legislation for which later one has some cause for regret. I assume that there is no particular need for emergency legislation in this case. The current legislation has lasted a long time.

My question—a simple question of guidance—to you is this. Having come before the House with amendments that are of some significance, of which there has been little or no notice, would it be possible—out of courtesy to the House and to ensure that every hon. Member is able to examine and, if necessary, to take advice from whichever outside sources are relevant and that have an interest in the matter—for the promoter of the Bill——

Mr. Deputy Speaker: Order. I am not sure whether the hon. Gentleman was here at the beginning of our proceedings. Had he been here, he would recall that what he is saying now is similar to points of order that were raised with Mr. Speaker and that were dealt with by him. Mr. Speaker pointed out that, although what we are doing may be unusual and that he might regret it, none the less it was in order. The amendment has been selected as being in order. The hon. Gentleman has expressed an opinion. It may be an opinion that I share, but that is not a matter for me to decide. The opinion that the hon. Gentleman has expressed is one that the House must make its judgment on, not me.

Mr. Anderson: With respect, Mr. Deputy Speaker, that is not the point that I am seeking to make. I am sure that your views, although very cogent for some of us on the substance of the Bill, are not relevant. The point is surely this: since Mr. Speaker made his ruling, events have moved on. The amount of debate shows that hon. Members feel some concern. The simple question is this: is it now technically possible, in the light of the debate that has taken place since Mr. Speaker gave his ruling, for the

[Mr. Anderson]

promoter of the Bill, out of courtesy to the House—because, as you can see, this is, at the very least, a highly unusual issue and we have to be wary of creating precedents in this or any other matter—to say, "I will pull up stumps at this stage and seek to adjourn the debate and come back, after due notice, to the House?" Given the nature of the amendment, it may even be that due notice is seven days or 14 days, but——

Mr. Deputy Speaker: Order. The hon. Gentleman said that he was raising a point of order, but he is now making a long speech. I think that I can deal with the matter. Of course it will be open to the hon. Member for Basingstoke (Mr. Hunter) who moved the amendments to seek the leave of the House to withdraw them, but that would be a matter for the House, not for the Chair, to decide. Alternatively, if the hon. Member for Swansea, East (Mr. Anderson) is saying that, for whatever reason, hon. Members, both inside and outside the Chamber, have had insufficient time to consider the implications of the amendments, that is a matter for argument and debate. It may be an argument that the hon. Gentleman will seek to deploy later in an attempt to persuade the House that it should reject the amendments until further consideration can be given to their effect.

Mr. Anderson: I concede that perhaps I strayed into the realms of argument and that that is a matter that I can properly deploy in the Third Reading debate. May I ask a simple question? If, in the light of the debate, the mover of the amendments were to come to the conclusion that he should withdraw now and pull up stumps, or whatever the appropriate expression may be, would he be able to bring the Bill back to the House for further debate after due notice?

Mr. Deputy Speaker: No. We should then proceed to debate the Third Reading of the Bill, and it would be for the House to decide whether to give the Bill a Third Reading. We are all familiar with the fact that Bills that have been the subject of comment in the House but that have not necessarily, for whatever reason, at that point been amended, can be amended in another place, or their Lordships can be persuaded to consider amendments that may be tabled in another place.

Mr. Powell: I am becoming not only confused but bemused and aggravated. I am very worried. What worries me most of all is you, Mr. Deputy Speaker. When a point of order was raised by the hon. Member for Orpington, you had to consult the document to amend your ruling. That illustrates to me——

Mr. Deputy Speaker: Order. I have not amended any ruling.

Mr. Powell: Then the observations that you were making on it. We have all had to do that this morning—even you, with your knowledge and expertise in the Chair. What we ought to be doing now is a very worrying problem. It is causing embarrassment to the sponsors of the Bill and those who are discussing it. Even Mr. Speaker this morning was not, I assume, eager to suggest that the amendment should be accepted on a verbal basis.

For the benefit of those hon. Members who have joined us since 9.30, you highlighted the fact that first word of the Bill—"repeal"—is to be amended and that the word "amend" is to be inserted instead of the word "repeal". We have to consider the effect of the Bill as a result of the insertion of that one word. That is the reason for the dilemma. The whole thread and trend of my speech is now in shreds. I am having great difficulty in trying to pull all the threads together in dealing with the amendments.

I said to my hon. Friend the Member for Bolsover (Mr. Skinner) half an hour ago that I had not made up my mind whether I wanted the word "repeal" to be accepted or the word "amend." Now I am not sure whether either word should be accepted, or even whether we should be debating the matter any further. Perhaps we should reject the Bill altogether, and that creates another dilemma. As a Whip, I know that when hon. Members arrive at night directly from meetings, they ask, "In which corridor shall we go—left or right, Noes or Ayes?" and we have to advise them, as you know, Mr. Deputy Speaker.

Mr. Skinner: A few weeks ago, when the title of the Bill was different, I would have advised hon. Members to go into one Lobby, but since a different Bill has been pesented to us this morning, a Bill that went through on the nod in a different fashion, I would advise the opposite. That shows the nature of the Bill. Within a few weeks, that Bill has not been amended but has been totally and utterly changed. That is the burden of my hon. Friend's argument.

Mr. Powell: What my hon. Friend the Member for Bolsover has said is extremely important. Imagine the scene when you call a Division on the matter, Mr. Deputy Speaker, and hon. Members are herded into the corridors and say, "In which Lobby shall we vote?" As it is a private Member's Bill, there should be no Whip advising them. There is certainly no Whip on the Opposition Benches.

Hon. Members will come in, all confused and ask where to go, and be told, "You can vote Aye for a repeal, you can vote Aye for amendment, or you can go into the No Lobby." They will ask, "What are we doing in the No Lobby?", and be told, "We are voting on two verbal amendments that have been tabled this morning.".

That will all happen in the space of eight minutes, in which hon. Members have to get here from their offices which may be in Norman Shaw or Abbey gardens. They will run in with their shoes untied and their ties undone to get here in eight minutes to be confronted with a dilemma as to which way they should vote. Are we to send them into the Lobby to vote on one amendment or both amendments, and how will we explain to them the effect of that on the entire Bill which, in all probability they have not seen because it was hurriedly put through?

Mr. Anderson: I pay tribute to my hon. Friend's work as a Whip. As an hon. Member representing a Welsh constituency, I have never had any doubt as to which Lobby to choose. I have never needed to ask my hon. Friend for an explanation, I had only to look at him. I recall coming in from the bath, scantily clad. I did not ask my hon. Friend for advice, I simply looked at him. The advice he invariably gave me since I first entered the House as, "When in doubt, vote Labour." I have faithfully followed that advice. One never need ask for explanations from my hon. Friend, one just looks at his eyebrows, which have been eloquent enough.

10.45 am

Mr. Powell: My hon. Friend makes very kind remarks, but on this occasion, if a Division is called, my eyes will have to be cast to the floor because I would not be able to advise hon. Members by giving them directions with my eyes because I do not know whether they should be going into the Aye Lobby or the No Lobby.

I shall get on with my speech, but I do not feel that I can make the speech that I wanted to make about the amendments; I will have to wait for Third Reading because the remarks that I want to make may be interpreted as out of order. I represent a mining constituency. In 1979, it had seven collieries employing some 5,000 miners. The mining industry in Ogmore employed some 7,000 people in total. All the collieries were closed, so all the miners' homes which used to have smoke coming from their chimneys because of the allocation of free coal—although the free coal has stopped, tradition dies very hard in Wales, especially in my constituency and people still burn free coal—may be affected by the Bill as those people might be breaking the law if smoke is emitted from their chimneys.

Mr. Win Griffiths: My hon. Friend has probably received a number of representations about the problem of free coal. Because of the way in which British Coal is amending the scheme, it is becoming less likely that miners will convert their homes to gas or other completely smokeless fuels, but will continue to use their free coal allocation.

Mr. Deputy Speaker: Order. We are not debating that. We are debating whether a word should be deleted from the Bill and replaced by another word.

Mr. Powell: I appreciate what my hon. Friend says. It is very relevant to whether we replace the word "repeal" with the word "amend" in the title of the Bill as that will have a considerable effect on the Clean Air Act 1956, and section 1 of the Clean Air Act 1968. Those of us who have studied those Acts in depth and in detail because we are genuinely concerned about the environment—unlike the green goddess at No. 10—were concerned about the Clean Air Act long before 1979, and were affected by it even before the legislation was introduced in 1956 and 1968.

I illustrated that by describing my walk from Willesden to Acton at the tender age of 17 in all the fog and smog in London. I should be claiming from someone for the continual bouts of bronchitis I have suffered, not because I worked down the mines but because I have had a chest complaint ever since I was 17.

Mr. Eric Illsley (Barnsley, Central); I should be happy to advise my hon. Friend about a claim for pneumoconiosis should he wish to claim some compensation for his chest complaint. I, too, am quite concerned about the Clean Air Act, as I also represent a mining constituency. If we vote against the amendments, we should be left with the Bill in its present form. Would that mean that section 16 of the Clean Air Act 1956 would be repealed, or would it remain in place within the Bill? Having listened to most of the debate, I am in something of a dilemma as to whether the Bill in its present form will repeal or amend section 16(1) of the Clean Air Act 1956.

Mr. Powell: That is the dilemma. I see that my hon. Friend is equipped with a book containing perhaps 1,000 pages of interpretation. He has obviously had time to study the matter. He may well be far more informed than some of us who have been participating in the debate since 9.35 this morning. Having read the documents perhaps he will be able to advise us.

Mr. Skinner: I am prepared to vote in order to produce that dilemma, because there is nothing wrong with the Opposition attempting to destabilise the Government. However, there is another way of attempting to find an answer to the problem. Unfortunately, that is difficult now. We could have consulted a barrister but they are on a go-slow—cacanny as they say in Scotland. There would be no point in approaching a run-of-the-mill solicitor because they have fallen out with the barristers. In fact, they will not sit with them on the Tory Benches. Therefore, there is a dilemma, and we should look at it from a layman and a laywoman's point of view.

Mr. Anderson: Layperson.

Mr. Skinner: Yes.

We should use our native gut instinct and vote the amendments down. The hon. Member for Basingstoke (Mr. Hunter) could then read his Bill—he has not had a chance to read it because the Whips shoved it into his hand. They took it from the Government shelf. We could then have a fresh crack at it and support a measure which is environmentally and technically clean.

Mr. Powell: I accept the advice of my hon. Friend. Nevertheless, we should debate which way we should vote. With respect, Mr. Deputy Speaker, despite all the advice afforded us by both you and Mr. Speaker, we are still in a dilemma. If we were to stop the debate now and say that we will vote on the basis of the discussions we have had so far, we would not know which Lobby to enter. We would not know whether to insert the word "amend" or leave the word "repeal". I return to the same argument I put to my hon. Friend the Member for Bolsover, the repeal of section 16(1) of the 1956 Act would be rather strong.

Mrs. Dunwoody: It is sweeping.

Mr. Powell: Yes, it is sweeping. I do not think that the environmentalists who have turned up to debate the matter would be eager to see that. Therefore, we are in a dilemma as to whether "amend" is the right word. We are facing great difficulties even on advising people on amendment No. 1. The difficulties have resulted from the way in which the amendments were thrown at us at 9 o'clock this morning.

Mr. Anderson *rose*——

Mr. Powell: I want to get on with my speech. I have been delayed by interventions and I have a speech to deliver on this important issue. If we can resolve the dilemma, I could ensure that my speech is recorded.

Mr. Anderson: The most important point mentioned by my hon. Friend the Member for Ogmore (Mr. Powell) is the way in which the amendments have been thrown at us. I am trying to think of a compromise——

Mr. Skinner: I hate that word.

Mr. Anderson: I shall try to think of another word to satisfy my hon. Friend. Perhaps "middle way"?

Mr. Skinner: Solution.

Mr. Anderson: I am trying to think of a solution which might satisfy both sides of the House. Since the Bill improves the environment, albeit in a limited way, it would be wrong to block it.

If the Bill were to be withdrawn now and within a reasonable time there were to be adequate environmental and technical explanations of the need for it, on its reintroduction would my hon. Friend give the Bill a fair wind so that it can be enacted by the end of the Session? Would that not be a fair way of meeting both sides in this matter?

Mr. Powell: I accept my hon. Friend's point. If the amendments were to be withdrawn, we could get on with the debate on the Bill itself.

As an environmentalist, I am concerned about pollution. However, there is another Bill on the Order paper for which I prepared a speech—the Sunday Trading (Reform) Bill. I had hoped that we would have reached that by now, because I stayed up late last night preparing for it. I am also interested in the Weights and Measures (Amendment) Bill, but, because of these amendments, we have been thrown into a dilemma and have been delayed for an hour and a half. As my hon. Friend the Member for Bolsover said, we may have been able to call on the other place for advice. However, as a result of the Government's attitude and policies to the health workers, railway workers, transport workers and now the judges and the Law Lords, everybody is in dispute. The country is in turmoil, and on arriving here at 9·30 on a Friday morning to discuss the control of smoke pollution, we find that the House is in turmoil.

Mr. Win Griffiths: My hon. Friend has mentioned the turmoil being caused by the Government. He omitted to mention that the proposals for the National Health Service are causing turmoil in the medical profession. My hon. Friend also mentioned the severe chest problems from which he suffers as a result of pollution. Therefore, there are far more substantive issues with which we should deal, but we cannot do so because of the way in which the Bill has been presented to us and the mistakes that have been made.

Mr. Powell: My hon. Friend has raised an important point. If we can prevent smoke being ejected from industrial and domestic units, it would clean the air and should stop some of the health problems with which we are faced now and the expense of curing them. We should be looking at that closely.

I was considering this matter last night and was in a dilemma as to whether I should seek to catch your eye, Mr. Deputy Speaker, to speak on this Bill or whether I should wait for the Sunday Trading (Reform) Bill. I am sponsored by the union representing shopworkers and therefore, I have an interest in that Bill.

Hon. Members have sought your advice, Mr. Deputy Speaker, on what to do with the amendments. We have received certain legal advice from the hon. Member for Orpington, but we are still in a dilemma. We shall not make progress unless the hon. Member for Basingstoke withdraws the amendments; until he does so, the matter will not be resolved. Hon. Members have said, in points of order and interventions, that that is the only way out.

11 am

My hon. Friend the Member for Bridgend (Mr. Griffiths) mentioned health hazards caused by smoke pollution, which affect us all. I look forward this afternoon to driving down the M4 or catching a train from Paddington to the fresh air and beauty of Wales. In Wales, I do not have to wear an oxygen mask, which some hon. Members use in London. There is a particular need for smoke control in cities. Hon. Members are concerned about pollution, and had the amendments not been thrown at us this morning we would probably have made short speeches in support of the Bill, which we believe could be effective and helpful to people. I want more smokeless zones and less smoke emitted into the atmosphere.

We should be debating smoke emitted not only by domestic homes or industrial units but by farmers burning stubble, where black smoke is emitted and——

Mr. Deputy Speaker: Order. This has nothing to do with the amendments.

Mr. Powell: I am loth to question your ruling, Mr. Deputy Speaker, but the title of the Bill is

"To repeal section 16(1)(a) of the Clean Air Act 1956 and to amend section 1 of the Clean Air Act 1968."

We are debating smoke emission from chimneys, industrial units and other places. I am questioning whether we should repeal or amend——

Mr. Deputy Speaker: Order. I thought that the hon. Gentleman was talking about smoke emission from farmers burning stubble.

Mr. Powell: I was talking about the extension of the offence of emitting dark smoke from industrial or trade premises. Some farm units are industrial units. I have been on trains when dark smoke has blocked the entire railway track. Indeed, I have travelled on the M4 when the same has happened as a result of industrial waste being burnt on farms.

Mr. Anderson: My hon. Friend has mentioned one of the most important sources of dark smoke. If I am fortunate enough to catch your eye, Mr. Deputy Speaker, on Third Reading, I should like to deal with the definition of dark smoke. Some major polluters have been omitted from the Bill, and my hon. Friend the Member for Ogmore (Mr. Powell) should consider whether there is anything sinister in that. Has there been a conspiracy to omit from the Bill major polluters and to deal only with——

Mr. Deputy Speaker: Order. The hon. Gentleman cannot debate these matters on the amendments.

Mr. Powell: My hon. Friend the Member for Swansea, East (Mr. Anderson) is right. The Bill should define black or white smoke.

When one travels on the train to Didcot, one sees electricity power stations that have large chimneys. When white smoke is being emitted, it does not look too bad, but sometimes they emit black smoke. The difficulty is how to define black or grey smoke. Who will define it? Are there sufficient inspectors to ensure that offences are not committed? I have a 40-page document——

Mrs. Dunwoody: Read it out.

Mr. Powell: I shall not read it all. It is produced by Her Majesty's inspectorate of pollution and clearly shows a

reduction in the number of inspectors. I do not want to aggravate matters because I can see you, Mr. Deputy Speaker, shuffling in your chair.

Mr. Harry Greenway: The hon. Gentleman has touched on the difference between black and white smoke, which is fundamental to the Bill. The wide-ranging effects of the amendments encompass——

Mr. Deputy Speaker: Order. There is nothing in the amendments that varies the colour of the smoke that should be subject to the legislation.

Mr. Greenway: May I make my point? I was——

Mr. Deputy Speaker: Order. I have heard sufficient of the hon. Gentleman's point to understand it.

Mr. Greenway: But, Mr. Deputy Speaker——

Mr. Deputy Speaker: I call the hon. Member for Ogmore (Mr. Powell).

Mr. Greenway: I am not——

Mr. Deputy Speaker: Order. If the hon. Gentleman wants to persuade the House of his argument he should try to catch my eye in the usual way instead of persisting with an intervention that I have said is not compatible with the rules of order.

Mr. Powell: The way in which the amendments have been moved this morning has aggravated hon. Members. We are all on tenterhooks because we do not know whether we are in order. We must therefore be guided by you, Mr. Deputy Speaker. I should like to get on and deal with the Sunday Trading (Reform) Bill.

Mr. Win Griffiths: Before the intervention of the hon. Member for Ealing, North (Mr. Greenway), my hon. Friend the Member for Ogmore (Mr. Powell) made an important point. If we pass the amendments, the Bill will become different. There is also the issue of the inspectorate. What is the point of passing the Bill in its amended form if we do not have the inspectors to ensure that the Bill is carried out? Even if the Bill is passed unamended, we shall need more inspectors. If the amendments are carried, there is an argument about whether we need more or fewer inspectors. My hon. Friend the Member for Ogmore (Mr. Powell) should give us some facts and figures about the inspectorate, so that we can determine the best way to proceed.

Mr. Powell: The penultimate paragraph of the explanatory memorandum says:

"The Bill has no financial effects or effects on public service manpower."

I have read and re-read the Bill and it is obvious that there must be more inspectors to draw to the attention of the people concerned the extension of the offence of emitting dark smoke from industrial and trade premises. In such circumstances, I assume that the people involved would be prosecuted. My hon. Friend has made a relevant point. If we do not have more inspectors, the inspectorate will not be able to carry out its obligations under the Clean Air Act 1968.

Mr. Bob Cryer (Bradford, South): Would my hon. Friend care to speculate on the desirability of repealing section 16(1)(a) of the Clean Air Act 1956? If it was repealed rather than amended, we could produce amendments to incorporate the Ringelman scale which, as my hon. Friend knows, is the scale used to test whether an offence has been committed when smoke is emitted from steam locomotives. As my hon. Friend knows, I have some considerable experience in these matters. I hope that my hon. Friend will dwell for a little while on the argument about whether repeal would be better. I have the Clean Air Act 1956 in front of me; section 16 provides no definition of black, white or grey smoke. Some adequate definition should be inserted.

Mr. Powell: I am glad that my hon. Friend is here to give us that advice. If he had been here earlier, he might have been able to resolve our one-and-a-half-hour discussion. We could have listened to his advice and we could then have talked about amendment or repeal. He has convinced me that we were not clear about which it should be.

I have had some experience of British Rail. I talked before about walking to Old Oak common railway depot in London, which serviced most of the western region of British Rail. Some hon. Members have said that I have always pushed a pen, but in fact I used to use a 2 ft shovel on British Rail to shovel coal into an engine from a tender which had a 28-ft firebox. The smoke that used to come out was black when we were at Paddington, but it would be white on the way down to Penzance and Plymouth. If we were to repeal section 16, we could table many amendments to provide a definition. That would please you, Mr. Deputy Speaker, because we would then clearly be in order in having a full debate on a proper definition of grey smoke, black smoke and white smoke.

Mr. Anderson: I want to bring my hon. Friend back to the amendments, which will please you, Mr. Deputy Speaker. He has done well to keep within their constraints. He pointed out that it is rather implausible to believe that the Bill will have no financial effects on public service manpower. That bald and implausible statement related to the Bill in its original form. We have not heard from the Government or any other source whether the amendments will, in themselves, have repercussions on the need for public service manpower.

If the Bill is a coherent whole, to alter one part may lead to the alteration of other parts, so the whole exercise this morning is misconceived. I ask my hon. Friend to consider the point about the implausibility of there being no financial effects on public service manpower and also the possible differences of amendment or appeal on the need for public service manpower.

11.15 pm

Mr. Powell: That is a relevant point because, as I quoted earlier, the Bill suggests that there will be no financial effects on public service manpower.

Mr. Anderson: That is nonsense.

Mr. Powell: I agree that that is nonsense.

Ms. Walley: I feel that somehow or other the House will have to find a solution to our present predicament. There is the question how, if there were to be a Division, we would explain to those Members who are either away from the Chamber or who have not taken part in the debate how they should vote on the two amendments. We have no way of knowing how the amendments will change the details of the Bill and we do not know the implications for

[Ms. Walley]

manpower—or personpower, I should say. We have just had a sanitised annual report from the inspectorate of pollution—and I hoped to refer to it on Third Reading —which gives details of the way in which the inspectorate is under-resourced, demoralised and unable to carry out its work on air pollution.

We are in a dilemma. How are we to tell other hon. Members what is happening? How will the general public know what is happening when they hear our arguments on "Today in Parliament"? Our confusion and dilemma are indicative of the Government's confusion on environmental issues. For that reason, I urge Opposition Members to do all that they can to establish a proper environmental protection agency—which a Labour Government will do —and I urge the Minister or the hon. Member for Basingstoke (Mr. Hunter) to come forward with specific proposals.

Mr. Deputy Speaker: Order. This is supposed to be an intervention.

Mr. Powell: My right hon. Friend—I should have said my hon. Friend, but she will be my right hon. Friend before long—has made a timely intervention, which is a request for some help from the Government to resolve our dilemma, if it is possible to obtain help from the Government when the House is placed in a dilemma on private Members' Bills. It was not only an intervention but a plea made in the hope that——

Mr. Deputy Speaker: Order. The Minister is seeking to catch my eye. Perhaps the hon. Gentleman might consider bringing his remarks to a conclusion so that the Minister can do as he asks.

Mr. Cryer: On a point of order, Mr. Deputy Speaker. I hope that there is no preferential treatment for Ministers. This is essentially a day for Back Benchers and I should not like to see any preference given to a Minister, as often happens.

Mr. Deputy Speaker: Order. The hon. Member for Ogmore (Mr. Powell) was expressing the hope that the Minister would give the House some guidance. In case the hon. Member for Bradford, South (Mr. Cryer) had not noticed, I was merely pointing out that the Minister was seeking to do exactly what the hon. Member for Ogmore wanted. Whether he terminates his speech to allow the Minister to intervene is a matter for him and the Chair.

Mr. Powell: I am glad that you said that, Mr. Deputy Speaker. Since I started my speech on the amendments, I have been trying to get the Minister to intervene. I do not wish to delay the House any longer. I hope that I will catch your eye later, Mr. Deputy Speaker, after the Minister has spoken so that I can give my speech on Third Reading.

Mr. Alan Meale (Mansfield): I thank my hon. Friend for clarifying matters. He mentioned the report by Her Majesty's inspectorate of pollution. Perhaps he will comment on the points made by my hon. Friend the Member for Stoke-on-Trent, North (Ms. Walley) and show that it is pointless for legislation of this kind to proceed while the Government are in such a mess over the air division. During the recent debate on the Consolidated Fund, the Minister admitted that there was disarray and that the chief inspector of air pollution and other senior inspectors had resigned. Reorganisation is proceeding in the air division and there is absolute turmoil. Perhaps my hon. Friend will refer in detail to the document which he mentioned earlier, thereby enlightening the House as to what needs to be done.

Mr. Powell: I notice that my hon. Friend the Member for Stoke-on-Trent, North (Ms. Walley) has a copy of the report by Her Majesty's inspectorate of pollution, about which I could go into some detail. On reading the report last night I found that one senior inspector had resigned. Mr. Brian Ponsford was responsible for the report's preparation. Its implications for the Bill will be profound. Scales of promotion, remuneration and qualifications have been reported upon and a number of qualified inspectors will no longer enjoy their former conditions of service. I do not understand how they can monitor what is happening at present, let alone in future, if their work load is increased.

Ms. Walley: In view of the issue as to how smoke control can be monitored, I am happy to have an opportunity to show the crisis that exists within HMIP. On air pollution legislation, the sanitised version of the first annual report says:

"Inspectors made 9,134 visits to or in connection with scheduled works in 1987-88 (8,723 in 1987) compared with 9,391 in 1986."

It is plain that there has been a substantial decline in the number of inspections. The report continues:

This is in line with the targeted figure of 9,000. In several districts shortage of Inspectors or the need for introductory training for new Inspectors meant that some works did not receive a visit during the year."

Mr. Deputy Speaker: Order. Briefly.

Ms. Walley: I shall be brief, Sir. Even more important, an unsanitised version of the report, in which I am sure my hon. Friend the Member for Ogmore (Mr. Powell) will be interested, states——

Mr. Deputy Speaker: Order. Interventions should be brief and relevant.

Mr. Powell: My hon. Friend's points were relevant, as is the unsanitised version, which she has passed to me, because it covers the whole inspectorate. I read that document last night because I thought that I might be lucky enough to catch your eye, Mr. Deputy Speaker, to speak not on the amendments but on the Bill in general. The document refers to the reorganisation of HMIP and new legislation which will increase the inspectors' workload. It states:

"The proposed reorganisation provides only six middle management field posts to do the work which at present is being performed by sixteen people; comparison with Scotland where there has been a staff inspection within the last two years shows that, even without the additional work resulting from the new legislation, eighteen middle management posts would be realistic."

That was only the second paragraph. The third states:

"The long term objective of having all inspectors working from three Regional offices in Industry Groups would result in inefficiency from excess travelling and give less inspection at a given cost, at the same time there would be less liaison with Local Authorities and a lack of the local knowledge which exists at present."

The Parliamentary Under-Secretary of State for the Environment (Mrs. Virginia Bottomley): I am reluctant to intervene. I have listened with great care to the hon.

Gentleman for the past hour and three quarters. It may help him to move towards the conclusion of his important remarks if I clarify the point that the Bill has no effects for HMIP; it would be environmental health officers who would be involved. I hope that that helps the hon. Gentleman to move to a conclusion so that I have the opportunity later to catch your eye, Mr. Deputy Speaker.

Mr. Anderson: I should like——

Mr. Deputy Speaker: Order. There should be no interventions in interventions.

Mr. Powell: Yes——

Mr. Anderson: Will my hon. Friend give way?

Mr. Powell: I give way.

Mr. Anderson: I should like to follow that point. Although there is a crisis in the national inspectorate, the amendments relate specifically to domestic smoke and domestic pollution. As the Under-Secretary of State has properly said, the people who, without any additional manpower or expenditure, will be reluctant in this context, are not the members of the hard-pressed national inspectorate but the environmental health officers at local government level. My hon. Friend has had extensive experience of local government and is more aware than all of us of the crisis among environmental health officers at local government level. We hope that the proposals will have no effects on manpower, yet the environmental health officers, who already have additional burdens placed on them by other Government measures—that is right—will be expected to do the work without additional remuneration.

Mr. Powell: I accept my hon. Friend's important point. If we were considering the third Bill on the Order Paper, the Sunday Trading (Reform) Bill, we would be considering a similar problem for environmental health officers—how to monitor if there were Sunday opening of shops. It is ridiculous to imply that extra staff will not be needed. We reject that idea.

Ms. Walley: I feel obliged to return to what the Under-Secretary of State said—that this matter has nothing to do with HMIP but is for environmental health officers at local level. For the Minister's information, I recently tabled a series of parliamentary questions asking about the cuts in training which are causing a national shortage of environmental health officers. The Minister is nodding because, no doubt she remembers those questions. It is clear that we have a national shortage of environmental health officers throughout the country and that this problem is exacerbated by the cuts being implemented by the Department of the Environment.

I also asked a series of questions of the Institution of Environmental Health Officers so that it could show me where there is a shortfall between the numbers of posts it has on the establishment and the number which it has employed to carry out this vital work. In many cases there is as much as a 30 per cent. shortage.

Not two miles from this place, in the London borough of Lambeth, there is a shortage of environmental health officers. How on earth will it be possible for each and every local authority throughout the country to take on board the implications of the Bill, which we do not even understand because of the way in which verbal amendments have been brought to the House this morning? That is beyond my comprehension and, I repeat, is indicative of the Government's misunderstanding of the environmental issue and the crisis facing the country today.

11.30 am

Mr. Powell: I have been interested to see in the House over the past few years the knowledge and extreme capability within the Opposition, particularly on our Front Bench. The short intervention of my hon. Friend the Member for Stoke-on-Trent, North (Ms. Walley) shows the House and the country the knowledgeable people we have in the Opposition—especially the women. I am grateful for that intervention and for the knowledge that my hon. Friend expounded to the Minister.

I shall not excite your wrath further, Mr. Deputy Speaker, because I desperately need to powder my nose. Therefore, I shall give way so that the Minister may catch your eye and speak on the amendments. I hope that you will be kind enough to allow me to speak later on Third Reading.

Mrs. Virginia Bottomley: It is no doubt right that the House should have debated these amendments at such length. We all appreciate the possible sacrifice which has been made by the hon. Member for Ogmore (Mr. Powell) if it proves to be impossible for him to catch your eye later, Mr. Deputy Speaker, to discuss a subject which is obviously of great concern to him.

This is an unusual way to deal with amendments, and there is no doubt that it is right that the House should give proper scrutiny to these procedures. I was not going to address the substance of the Bill in these brief remarks —hoping that I might be able to catch your eye, Mr. Deputy Speaker, if we moved to Third Reading.

The Bill of my hon. Friend the Member for Basingstoke (Mr. Hunter) has the support not only of my Department but, on the basis of consultation held over some time, of virtually all the local authorities from which hon. Members present come, even if they do not all represent them. The Bill has a wide measure of support and there is no doubt, from this morning's debate on these amendments, that there is much interest in the subject. There is also some misunderstanding about the terms of the Bill. No doubt my hon. Friend, if his Bill reaches Third Reading, will explain precisely what his measures involve.

It is a source of great regret that, frankly, an error was made in the long title of the Bill. The amendments merely change the long title and do not change the substance of the Bill or its effects on section 16(1)(a) of the 1956 Act.

Mrs. Dunwoody: Is the Minister seriously suggesting that a Bill with a major defect in its title has been brought before the House in a suitable form? Is it not true that any legislation put before the House—particularly such as this, which was rushed through on Friday with no debate—should be perfect and not warrant criticism of its wording? How could highly paid parliamentary draftsmen make such elementary mistakes?

Mrs. Bottomley: It is a source of considerable regret that this error occurred in the long title. However, it does not in any way change the content of clause 1. As it stands, there is a conflict between the substance of the long title and clause 1.

Mr. Anderson *rose*——

Mrs. Bottomley: I shall finish answering the point made by the hon. Member for Crewe and Nantwich (Mrs. Dunwoody), who talked about the way in which my hon. Friend the Member for Basingstoke secured the earlier stages of the Bill, which was unusual. There is a general understanding that there will be an opportunity for full debate to discuss the detail of this important measure on Third Reading. If the House decides that the Bill should be given a Third Reading, it will be possible to give this important measure the full scrutiny it requires.

Mr. Anderson: The House is always charitable and understanding when a Minister or any hon. Member says that a fault or error has occurred, as on this occasion. I do not wish to carry out a witch hunt, but it would be helpful to know whether this was merely a technical error by a draftsman or whether the fault lies with the Department, so that we may better understand the source of the error. Who committed the error?

Mrs. Bottomley: I cannot reply to that specific point. I hope that the hon. Member for Swansea, East (Mr. Anderson), if he studies the Bill, will appreciate that its substance is entirely unchanged.

Mr. Dennis Skinner (Bolsover): I wish to make it abundantly clear that the House would be remiss to allow this legislation to go through without a vote. If the amendments were accepted, some people would argue that the Bill was not a bad measure, despite the fact that there is no allocation for manpower, which means that this would have to come from somewhere else. Staff would have to be taken off other jobs to look after those affected by the Bill.

It is pretty clear that a few weeks ago the Government decided to get a small Bill on the statute book that could be described as green. The Prime Minister has made various speeches up and down the country and it was obviously decided to use Parliament and a private Members' day to pass a so-called green Bill. Little or no attention was paid to the content of the Bill—merely that it should be passed.

Therefore, several Fridays ago, a Bill was taken off the shelf—it was not looked at properly, and was handed to a Back Bencher. It has reached Third Reading, and it is disgraceful that, having reached this stage, the Bill's proposer, in cahoots with the Government, had to table Third Reading verbal amendments to clean up the Bill. There is no question but that such proceedings should be totally refuted by hon. Members.

Mr. Anderson: In answering the question about whether the Bill's origin was in the Department of the Environment or with a private Member, are we not finding an answer to my question about who was at fault? If this were really a Bill conceived by a private Member, we would understand the error because we are not experts. However, the Bill was taken from the dusty shelves of the Department of the Environment, and the Minister should say, "I am at fault—please understand it is me." Is this a private Member's Bill or a Bill from the Department of the Environment?

Mr. Skinner: I have no doubt, and perhaps the indications given by the proposer of the Bill suggest, that my hon. Friend is correct. The proposer of the Bill said very little when he moved the amendments. In all the confusion, he threw no light at all on the matter. It is not the first time that that has happened. It happens quite often when Governments go to Back Benchers and say, "Do you want your name in the history books? Here is a chance. You can get this Bill through on a Friday. It is an innocuous measure and will not cause any trouble. Most Opposition Members will support it." If the Bill had been put in the proper form, that would have been the case.

The Government are now totally confused and are taking on the doctors, the Health Service, lawyers, dockers, almost every group of people in the country—and Parliament. The Prime Minister and her junior Ministers and others were not aware of what was taking place. They think that on a Friday not many people will be here and that they can get the Bill through because there will be no Opposition Members to examine it. My hon. Friend the Member for Ogmore (Mr. Powell) has done a good job this morning. After a long argument not only with the Government but with the authorities, including the Chair, we, and especially my hon. Friend, have been able to establish that this procedure should be stopped.

Mr. Cryer: Has my hon. Friend noted that there are no members of the Liberal, SDP or other cauliflower parties here exercising the parliamentary scrutiny that they often claim is their priority right? Does he agree that one of the reasons for the procedures of the House being abused on a Friday by this seedy little conspiracy, which tries to get some sort of "green" Bill through, is that the Government are stuffing Parliament to its gills with legislation, such as the Water Bill, which will reduce anti-pollution standards? That means that they have no time to allow proper consideration for minor legislation such as this Bill. If they had any decency, they would withdraw some of the nasty big Bills and give proper time to small Bills such as this.

Mr. Skinner: That would not be a bad idea. It could be quite properly argued that the Government have caused all this confusion and heaped it on one of their Back Benchers. I do not regard him as the guilty party. There is a good argument for saying that the Bill should proceed on Monday and that the Bill for the repeal of the dock labour scheme should be dropped. That is another Bill that has been devised in haste. Perhaps the dockers should receive the same treatment as the lawyers and judges. When they threaten action at the Royal Courts of Justice, the Government run a mile and say, "We shall have to find a way out for them."

It is correct for us to make a stand on this issue. It is clear that the House has been abused in a way that I have not witnessed in all the time that I have been here. The last time that a Bill was verbally amended on Third Reading was 18 years ago. According to the authorities of the House, that was a minor correction. These amendments seek to change the title of the Bill. The Bill brought before the House several Fridays ago was quite different from this one. It was not different in style or in a few words. The title was different.

11.45 am

The Bill that had its Second Reading and went through its Committee and Report stages was not this Bill. It was a Bill to repeal a section of the Clean Air Act 1956, whereas the Bill before the House today seeks to amend

the Act to improve it. There is a mile of difference between a Bill that will repeal sections of an Act and one that seeks to amend Acts to make them better.

What would happen if I went to the Chair on Monday and said, "By the way, I have a verbal amendment that was not printed in Friday's Order Paper. I want to change the nature of Monday's debate about the dock labour scheme. Instead of repealing the scheme I want to amend it." Perhaps we should try that and seek to extend the scheme to the non-scheme ports. I wonder whether the Chair would accept that. Perhaps on Monday I can say, "Here I am, Mr. Speaker, with a couple of minor amendments. They change the title of the Dock Work Bill but they change only one word."

Mr. Anderson: Would that not have the additional benefit of avoiding strife in the ports? The dockers' leaders have made clear——

Mr. Deputy Speaker: Order. The hon. Gentleman cannot raise that matter while we are debating the amendment.

Mr. Skinner: It may not be in order to speak about that, but if I am to convince some of my hon. Friends to make a stand on this issue I have to draw analogies between what is happening today and what could happen on other days. To all intents and purposes, this is a Government-sponsored Bill on a private Members' day and that is an abuse of the procedures of the House. The Opposition came to that conclusion in the early part of the morning. We came here to talk about something else and suddenly discovered that the Bill placed before us was totally at variance with the one that had gone through three or four Fridays ago.

Mr. Harry Cohen (Leyton): My hon. Friend has spoken about verbal amendments and their dangers. He has also spoken about how the procedure might be used on Monday for the Dock Work Bill. If the precedent is set here——

Mr. Deputy Speaker: Order. We are not talking about the docks. We had better leave that until Monday and stick to Friday's business.

Mr. Cohen: Perhaps we could table a verbal amendment to this Bill to say that the Employment Bill which shackles trade unions that might have an interest in smoke pollution should not apply. Perhaps that could be a precedent for the Dock Work Bill.

Mr. Skinner: I agree with my hon. Friend. I know that Mr. Deputy Speaker is a bit concerned. I know that he has been placed in a serious dilemma this morning. I was here at 9.30 and saw him come in. I saw him shaking his head and I know why. He follows the constitution perhaps more keenly than some others. It looked to me as if the Speaker was saying, "They have got me in a fine mess this morning."

My hon. Friend the Member for Crewe and Nantwich (Mrs. Dunwoody) and I thought that we had come to debate a tiny straightforward Bill on smoke control, but discovered that it was completely different. Unusually, Mr. Speaker had to make a statement saying that this was almost a precedent. It has not happened for 18 years. He clearly seemed to have a problem. He said that he deprecated the use of this procedure. In response to my hon. Friend the Member for Crewe and Nantwich and I, he also said that he understood why my hon. Friend the Member for Ogmore might have to argue on a wider basis than on the narrow terms of the amendment. It is fairly easy to understand why that is so. If someone went to the Vote Office a few days ago and thought that the Bill there was the one going through and then found that it was not, it is clear that he would have a problem.

If on Second Reading, in Committee and on Report the promoter of the Bill had aroused a discussion and there had been a debate about the previous Bill, hon. Members and the Speaker could have argued for a narrow debate today. However, not a word has been spoken on the alternative Bill and it is obvious that the Speaker and the authorities realised that they had played a blinder.

Therefore, we must now seriously consider whether we can—I am speaking now to Opposition Members and any Conservative Members who are interested in the constitution and the House—support the amendments, albeit that the Bill in its entirety might be fine when produced properly. Should we allow, for purely constitutional purposes, the amendments to go through? Would it not be right and proper for somebody to make a stand and divide on the amendment so that we can demonstrate to those outside the House that we did not allow the Government-sponsored chicanery to pass without making a stand?

Mr. Cohen: I am still concerned, because, as my hon. Friend has rightly said, the Bill went through Second Reading and Committee without any word being spoken about it. That was presumably because, without the amendments, the House accepted that it was a good Bill. However, the amendments fundamentally alter the Bill, because, for example, section 16(1)*(a)* of the Clean Air Act 1956 exempted chimneys that produced smoke that was deemed to be a statutory nuisance. Under the unamended Bill owners of chimneys creating a nuisance would no longer be able to get away with it, but because of the words "to amend" they can continue to create a nuisance. The problem is that there has not been a statement about that during the debate and no one has explained why they should be allowed to continue to create a nuisance. Does my hon. Friend consider that that is a serious point?

Mr. Skinner: It is a serious point, because when the Bill was presented it was not debated, and when it was brought here today it was not explained. Now the Minister has been on her feet and, because she wants to be careful about her rising up the greasy pole on the ministerial Bench, she would not commit herself completely on the issue. Why? The watchword is: "When confusion reigns, keep your trap shut." That is why the hon. Lady did not explain—this is what my hon. Friend the Member for Leyton (Mr. Cohen) tried to explain—the difference between "amend" and "repeal". Because Opposition Members are concerned about the constitution, we want to know what the words would have meant and what they now mean in their new context.

Mr. Anderson: Is not another possible explanation for the Minister's reticence and surprising brevity that, if she had spoken longer, she might have revealed all? She would have revealed the fact that the Bill is in fact a Department of the Environment Bill and not a private Member's Bill. She was keen not to go beyond the strict confines of her brief so as to avoid revealing the Bill's true origin.

Mr. Skinner: I do not doubt that. Just imagine her going to see the Secretary of State for the Environment and saying, "I have had a tidy time in there today and I am afraid that I made a slight error." He says to her, "I have not been around. I have been in my own back yard. I am not sure what has been happening this week. I have been dealing with planning matters in the north and in Gloucestershire. I have been trying to ward off all those people who want to invade my privacy, even though I shall vote against those Bills next Friday." She then says, "I am afraid I went too far. We had a Bill off the Government shelf that dealt with the environment which we thought would please the Prime Minister who has this new green image." As I said earlier, some people in my area said it was a mouldy image, but that is another story. She says to the Secretary of State, "What happened was that we brought forward a Bill that was upside down and, rather than explain it to the House, I thought that I had better keep my mouth shut."

Mrs. Dunwoody *rose*——

Mr. Skinner: I think that my hon. Friend wants to embroider that point.

Mrs. Dunwoody: Does not my hon. Friend understand that what happened was much simpler than that? The Minister is the only woman in the Department; she is intelligent and she knows what she is doing. They have mucked the Bill up, and the Government have given it to her to straighten out.

Mr. Skinner: My hon. Friend used to be in a Government Department and I am prepared to accept what she has said. It is just conceivable that she has taken one off the shelf before.

Mrs. Dunwoody: No, I have not.

Mr. Skinner: It is just a possibility. My hon. Friend, however, knows the way in which the machinery works. There is no doubt in my mind—it has been confirmed now —that the Government are behind all the confusion. I think that we must lay it at their door.

Mr. Cohen: On the question of drafting, does my hon. Friend agree that the reason why the Minister has this horrible job this morning is that the Department of the Environment realises that it has made a great mess of it and it has given the woman the worst job, as is always the case in this life? Does my hon. Friend agree that perhaps the Secretary of State for the Environment had a role in this matter, because, after all, he was responsible for the Housing Bill? The Secretary of State is reported to have said, when that Bill was before the House, that he thought that it was a wonderful Bill because he had drafted it himself. However, because it was such a mess, it had 400 to 500 amendments made to it before it passed through Committee. Could it be that he had a hand in drafting the Bill?

Mr. Skinner: There are many ways of looking at it, but I think that there are two main ones. The Bill was drafted with him hanging over it and the fag ash dropped on the wording. That is how we got the wrong wording. It was obliterated by the fag ash. The other alternative was that he was out one day in the park picking up litter. The Prime Minister was at his side and he had a bag. They were putting litter into the bag in St. James's park and, as he was rummaging through the bag, because his fag had dropped into it, he pulled out a bit of paper—it was the Bill. That is where it came from. I tend to think that it was probably the first proposition. However, despite all the hilarity that might be caused, a Government-sponsored Bill was presented to the House calling upon us to repeal the Clean Air Act, but, when we came here today we were told, "We did not mean that; we only wanted to amend it."

I have been discussing this matter with some of my hon. Friends, and we believe that it would be worthwhile considering voting against the amendments. That would not be on the basis of whether they are good or bad, but it would be a way in which we could register our disapproval at the way in which the Bill has been dealt with. If we do not do that, the history books will record that we took part in it and, in all the confusion that reigned, it will be recorded that we connived and allowed the Bill to go through when we all know that it would be better if the Bill were presented in its proper form on another day.

I believe that no one who has spoken or intervened would not give a fair wind to the general idea that is contained within the Bill if it came back to us properly drawn up, either next Friday or the Friday after. There are several more weeks to go before the end of this Session. It would still have time to go through its procedures—in the sleepy den in the other place—that is if it can get rid of the football passes Bill—and then become law. If we allow the Bill to go through without registering disapproval of the amendments, we shall have been a party to the same kind of connivance into which the Government have entered with the hon. Member for Basingstoke (Mr. Hunter).

12 noon

Mr. Cryer: Does my hon. Friend agree that Parliament ought not to have double standards—one for the Government and one for Back Benchers? If we accept this precedent without objecting or voting, should we not try the same trick on Monday? The Government's standard would surely not apply to Opposition Back Benchers. If we wanted to amend the Dock Work Bill on Monday, we would not be allowed to table amendments then. If there is to be consistency, right hon. and hon. Members should reject the Government's shabby manoeuvre.

Mr. Anderson: My hon. Friend the Member for Bradford, South (Mr. Cryer) puts his finger on an important point. If, contrary to our inclinations, we give way and are not true to our role, perhaps the Government will give way on Monday and accept a similar amendment not to repeal but to amend the Dock Work Bill.

Mr. Skinner: From time to time I have been involved in negotiations with others in the House, but it is a bit of a tall order to ask me to make it my job between now and Monday to negotiate with the Government about repealing the dock labour scheme. On Monday, it will be our job to attempt that through the Authority of the Chair. The Chair should be warned that some right hon. and hon. Members may try that procedure.

It is not a bad idea to alert those of my hon. Friends who are sponsored by the Transport and General Workers Union, and who are more closely allied with the issue, of what happened today and that a new system has developed. They should be informed that, contrary to the

practice of the past 18 years, one can now change the title of a Bill, and that instead of repealing legislation, one can amend it. We should alert our colleagues.

Mr. Anderson: And raise points of order.

Mr. Skinner: There is no question that we should raise points of order. We shall call upon the Chair to accept amendments to the Dock Work Bill when it is debated on Monday. If we did that, the Bill could be modified to include all non-scheme ports, which would ensure that everyone enjoyed the same conditions of work in ports throughout Britain. As there has been no industrial trouble at the ports over many years, the chances are that there would be relative—I say relative—industrial peace throughout the industry. In that way, we would serve a very useful purpose.

The more that I think about it, the more I am convinced that this change of procedure can provide us with great opportunities in future. I am beginning to think about all the Bills that are to come before the House, and in particular——

Mr. Deputy Speaker: Order. Sufficient has been said about docks. Right hon. and hon. Members should concentrate on the amendments before the House.

Mr. Skinner: When considering whether I agree to repeal or amend a Bill, I can only do so on the basis of whether that is right for the Bill before the House and whether it is correct parliamentary practice. I cannot look at it in any other way. I must ask myself, "Is it right for those acting on behalf of the Government to take such action?" We all know that the Government are behind the Bill, otherwise they would have denied it. In the new parliamentary straits in which we find ourselves, it is right to consider whether this new procedure would be appropriately adopted not only on Monday but on many other occasions.

Shortly we may have before us what is known as the other private Member's Bill procedure. I want to know whether under that Bill it will be possible, once the Bill has passed through all its other stages, to amend or repeal the Associated British Ports (No. 2) Bill and the Associated British Ports (Hull) Bill. Mr. Deputy Speaker knows something about that subject because he comes under the general auspices of Chairman of Ways and Means. Perhaps he can give an answer off the top of his head. However, in view of what happened this morning, he may have to study the books. I shall not develop that point but will throw it in as a sprat to catch a mackerel on another day.

Mr. Cohen: Could not the same procedure be used for the Dock Work Bill as is being used today? Instead of repealing the dock labour scheme, it could be amended by enhancing trade union rights and increasing pay.

Mr. Deputy Speaker: Order. The House must wait until next week to do that. We cannot debate next week's business today.

Mr. Skinner: My hon. Friend is getting pretty excited at the prospect that I hold out. Those right hon. and hon. Members who have served the House for the past 18 years have never seen such a procedure used before. Some of us study "Erskine May" but obviously we have missed some bits. However, I have since discovered that on the last occasion that the procedure was used it involved a non-controversial measure and did not involve totally changing that Bill. The last time that the verbal amendment procedure was used the measure concerned was, by comparason with the Bill before the House, of a comparatively minor nature. However, the amendments now before the House would turn the Bill upside down. A wide procedural gate has been opened, and those of us who take account of parliamentary procedures will exploit it in future.

Ms. Joyce Quin (Gateshead, East): My hon. Friend refers to the problems of dealing with a private Member's Bill that is basically a Government Bill in disguise. Shortly we shall be debating a similar private Member's Bill concerning weights and measures that also appears to be a Government Bill in disguise. When we come to consider the amendments to that Bill, can we be sure——

Mr. Deputy Speaker: Order. The House cannot debate now a Bill that appears later on the Order Paper.

Mr. Skinner: My hon. Friend makes a reasonable point, and her remarks are not really out of order when one considers them against the background of the Government-sponsored Control of Smoke Pollution Bill, which my hon. Friend knows has changed. She arrives at the House this morning primarily to debate weights and measures and suddenly finds herself embroiled in a constitutional wrangle or crisis. Naturally she asks herself whether the same arguments apply to the Weights and Measures (Amendment) Bill. I can give my hon. Friend another piece of news. I have heard that the Government told the Conservative Member responsible for the Weights and Measures (Amendment) Bill to bobby off. [HON. MEMBERS: "Never."] I know that I am not supposed to speak to that Bill, but I mention in passing that we first find ourselves debating a completely different Bill, and then encounter, in respect of the Weights and Measures (Amendment) Bill, another example of chicanery. The Conservative Member who was to speak to that Bill entered the Chamber, looking active and as though he was ready to progress it, but after a few minutes the word came through the grapevine of this gentleman's club——

Mrs. Dunwoody: There are also some good women in it.

Mr. Skinner: Yes, on this side of the House.

Mr. Anderson: Be charitable.

Mr. Skinner: The hon. Lady has been quiet: she will not tell us what the amendment is all about.

In this other bit of chicanery, the hon. Gentleman has been told to go away because the Government are happy to see this happen. I do not think any of the amendments will be discussed, and no doubt I shall be proved right.

Mr. Anderson: I know that my hon. Friend is always very understanding of Conservative Members. Having criticised the hon. Gentleman who withdrew his Weights and Measures Bill, will he pay tribute to the other side of the coin—the hon. Member for Basingstoke (Mr. Hunter), who must have been subjected to the same Government pressure but who has stood his ground? That, surely, is tremendously to his credit. Despite all the blandishments, the possible preferment, the greasy pole, the knighthoods —whatever he may have been offered—the hon. Gentleman is determined to bring forward his Bill.

Mr. Cryer: On a point of order, Mr. Deputy Speaker. It has been suggested several times that the Weights and Measures Bill has been withdrawn. So far that is only a rumour, but I wonder whether as a matter of courtesy to you—and hence to the House—the promoter has given formal notice of withdrawal? I raise the question as one who has taken the trouble to put down several amendments in the expectation of debating them. What action can you take, Mr. Deputy Speaker, if the Bill's Second Reading is not moved and the promoter has simply drifted off in contempt of the House?

Mr. Deputy Speaker: I have received no formal notification. We may be indulging in speculation and feeding on rumour. We had better wait until we reach the relevant Bill and discover whether the promoter is here to move his motion.

Mr. Skinner: According to some authorities, they have been informed that at the appropriate time today an attempt will be made to move the Bill to another day.

My hon. Friend the Member for Swansea, East (Mr. Anderson) wanted me to compliment the hon. Member for Basingstoke on having stood his ground. I think that my hon. Friend should look beyond today.

The hon. Member for Basingstoke is sat patiently with this Government Bill in his hand—well, a different Bill from the one that he had the other Friday—and I think that there is a possibility that he will be made a Whip. I have seen this happen before on a Friday. I have seen Conservative Members talk out a Bill and be promoted. I could name a few. They come into the Chamber late and talk Bills out; the next minute they are in the Whips' Office. Whether that is a promotion is neither here nor there. Hon. Members may finish up bringing in the snooker cue once a month with a message from the Queen. Is that a better job? It is certainly better paid, but I would regard it as something of a hack's job. I do not know whether the hon. Member for Basingstoke is really after that sort of promotion, but no doubt he will get his due reward.

Mr. Cohen: I take my hon. Friend's point. The hon. Member for Basingstoke (Mr. Hunter) will, however, have to compete with the hon. Gentleman who should have moved the Second Reading of the Weights and Measures Bill. Perhaps he has drifted off because, like the Prime Minister, he did not know that a "large white" meant a loaf of bread. Surely that is why the Weights and Measures Bill should be considered—to ensure that a "large white" is a proper loaf of bread, not chalk, for instance.

12.15 pm

Mr. Skinner: I do not know about the Prime Minister and the large white, but I know that when she used to serve in Alderman Roberts's shop in Grantham she was so keen on making a profit that she used to cut up the dolly mixtures to make sure that they were not over weight. Once someone gets down to that sort of thing we know that they are into making money. [HON. MEMBERS: She has been cutting ever since."] She certainly had a lot of practice then. People would come in for 2 oz of dolly mixtures and she would put them on the scales and if they were a bit over weight she would cut them in half.

When I went to Grantham I said to an old fellow there, "Do you remember her?" He said, "Oh aye, we all knew about Snobby Roberts." Of course, we are all fashioned in our childhood; we are all products of our environment. If someone has spent her time behind a shop counter slicing the bacon so thin that people can see through it and cutting dolly mixtures in half, is it any wonder that when she becomes Prime Minister she is prepared to cut services? Is it any wonder that the NHS is under attack?

Mind you, she is not cutting the money at Downing Street. It is costing more than £5 million a year to keep it going—more than for Buckingham Palace. That is why the Queen gets so upset. But I shall leave that subject altogether, Mr. Deputy Speaker; I am more concerned about the constitutional propriety of changing "repeal" to "amend".

Mr. Ray Powell: My hon. Friend mentioned that the hon. Member for Basingstoke (Mr. Hunter) might be looking for promotion to the Whips' Office, and might be walking in with his billiard cue. He also mentioned the amount of time that the hon. Gentleman had spent on the Bill.

Earlier this week we heard about the amount of time that had been spent on other Bills—hours and hours. My hon. Friend the Member for Ashfield (Mr. Haynes), for instance, had spent 162 hours considering the Electricity Bill. How much time was spent on this Bill? Was it two minutes, one minute, three and a half minutes? That is how much time the hon. Member for Basingstoke, who is expecting a promotion to either the House of Lords or the Whips' Office, has spent on it.

Mr. Skinner: That is the kernel of the argument. My hon. Friends and I expected a proper explanation after Mr. Speaker had told us what had happened. We raised points of order because we could not believe what we were hearing—that two "verbal" amendments were to be discussed on Third Reading.

That is so unusual that I was wondering whether the Mace would have to be removed. I was not sure of the exact procedure, and wondered whether the Serjeant at Arms—or perhaps my hon. Friend the Member for Edinburgh, Leith (Mr. Brown)—would have to come and take the Mace away. [HON. MEMBERS: "Or Heseltine."] The right hon. Member for Henley (Mr. Heseltine) would really be more appropriate, because he waved the Mace around his head. I thought that that might happen, because it happens when a Bill goes into Committee. It was an interesting little parliamentary scene for the connoisseur. I thought that because the Mace had not been taken away we were not in Committee and then I thought, "What cheek. The Government are amending a Bill that has never been debated in the House of Commons."

The hon. Member for Basingstoke who has promoted the Bill on behalf of the Government—we all know that that is what this is all about—was expected to explain, amid all the confusion, why suddenly a Bill to repeal the Clean Air Act is now a Bill to amend it. That can mean that it might improve it, whereas in the context of the ports Bill "repeal" means to destruct and to destroy. It was only to be expected that a full and proper explanation would be given, especially since there has not been discussion on this before. Well, we did not get much of an explanation——

Mrs. Dunwoody: We did not get any.

Mr. Skinner: No, we did not get any explanation and the Minister then made a brief appearance at the Dispatch Box. However, as she wants to safeguard her future, she

was not prepared to put her foot in it. If somebody is to start making charges, the Minister does not want it on her doorstep. It would be better in Ridley's backyard rather than in hers—[HON. MEMBERS: "What about planning permission?"] That is the position that we are in and it is a tidy old mess.

Mr. Ray Powell: My hon. Friend mentioned the Minister and perhaps he will recall that I was in full flight in my comments on the amendments but because I thought that the Minister would make a statement to solve our problems, I stopped—*[Interruption.]* Obviously, the Minister would not have been able to do that in a point of order or an intervention. I stopped halfway through my speech. I still have my speech with me and there is at least one hour's contribution left. Although I gave way to the Minister, she did not resolve the problem or get us out of this dilemma and that is typical of the way in which the Government act towards Opposition Members——

Mr. Deputy Speaker: Briefly, please.

Mr. Powell: However, what is coming out now is something even worse because we know that some of our hon. Friends have prepared for the next debate but have now found that that Bill is to be withdrawn because yet again the Government have decided—*[Interruption.]*

Mr. Deputy Speaker: Order. Interventions should be brief. I call Mr. Skinner.

Mr. Skinner: When my hon. Friend said that he would draw his remarks to a close, I was listening because I thought that as my hon. Friend is a gentleman he would give way——

Mr. Powell: My father was a miner.

Mr. Skinner: I was waiting to hear what the Minister would say in explanation and in answer to the many points that have been put forward. I knew that my hon. Friend had not dealt with everything because I remembered my hon. Friend the Member for Mansfield (Mr. Meale) asking him whether he had read the document on pollution control. It was a fairly weighty tomb—no, tome. *[Laughter.]* Well, perhaps it should have been a tomb as well—a tomb to put the Government in.

I wondered why my hon. Friend was not speaking at length, or at least to some extent, about the document. I thought that my hon. Friend was anxious to hear the Minister explain the predicament caused by the Government which has landed on the shoulders of the hon. Member for Basingstoke. He is carrying the can. We have been able to remove part of that weight from his shoulders. It is true that he is acting in good old party fashion, but why should he carry all the blame? I thought that my hon. Friend the Member for Ogmore had cut short his speech so that the Minister could rise to explain what had happened. However, she played it craftily—[HON. MEMBERS: "Oh, aye."] She said I want to reserve my comments for the Third Reading debate. She was cleverly trying to escape from explaining why the Government were pushing through a Bill via a Back Bencher, which is totally opposite to the Bill that went through the initial proceedings. I heard my hon. Friend the Member for Ogmore bring his remarks to a close, but he did not get the answer that he expected.

Mrs. Dunwoody: Was it not worse than my hon. Friend has made out? The Minister said something revealing when she said, "If we are allowed to proceed without any further discussion to the Third Reading, I will make my remarks." What is happening with this Bill is what has happened with so many other Bills. Bills that look as if they are private Members' Bills are introduced, the Government having decided that they want them to go ahead. If we had not debated the amendments—as we are doing—then, and only then, would we have heard the Government's attitude.

Mr. Skinner: I agree absolutely with my hon. Friend.

Mr. Anderson: And worse, had we fallen for the stratagem of the Government and allowed the amendments through at this stage, surely the Government would have argued on Third Reading that there was a fait accompli and said, "After all, you agreed it." Is that not indicative of the serpentine way in which the Government are trying to move?

In passing, I commend my hon. Friend the Member for Bolsover (Mr. Skinner) and my Welsh hon. Friend the Member for Ogmore (Mr. Powell) on playing the House of Commons role in this matter——

Mrs. Dunwoody: He is not the only hon. Member from Wales.

Mr. Skinner: I liked my hon. Friend's description, "the serpentine way". Perhaps he was trying to say that the Government are lower than a snake's belly. At least, I thought that that was roughly what he was trying to say, but I know that he is a lawyer and that they do things differently.

Before we go any further I want to put on record the fact that this is no longer a private member's day. That has been established beyond peradventure this morning——

Mr. Anderson: Lawyers would say, "Beyond reasonable doubt."

Mr. Skinner: We thought that we were here to deal with private Members' business, but we have found out that this is really a Government Bill which has been shovelled towards a Back Bencher. Indeed, it was drawn up wrongly in the process. We also know that another private Member's Bill has been taken off the Order Paper—that is, if the Library authorities are correct.

I do not want anybody, especially the press, to suggest for one moment that there has been an attempt to scupper a prized private Members' day. What we have been doing this morning, and especially my hon. Friend the Member for Ogmore, is stopping the Government in their tracks. Nobody should have any doubt any longer that this Friday is about private Members' business.

This has been one of the most obnoxious pieces of chicanery and conspiracy from the Government since they have been in power. Not content with having Monday to Thursday for getting through their own business, the Government have decided to use Friday as well. Let nobody say any different because we are not discussing Bills that were drawn out in the top six in the private Members' ballot. We are discussing Bills that have been slipped through with Government connivance. We should have no fears or worries about spoiling a private Member's

[Mr. Skinner]

day because this week the Government have collared Monday, Tuesday, Wednesday, Thursday and now Friday for their own business.

The Prime Minister decides to go green. She wants a little green Bill to go through and she leaves it in the hands of the Secretary of State for the Environment. He produces a Bill that is upside down, so he passes it to a Tory Back Bencher. Then the Government do not have the guts to explain why confusion reigns.

Mr. Ray Powell: I owe my hon. Friend an apology. Earlier he suggested that this could have been arranged by the Whips' office. I have been a Whip. I was brought up in chapel, so I said that I did not suspect that the Whips on either side, or the usual channels, could be involved. That is why I made that comment, but I withdraw it and apologise, because my hon. Friend has proved beyond doubt that the Government and the Government Whips must have been involved in the process.

12.30 pm

Mr. Skinner: The truth is that the Government Whips operate differently. My hon. Friend is a member of what I would call a loose federation in the Labour Whips' Office. When one is in the Government Whips' Office, however, one is a Minister and part of the collective responsibility, unless one is the Secretary of State for Wales. Then one does one's own thing. If one is a Government Whip, one has to toe the line. What happens is that one of those Whips comes along and says, "Pass the Bill down the line." There is always a pair of waiting hands in the gully or at third slip.

Mr. Cohen: My hon. Friend makes a serious point about the Government taking all the business of the House to themselves and not giving any of it to Back Benchers. To refer to my hon. Friend's earlier analogy, would he describe the Prime Minister as having given up cutting the dolly mixtures? She now wants all the dolly mixtures in the parliamentary timetable for herself. To elaborate on that analogy, does my hon. Friend agree that it does not extend to the liquorice? Instead of cutting everything, she has given a lot to the wealthy. It does not apply to the all-sorts. The wealthy have got more from this Government.

Mr. Skinner: I just cannot see the Prime Minister in the role of "Hello, Dolly." She does not conjure up that image for me. I have said before that she does not conjure up for me, either, the image of being one of the greens—in an anorak and wellies and carrying a bowl of rice.

It is just as well that we sussed this out. It has been good for Parliament. We do not change a great deal here. Dramatic changes take place outside Parliament. Most Opposition Members believe that, but we have to use Parliament as a sounding board and for passing legislation when dramatic changes are effective. Since we are here, however, we have got to do a job.

This morning—albeit it is a small beginning—we have been able to explain quite vividly that Parliament is being hijacked. What is worse, the private Member's Bill day is being hijacked. People talk about filibustering. That never occurs here. We hear about hon. Members debating a private Member's Bill and preventing other hon. Members from getting their Bills through. That is not what has happened today. The Government had plans to get their own little Bill through, even though it came from a Department that got four other Government Bills wrong.

In the last few years the Department of the Environment has introduced Bills that had to be drastically changed. On at least two or three occasions it had to go to the law courts to get them changed as a result of action taken outside this place. On other occasions, the same Department had to introduce retrospective legislation to put right previous legislation. This is another example. On this occasion it said, "There won't be many there on Friday. We will slip it through on Back Benchers' day." That is what the game is all about.

Mr. Cryer: Does my hon. Friend recall that in her brief remarks the Minister claimed that local authorities had been consulted about the Bill? She said that there had been wide consultation. She claimed that hon. Members would have been involved in consultations with the local authorities in their constituencies. Is it not outrageous that, after the huge panoply of consultation that the Minister claimed had taken place, the Government should have produced a shoddy Bill such as this instead of adopting the proper procedure—a public Bill in Government time?

Mr. Skinner: We always hear about consultation. I find it rather strange that next Thursday we are to discuss procedure on some other Bills. Why are we to do that? Because over the years people have discovered that there is an inherent weakness in the way in which those Bills are proceeded with in the House in that the Government have gradually invaded what used to be private Bills. Those private Bills, which were generally of a very minor nature, have suddenly become much more political, and it has become so bad that next Thursday we are to debate changing the procedure for private Bills because the Government have allowed and have even encouraged the private Bill procedure to have a more overt political tone.

Mrs. Dunwoody: Does my hon. Friend agree that, certainly in transport Bills, the Government are using the private Bill procedure as an alternative means of getting planning permission? They are pushing through the House major Bills which are taking the place of normal planning procedure. They are getting them on the statute book to bring about what they could not achieve by using the agreed procedures.

Mr. Deputy Speaker (Sir Paul Dean): Order. I am sure that the hon. Gentleman will resist the temptation to expand on that point. Let us stick to Friday, this Bill and these amendments.

Mr. Skinner: I must answer that because, although you have to guide us, Mr. Deputy Speaker, a few of us were here this morning and we witnessed a parliamentary scene of confusion that we have not witnessed in all the years that we have been here and Mr. Speaker used words——

Mr. Deputy Speaker: Order. Let me disabuse the hon. Gentleman. I assure him that I have been here in spirit since 9.30 this morning, I have heard almost every word that has been said, and the Chair is indivisible in these matters.

Mr. Skinner: What was initially a motley crew has now developed into concerted, collective action. On private Members' days we do not have Whips and we do not

accept one person's point of view on any particular issue. From the explanations given by my hon. Friend the Member for Ogmore and others, it is pretty clear that there has been a conspiracy by the Government, on the Bill.

You have to sit in the Chair on many Fridays, Mr. Deputy Speaker. You also sit there from Mondays to Thursdays, and you expect a different argument on Fridays. But today it is the same argument. It is a Government Bill which has been produced by the Government and parcelled off to a Tory Back Bencher who has to take the flak. We are discussing specifically whether the amendments to replace "repeal" with "amend" are acceptable, and to reach a conclusion on that we have to find out why the word "repeal" was used in the first place. We have to find out where the murky trail began. We have discovered that it did not begin at Basingstoke. We found that it began in Downing street, in the Cabinet, and in the Department of the Environment. That is where the trail led us, and once we had discovered that we had every right to consider the amendments against the background of Government interference in a private Member's day.

We have no alternative. We are now engaged in a battle against the Government and that is not normal practice on a Friday. Although I find it hard to take my Opposition hat off on any day, most of us try to consider Fridays in a different light. That is what we are doing here today and Opposition Members are fully apprised.

Ms. Quin: Is it not the case that by introducing amendments at this late stage the Government are avoiding the consultation that they should be having with the many interested parties? Is it not also the case that, by introducing a Bill in this way, they are avoiding consultations which would be of great value to both sides of the House?

Mr. Skinner: A properly drawn up Bill dealing with the environment including these measures, would be supported. Such a Bill should be drawn up after proper consultation with local authorities—not the type of consultation that the dockers have had—and with hon. Members. In this age, more and more people are concerned about the environment and everyone knows that we cannot patch the hole in the ozone layer by using some sort of Tebbit-like entrepreneur. We cannot clean up the environment by allowing market forces to proliferate. Imagine saying to somebody, "We've a hole in the ozone layer and we are leaving it to an entrepreneur on an enterprise allowance to patch it up." It is nonsense.

We all know that if the environment is to be cleaned up, it has to be done by collective action. Once we start talking about collective action, we are talking about society, and that is a word that the Prime Minister does not like. Only people who are prepared to back philosophically collective action can sort out the problems surrounding the amendments. It cannot be done by the operation of market forces. I can see the twinkle in the eyes of many of my hon. Friends now that we have moved into this territory.

Mr. Ray Powell: We should be considering what the hon. Member for Basingstoke (Mr. Hunter) will say about all the comments that have been made on this issue. What part has he played in the conspiracy? When he walked down Whitehall to obtain his instructions, was he told, "You will be all right because we will not reach the second or third Bill on the Order Paper"? If that is the case, all the preparation for the debates on the Weights and Measures (Amendment) Bill and the Sunday Trading (Reform) Bill will be wasted. By the time the hon. Member for Basingstoke gives the House his explanation there will be no time left.

All that is engendered by a Government conspiracy against us and, as my hon. Friend the Member for Bolsover (Mr. Skinner) said, it is taking place on a private Member's day. It will affect Bills other than those on the Order Paper today. Some hon. Members have sat up all night preparing for the introduction of a Bill under the ten minute rule. They have now found out that if the Government want something, they conspire to ensure that an hon. Member will obtain it for them, but when they do not want something they are prepared to stop private Members' Bills. That is what we should be looking at.

Mr. Skinner: I agree with my hon. Friend. It is worth saying that later today the Elimination of Poverty in Retirement Bill will be moved. I offer a challenge now to the Government: when the Bill is moved at 2.30 pm, do not object to it. If they believe in looking after old-age pensioners by giving them proper aid and assistance, they should not object to the Bill. If they can destroy a private Member's day by bringing forward their own considerations, they should not stop Bills of that nature. Hon. Members have queued up to obtain an opportunity to introduce a Bill under the ten-minute rule.

Why were verbal amendments moved? Why did the amendments arrive only this morning? As the Bill passed its previous stages several Fridays ago—you, Mr. Deputy Speaker, may have been in the Chair when that happened —why was it not revealed that the Bill had been given the wrong title? Three or four weeks is a long time for legislation. The Government could have said, "Do you know what we have done? We have given the Bill the wrong title. Instead of giving it a title to amend the Clean Air Act, we have given it a title to repeal it."

12.45 pm

Three or four weeks have elapsed, yet nothing has happened, which means that the mistake was not spotted by civil servants. Let us assume that civil servants knew and that, rather like "Yes, Minister", Sir Humphrey or his equivalent said, "Hallo, hallo, hallo, look at this lot. The Bill will repeal the Clean Air Act instead of amending it. I said that it should be amended before I told you to find an hon. Member who would introduce it." Let us assume that Sir Humphrey or his counterpart said to the Secretary of State for the Environment, "Here is a good Bill. It has a green image and will be like a glow-worm in Downing Street. It will show that the Prime Minister means business."

I think that I know what went wrong in those four weeks. My hon. Friend the Member for Crewe and Nantwich (Mrs. Dunwoody) hinted at the answer at 9.40 am. I think that the Government were aware of the mistake but hoped that it would escape attention, as it did on the first occasion. They thought, "We have made a mess of this and we will probably place the Chair in a predicament", which was the case when Mr. Speaker had to make a statement about the new 18-year development. They thought that they would slide the Bill through and get on to the next one.

Mr. Anderson: Is it possible that Sir Humphrey knew the effect of the error from the outset but that the Government, as with other matters, refused to listen?

Mr. Skinner: Normally, we see civil servants shuffling papers back and forth to the Minister. I have been here all morning, but I have not seen any paper going back and forth. Labour Members have asked many questions and my hon. Friend the Member for Crewe and Nantwich raised several constitutional matters. One would have thought that if what we were saying was untrue a little bit of paper would have come from the Box.

Mr. Anderson: Confetti.

Mr. Skinner: Yes, confetti. There has been no paper from the Box.

Labour Members sussed out the Government early on. I am not prepared to accept lectures from the Government about private Members' Bill time. They have hijacked a private Members' day to pass a Bill that was wrongly drafted.

Mrs. Teresa Gorman (Billericay): Does not the hon. Gentleman think that the answer may be that my hon. Friend the Minister is so competent that she does not need to be briefed and has all the answers waiting for the hon. Gentleman?

Mr. Skinner: The hon. Lady has not been here all morning. I suppose that she was down at Wimbledon, getting ready for the ticket touts in June and July. Had she been here she would have heard the minister speak briefly, because she has been handed the difficult job of trying to explain away why it is that the amendment seeks to make the Bill wholly different from what it was before. The minister dodged the issue. If the hon. Lady had been here, she would have thought that it was funny that the Minister should get up to explain yet explain nothing although she would have kept her mouth shut because she would have thought, "She is one of ours". She would also have thought, "There must be some reason for the Minister's reticence." I did not hear the Minister explain or give any answers to my hon. Friend the Member for Ogmore. The Minister wanted to intervene, but did not give the answers. If the hon. Lady had been here, she would have known the answer. As she asked, I have given her the answer.

Mrs. Dunwoody: The Bill was obviously drafted by the Department, which would have used parliamentary draftsmen. They are specific in their instructions to Ministers that the English used must reflect accurately legal interpretations. Is it not a shame that they handed over to the hon. Member for Basingstoke (Mr. Hunter) a document that is so deficient in its drafting? The draftsmen not only missed their own incompetence, but had to bring in a rarely used procedural measure to do something about it. They should apologise to the hon. Member for Basingstoke, who has been put in an awkward position.

Mr. Skinner: Although the Minister made only a brief statement, she could at least have done what my hon. Friend has suggested. She could have said to her hon. Friend the member for Basingstoke, "I am not going to say much about the amendments because they are a bit of an embarrassment to me. We have placed you in something of a predicament." The hon. Gentleman has had to sit here all morning. I imagine that they told him beforehand that the Bill would be through quickly and he may have expected it to be all over by 10 am or 10.30 am. That may have been the signal he was given. The Minister should say, "We are sorry that the Bill was wrongly drafted. I apologise for all the trouble and embarrassment caused." Even at this stage the Minister could intervene and apologise for the trouble that she has caused him. We do not need apologies. In many ways, we have scored a parliamentary triumph today in thwarting the Government's activities. *[Laughter.* Some Tory Members laugh. Had they been here earlier and listened to the hon. Member for Orpington (Mr. Stanbrook), who spoke briefly on the matter, they would have known that what I am saying is said against the background of a Conservative Member fully understanding the muddle that the Government have created. I do not want to put words into his mouth, but he more or less said that in typical, Tory coded language.

Mr. Cryer: The Walker code.

Mr. Skinner: It was a bit more overt than that. The hon. Gentleman was astounded that such a procedure was being developed. He wanted to know how, when and why. He did not go on at length, but he made his point and he did not receive any answers. We have not had any answers either. The hon. Member for Orpington might explain to his hon. Friends who were not here at the beginning how the new procedure was brought in. We have sussed out the truth. We are trying not only to deal with the Bill and the amendments, but to ensure that such a mistake does not happen again. I hope that the Bill will go through. We have tried to ensure that such a mistake does not happen before with the Department of the Environment. Other Bills have been taken up in court and have caused the introduction of retrospective legislation. We have said, "Don't do it again." Then the Secretary of State has done it again. They have got the legislation wrong five times, and this makes it six.

Why should we just say, "We are sorry that you have got it wrong. You have brought in a bill that is totally wrecked compared with what it was at the beginning"? We must put it on the record that we shall not allow Parliament to be abused in this way or for private Member's day to be taken over by the Government to get their Bills through rather than use the opportunity on proper Government days to introduce proper environmental measures.

Mr. Cryer: My hon. Friend has suggested that the decent thing for the Minister to do would be to apologise for the abuse which the Government, through this shabby little conspiracy, have heaped upon the House. Does my hon. Friend agree that expecting an apology from the Government to a democratic institution is like asking for snow not to melt in spring? The Government's hallmark is what Lord Hailsham described as the elective dictatorship. When the Labour Government were in a minority and, ever since, with a majority of 100 on the Conservative side, the Conservatives have tried to trample on the rights of the House. They have used that majority and Lord Hailsham has never uttered a single criticism of the true elective dictatorship with which we are faced.

Mr. Skinner: It is not just that. We do not expect Lord Hailsham to defend the rights of working class people. It has been left to Labour Members to sort out this constitutional and parliamentary chaos. It is significant that throughout the debate—it is now nearly 1 o'clock

—not a single member of the rag tag and bobtail parties has been present. Those Social and Liberal Democrats go round the country talking about Parliament. We hear the leader of the officials and the leader of the provos on television. They talk about the need to reform Parliament. Where are they today? We have seen neither hide nor hair of them. They are not concerned about the way in which parliamentary procedures are trampled upon. They have not turned up for work. It has been left to Labour Members to discover the way in which the Government have taken over this Friday for their purposes.

Those Members who should be here have gone missing. I suppose that they are down in the Vale of Glamorgan —some good that will do them! I have been told that they have a meeting with Michael Meadowcroft because he has started another party. They are spawning—it is like mushrooms in a field. Every time I pick up a newspaper, there is another party, so we cannot expect those people to be here advising on the parliamentary chaos when they have so much chaos within their ranks.

Mr. Cryer: They are experts.

Mr. Skinner: There is no doubt about that. In the last election they were going to appeal to the electorate by saying, "Leave it to us. We will work with anyone." They are not working today, are they? They are not here. I knew that for a lie at the beginning. During the 1987 election, I saw one of the leaders get on one bus and another get on another bus. I said to a mate, "Did you notice that? They are supposed to be together but they are on different buses!"

We do not want those people to tell us about how to make sure that Back Benchers' rights are protected against a Government who are prepared to trample all over those rights and to bring in a Bill using all sorts of methods so that it can weave its way through Parliament. It is nearly 1 o'clock.

Mr. Cohen: I have followed the arguments of my hon. Friend the Member for Bolsover (Mr. Skinner) about the way in which the amendments and the Bill have come about. I agree that they may have emanated from Downing street. An even more sinister possibility which my hon. Friend should consider is that the Bill started out repealing the exemption from the statutory nuisance provisions. If the amendment is passed, people will be able to create a smoke nuisance.

1 pm

The sinister aspect is that, perhaps the Government meant "amend" in the first place but put "repeal" because they wanted to defuse any opposition so that the issue would not be raised. Now, at this late stage, the Government have come up with this new procedure—verbal amendments—to stick in the word "repeal". They avoided doing so earlier when there could have been criticism and a proper debate on the matter. Will my hon. Friend consider that sinister possibility?

Mr. Skinner: That is a more sinister argument. What my hon. Friend the Member for Leyton says is interesting and quite possible. We should examine what he is saying, which is that when the Government first introduced the Bill they deliberately put in "repeal" to put people off, so that they would say, "This is not a matter for us." Then on Third Reading, they changed it. That is really sinister.

My hon. Friend the Member for Leyton has been right on such matters before. If this sort of procedure is to take place we should try it regularly on every Bill put before the House. We are to start discussing the Dock Work Bill on Monday and we have already discussed the possibility of changing its title so that instead of repealing the docks scheme we will amend it.

Imagine the sort of measures that could be carried through when we are in Government—my hon. Friend the Member for Leyton might be a junior Minister like the hon. Member for Surrey, South West (Mrs. Bottomley), or even in the Cabinet, and he could quietly say to me and one or two others, "Don't worry about the Bill on Friday —we don't mean to do what it says because we are going to change its title; we only put it in to keep the Tories off." It would be an interesting development to bring in Bills which were the opposite of what they were intended to be. Talk about a circus—the Government have done some tricks in here from time to time but if this is what they are up to now, we shall need the sharp eyes of my hon. Friend the Member for Leyton on all these Bills. I shall certainly go through them all from now on. Most of the Bills that are being fetched off the shelf and handed down to Tory Back Benchers for a bit of kudos could mean the opposite of what they say, so we shall have to come here every Friday from now on.

Mrs. Dunwoody: I want to vote for some of them.

Mr. Skinner: We shall have to have two briefs. My hon. Friend the Member for Crewe and Nantwich (Mrs. Dunwoody) says that she will come to vote. It will mean a bit more work, but we shall have to prepare a brief in favour of the Bill and one against it in case it is amended at the last minute. We have no alternative.

Mr. Anderson: During the past two decades the Government have been bound to set out the way in which Bills affect finances and manpower, and the European Community. Will it be possible for the Government to add a third consideration—whether the Bill should be taken seriously at its face value?

Mr. Skinner: Imagine what the papers would say if the Labour party was doing this—what would have happened if a Labour Government had shovelled this Bill to a Back Bencher? The headlines in the Tory press the next day would have read, "Labour in complete bungle." We have not seen many members of the press in the Gallery today. The press would have said, "Total incompetence". The newspapers would have used all the epithets that they could think of, but I bet that they will not do that on this occasion. We shall have an opportunity in future to examine the matter, but we had better be careful about all the provisions in this Bill.

I have spoken for a long time because we are dealing with a constitutional matter. We thought that today's debate would be about a minor smoke pollution control Bill, but it has not been about that at all. When I discussed the Bill earlier with my hon. Friends, we thought that it would finish fairly early—we did not know that the Government were up to some dirty work, but we have found them out. Having found them out, we explored all the possible reasons as to why they had hijacked this private Members' day and brought it under their own control.

[Mr. Skinner]

In the past three hours or so we have made a protest, not just because of the Bill but because we have to stop the evil practice of turning the titles of Bills upside down in the course of their preparation. We have to stop the nonsense of Bills going through on the nod without proper debate. Today's happenings will make us wary about that in future.

For all those reasons, I am happy in the knowledge that my hon. Friends now understand the matter more clearly. As we approach the end of today's business, we are more aware and better understand the way in which the procedures of the House have been bludgeoned by the Government. That has to stop. For that reason, on every Friday in future while the Government remain in office we shall closely scrutinise all Bills to find out whether they mean the opposite of what they are supposed to mean and to make sure that this is the last time the Government can hijack a private Members' day for their own purposes. That is what we have learnt this morning.

Mr. Anderson: I should like to develop the theme of elective dictatorships. It has emerged forcefully during the debate that a tribute must be paid to my hon. Friends the Members for Ogmore (Mr. Powell) and for Bolsover (Mr. Skinner) on carrying out a magnificent House of Commons job.

When we take parties of schoolchildren or others through the Members' Lobby, we show them the statues of Lloyd George, Winston Churchill and Clement Attlee. There is also an empty plinth. In future, it may have on it a statue of either my hon. Friend the Member for Bolsover or my hon. Friend the Member for Ogmore, because today's debate has shown them to be great House of Commons men. We congratulate them on their forensic skills. What appeared to be a sprat of a Bill was proved by them to be something far more significant. My two hon. Friends have followed the clues in a fine forensic way from Basingstoke to the very steps of Downing street, and that in itself is a tribute to their skills. They have shown the way in which the Government are able to manipulate private Members' time.

I generally feel sympathy for you, Mr. Deputy Speaker, and for your colleagues in the Chair when you are subjected to difficulties posed by the Government. The Minister is greatly respected by all hon. Members, and because of that she has been landed with the baby—if that is not a sexist term. She has been forced to take the flak in quite an undeserved way. The hon. Member for Basingstoke (Mr. Hunter), to whom we all pay tribute, in all innocence accepted the Bill. From a legal viewpoint, I would like to know the terms of the contract that the hon. Gentleman concluded with the Government. What were the promises and undertakings made by the Government about the time that the hon. Gentleman would be engaged in the House on the Bill? He was probably told, "Look, here is a little Bill off the shelf. We promise that it will last only a couple of minutes and you can be back in your constituency opening a fete"—or whatever one does on a Friday. "We give you our solemn promise as a Government that it will not take long." However, because of a mistake made by the Government, it is just after 1 o'clock and the poor hon. Member for Basingstoke is still here.

The Minister began by saying it was an error. She refused to say whose error it was, because—if she had been smoked out—if she had been frank and had said that it was an error, either of the parliamentary draftsmen or of the legal advisers in the Department of the Environment, she would have let the cat out of the bag. We would have known straight away —as we all know in reality—that it is a Government Bill that masquerades as a private Member's Bill on a Private Member's day.

That happens all too frequently. When I entered the House in 1966 Private Member's Bills were just that. So long as the first eight Members put forward a reasonable and not eccentric Bills, they would expect to get their Bills through, and other Bills, too—given a fair wind—had a chance. Now, effectively, the Government have taken over Private Member's Bills procedure and even the first six in the ballot have no chance of making any serious progress with their Bills, unless they have the full authority and the concurrence of the Government.

Mr. Gerald Bermingham (St. Helens, South): Is my hon. Friend not understating his case? We have seen on a number of occasions Bills of hon. Members in the first six in the ballot not succeeding if the Government have not liked them. An example was the Bill of my hon. Friend the Member for Liverpool, West Derby (Mr. Wareing), to assist the handicapped. Even when a Bill is high up in the chain, it often suffers from the payroll vote of Members who are present on a Friday and can defeat crucial and major parts of it. Nowadays, unless a Private Member has a Bill in which the Government acquiesce, all sorts of devices are used to block it.

Mr. Deputy Speaker: I realise that the hon. Gentleman is still on his preamble and is making some general remarks, but I am sure that he will now anchor his remarks to this Bill.

Mr. Anderson: I shall be brief because I know that other hon. Members want to speak before we proceed to Third Reading. I am joining my hon. Friend the Member for Bolsover (Mr. Skinner) in exposing what has increasingly been Government practice—that is, to obliterate what used to be the intermediary bodies between Government and citizens. They have done it across the board. They have done that with the trade unions, with local government and with all bodies that used to filter and alter the views of Government. We have in Parliament an exact example of what Government have done. As my hon. Friend the Member for Bradford, South (Mr. Cryer) said, it is a form of elective dictatorship.

When Lord Hailsham used the phrase "elective dictatorship" against the Labour Government, I confess that I had a certain sympathy with him. I would now consider his views with greater esteem and consider them to be more credible if we had had even a peep from Lord Hailsham about what is happening under this Government. It is clear that, when he criticised an elective dictatorship, he was doing it in a one-eyed, selective and partisan way.

Mr. Bermingham: My hon. Friend may not be aware that Lord Hailsham said this morning that the present Government were sitting on their head and thinking with their bottom.

Mr. Anderson: That was only because it concerned an area in which Lord Hailsham has a special interest—that

of the law. When he sees the other major inroads into private liberties—the other major demands made by this authoritarian Government—and says nothing, we can hold certain views on Lord Hailsham.

I leave elective dictatorship there. I commend my hon. Friends for the tremendous work that they have done on behalf of the House. I look forward to developing my points on Third Reading.

1.15 pm

Mr. Win Griffiths: When I entered the House this morning, I expected a completely different sort of day from that which I have so far experienced. Earlier this week, I was advised that the Control of Smoke Pollution Bill was uncontroversial and would go through with little debate, but that the Weights and Measures (Amendment) Bill would excite some discussion—and I prepared myself for that possibility. Having listened to what will probably go down as some of the most eminent contributions in defence of Back Benchers' and private Members' rights, I discover that the Weights and Measures (Amendment) Bill will not be debated. Instead, I find myself in the midst of a constitutional and procedural crisis. Moreover, it is a crisis of which the generality of right hon. Members are unaware.

Arriving at the House this morning, I detected a whispering hum in the Tea Room about the verbal amendments to the Control of Smoke Pollution Bill that were to be debated this morning—the like of which had not been seen for 18 years. Only right hon. and hon. Members who happened to be present in the House this morning were aware of those amendments.

I still hope that the Minister or the hon. Member for Basingstoke (Mr. Hunter) will tell the House who drafted the Bill. At one point, my sympathies lay with the hon. Member for Basingstoke for having been handed such a measure by his Government. However, his continued silence throughout the debate makes me wonder whether he expects some kind of preferment afterwards for being so stoical in accepting without comment all the remarks that have been made.

The explanatory and financial memorandum makes the Bill's intentions fairly clear. However, the repeal of the long title is quite against the legislation's intentions as described in the explanatory and financial memorandum. I hope that an acceptable agreement will be reached that will allow the small but worthy improvement to the environment that the Bill would provide—at least as reflected in the explanatory and financial memorandum—to be made as if the Bill had been allowed to progress with its original title.

I look forward to a proper explanation of how major errors came to be made. Will the civil servants concerned be exonerated? Will the hon. Member for Basingstoke take it upon himself to accept the blame, or will that be done by the Minister? Or will the blame be accepted by the Secretary of State for the Environment who has not been prepared to come to the House today and face the flak?

Mr. Ray Powell: On a point of order, Mr. Deputy Speaker. I realise that, in an invisible state, you have been involved in the debate since 9.30 am, and will appreciate that our debate has been about the two amendments. The dilemma facing hon. Members has resolved on those two amendments, but we should now like to bring the debate to a conclusion. With your assistance, Mr. Deputy Speaker, I am sure that we shall be able to do so. Perhaps we will be informed by the Minister of the Government's response to the points made by right hon. and hon. Members.

I hope that this point of order will be helpful. If we are given some kind of assurance—perhaps that the amendments will be withdrawn so that they can be dealt with when they have been properly tabled—we may be able to resolve the matter this afternoon so that we can get on with the next debate.

Mr. Deputy Speaker (Sir Paul Dean): Order. I have noticed that the hon. Member for Basingstoke (Mr. Hunter) is trying to catch my eye. He would, of course, need the leave of the House to speak. [HON. MEMBERS: "The Minister."] I now understand that the Minister may wish to speak, again with the leave of the House, so I shall call her.

Mrs. Virginia Bottomley *rose*——

Mr. Cohen: On a point of order, Mr. Deputy Speaker. Before the Minister speaks, may I make a brief point? Perhaps she can tell us the status of the part in summary on the face of the Bill which refers to the removal

"exemption from the statutory nuisance provision of . . . smoke from certain domestic chimneys".

Mr. Deputy Speaker: Order. That is not a point of order; it is a point for debate. It would be helpful for the whole House—I am grateful to the hon. Member for Ogmore (Mr. Powell) for his suggestion—if we were now to hear the Minister.

Mrs. Bottomley: Being mindful of the fact that today is a private Members' day, I have done my best to be rather restrained in my remarks. I thought it proper to debate the amendments, particularly in the unusual circumstances—it is 18 years since anyone tried to move a verbal amendment. That seemed an appropriate use of parliamentary time.

I had hoped to speak at much greater length on Third Reading about my experience of these matters. Much concern has been expressed to the Department—whether in Bolton or Barnsley, in Bristol, Scunthorpe or Sheffield—about the burning of buses and the pollution that it causes, let alone the problems emanating from domestic premises, where non-dark smoke causes offence and nuisance to neighbours who are powerless to obtain redress.

Let us examine the history of the matter. My hon. Friend the Member for Basingstoke (Mr. Hunter) is known by everyone in the House to have been a distinguished member of the Select Committee on the Environment. He has a considerable knowledge of environmental matters and indeed of air pollution: he contributed to the Select Committee's report on air pollution. I am surprised that hon. Members should even suggest that he is not a man of great experience, with clear views on the way in which he wished to use his private Member's slot.

My hon. Friend, graciously and kindly, consulted the Department about whether there were matters of concern to him, with his knowledge of air pollution, which would also be popular and acceptable and would play an appropriate part. I ceased only recently to be a Back-Bench Member—a week ago the hon. Member for Bolsover (Mr. Skinner) said I had been a Minister for only

[Mrs. Bottomley]

five minutes; it is another 10,000 minutes since he said that—but it is important, if a Bill is to meet with success, for it to fit within the general framework.

I said earlier that it was a considerable source of regret that this error was not spotted. The fact is that clause 1 stands fairly and clearly. The substance of the Bill is perfectly straightforward, but for one reason or another its long title did not contain a small substitution. As I have said, it is a source of regret.

It might help the House if—this measure will meet with great popularity among the constituents of all hon. Members——

Mr. Bermingham *rose*——

Mrs. Bottomley: No, I would rather not give way.

My hon. Friend the Member for Basingstoke may feel that in the circumstances the best way forward would be for him to seek to withdraw his amendments so that progress could be made on the Bill and it can be considered in another place.

Mr. Hunter: With the leave of the House, may I say how deeply I regret accepting the advice to table the amendments? I apologise to the Chair and to Opposition Members for any embarrassment that this hassle may have caused. I meant no discourtesy.

It has been an interesting and lengthy debate. I stress that there was no conspiracy. It was a monumental blunder. Obviously, as the Bill bears my name I must accept responsibility for it. The original draft of the Bill was changed long before Second Reading. It transpires that the blunder was committed at that stage and that the title of an original draft Bill was not changed. I did not reaslise that at the time of the Bill's Second Reading on 3 March. It was brought to my attention only at the beginning of this week, shortly before the Select Committee on the Environment went away for two days, which meant that I was not in a position to seek advice about it. Therefore, in a hurry, I agreed yesterday to table the amendments.

I accept the advice given by my hon. Friend the Minister. I believe that these matters can be resolved in the House of Lords and, with that in mind, I beg to ask leave to withdraw the amendment.

Amendment, by leave, withdrawn.

1.26 pm

Mr. Hunter: I beg to move, that the Bill be now read the Third time.

If the past few hours are put to one side, the fact remains that this small Bill is an important contribution in the battle against pollution.

Clause 1 seeks to bring certain smoke emitted from domestic premises within the statutory nuisance provisions of part III of the Public Health Act 1936 or, for Scotland, of the Public Health Act (Scotland) 1897. In clause 1, the category of smoke emissions is that of non-dark smoke from dwellings that are not in smoke control areas. So far, that aspect of smoke control does not exist. It is a loophole in the existing legislation and the Bill seeks to close it.

The Clean Air Acts of 1956 and 1968 essentially declare three points. First, there is the prohibition on dark smoke—the most pollutant smoke—from any building except in special circumstances under the regulations introduced by the Secretary of State. Secondly, within the smoke control areas, there is a prohibition on dark and non-dark or clean smoke from all premises. Yet again, there can be exceptions and some were specified when the original smoke control orders were issued. Others have been specified subsequently by the Secretary of State. The third essential aspect of the clean air legislation is that——

Mr. Harry Greenway: When my hon. Friend refers to non-dark or clean smoke, does he include washed smoke?

Mr. Hunter: I do not have the precise details, but I know that the public wealth Acts refer to the Ringelman scale by which the cleanliness or otherwise of smoke is gauged. I imagine that it includes the category that my hon. Friend has in mind, but I cannot be absolutely sure.

The emission of non-dark smoke can in certain circumstances be deemed to be a statutory nuisance. Clause 1 seeks to extend the categories of smoke emission that can be deemed to be a statutory nuisance to include non-dark smoke from dwellings that are not situated in smoke control areas. The existing statutory provisions do not apply to smoke from dwellings that are situated outside smoke control areas. They are limited to industrial premises. The purpose of the clause is to extend the existing statutory provisions that now apply only to industrial premises to domestic dwellings.

The Bill is the result of a consultation process. Opposition Members unfairly ridiculed that suggestion when it was made earlier. In December 1986, the Department of the Environment, the Scottish Development Department and the Welsh office published their review of air pollution control in Great Britain. They published a follow-up paper in December 1988. It was a lengthy consultation process. Local authorities, local authority associations, trade associations, companies, firms and individuals took part in the process. The recommendation that is embodied in clause 1 was made by the Government and it was supported by 64 representations. Four were against. There was overwhelming support for the recommendation.

Clause 2 has two subsections. Subsection (1) refers to the "occupier of the premises." A loophole in the existing legislation has been exposed. The Clean Air Act 1956 and the Clean Air Act 1968 make the occupier the person who is legally responsible. The Acts specify "the occupier". It may be, however, that people other than the occupier in law start a fire that emits the offending smoke. The object of subsection (1) is to make not just the occupier but any person "who causes or permits the emission" responsible. It is a neat tidying up of that loophole.

Local authorities have faced problems over securing prosecutions. It has been difficult for them to establish when combustion has taken place illegally, particularly at night, and the precise nature of the smoke emitted. Subsection (2) is designed to close that loophole and to make prosecutions easier. During the consultation process there was overwhelming support for the proposal that such a change in the law should be made.

The Bill encompasses little but it would achieve a lot if it were passed. I regret that this morning and during the early part of this afternoon we have had to spend, quite rightly a great deal of time on an important matter. I hope that that will not cloud hon. Members' judgment when

they consider the Bill in its own right. I commend the Bill strongly as I believe it will close loopholes and will be a vital part of our legislation against pollution.

1.35 pm

Mr. Bermingham: I shall be extremely brief in asking the Minister for a number of assurances. First, once more parliamentary draftsmanship has led to great delay. Let us be open and honest and admit that it is not the first time, and probably will not be the last time, that that has happened. The basic problem is that "amend" and "repeal" have different meanings.

Secondly, clause 2(2) should be re-examined as it does not cover the problem that has arisen on a number of occasions on demolition sites. A demolition site is said to be a site where a trade or industry is being carried on. The Minister will be well aware that much demolition is taking place in the north of England to rejuvenate inner cities and other areas. That demolition is often carried out by contractors, not local authorities because the local authorities own the land or the premises to be demolished. I know that there have been a number of serious emissions of dark smoke from demolition sites without prosecution because of certain loopholes.

Will the Minister also consider the problem that occurs when explosives are used to demolish buildings? A dust cloud is still a cloud, and can be a very dark cloud which causes great nuisance to the owners of adjoining land. That problem does not appear to be resolved by subsection (2).

Finally, I wish to draw the Minister's attention to the burning of vehicles, which is what might be called the Barnsley and Bolton problem, which I am aware of from yesteryear. In particular, buses and their tyres are burnt. That is often done outside smoke-control areas on sites or land belonging to people who do not give permission for the burning. Will the Minister consult her officials so that when the Bill is considered in another place—I certainly will not impede its progress—the wording of clause 2 can be altered to deal with that problem? The owner of the land is not a willing party to those practices, particularly to the cutting up and burning of buses which causes great offence in the Peak park areas and parts of Lancashire.

I trust that the Minister will undertake to look at those points which should be considered in another place.

1.38 pm

Mr. Harry Greenway: I shall be brief, although I have had the pleasure of listening to some long and remarkable speeches this morning.

I am very interested in the Bill as I welcome legislation which closes loopholes on pollution, particularly smoke pollution which is perhaps the most noxious in that it induces severe illnesses such as congestion of the lungs, very bad throats and bad colds. I well remember the London smogs of the late 1950s and early 1960s, which were largely caused by smoke. Walking through those smogs, one could not see one's hand before one's face, and as one walked along hoping that one was going in the right direction, bits in the air would hit one in the face. It was a very unpleasant experience. For that reason, smog masks were introduced to protect people's noses, but their eyes could not be protected. In the school where I was teaching at the time a great many children became extremely ill due to that smoke pollution. A great deal of it came from domestic chimneys across London and in many cases there were aggressive fires.

I should like to ask my hon. Friend the Member for Basingstoke (Mr. Hunter) and my hon. Friend the Minister what the penalties will be for those who are caught by the Bill. My hon. Friend the Member for Basingstoke spent no time—I know that he had other things to say—explaining what will happen to a person convicted of an offence under the Bill. It would not be right for the House to agree to the passage of any measure without knowing what penalties are involved.

Clause 1 seeks the

"Removal of exemption from statutory nuisance of smoke from certain domestic chimneys."

That means that private individuals will be subject to the provisions of the Bill.

Mr. Hunter: What happens under the existing law to the owners of industrial premises which emit offending smoke will now happen, theoretically, to the domestic dweller. In the first instance, an abatement notice is served requiring the nuisance to cease. If that is not complied with, the local authority may apply to the magistrates court for a nuisance order and finally—theoretically—the matter may go to the county court.

Mr. Greenway: I am grateful for that enlightenment. We need to pay attention to the fact that procedures currently enforced against industry will be enforced against individuals. It is extremely important for the House and particularly for my hon. Friend the Member for Basingstoke and the Minister to say that they would expect any court to deal with an individual householder more leniently than an industrial concern. It is a serious weakness in the Bill that attention is not paid to that important matter. If my hon. Friend the Minister can give the House an assurance as to how she expects the courts to act in relation to individuals, we shall be grateful.

There seems to be no difficulty about the definition of dark smoke and non-dark smoke, although you, Mr. Deputy Speaker, will know that for centuries the election or non-election of a Pope has been signified by the appearance of white or dark smoke above the sistine chapel. The process for producing dark smoke has not always worked and the wrong colour smoke has sometimes appeared, so there can be difficulties about the definition of dark smoke. That should be borne in mind. The burning of very green wood in any household will produce dark smoke, but it is not dirty smoke. That, too, should be dealt with by the promoter of the Bill and by my hon. Friend the Minister.

1.43 pm

Mr. Ray Powell: I shall be brief because we want to move on to the next debate. But for the two amendments, I could have delivered my speech—which took hours last night to prepare—in a reasonable time. I assume, Mr. Deputy Speaker, that your advice would be to save my speech so that if the Bill comes back from another place I shall not have wasted my copious notes.

It has been an interesting debate and the House, the Government and people who make blunders have been taught a lesson. I must tell the hon. Member for Basingstoke (Mr. Hunter) that we all make blunders on occasions and take decisions that, with the benefit of hindsight, we realise that we should not have taken. I

[Mr. Ray Powell]

assure the hon. Member for Basingstoke that his efforts have taught hon. Members and the Government a useful lesson. I shall be brief because my hon. Friend the Member for Bradford, South (Mr. Cryer) and other hon. Members want to deal with the next important debate, but when the Bill returns from the other place we shall consider it closely.

1.45 pm

Mr. Cryer: I travelled this morning from home in Bradford, having attended a constituency meeting last night, to talk about the Weights and Measures (Amendment) Bill.

The debate has been important. The fact that the Weights and Measures (Amendment) Bill—another privatisation measure that the Government attempted to sneak through the parliamentary procedures without proper scrutiny—has been withdrawn is a minor victory. I am pleased that the two amendments to the Control of Smoke Pollution Bill have been withdrawn.

The hon. Member for Basingstoke (Mr. Hunter) courteously took all the flak directed at the Government by Opposition Members. That should be recognised in the record, because if anyone is to blame it is the Government. The Government have a vast army of civil servants and expert parliamentary draftsmen. Nevertheless, the error was made.

Opposition Members are pleased that the amendments have been withdrawn. The reason why there will be no Division on the general principle of the Bill is the understanding that the amendments will be restored in another place in a better, clearer and less hasty way. We shall be looking out for that when we consider Lords amendments to the Bill. If amendments are not made in the Lords, the Bill will be confused and untidy because it will have repealed section 16(1) (a) of the Clean Air Act 1956 and there will be nothing to amend. It could be argued that that need not be so, but we must always ensure that when legislation leaves both Houses it is as clear as we can make it. We do not want useful legislation to be subject to protracted and expensive challenge in the courts. I therefore expect amendments to be made to make the Bill read sensibly.

I hope that the promoter—especially following the debate on the drafting error—is satisfied that there is a definition of dark smoke in the Bill. He mentioned the Ringelman scale, and those of us who have fed coal into fiery locomotive furnaces know what that is. I am the only hon. Member who has carried a copy of the Ringelman scale in his pocket. As a fireman, I put coal in the locomotive and checked whether emissions conformed with the Ringelman scale or whether they were on the darker side, which could mean prosecution. A widely used degree of definition is available. It is used by environmental health officers to check whether a prosecutable offence has occurred. I assume that in some way or another—I have not checked—there is a link in either the 1956 Act or the 1968 Act with the Ringelman scale, so that a prosecution can be certain.

I look forward to further scrutiny of the Bill. If there are omissions, the scrutiny should be long so as to encourage diligence by the Government. However, I support the general principles of the Bill.

1.55 pm

Mrs. Virginia Bottomley: I can only say again that it is a source of regret that the drafting error concerning the word "repeal" rather than "amend" in the long title has meant that we have not had sufficient time properly to scrutinise and to discuss all aspects of the Bill or the important effects on individual concerns and grievances in many constituencies.

The hon. Member for Ogmore (Mr. Powell) referred to Rockwool, in his constituency. I can assure him that we have extended the powers of air pollution control and that the fibre works will be within the province of the inspectorate of pollution.

The hon. Member for Bradford, South (Mr. Cryer) speculated, rightly, that the Clean Air Act 1956 gives a clear definition of dark smoke and refers to the Ringelman chart, about which the hon. Gentleman has a particular knowledge. The smoke has to appear to be darker than shade 2.

The hon. Member for St. Helens, South (Mr. Bermingham) can be reassured about vehicle burning. Instances of vehicle burning have caused great difficulty. My hon. Friend the Member for Ealing, North (Mr. Greenway) also spoke of vehicle burning as being a great danger. It is not only the sooty particulates and the lead, but chlorofluorocarbons from the blown foam and the dioxins from the plastics that are dangerous. The Bill hopes to address such problems.

It is possible to burn matter on demolition sites as long as one can demonstrate that there is no other reasonable, safe and practical method of disposing of the matter. The burning must be carried out in such a manner as to minimise the emission of dark smoke and must be under the direct and continuous supervision of the occupier of the premises.

Our Clean Air Acts have been a monumental success. The hon. Member for Ogmore referred to his early days in Acton when he had to wear a mask over his mouth and could scarcely move about in the smogs of winter. They are a thing of the past. Visibility in London has increased from one and a half miles to four miles over the past 40 years. Central London enjoys twice as much sunshine in winter now as it did then, and that is a dramatic success.

I regret that time constraints have made it impossible for me talk about the other issues of air pollution such as the steps to promote the use of unleaded petrol, the move to remove CFCs to save the ozone layer, the gas desulphurisation programme and the introduction of Low-Nox burners, which will tackle the problem of acid rain. The Government are busy and are committed to reducing air pollution in a number of ways.

My hon. Friend the Member for Basingstoke (Mr. Hunter) has chosen to tackle two particular aspects of air pollution of local and immediate concern. Quite properly, many hon. Members have raised such matters over the years on behalf of their constituents. I should like wholeheartedly to congratulate my hon. Friend on his success.

Mr. Harry Greenway: Will my hon. Friend spend half a minute in dealing with the penalties for private individuals?

Mrs. Bottomley: My hon. Friend the Member for Basingstoke outlined the position precisely. The maximum penalty is £2,000, and there is no difference between cases of burning generally and domestic nuisance cases.

My hon. Friend has done a great service to the House in bringing forward the Bill. A great deal of care has gone into its preparation, and I wish it well in its further stages.

Question put and agreed to.

Bill accordingly read the Third time, and passed.

Weights and Measures (Amendment) Bill

Order for consideration in Committee read.

1.54 pm

Mr. Ray Whitney (Wycombe): With the authority of the Member in charge of the Bill, my hon. Friend the Member for Weston-super-Mare (Mr. Wiggin), I beg to move, That the Bill be considered in Committee on Friday 28 April.

Mr. Ivor Stanbrook (Orpington): On a point of order, Mr. Deputy Speaker. When a Bill is taken out before half-past 2, does that need the leave of the House?

Mr. Deputy Speaker (Sir Paul Dean): The first Question that is always put is that on when consideration of the Bill is to proceed. It is for the hon. Member in charge of the Bill, or someone else on his behalf, to name a day. The hon. Member for Wycombe named a day, and that procedure is perfectly in order.

Mr. Stanbrook: Further to that point of order, Mr. Deputy Speaker. I understand that. That is the procedure which is followed after half-past 2. Does it apply before half-past 2?

Mr. Deputy Speaker: The same procedure applies before half-past 2 to any Order of the Day.

Mr. Stanbrook: Therefore, before half-past 2 it is possible for the motion on the Bill to be moved and for a debate on any stage to proceed. Apparently, it is in your hands, Sir, to put the Question to the House as to when next the Bill will be considered. That is a different matter entirely.

Mr. Deputy Speaker: The Member in charge of the Bill can decide whether he wishes it to proceed. Precisely the same applies to Government Bills. What has happened today on this Bill has been in order.

Mr. Stanbrook: What form of authority from the Member in charge of the Bill is required to enable another Back Bencher to proceed with it? Is there any formality about the passing of that authority?

Mr. Deputy Speaker: On these occasions, the Chair is always prepared to accept the good faith of an hon. Member when he says that he is speaking on behalf of another hon. Member. The Chair accepts that automatically.

Mr. Dennis Skinner (Bolsover): On a point of order, Mr. Deputy Speaker. I should like to move, on behalf of the Prime Minister, that the Bill on Monday to repeal the dock labour scheme be not proceeded with.

Mr. Deputy Speaker: The hon. Member had better wait until Monday and see how he gets on then.

Sunday Trading (Reform) Bill

Order for Second Reading read.

1.57 pm

Mr. Steve Norris (Epping Forest): I beg to move, That the Bill be now read a Second time.

The problem with the position in which I find myself is that one prepares for a speech of not more than three and a half hours and not less than four minutes and, invariably, the latter transpires. Because of this morning's efforts—no doubt well meant—we have about 35 minutes to talk about this important subject. I shall endeavour to truncate my observations and allow other hon. Members to participate. I hope that those hon. Members who follow me will, in the same spirit, allow as many colleagues as possible to speak.

I am sure that I need not remind the House that the present Sunday trading law is essentially that regulated by the Shops Act 1950 and a number of subsequent small amendments. The Shops Act is riddled with anomalies and does not reflect in any sense modern social patterns. Schedules 5 and 6 show that that is nonsense. Schedule 5 provides:

"Transactions for the purposes of which a shop may be open in England and Wales for the serving of customers on Sunday".

That includes

"meals or refreshments whether or not for consumption at the shop at which they are sold, but not including the sale of fried fish and chips at a fried fish and chip shop".

One can have one's fish and chips, but not from a fish and chip shop, as anyone born north of the Trent knows, is the only place at which one should ever eat fish and chips. As was the spirit in those days, one can buy "intoxicating liquours" and "tobacco and smokers' requisites". One can buy "flowers, fruit and vegetables". In particular, according to schedule 5, one may include mushrooms in that purchase. That is an important addition, which has vexed many a council for many a day. One may buy

"milk and cream, not including tinned or dried milk or cream, but including clotted cream whether sold in tins or otherwise;"

I shall pass over what clotted cream in tins is like, but, if it can be found, one may buy it.

In the spirit of schedule 5, and in order to allay the fears of those ecologically-minded hon. Members who care about such matters, if they want to travel here by horse on a Sunday they may buy

"fodder for horses, mules, ponies and donkeys"—

if they happen to come by donkey—

"at any farm, stables, hotel or inn."

If people want to buy fodder for a donkey, they should do so not from a roadside trader because that would be illegal, but from an inn, which would be legal.

If I had time to make a three-and-a-half-hour speech, it would be mildly amusing to go through the list in greater detail. However, I shall summarise it by saying that the present law allows one to buy fresh but not dried milk, newspapers but not toilet paper, car batteries but not torch batteries, and fan belts but not ladies' tights. Everyone knows that if a fan belt breaks, by far the best way of restarting the car is to buy a pair of ladies' tights and use them as a fan belt.

My hon. Friend the Member for ——

Mrs. Teresa Gorman (Billericay): Billericay.

Mr. Norris: I am glad to see that my hon. Friend has been there long enough to remember the name of her constituency. She has probably used the odd pair of tights in that way and should know that she can buy a fan belt on a Sunday but not a pair of tights.

I am sure that this will not affect my hon. Friend the Member for Billericay (Mrs. Gorman), but she can buy gin but not a baby's bottle, Easter eggs but not fresh eggs. She can buy car oil but not cooking oil. The present legislation is a complete and absolute nonsense. I need go no further with schedules 5 and 6 or the Shops Act 1950. It is an extraordinarily patronising piece of legislation which Conservative Members should be prepared to see the back of once and for all.

In addition, patterns of life have changed considerably over the past 40 years. I shall pass over the question of the standards of religious observance. Clearly, there are higher living standards, which have created a higher demand for leisure activities, particularly gardening, and repairing and improving homes. The DIY boom is important in connection with the Bill. Much DIY activity involves going to stores to purchase the goods, which involves breaking the law.

There has also been a change in women's approach to work. In 1951, only 26 per cent. of married women were in employment. Now the figure is 61 per cent.

Mr. Ivor Stanbrook (Orpington) *rose*——

Mr. Norris: In order to give as many hon. Members as possible the opportunity to speak, I shall not take interventions.

The enforcement of the present law is not merely nonsense. The list on its own can be funny, and seen as one of those amusing hilarities such as the existence of the death penalty for witchcraft. However, enforcement of such law is outrageous. There are about 420 enforcing authorities in England and Wales, and it is estimated that about 20 per cent. of them bother to enforce the law on Sundays. It is not only extraordinarily unreasonable that whether one is fined or injuncted and restrained from selling on Sundays depends in which local authority area one happens to live, but grossly unfair.

I know from my experience as the hon. Member for Oxford, East that a shop on one side of the road under a a local authority that was keen to enforce the Act had to compete with a shop on the other side of the road in the area of another local authority that said, "We do not give much of a damn and have neither the resources nor the inclination to enforce the Act." About 26 per cent. of turnover can accrue to a business on a Sunday in these selected trades, and it is outrageously unfair that local authorities should discriminate in that way.

There is a further idiocy. Under article 30 of the treaty of Rome there has been a reference by the courts to the European Court of decisions on the granting of injunctions. That means that existing legislation may be overtaken by decision of the European Court. If the European Court rules, as it is invited to do, that the Shops Act 1950 conflicts with article 30 of the treaty of Rome, which deals with restraint of trade, then whatever the attitude of some hon. Members towards Europe, I for one shall say thank goodness that Europe can introduce a little sanity into our proceedings.

On the matter of sanity, I should like to quote Councillor John Denison, the chairman of the Association of District Councils' general services committee. On hearing about the European reference, he said:

"This is the last straw. The present law is totally discredited and every effort by districts to enforce the law is thwarted even by the courts. These cases show that it is imperative for Government to take urgent action to reform the law."

The law is an abject mess.

Mrs. Gorman: The law is an ass.

Mr. Norris: My hon. Friend is right. What should we do about it? The Conservative manifesto was clear. We committed ourselves in that manifesto to bring sense and consistency to the law. I intend to remind all Ministers of that and not just my hon. Friend the Minister of State, Home Office who has given up some important engagements to be here for the debate. I remind my hon. Friends of that commitment and hope that the Government will see it through.

The last Bill in 1986 was hijacked by a minority who impressed their opinions on some of my hon. Friends who, like me, were in extraordinarily unsafe seats. They each received perhaps 100 letters in favour of the system from some of the vast majority of people who already used it, perhaps without knowing that they were abusing it, and could not be exercised to do anything about it at that time. I suspect that things might be different if we had another opportunity to debate such a Bill.

Complete deregulation is the only logical answer. In a speech in his constituency on 10 February the Minister of State, Home Office said that the Government had not changed their views on the issue. He said:

"We still believe that the wholly logical solution is that of total deregulation. But we have to recognise that this was not acceptable to Parliament."

If, for whatever reason—and we can all speculate—Parliament has said that total deregulation is not its wish, we must not insult Parliament by reintroducing the 1986 Bill. We must consider the real and serious objections of some hon. Members to that Bill.

If we do not want to go down the path of total deregulation, we have three options. One is to go down the path of a new list, but a new list would be absurd because it would instantly be arbitrary, immediately anomalous and increasingly ridiculous. There would be great difficulties in enforcing a new list system. Huge resources would be needed to visit every shop that was entitled to be open, because it sold some items that were on the exempt list, to make sure that it was not selling items that were not on the list. That is also nonsense in manpower terms. We will need an army of inspectors and an army of fraught policemen running around deciding whether someone has had the temerity to buy tights or is buying fodder for his horse from an unrecognised inn or farm. How awful that would be.

We could, of course, allow any shop to choose its own restricted hours—perhaps to open for six or seven hours on a Sunday—but I believe that that suffers from the same problems of enforceability and is an avenue down which we should not go.

My Bill would allow any shop to open from noon to 6 pm. It would allow an extension for small shops, because I believe that, on either side of the argument it is generally recognised that there needs to be some protection for small shops. I was advised, that, because of my inadequate drafting, the worker protection clauses in my original draft of the Bill were inconsistent with the wording of the long title. Therefore, I give the House my commitment that, if it approves my Bill on Second Reading, I shall introduce similar worker protection clauses to those contained in the 1986 Bill. I believe that that is the solution that gets nearest to common sense. It was supported by a majority of those participating in the polls. It also has least opposition of any of the proposed schemes. Its advantages are that it is enforceable, that there are no lists, that it is fair and that it retains the special character of Sunday, in that it clearly requires the closure of shops at certain times and a different pattern to be be established from that that applies on the other six days of the week.

I will not proceed further other than to summarise the words of an editorial in the *Evening Standard* some time ago, which said:

"Nowadays you can join a union, run your school, buy your council house or own shares if you so desire. But if you want to buy your baked beans or your wallpaper on the way to church on Sunday, you can't. The outdated and bizarre law preventing Sunday trading remains on the statute books . . . Ministers should have the courage to reintroduce their Bill at the earliest opportunity. Sunday trading is not a wrong but a right."

2.11 pm

The Minister of State, Home Office (Mr. Tim Renton): It would be as well if I intervened at this stage—with apologies to hon. Members on both sides of the House—because if I do not intervene now, in the short space of time available, it may be impossible for me to do so at all.

Mr. Ray Powell (Ogmore): On a point of order, Mr. Deputy Speaker. I do not challenge who you call, because that is not for us to challenge. I realise that it is a Private Member's Bill, but it is custom and practice to call an hon. Member from one side of the House and then an hon. Member from the other side of the House. I am rather disturbed that you did not seek to catch the eye of Opposition Members, because we had declared in previous debates this morning our interest in getting rid of the previous debate so that we could get on to this one. I am somewhat appalled at the fact that you have called two hon. Members from the Conservative side when Opposition Members would also wish to contribute to this emotive debate. Those of us who are sponsored by the Union of Shop, Distributive and Allied Workers are worried that we might not be afforded the opportunity to speak on the issue because of the time factor.

Mr. Stanbrook: Further to that point of order, Mr. Deputy Speaker. It would be unusual to call a Minister immediately after a Back Bench Member has just moved his own Private Member's Bill. This is a Private Member's day. The Government have no business to intervene so soon.

Mr. Deputy Speaker: Order. The hon. Members who have raised these points are very experienced. They will know that it is customary to call Ministers when they rise. The Minister has risen and I have called him.

Mr. Renton: I offered my apologies to hon. Members on both sides of the House. I shall be extremely brief in the hope that both the hon. Member for Ogmore (Mr. Powell) and my hon. Friend the Member for Orpington (Mr. Stanbrook) will be able to make their contributions during the next 17 minutes. However, I must say that the

[Mr. Renton]

comments of the hon. Member for Ogmore smelt somewhat of hypocrisy, as the Labour Opposition's record in promoting any attempt to reform Sunday trading so far has not only been one of total neglect, but every Labour Member who was present in the House voted against our Bill in 1986. As the record of the Labour party on this has been one of total ignorance and unawareness of the needs and wishes of the consumer, I cannot accept the hon. Gentleman's objections.

I am grateful to my hon. Friend the Member for Epping Forest (Mr. Norris) for giving us the chance to examine an issue which continues to command a great deal of parliamentary and public attention. It is particularly helpful that my hon. Friend, in a concise and well-phrased speech, has presented a Bill which is simple, straightforward and avoids extremes. That ought to encourage rational and sensible discussion.

I fully agree with my hon. Friend's analysis of the difficulties that face proposals for legislation. There is virtually universal agreement that the present law is badly in need of reform and contains indefensible anomalies which limit public choice and no longer reflect modern needs. Equally, there are wide divisions about the steps that should be taken to achieve reform—and the practical difficulties of achieving it without creating equally indefensible anomalies, often of a very complex nature, are legion. I have found that to be so in my 20 months at the Home Office, in meetings with a great many people representing both sides of the issue, and in my attempts to find a halfway house acceptable not just in the House but to the vast majority of our countrymen. At every turn one is reminded of the sheer difficulty of arriving at a workable compromise.

One reason is that, at heart, none of us wants all seven days of the week to be exactly the same. That would imply a grey monotony and a drab uniformity of which Orwell's thought police would certainly approve. We all want the rhythm of our lives to change on at least one day of the week—be it Friday for the Moslem, Saturday for the Jew, Or Sunday for the Christian. For at least one day of the week, those who live in towns want the high street to be quiet and the pedestrian centre to be peaceful. They would like an absence of heavy duty lorries parked on the double yellow lines and blocking narrow streets as they unload their goods, with coaches and cars queueing behind and honking their horns in irritation. At the same time, as my hon. Friend points out, consumers want on that same idyllic day regularly to buy a newspaper and petrol, to take the family out for a meal, enjoy a game of sport, buy the extra food needed because two of one's children are unexpectedly arriving for supper, visit the DIY store to buy paint and brushes, or the garden centre to purchase plants, fertiliser, a spare trowel, and so on.

It is because of the normal demands of average consumers—certainly not wicked sybarites—that about 5 million people already work on Sunday. That is so often forgotten. It is because of those same demands that Scotland—a more Sabbatarian country than England—imposes no controls whatever on Sunday shopping. If one walks down Princes street or Sauchiehall street on a Sunday, one certainly does not get the impression that Jezebel has taken over. The churches are fuller while some shops are open and some are not without any bother at all.

That is why I find the attitude taken by Scottish right hon. and hon. Members—not one of whom is present in the Chamber this afternoon—so extraordinary. In my experience, the Scots do not usually hesitate to extol the superior virtues of arrangements north of the border where they differ from ours. On this issue, however, they show a strange reluctance to do so. The hon. Member for Edinburgh, Central (Mr. Darling), for example, who is a Shadow spokesman on home affairs, and who is not in his place this afternoon, can stroll through his constituency on a Sunday and buy anything that he chooses—yet he and his Scottish right hon. and hon. Friends vote against giving consumers in England and Wales the same right. What is the reason for the hon. Gentleman's reticence? One can only assume that he and all Scottish Labour Members are creatures of the Labour Whips Office first, Scotsmen second, and friends of the consumer a very poor third. They will not speak up for a system that operates successfully in their own country. Their opposition to reform in England is a hypocritical sham, and their arguments are just so much humbug.

I return to the notable omission from my hon. Friend's proposals, on which he touched in his remarks. In my judgment, the eventual Bill must provide safeguards for shop workers working on Sundays. I note that if my hon. Friend's Bill goes into Committee he will make certain that clauses to provide safeguards for workers would be included.

Mr. Barry Sheerman (Huddersfield) *rose*——

Mr. Renton: I shall not give way to the hon. Gentleman, who has only just come into the Chamber, as there is very little time available.

Whatever happens to this Bill—it is clear that Labour Members are not at present inclined to help it on its way—I should make it clear that we are committed to finding a way of making sense of the present unsatisfactory position. I have every sympathy for retailers who find the present law confusing, anomalous and inconsistent, and who cannot meet the known needs and wishes of their customers without running the risk of breaking the law.

Mr. Ray Powell: On a point of order, Mr. Deputy Speaker. The Minister has just said that Labour Members were not trying to help the Bill on its way. As you are aware, Mr. Deputy Speaker, arrangements were made before this debate so that it could start. If those arrangements had not been made through the usual channels, the debate would not have been allowed to begin. The Minister should withdraw his remark, as he was fully conversant with those negotiations.

Mr. Deputy Speaker: Order. That is a point of argument, not a point of order for the Chair.

Mr. Renton: It is possible, for example, that the Bill points to the next stage in the process of bringing sense and order to this obscure and complicated corner of the law. However, we need to be clear about its objectives for Sunday mornings. I am slightly fearful that the limit of 3,000 sq ft may be a little too wide and might have too great an impact on the number of shops that stayed open in the High street, but that is another point that we could consider in Committee. I know that the Shopping Hours Reform Council, under the leadership of Sir Basil Feldman, is anxious to take that further, and my right hon. Friend the Home Secretary and I will be pleased to give the

council all the help that we can. I take this opportunity pay tribute to the work of the council and Sir Basil for the dedicated and conscientious way in which they have attempted to build a consensus in favour of change. Their achievement in the areas of agreement that now exist has been considerable, and they continue to play an important role in finding an acceptable basis for legislation. I encourage all concerned to respond to their efforts.

The law places the responsibility for enforcement fairly and squarely on local authorities. It is a matter for their discretion and judgment, and, although current references to the European Court are relevant to the future status of the law, there is clearly no reason why they should get in the way of the ordinary process of enforcing the 1950 Act in the courts when local authorities think it appropriate.

Mrs. Gorman *rose*——

Mr. Renton: With respect to my hon. Friend, I am about to conclude my remarks. I hope that she may yet have a chance to catch your eye before 2.30, Mr. Deputy Speaker.

The question of the reform of Sunday trading is unfinished business for the Government but, as I have said before, we are in no hurry to finish it until we have a consensus which commands maximum support in the House and throughout the country on a subject that is certainly dear to all Conservative hearts, even if it is widely ignored by the Labour party. I thank my hon. Friend the Member for Epping Forest for the proposals that he has briefly put today, and I wish him well in his efforts.

2.23 pm

Mr. Alan Meale (Mansfield): I note with interest that because of the time that the Minister has taken up—and taken away from Back Benchers—he is part and parcel of the probable talking out of the Bill, which contradicts the argument that he has put.

The Bill's explanatory memorandum states that part of its purpose is to abolish the restrictions on premises

"where a retail trade or business is carried on to serve customers from the hours of twelve noon to 6.00 pm"

Hon. Members of all parties are aware that we have recently had a debate on a Bill about Sunday sport and that those provisions would have enabled some retail trading to take place on that day. As the explanatory memorandum points out, if the Bill were allowed to proceed today, it would cause yet another anomaly within the racing industry. That is an important point because it would mean that betting shops in the high streets of Britain would be able to open on Sundays. Conservative Members might say that that is irrelevant because there would not be any horse racing because hon. Members, and especially Opposition Members, managed to prevent a Bill that would have allowed that.

However, because of the new technology and the investment that has been made by those in the bookmaking industry outside the United Kingdom, because of SIS—Satellite Information Services—and news satellite services, racing could be beamed live to British betting shops. If the betting shops in our high streets were open, clearly the workers in those shops would have to work on Sundays. That would change the Bill and the purpose of these arguments in the House, which has clearly rejected the arguments for Sunday sport. Anyone who has any doubt about that need only consider the investments that have been made by the big four betting chains in Southern Ireland. In the past 18 months the four big betting houses of Ladbroke and Co, Coral's, Mecca Bookmakers Ltd and Hill's have purchased more than 250 betting shops in Southern Ireland. Because SIS is now available, it is possible to beam overseas races live to this country. The betting industry has also made major investments in other countries. Negotiations are currently taking place to purchase betting and gambling rights in Belgium and France. Betting rights have already been agreed in California and Ohio in the United States. British betting chains are already working towards the possibility of beaming races live, at all hours of the day and night, which would allow betting in the high streets in Britain. That is a serious matter.

Another serious concern relates to workers' rights in the retail trade. We must question whether those who have prepared the Bill have considered its effect on people who work in shops. I do not think that that has been thought through. The hon. Member for Epping Forest (Mr. Norris), who promoted the Bill, has rightly pointed out——

Mr. Win Griffiths (Bridgend): Does my hon. Friend agree that the hasty and ill-thought-out nature of the Bill has been shown up by the fact that its promoter had to admit that there were problems about protecting the rights of workers?

Mr. Meale: I entirely and absolutely agree. The argument that at some later stage the hon. Member for Epping Forest would try to ensure that protection clauses were inserted into the Bill is unacceptable to hon. Members of all parties. Members of Parliament are not shop workers and do not have to face the possibility of working a seven-day week. Many hon. Members will argue that they work a seven-day week and 24 hours of the day, but as a fellow Member of Parliament I deny that that happens. I think that Members of Parliament have good terms and conditions. They do not have to put up with regularised work over a seven-day period, which people on low pay and with bad conditions have to face in other industries.

Mr. Ray Powell: Does my hon. Friend recall the Minister's words about the Government's attitude to the Bill and to shops legislation? My hon. Friend has participated on numerous occasions in debates on shops legislation. Does he recall that on many occasions the House has rejected any suggestion that legislation should be enacted to allow Sunday trading?

Mr. Meale: That is right. Hon. Members have to ask themselves why the Government are seeking to introduce Sunday trading legislation by means of a private Member's Bill. It is important to remember that fact because, although it is the normal practice, the Minister did not allow individual Back-Bench Members——

It being half-past Two o'clock, the debate stood adjourned.

Private Members' Bills

ABORTION (FINANCIAL BENEFITS) BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 5 May.

CHANNEL TUNNEL ACT 1987 (AMENDMENT) BILL

Order for Second Reading read.

Mr. Deputy Speaker (Sir Paul Dean): Not moved.

TROPICAL HARDWOODS (CONTROL) BILL

Order for Second Reading read.

Mr. Deputy Speaker: Not printed.

Second Reading deferred till Friday 12 May.

ELIMINATION OF POVERTY IN RETIREMENT BILL

Order for Second Reading read.

Hon. Members: Object.

Second Reading deferred till Friday 5 May.

Mr. Jeremy Corbyn (Islington, North): On a point of order, Mr. Deputy Speaker. I did not hear an objection, although I am sure that you did. We have had this discussion before. I should be grateful for your advice on the subject in this Session of Parliament. The Bill has been moved six times but it has never been debated. It has been objected to on every occasion by the Trappist tendency on the Treasury Bench. It would be helpful if 9 million pensioners knew who it is that does not want the Bill to be debated in the Chamber and who wants to block any discusson of a measure that would eliminate poverty among the elderly.

Mr. Deputy Speaker: We have had this discussion many times before at 2.30 on Fridays. The procedure that has been followed is perfectly in order. The hon. Gentleman will recollect that the Select Committee on Procedure considered the matter fairly recently and recommended that there should be no change in the procedure.

POLL TAX (RESTORATION OF INDIVIDUAL PRIVACY) BILL

Order for Second Reading read.

Mr. Deputy Speaker: Second Reading what day?

Mr. Harry Cohen (Leyton): Now.

Mr. Deputy Speaker: The Question is, That the Bill be now read a Second time.

Hon. Members: Object.

Mr. Deputy Speaker: Objection taken. Second Reading what day?

Mr. Cohen: On a point of order, Mr. Deputy Speaker.

Mr. Deputy Speaker: Order. We must deal with this first. I asked, Second Reading what day?

Mr. Cohen: On a point of order, Mr. Deputy Speaker. Under the procedures of the House, I moved the Bill and there was no objection. You should have said that the Bill had been given a Second Reading, and the next stage would have been the Committee stage, but you did not do that.

Mr. Deputy Speaker: Order. I can deal quickly with the hon. Gentleman's point. An objection at any time during the proceedings is in order. It does not necessarily have to be when the title of the Bill is first read out. There was an objection as soon as I put the Question on Second Reading. Consequently I asked the hon. Gentleman "Second Reading what day?"

Mr. Cohen: Further to that point of order, Mr. Deputy Speaker. Can it be right——

Mr. Deputy Speaker: Order. There can be no further points of order.

Mr. Cohen *rose——*

Mr. Deputy Speaker: Order. I have explained the procedure to the hon. Gentleman. He has heard the explanation on more than one occasion at 2.30. I repeat that when I put the Question on Second Reading objection was taken. According to our procedure, that means that the Bill is not able to proceed. All that I am then able to do is to ask the hon. Gentleman to name a day for Second Reading.

Mr. Tony Banks (Newham, North-West): On a point of order, Mr. Deputy Speaker. Will you explain exactly how we move through the various stages of a private Member's Bill? As I understand it, if no objection is taken when the mover has nominated today for Second Reading, we have moved on to the Second Reading stage. If there was no objection, we should have moved on to Committee——

Mr. Deputy Speaker: Order. I understand the hon. Gentleman's point. In this case, the objection was made when I put the Question on Second Reading. Had the Question been agreed to, the Bill would have received a Second Reading. But the objection was taken before that stage was reached and as a consequence the objection stands.

Mr. Corbyn: On a point of order, Mr. Deputy Speaker.

Mr. Deputy Speaker: Order. I shall listen to the hon. Gentleman, but I remind him that we have other business. We have been through this on many occasions on Fridays. I understand the frustration of hon. Members, but I must remind them that the Select Committee on Procedure looked at the matter fairly carefully and they may wish to refresh their minds and look at the reasons that the Select Committee gave for not recommending alterations to our procedures.

Mr. Corbyn: I share your concern about the procedures, Mr. Deputy Speaker, and I hope that the Select Committee will reconsider the procedure for Friday afternoon objections. We are not dealing with that problem at the moment. My hon. Friend the Member for Leyton (Mr. Cohen) quite properly and correctly moved the Bill and none of us heard any objection——

Mr. Deputy Speaker: Order. I distinctly heard objection. Therefore, I said, "Objection taken", as I am obliged to do.

Mr. Corbyn *rose——*

Mr. Cohen *rose*——

Mr. Deputy Speaker: Order. I shall not listen to any more points of order as they are getting dangerously close to arguments with the judgment of the Chair.

CHLOROFLUOROCARBONS (CONTROL) BILL

Order for Second Reading read.

Mr. Deputy Speaker: Not moved.

ABOLITION OF DOMESTIC RATES ETC. (SCOTLAND) ACT (AMENDMENT) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 12 May.

INDECENT DISPLAYS (NEWSPAPERS AND WORKPLACES) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

AGE OF LEGAL CAPACITY (SCOTLAND) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

GAMING MACHINES (PROHIBITION ON USE BY PERSONS UNDER EIGHTEEN) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

RIDERS OF EQUINE ANIMALS (WEARING OF PROTECTIVE HEADGEAR) BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

COUNTING WOMEN'S UNREMUNERATED WORK BILL

Order for Second Reading read.

Hon. Members: Object.

Mr. Deputy Speaker: The Bill has not been printed, so I cannot put the Question.
Second Reading deferred till Friday 21 April.

BRITISH RACING COMMISSION BILL

Order for Second Reading read.

Hon. Members: Object.
Second Reading deferred till Friday 21 April.

CONTROL OF POLLUTION (AMENDMENT) BILL

Order for Second Reading read.

Mr. Deputy Speaker: Not moved.

BUSINESS OF THE HOUSE

Ordered,

That, at the sitting on Monday 17th April, notwithstanding the provisions of Standing Order No. 15 (Prayers against statutory instruments, etc. (negative procedure)), Motions in the name of Mr. Neil Kinnock relating to Education may be proceeded with, though opposed, for one and a half hours after the first of them has been entered upon; and if proceedings thereon have not been previously disposed of, Mr. Speaker shall then put the Question already proposed from the Chair.—*[Mr. Alan Howarth.]*

Mr. Alan Meale (Mansfield): On a point of order, Mr. Deputy Speaker. I was asked to give a date for the Second Reading of my Bill——

Mr. Deputy Speaker: Order. The hon. Gentleman gave me a date which was 21 April, and that has been recorded.

Ms. Mildred Gordon (Bow and Poplar): On a point of order, Mr. Deputy Speaker. The Counting Women's Unremunerated Work Bill was presented behind the Chair and, therefore, has been printed. Does that not count?

Mr. Deputy Speaker: There has to be a printed text of the Bill before I am able to put the Question.

Ms. Gordon: Further to that point of order, Mr. Deputy Speaker. It was presented as a Bill behind the Chair in the previous Session.

Mr. Deputy Speaker: The previous Session does not count. There must be a printed text of the Bill in this Session, and my understanding is that there is not one. Therefore, I am not able to put the Question.

Mr. Corbyn: On a point of order, Mr. Deputy Speaker. Can you tell me the position on the Poll Tax (Restoration of Individual Privacy) Bill, which is before us today?

Mr. Deputy Speaker: If a day is named for the Second Reading of any Bill that has been deferred today, the Bill will appear on the Order Paper for that day. That does not necessarily mean that it will be reached. I understand that the hon. Member for Leyton (Mr. Cohen) did not name a day for Second Reading, but he can do so by giving an instruction to the Table Office.

Mr. Corbyn: Further to that point of order, Mr. Deputy Speaker. My question related partly to that and partly to the present status of the Bill. Has the Bill passed its Second Reading and Committee stages so that when it returns it will be for its Report stage, or was it blocked by the Trappists on the Conservative Benches?

Mr. Deputy Speaker: I realise that this is a complicated matter, so I shall expand a little on the procedure. Let me read from the report of the Select Committee on Procedure which explained this point. Paragraph 70 states:

"When the titles of private Members' Bills are read over . . . on a Friday, instead of rising to speak or to object, it is open to Members to remain seated but to give their voices as 'No' when the question is put."

Mr. Cohen: Further to that point of order, Mr. Deputy Speaker. That is not what happened. No Conservative Member said anything. Therefore, the Bill——

Mr. Deputy Speaker: What I read out is exactly what happened.

Mr. Cohen: I dispute that.

Mr. Deputy Speaker: Order: I am on my feet. I realise the hon. Gentleman's frustration. We have been following a well-established procedure. It applies to Government orders on occasions and to private Bills on other occasions. At the moment, the hon. Members who are raising points of order have not managed to persuade the Procedure Committee or the House that the procedure

[Mr. Deputy Speaker]

should be changed. It is my job in the Chair to ensure that our present rules and regulations are observed. That is what I have been doing this afternoon.

Mr. Cohen: Further to that point of order, Mr. Deputy Speaker. What arrangements will you make to rewrite "Erskine May" on this issue, because you have changed the rules in your ruling today? The Bill received——

Mr. Deputy Speaker: Order. I have made no changes in the rules. It is open to the hon. Gentleman, if he so wishes, to put the matter to the Procedure Committee.

Maternity Services (East Lancashire)

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Alan Howarth.]*

2.43 pm

Mr. Ken Hargreaves (Hyndburn): I welcome the opportunity to draw the House's attention to the concern of right hon. and hon. Members representing east Lancashire constituencies about the inadequate maternity services in the area covered by the Blackburn, Hyndburn and Ribble Valley district health authority. The concern that I shall outline is shared by my right hon. Friend the Member for Ribble Valley (Mr. Waddington) and my hon. Friend the Member for Rossendale and Darwen (Mr. Trippier) but, because of their ministerial positions, they are unable to take part in the debate. The concern is also shared by the hon. Member for Blackburn (Mr. Straw) who is unable to be present because of a longstanding engagement in Cheshire. His interest in the need for improved maternity services is clearly shown by the fact that he raised the matter in an Adjournment debate two years ago.

I wish to make an urgent plea for reconsideration of the place in the North West region's capital programme of the new maternity unit for Blackburn, Hyndburn, and Ribble Valley district health authority. The provision of a centralised maternity unit has been considered urgent since the 1970s, and in 1979 was recognised as the highest priority of the former Lancashire health authority. The regional health authority incorporated the scheme as phase IIIA of a development programme for Queen's Park hospital. After much discussion, it was eventually included in the regional capital programme in 1985, with a start date of 1990-91, which was subsequently put back to 1992-93. As a result of the changes in the approval process, the current status of the scheme and its start date are not known. Current and future problems are so acute that urgent action is needed if a crisis is to be avoided.

At present, district maternity services are provided on three sites—the main consultant unit at Queen's Park hospital, which has 67 beds, the GP unit at Victoria Accrington hospital, which has 15 beds, and the GP unit at Bramley Meade, Whalley, which has 20 beds. The GP unit at Darwen was closed in 1988 because of a substantial fall in the number of births. The authority decided that staff and resources could be used more efficiently by providing a temporary GP unit with 10 beds at Queen's Park hospital.

The problem is accentuated by the fact that between 1978 and 1988 the proportion of births in GP units fell from 30 per cent. to 9 per cent. This change, together with a rise in birth rate, led to an increase in the number of births at Queen's Park hospital from 2,409 in 1978 to 3,591 in 1988—a rise of 49 per cent. Latest projections show that the number of births to residents of east Lancashire will continue to increase to more than 4,500 by 1993. If the current trend continues, most of the births will be at Queen's Park hospital.

The total number of beds and staffing levels in the district reflect the regional average, but unfortunately the combination of a rising birth rate, a three-site operation and a 20 per cent. deficiency in consultant beds has placed enormous pressure on staff and facilities at Queen's Park hospital. Clinicians and midwives are extremely concerned

that the work load has increased to a point at which an effective and safe service can no longer be maintained. In 1985, while the number of births per midwife was 26·88 in the region as a whole and 29·6 in the district, it was a massive 49·44 at Queen's Park hospital—80 per cent. higher than the regional average.

The unit at Queen's Park hospital is clearly extremely busy and junior medical staff cover is inadequate. There is only one registrar for obstetrics and gynaecology. I believe that no other district which delivers 4,000 babies per year has only one registrar. The problem is further compounded by the fact that the registrar has commitments at other sites, particularly Blackburn royal infirmary.

I referred earlier to the debate initiated two years ago by the hon. Member for Blackburn. He reminded the House at that time that:

"The ante-natal clinic is half the size needed for its load. On some mornings 100 patients wait to see doctors, but only four examination rooms are curtained off and"

there are only two small waiting areas

"so some patients must wait in the corridors and some must stand. It is bad enough having to stand to wait for medical treatment when one is otherwise able-bodied, but for women in an advanced stage of pregnancy it is no joke . . . Such is the pressure on beds that no mother stays after birth for more than 24 hours unless she or her baby is ill."—[*Official Report*, 22 April 1987; Vol. 114, c. 767.]

In the two years since that debate, matters have not improved. The special care unit is on the lower ground floor, away from the main area. Only one lift serves the entire facility, sanitary accommodation is in a poor state, and there is no anaesthetic or recovery room. The position is not only wholly unsatisfactory, but grossly wasteful and inefficient.

The figures and examples cited give some idea of the unsatisfactory conditions that patients have to endure and under which the staff have to work. But for the dedication of the excellent medical, midwifery, nursing and ancillary staff at Queen's Park hospital, Accrington Victoria hospital and Bramley Meade hospital, the service would have broken down many years ago. It is sometimes difficult to escape the feeling that the district health authority is being penalised because it has made do with facilities that would not be acceptable elsewhere.

As the starting date of phase IIIA is unknown, the district health authority has had to consider interim measures. In February, the authority decided that bookings for deliveries could no longer be accepted from patients resident outside the district. There is a real danger that bookings for deliveries even from patients resident in the district will have to be refused and that mothers will be sent to hospitals miles away. The district health authority is well aware of that possibility and because it would be totally unacceptable if that happened it has recently agreed that improved delivery facilities and a temporary ward will have to be constructed at Queen's Park hospital in the near future. That is not only unsatisfactory and a poor use of the money available, but carries with it the risk that once we have a temporary ward, poor though it may be, we shall once again be seen to be making do, which may cause further delay in providing the much overdue unit at Queen's Park hospital.

The maternity service in Blackburn is already under pressure, with a high number of births, a high proportion of low weight births and a consequently heavy work load in the central unit. The service is already operating under conditions of considerable risk. The region's guidelines for the operation of general practitioner maternity units cannot be met, which has serious legal implications. The birth rate is forecast to rise significantly by 1993. If that happens and the decline in the number of births at the GP unit continues, the unit at Queen's Park hospital will be unable to cope. The new maternity unit will enable the district health authority to deal with its work load and will allow scarce resources in midwifery and medical staffing to be used more efficiently and with greater cost effectiveness. I ask the regional health authority to recognise the urgency of the situation and to support the view of Blackburn, Hyndburn and Ribble Valley district health authority that the only solution to the impending crisis—which could have serious legal implications—is to bring forward the new maternity unit in its capital programme. Building on the unit should be brought forward to start in 1989.

I hope that the Minister will feel able to say that he agrees with hon. Members representing constituencies in east Lancashire who say that the present situation is unacceptable. I hope, too, that he will do all that he can to encourage and persuade the regional health authority to find some way of ensuring that this important project is given urgent priority and that a date for the start of construction is decided as soon as possible, so that my constituents and those of other east Lancashire Members may benefit from a safe, efficient and effective service.

I assure my hon. Friend the Minister that we appreciate the enormous improvements in National Health Service provision in east Lancashire in the past 10 years. There has been a £4·5 million redevelopment at Queen's Park with 54 adult acute beds and 46 children's beds replacing wards that were appalling; £300,000 has been allocated for a renal unit at Accrington Victoria hospital and £200,000 has been provided to upgrade the theatres at Blackburn. Those are only three recent examples. Nevertheless, grateful as we are, we should be failing in our duty as Members for east Lancashire if we did not do everything in our power to ensure the urgent provision of the long-awaited maternity unit at Queen's Park hospital.

2.53 pm

The Parliamentary Under-Secretary of State for Health (Mr. Roger Freeman): Before dealing with the detail of this important subject, I should congratulate my hon. Friend the Member for Hyndburn (Mr. Hargreaves) on his success in the ballot. I am aware of the close interest that he has taken over many years in the provision of health care services for his constituents. This debate is yet another example of his continued presure on behalf of the people of east Lancashire. My hon. Friend is no doubt aware that the need for better maternity services in east Lancashire has been accepted by both the district and the regional health authorities. I, too, accept the need for improved maternity services and I hope that my hon. Friend is convinced that the Department of Health takes the matter seriously.

The maternity services for east Lancashire are provided by the Blackburn, Hyndburn and Ribble Valley health authority. I hope that the House will allow me to comment briefly on the provision of patient services generally before responding to the points put to me about maternity services as it is important to set maternity provision in the context of hospital services generally.

[Mr. Roger Freeman]

The Blackburn, Hyndburn and Ribble Valley health authority provides the full range of health care services for a local population of 268,000 people. The health authority's record on achieving improved patient services in recent years is good. Comparing the latest available figures for 1987-88 with those for 1982 we see that the in-patient annual treatment rate is up by 17·3 per cent. from 36,926 to 43,315, the outpatient rate is up by 18 per cent. from 158,000 to 187,000, and the number of persons treated by community nurses in the district is up by 33·2 per cent. from 65,000 to 86,000. Those figures, of course, do not show the increases in the quality of care which have also taken place.

Perhaps a more tangible sign to the local community of the improvement in services locally is the local building programme, which is well advanced, to modernise and upgrade buildings and equipment at Queen's Park hospital, Blackburn. The first phase has been completed and took the first patients in 1987. As my hon. Friend knows, this provided 46 paediatric medical beds and 56 acute medical beds and a range of other patient facilities, all at a cost of £4·6 million. Construction of phase II is due to start this year and will provide 76 geriatric beds and 50 day places and support services, including a new catering department. The total cost will be £8·3 million. Those new buildings and the facilities that they contain will ensure that the improvements in patient care achieved in recent years will continue well into the future, but the building programme must not end there.

With regard to the specific subject raised by my hon. Friend, it may be helpful to the House if I first give some of the background to the maternity services available in east Lancashire. Current district provision is located on three sites—Queen's Park hospital, Blackburn, which has 67 consultant beds, 10 GP beds and seven delivery suites; Bramley Meade maternity home, Whalley, which has 20 GP beds and two delivery suites; and Accrington Victoria hospital, which has 15 GP beds and two delivery suites. The two smaller GP units are nine miles and six miles respectively from the main unit at Queen's Park hospital.

Taken overall, the district has about the right number of maternity beds, but changes in the pattern of work between the GP units and Queen's Park hospital have put the main unit at Queen's Park under considerable strain. I agree about the way in which the pattern of work has changed in the past few years and I agree with my hon. Friend's forecast of the number of births likely to occur in the next decade. The increased pressure at Queen's Park hospital, Blackburn is due not wholly but partly to the desire of general practitioners to refer expectant mothers to a large hospital with a full range of maternity facilites available, and the Department of Health understands that trend, which occurs throughout the country.

That brings me back to the building programme for the district. The solution to the problem is a further phase IIIA of building at Queen's Park hospital to provide extra maternity beds on the main district general hospital site to replace those presently located at the GP units. The health authority is aware however, that even if the phase IIIA capital development could be brought forward it would not be ready in time to solve the immediate problem.

I can reassure my hon. Friend that the Blackburn, Hyndburn and Ribble Valley Health Authority is aware of the need for immediate action to deal with the problem that I have outlined. The authority has given it the highest priority for action. I know that the full health authority has discussed it at both its last two meetings and that the district general manager has met regional health authority officers to discuss what action can be taken. At its meeting on 5 April, the district health authority made a decision on a further, more substantial measure to deal with the immediate effects of the problem. In conjunction with the regional health authority, it has agreed to erect a temporary building at the Queen's Park hospital as soon as possible. Final decisions have not been made about the extra facilities that this will allow, but it is hoped that it will contain 19 extra beds and two more delivery suites.

I am pleased to announce that, as an exceptional gesture, the North Western regional health authority has agreed to provide additional capital funding of £450,000 to the district to make that building possible, and I am advised that the building will be well founded and of an acceptable quality. It will not be temporary or makeshift but will, I hope, have a long-term use. It will not be a permanent solution to the problem, to which I shall now turn, but it will produce an immediate expansion in the facilities available in the short term.

Clearly the measures that I have outlined must be regarded as short term. I understand that both the district and regional health authorities regard the completion of phase IIIA as the permanent solution. The comments made by my hon. Friend add further weight to that view. When my predecessor spoke about phase IIIA in the Adjournment debate two years ago, she mentioned a start date for it in 1992-93. In the light of the points put to me today, I shall ask the regional health authority to advise me of the implications of achieving that. I mean the implications for the capital programme for the region, the revenue implications for the district and the potential closure decisions on the two smaller facilities to which GPs refer their patients for maternity care. I shall then discuss the details with the regional chairman when I am in the region next month.

In concluding my response to the points put to me during the debate on this important subject I pay tribute to the medical, midwifery and other support staff providing maternity services in east Lancashire. I know that my hon. Friend will join me in that tribute. We all value highly the extra efforts which I know that they have made to safeguard the standard of care that they give to mothers during the present period of difficulties which I hope will shortly be put right permanently.

Question put and agreed to.

Adjourned accordingly at two minutes past Three o'clock.

THE ARTS

Computer Consultants

Mr. Tim Smith: To ask the Minister for the Arts what was the total amount spent by his Department in 1988 on management and computer consultancy contracts, excluding hardware and software purchases; and if he will list each management or computer consultancy contract awarded by his Department in 1988, giving in each case the name of the consultancy firm and the subject of the assignment.

Mr. Luce: In 1988, £23,391 was spent by my office on computer consultancy contracts. The sum was the balance of expenditure payable to AMTEC consulting for work on the Government art collection database project, commissioned in 1987. No money was spent on management consultancy contracts, and no management or consultancy contracts were awarded in the year.

NATIONAL FINANCE

Central Bank Base Rate

Mr. Gould: To ask the Chancellor of the Exchequer if he will publish a table in the *Official Report* showing for each quarter since the first quarter of 1979 Britain's central bank base rate as a percentage of the G7 average.

Mr. Lilley: Interest rates in the United Kingdom from the first quarter of 1979 are shown in the table along with the average interest rate in the Group of Seven major industrialised countries.

[1] Three month interbank rate.
[2] Certificate of deposit or interbank rate.
[3] Average of Monday rates for January, February and first three Mondays of March.

Public Sector Debt

Mr. Redwood: To ask the Chancellor of the Exchequer what was the outstanding total of sterling debt of the public sector on *(a)* 6 April 1988 and *(b)* 1 February 1989.

Mr. Lilley: Figures for the outstanding stock of public sector debt are only compiled for the end of each calendar and financial year. The latest available estimate is for the end of 1987-88 when the sterling component of net public sector debt outstanding was £188·2 billion.

Premium Bonds

Mr. Redmond: To ask the Chancellor of the Exchequer why he reduced the percentage calculation of prize money for premium bonds from 7¾ per cent. to 7 per cent.; and if there is any current review of the scheme.

Mr. Lilley: The premium bond prize fund rate, like national savings other variable rates, is kept under continuous review and adjusted from time to time in the light of a number of factors.

Excise Duties

Mr. Teddy Taylor: To ask the Chancellor of the Exchequer what is the policy of Her Majesty's Government with respect to the consultation procedure

with the European Economic Community Commission in relation to the revision of excise duties as set out in "Common Market Reports" page 2435; and if he will make a statement.

Mr. Lilley: The procedure to which my hon. Friend refers formed part of the European Commission's proposal of 7 March 1972 for a directive on the harmonisation of excise duty structures. The proposal has not been adopted and Her Majesty's Government are not, therefore, bound by any such consultation procedure.

Alcohol and Tobacco (Taxes)

Mr. Teddy Taylor: To ask the Chancellor of the Exchequer if Her Majesty's Government have accepted any European Economic Community rules which ensure that changes in its taxes in alcohol and tobacco do not involve non-convergence from the European Economic Community proposals; and if he will make a statement.

Mr. Lilley: Since we do not accept the Commission's proposals for harmonisation of taxes/excise duties on alcohol and tobacco we have not accepted, nor are we bound by, any current EC Commission proposals involving the convergence of rates of tax on these items. All such proposals on matters of taxation would require unanimity before they could be binding on member states.

Benefits and Allowances

Sir Ian Gilmour: To ask the Chancellor of the Exchequer if he will publish a table, on the same basis as his reply to the then hon. Member for Kensington, *Official Report*, 3 December 1985, columns *173-4*, showing the rates of child benefit, single person's tax allowance and married man's allowance at current and at 1979 prices, in April each year from 1979 to 1989.

Mr. Lawson: The information is in the table.

	Child benefit (£ per week per child)		*Single person's tax allowance (£ per annum)*		*Married man's tax allowance (£ per annum)*	
April	*Current prices*	*1979 prices*[1]	*Current prices*	*1979 prices*[1]	*Current prices*	*1979 prices*[1]
1979	4·00	4·00	1,165	1,165	1,815	1,815
1980	4·00	3·29	1,375	1,129	2,145	1,762
1981	4·75	3·48	1,375	1,008	2,145	1,572
1982	5·25	3·52	1,565	1,049	2,445	1,638
1983	5·85	3·77	1,785	1,150	2,795	1,801
1984	6·50	3·98	2,005	1,228	3,155	1,933
1985	6·85	3·92	2,205	1,263	3,455	1,979
1986	7·00	3·89	2,335	1,298	3,655	2,032
1987	7·25	3·87	2,425	1,293	3,795	2,024
1988	7·25	3·72	2,605	1,337	4,095	2,102
1989	7·25	[2]3·45	2,785	[2]1,326	4,375	[2]2,083

[1] Figures converted to 1979 prices using the movements in the RPI between April of each year.
[2] This will depend on the level of the RPI in April 1989. The figure given is derived by applying the annual increase in the year to February 1989 (the latest month available) to the level of the RPI in April 1988.

Computer Consultants

Mr. Tim Smith: To ask the Chancellor of the Exchequer, what was the total amount spent by Her Majesty's Customs and Excise in 1988 on management and computer consultancy contracts, excluding hardware and software purchases; and if he will list each management or computer consultancy contract awarded by Her Majesty's Customs and Excise in 1988, giving in each case the name of the consultancy firm and the subject of the assignment.

Mr. Lilley: The total amount spent by Her Majesty's Customs and Excise in 1988 was £3,527,225.

The consultancy firms awarded contracts in management and computer consultancy, excluding hardware and software purchases are as follows:

Mr. Tim Smith: To ask the Chancellor of the Exchequer what was the total amount spent by Her Majesty's Stationery Office in 1988 on management and computer consultancy contracts, excluding hardware and software purchases; and if he will list each management or computer consultancy contract awarded by Her Majesty's Stationery Office in 1988, giving in each case the name of the consultancy firm and the subject of the assignment.

Mr. Lilley: In 1988 total HMSO expenditure for these purposes was £230,000. Contracts awarded during 1988 were:

Firm	*Subject of assignment*
Metron Technology Limited	Capacity planning for mainframe computers
MCP Management Consultants	Development of revised remuneration scheme
Touche Ross Management Consultants	Review of customer coding system

National Debt

Mr. Allen: To ask the Chancellor of the Exchequer if he will list those organisations which have received or will receive repayments arising from his Budget decision to repay £14 billion of the national debt and the payment for each organisation.

Mr. Lilley: Detailed information about an individual's or organisation's holdings of debt is confidential. However, figures for net transactions in public sector debt by the main sectors of the economy are given in "Financial Statistics" table 2.6 and the *Bank of England Quarterly Bulletin* table 8.

Public Sector Borrowing Requirement

Mr. Harry Greenway: To ask the Chancellor of the Exchequer what was the public sector borrowing requirement five, 10, 15 and 20 years ago; and if he will make a statement.

Mr. Lilley: The information requested is as follows:

Public sector borrowing requirement

	£ billion	*Ratio to GDP (per cent.)*
1968-69	0·4	¾
1973-74	4·3	5¾
1978-79	9·2	5¼
1983-84	9·7	3¼

These are in marked contrast to 1988-89 when the public sector is expected to show a net repayment of £14 billion, equivalent to 3 per cent. of GDP. The Government have also been able to budget for a £14 billion surplus in 1989-90.

Pensions Schemes (Abatement)

Mr. Win Griffiths: To ask the Chancellor of the Exchequer if he will describe the purposes of the curent review of the policy of abatement in public service pension schemes; whether it will take account of shortages in qualified manpower, including the shortages of qualified teachers identified by the Department of Education and Science; whether it will take account of the abolition of the earnings rule for national insurance pensioners; when he expects the review to be concluded; and if he will make a statement.

Mr. Brooke: The long-standing policy of abating the public service pensions of people who are re-employed in the public service is currently being reviewed to see whether it needs to be modified in the light of the wider pensions choices now available and current management needs. Particular attention is being given, among other things, to the implications of the introduction of personal pensions and the effects which the existing policy has on recruitment and retention. The abolition of the earnings rule for national insurance pensioners is not immediately relevant to the abatement of public service pensions. The Government Departments responsible for the major public service schemes, including the teachers' superannuation scheme, are contributing to the review. It is expected to be completed this summer.

Taxpayers (Confidentiality)

Mr. Rathbone: To ask the Chancellor of the Exchequer if he will ensure that the new safeguards of confidentiality for taxpayers, to be included in the Finance Bill, in no way interfere with the Government's efforts to trace and seize the illegally gained assets of drug traffickers.

Mr. Lilley: Safeguarding the confidentiality of taxpayer information will not interfere with efforts to trace and seize illegally gained assets of drug traffickers. Provision in the Finance Bill 1989 will be confined to unauthorised disclosure of information held in the exercise of tax functions and relevant to tax or duty and, as drafted, does not include such matters as illegal trafficking in dangerous drugs which are not subject to tax or duty.

Johnson Mathey

Mr. Sedgemore: To ask the Chancellor of the Exchequer if, in the light of the allegations contained in the book "The Marcos Dynasty" by Sterling Seagrove he will set up an inquiry into Johnson Mathey's bullion dealing.

Mr. Lilley *[holding answer 22 March 1989]:* No.

Public Sector Debt

Mr. Tim Smith: To ask the Chancellor of the Exchequer how he computed the figure for the percentage of public sector debt to have been repaid by 31 March 1990 referred to in the *Official Report*, 15 March, column 431.

Mr. Major *[holding answer 23 March 1989]:* The "Financial Statement and Budget Report" (paragraph 6.04) forecast that the stock of net public sector debt would be £157 billion at the end of 1988-89. On the assumption that the change in the stock of debt in 1989-90 will be the same as the PSDR forecast for that year, the stock of debt will be £143 billion at the end of the year. This is some 16 per cent. lower than the stock of debt at the beginning of 1987-88, estimated to have been £171 billion.

OPCS (Interviewers)

Mrs. Ray Michie: To ask the Chancellor of the Exchequer whether he has any plans to introduce Civil Service pension provisions for interviewers employed by the Office of Population Censuses and Surveys.

Mr. Brooke *[holding answer 23 March 1989]:* Office of Population Censuses and Surveys interviewers, in common with other staff engaged on a fee-paid basis, are not eligible for membership of the principal Civil Service pension scheme. Their level of fees, out of which they are able to make their own pension arrangements, was set in the knowledge that the employment is not pensionable; and, in management's view, interviewers are paid the appropriate remuneration for the job. However, the trade union representing the staff concerned intend to submit evidence to support a claim that the total remuneration package for interviewers employed by OPCS should be substantially uplifted by providing for their membership of the PCSPS. The Treasury and OPCS management will consider further the claim for pension ability very carefully in the light of this evidence; but it would be necessary to look for an offsetting adjustment to the present level of fees in order to provide for membership of the PCSPS, or some other pension arrangement, unless an increase in the remuneration for interviewers were found to be justified.

Tax Changes

Mr. Meacher: To ask the Chancellor of the Exchequer if he will update, to take account of the 1989 Budget, the information on tax changes contained in his reply to the hon. Member for Oldham, West of 21 October 1986, *Official Report*, columns *807-8*.

Mr. Norman Lamont *[holding answer 23 March 1989]:* The information is in the tables. For each financial year shown, the tables compare the yield from the tax regime in that year with the 1978-79 tax regime. All estimates are based on a provisional 1989-90 income base projected from the 1986-87 survey of personal incomes and all tax regimes have been indexed to 1989-90 levels by reference to the statutory formula. The comparisons therefore allow for budgetary changes in income tax rates and allowances, but not for any changes since 1978-79 in the definition of the income tax base. Further information could be provided only at disproportionate cost.

Reduction(+)/Increase(−) in income tax compared with 1978-79 indexed regime (£ million)

Total	470	320	430	490	560	710	1,030	1,030

[1] Average gains and losses are calculated by reference to the estimated number who would be liable to pay tax under the indexed 1978-79 regime; this number is some 1,200,000 greater than the numbers paying tax in 1989-90, some 900,000 in the income range below £5,000 and 300,000 in the range £5,000 to £10,000.

Note: All information is in terms of tax units—that is, married couples are counted as one and their incomes combined.

Taxable Income

Mr. Blunkett: To ask the Chancellor of the Exchequer if he will publish his best estimates of the aggregate taxable income for 1988-89 in each *(a)* county, *(b)* former metropolitan county, *(c)* the Greater London area, *(d)* metropolitan district and *(e)* London borough area.

Mr. Norman Lamont *[holding answer 22 March 1989]:* The latest year for which estimates for counties in Great Britain are available is 1986-87: they are provided in the accompanying table. I regret that estimates for Northern Ireland counties, for metropolitan districts and for London boroughs are not available.

County	*Taxable income £ million*
English counties	
Cleveland	1,320
Cumbria	1,340
Durham	1,150
Northumberland	850
Humberside	1,590

FOREIGN AND COMMONWEALTH AFFAIRS

Brazilian Rain Forest

Mr. Barry Field: To ask the Secretary of State for Foreign and Commonwealth Affairs what recent discussions he has had with Brazil about the destruction of the rain forest.

Mr. Eggar: My right hon. and learned Friend the Secretary of State for Foreign and Commonwealth Affairs raised this question during the visit to London on 9-10 March by the Secretary General of the Brazilian Ministry of Foreign Affairs. He left Sr Flecha de Lima in no doubt as to the strength of feeling in this country about the rate of destruction. I also conveyed our concerns during that visit, as I also had done earlier in conversation with the President of Brazil during my visit in November 1988.

I refer the hon. Member to my speech on the rain forests issue in the debate on 13 March following the Consolidated Fund Bill.

Mr. Barry Field: To ask the Secretary of State for Foreign and Commonwealth Affairs what further programmes he intends supporting in Brazil to assist in arresting the destruction of the tropical rain forest.

Mr. Chris Patten: Following discussions with the Secretary-General of the Brazilian Ministry of Foreign Affairs during his recent visit to London, we are considering, at his request, what support further to that being provided for the Maraca rainforest we could give to scientific work or technical assistance for the rain forests. We shall also be discussing these issues with the Secretary-General of the Brazilian Ministry of the Interior when he visits London later this month.

Sudan

Mr. David Nicholson: To ask the Secretary of State for Foreign and Commonwealth Affairs what further measures he is taking to assist the United Nations Organisation's and other efforts to achieve peace and relief in the Sudan, following the recent United Nations conference in Khartoum; and if he will make a statement.

Mr. Waldegrave: On 3 April my hon. Friend the Minister of State for Overseas Development announced a further contribution of £5 million towards relief operations in Southern Sudan. Of this, £2 million will be channelled through the International Committee of the Red Cross (ICRC), £2 million through United Nations Agencies (UNICEF and the World Food Programme) and £1 million through British non-government organisations. This is in addition to the £14·4 million in emergency aid provided to Sudan in 1988. We continue to urge all parties in Sudan to work for the speedy implementation of the plan of action agreed at last month's United Nations conference in Khartoum.

West German Foreign Minister

Mr. Jack: To ask the Secretary of State for Foreign and Commonwealth Affairs when he next expects to meet his West German counterpart; and what matters will be discussed.

Mrs. Chalker: My right hon. and learned Friend will next meet Herr Genscher at the Foreign Affairs Council in Luxembourg on 24-25 April where a range of European Community issues will be discussed.

Iran

Mr. Teddy Taylor: To ask the Secretary of State for Foreign and Commonwealth Affairs what representations he has made to European Economic Community Governments about the decision of those member states who have replaced their ambassadors in Iran; and if he will make a statement.

Mr. Waldegrave: EC Foreign Ministers agreed on 20 March that their heads of mission, who had been temporarily withdrawn from Tehran for consultations, could return to Iran if national circumstances required this. Returning heads of mission will carry the strong message that the Iranian death threats remain unacceptable.

Mr. Teddy Taylor: To ask the Secretary of State for Foreign and Commonwealth Affairs if the recent agreement of the Council of Foreign Ministers on relations with Iran made provision for member states to consult the United Kingdom if they wished to reappoint ambassadors to Iran; and if he will make a statement.

Mr. Waldegrave: We have kept in close contact with our European partners over our response to the Iranian threats against Salman Rushdie and his publishers. We have been heartened by the solidarity shown by the Twelve. The strong position of principle adopted on 20 February was reaffirmed by EC Foreign Ministers on 20 March. It was never intended that heads of mission should stay away indefinitely. The decision that heads of mission could return to Iran was taken after full consultation between the EC Foreign Ministers. The ban on high level contacts remains in place.

Mr. Teddy Taylor: To ask the Secretary of State for Foreign and Commonwealth Affairs how many member states of the European Economic Community closed their embassies in Iran following the decision of the United Kingdom to break off diplomatic relations with Iran.

Mr. Waldegrave: No member states of the EC closed their embassies in Iran following the break in diplomatic relations between the United Kingdom and Iran. All EC member states withdrew their heads of mission in Tehran for consultations in response to the Iranian threats against Salman Rushdie and his publishers.

Crete Campaign (Medal)

Dr. Glyn: To ask the Secretary of State for Foreign and Commonwealth Affairs if, in the light of the feelings of those who fought in the Crete campaign in 1940-41, who have not had official recognition in the form of a medal, he will waive any formalities which debar the award or acceptance of such a medal.

Mr. Eggar: Any official foreign medal designed to be worn which might be offered to British subjects in connection with the Crete campaign 1940-41 would be subject to the Foreign and Commonwealth Orders Regulations 1969, a copy of which was placed in the Library of the House in reply to a question by my right

hon. Friend the Member for Worthing (Mr. Higgins) answered on 27 May 1988. The Foreign and Commonwealth Office does not have discretion to waive the provisions of these regulations, which are applied consistently to all requests from foreign Governments to bestow honours, decorations and medals on United Kingdom citizens.

Computer Consultants

Mr. Tim Smith: To ask the Secretary of State for Foreign and Commonwealth Affairs what was the total amount spent by his Department in 1988 on management and computer consultancy contracts, excluding hardware and software purchases; and if he will list each management or computer consultancy contract awarded by his Department in 1988, giving in each case the name of the consultancy firm and the subject of the assignment.

Mr. Eggar: Expenditure for 1988-89 financial year on management and computer consultancy was:

	£
Management consultancy	68,699
Computer consultancy	1,422,900

Individual contracts awarded during the year were:

Management	
Moon Associates	Study of FCO publications
Market and Opinion Research International	Staff communications survey
Jaycroft Limited	United Nations documents in the FCO
Brian J. Stent	Purchasing arrangements in FCO
Pergamon Technical Services International	Re-organisation of diplomatic services procedure
Metier	Resource and project management information study

Computer consultancies	
Data General Ltd.	Management information system
Enever Systems Ltd.	Management information system
Phase 3 Systems Ltd.	Management information system
Kinesis Computing Ltd.	Development of overseas systems
BIS Applied Systems Ltd.	Development of overseas systems
Express Computer Consultants	Development of financial system
Logica UK Ltd.	(i) Development of overseas systems (ii) FOLIOS consultancy studies
Computer Sciences Co. Ltd.	FOLIOS consultancy studies
Systems Designers Ltd.	FOLIOS consultancy studies
Psychometric R & D Management Systems	FOLIOS consultancy studies
PA Consultancy Systems	FOLIOS consultancy studies
The Instruction Set	(i) FOLIOS consultancy studies (ii) Administration records consultancy
Price Waterhouse	Administrative records consultancy
Information Resources Ltd.	(i) A financial estimates system (ii) An overseas estates financial system
Kings Brook Information Associates	Replacement of library and records system

Discharged Prisoners

Mr. Wheeler: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will state against each member country of the European Community what amount of money, travel allowance or other benefit, is given by that country *(a)* to British citizens and *(b)* to its own nationals on discharge from prison in that country.

Mr. Eggar: Payments made to British nationals on discharge from prisons in other European Community countries are listed below. Except for Portugal, no member state makes a distinction between British and host nationals in their rules governing discharge from prison.

Belgium: No discharge grant. Half of any earnings paid on release. Deportees with funds are required to pay their rail/ferry fares. In needy cases, prison social/welfare funds may contribute to homeward travel costs.

Denmark: No discharge grant. Journey paid to place of residence within Denmark. Deportees' journey home paid for, if unable to pay themselves.

France: No discharge grant. Prisoners can seek assistance from probation committees in their home towns. If no funds are forthcoming from prisoners' resources, prison can provide ticket to place of former residence, including country of origin.

Federal Republic of Germany: Practice varies between states (Länder). No discharge grant. A proportion of any earnings paid on release. Access to social security benefits. Travel payments range from cost of travel to nearest consular/diplomatic representation to cost of travel to the United Kingdom plus minimal subsistence.

Greece: No discharge grant. If prisoners have no funds they are referred to the nearest Organisation for Employment and Manpower which may grant relief to cover board and lodging for maximum of three months. No travel expenses.

Ireland: Gratuity paid on discharge, based on work carried out during period of incarceration. Surface travel is paid from prison to home address, the city where case was tried or to a convenient port. In exceptional circumstances ferry/air fares are paid to enable discharged prisoners to return to country of origin.

Italy: No discharge grant or travel expenses. Where an expulsion order has been issued and the prisoner has no funds the Italian Government will pay for repatriation.

Luxembourg: No discharge or travel expenses. Prisoners are expected to fund travel home etc. from money earned whilst in prison. However, prisoners without funds would get a ticket from a prison welfare group or the Ministry of Justice. Those resident in Luxembourg before their arrest are also eligible for accommodation costs to be paid while unemployed.

The Netherlands: No discharge grant. Discharged prisoners without funds are entitled to social security income support. Travel home, within the Netherlands, is paid. Deportees with funds must contribute to the fare home.

Portugal: No discharge grant or travel expenses are paid to prisoners of any nationality. In cases of real need, Portuguese nationals may receive basic subsistence and travel expenses.

Foreign nationals are referred to their embassies if they have no funds. The Portuguese Government will pay all or part of the repatriation costs of those prisoners served with expulsion orders who cannot pay themselves.

Spain: No discharge grant paid automatically. In cases of need, prisoners may apply to Ministry of Justice for a travel allowance, accommodation expenses and family allowance. The Spanish Government pay for repatriation where expulsion is part of the sentence.

British Citizens (Convictions and Imprisonment)

Mr. Wheeler: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will set out for the last five years as at a common date, and against each country in which they are held, the number of British citizens convicted in those countries and imprisoned there and against each (i) the nature of the offence and (ii) the duration of the sentence.

Mr. Eggar: The information requested is not readily available and could be provided only at disproportionate cost.

British Citizens (Imprisonment)

Mr. Wheeler: To ask the Secretary of State for Foreign and Commonwealth Affairs how many British citizens presently imprisoned overseas have dependent relatives in the United Kingdom who are in receipt of income support or other benefits.

Mr. Eggar: We have no knowledge of the personal financial circumstances of dependents of British citizens imprisoned overseas.

Private Security Firms

Mr. Livingstone: To ask the Secretary of State for Foreign and Commonwealth Affairs, pursuant to the answer to the hon. Member for Brent, East on 8 February, *Official Report*, column *731*, *(a)* which private security firms have been used by his Department, *(b)* where they have been deployed and *(c)* at what cost to his Department in each year from 1979 to the current date; what was the total cost to his Department of the duties undertaken by Zeus Security Guards Ltd. in 1982 and 1983; what were the access control duties performed by Zeus Security Guards Ltd. in 1982 and 1983.

Mr. Eggar: Detailed information on this subject is not readily available and could be provided only at disproportionate cost.

Falkland Islands

Dr. Hampson: To ask the Secretary of State for Foreign and Commonwealth Affairs in view of changes of fishing and commercial policy by the Falkland Islands Government, if he will make a statement on the policy of Her Majesty's Government towards British fishing companies in the Falklands and the role to be played by British interests in maintaining the economic development of the islands.

Mr. Eggar: We welcome the opportunities which the Falklands fishery offers British fishing companies and encourage them to make the effort and commitment to participate in its successful exploitations. So do the Falkland Islands Government. British commercial interests are playing a key role in infrastructural development, including a new telecommunications system, secondary school, housing and other building works. We shall continue to encourage British participation in the expanding economy of the Falkland Islands.

Lomé Conventions

Mr. Andrew F. Bennett: To ask the Secretary of State for Foreign and Commonwealth Affairs what Her Majesty's Government hopes will emerge from Lomé IV.

Mr. Chris Patten: We hope that the current renegotiation will produce a successor to Lomé III which will continue to provide a framework for effective co-operation between the Community and the ACP states in the spheres of both trade and aid.

Mr. Faulds: To ask the Secretary of State for Foreign and Commonwealth Affairs whether he will now withdraw the British tranche to the Lomé conventions, in view of the conduct of the Ethiopian Government.

Mr. Chris Patten: I refer the hon. Member to the answer that I gave him on 27 February at column *1*.

Private Investment

Mr. Thurnham: To ask the Secretary of State for Foreign and Commonwealth Affairs what was the level of private capital funds invested overseas for development purposes as a percentage of gross national product during the last five years; and if he will make a statement.

Mr. Chris Patten: The latest available figures for private direct investment, bank lending and grants by voluntary agencies in developing countries, as a percentage of gross national product, are as follows:

	Per cent.
1983	0·64
1984	0·55
1985	0·18
1986	0·77
1987	−0·05

TRANSPORT

Road Casualties

Mr. Thornton: To ask the Secretary of State for Transport if he will list the number of fatal and serious road casualties among children aged 5 to 14 years for each year from 1965 to the nearest available year between October and February for the following hours of the day *(a)* 7 to 8 am, *(b)* 8 to 9 am, *(c)* 9 to 10 am, *(d)* 3 to 4 pm, *(e)* 5 to 6 pm and *(f)* 6 to 7 pm.

Mr. Peter Bottomley: The information requested is available only from 1979. This is given in the table.

Fatal and serious casualties among children aged 5-14 years by time of day between October and February: 1979-87

	7-8 am	8-9 am	9-10 am	3-4 pm	4-5 pm	5-6 pm	6-7 pm	Rest	Total
1979-80	47	404	108	418	729	423	263	1,295	3,687
1980-81	63	354	79	415	586	383	232	1,286	3,398
1981-82	46	260	79	400	562	325	232	1,204	3,108
1982-83	39	346	81	471	553	365	231	1,237	3,323
1983-84	50	356	60	487	581	372	261	1,227	3,394
1984-85	48	324	78	434	492	356	271	1,143	3,146
1985-86	46	309	88	469	489	348	244	1,192	3,185
1986-87	37	267	68	355	402	286	223	960	2,598

Heavy Lorries

Mr. David Nicholson: To ask the Secretary of State for Transport what representations have been made to him regarding *(a)* exceeding the speed limit and *(b)* hazardous overtaking involving heavy lorries; what prosecutions have taken place in the past years with regard to these two offences; and if he will make a statement.

Mr. Peter Bottomley: The Department receives many representations about the full range of road safety issues.

We devote considerable effort to improving driver behaviour. Last year my right hon. Friend the Secretary of State for Transport announced a package of measures dealing specifically with motorway safety, and aimed in particular at improving driver behaviour.

Hazardous overtaking is not a specific offence in road traffic law, but drivers who perform dangerous manoeuvres can be prosecuted for either reckless or careless driving.

Statistics on road traffic offences are published annually by the Government statistical service in the supplementary tables on offences relating to motor vehicles England and Wales.

Lydd Airport

Dr. Thomas: To ask the Secretary of State for Transport what consideration he has given to plans to extend Lydd airport in terms of the increased air traffic over south-east England.

Mr. Peter Bottomley: A planning application by Lydd Airport Group Limited to extend the airport runway was called in for determination by my right hon. Friend the Secretary of State for the Environment in July last year. The inspector who conducted the inquiry into the proposal has now reported to my right hon. Friend, who will announce his decision as soon as possible.

Random Breath Testing

Mr. Sheerman: To ask the Secretary of State for Transport what information he has relating to New South Wales regarding *(a)* the percentage reduction in the average number of fatal crashes in the five years after the introduction of random breath testing, *(b)* the percentage reduction in the average number of alcohol-related fatal and serious accidents in the four years after the introduction of random breath testing and *(c)* the percentage reduction in the average number of drivers and riders killed over the legal limit in the four years after the introduction of random breath testing.

Mr. Peter Bottomley: Random breath testing was introduced in New South Wales in December 1982. It has been accompanied by a sustained publicity campaign and a high level of police enforcement activity which aims to test one in every three drivers per year.

Since 1982 the percentage of drivers killed while over the legal limit has fallen from 40 to 34 per cent. in 1986—a drop of 6 per cent.

Over the same period in this country, the decline has been from 36 to 25 per cent., a drop of 11 per cent.—nearly double that of New South Wales.

Assessments of enforcement strategy in New South Wales and other Australian states where RBT is used frequently draw attention to the impact of high levels of police activity and publicity as important factors, as distinct from the actual method of enforcement.

Research carried out by the school of behavioural sciences, Macquarie university, and the traffic authority of New South Wales in 1988 gives the following information:

(a) the number of fatal crashes fell by 22 per cent., from an average of 22·12 per week in the five years before the introduction of random breath testing to an average of 17·23 per week in the five years after;

(b) the number of alcohol-related fatal and serious injury accidents fell from an average of 13·43 per week in the five years before to 8·67 in the four years after, a decline of 35 per cent.;

(c) the average number of drivers and riders killed while over the legal limit dropped from 4·36 per week in the three years before RBT to 2·81 in the four years after, a fall of 36 per cent.

Simple comparisons and statistics may be misleading; for instance, the legal limit for blood alcohol content in New South Wales is 50 mg/ml and in this country it is 80 mg/ml.

Microlight Aircraft

Mr. Colin Shepherd: To ask the Secretary of State for Transport how many prosecutions have been made under section 48(1)(a) of the Civil Aviation Act 1949; how many of these involved microlight aircraft; and, in this respect, what was the outcome of each.

Mr. Peter Bottomley: Section 48 of the Civil Aviation Act 1949, which provided power to give effect in the United Kingdom to the Rome convention 1933 relating to damage caused by aircraft to third parties on the surface, was never brought into operation. It was repealed by section 26 of the Civil Aviation Act 1968.

Goods Vehicles (Speed Limiters)

Mr. Squire: To ask the Secretary of State for Transport if he will set out, in tabular form, in respect of each of the countries of the EEC, in respect of goods vehicles with a weight greater than 3·5 tonnes: the maximum speed in miles per hour on motorways and the maximum speed in miles per hour on non-motorway roads; whether there is currently a mandatory requirement to fit speed limiters;

and what is the proportion of all such vehicles registered within that country which are estimated to have been fitted with such speed limiters.

Mr. Peter Bottomley: The following is derived from a table provided by the EC Commission in January 1989, in respect of heavy goods vehicles:

	Maximum speeds (mph)		
Member State	*Motorway*	*Expressway*	*Other Road*
Belgium	56	56	37
Denmark	43	43	43
FR Germany	50	37	43
France	50	50	37
Greece	37	37	37
Republic of Ireland	35	35	35
Italy	50	37	37
Luxembourg	37	37	37
Netherlands	50	50	37
United Kingdom	60	50	[1]40
Spain	62	50	43
Portugal	50	43	37

[1] 30 mph in built-up areas.

There are a few variations according to operating weights. The information must be treated with some caution because the classification of roads varies between member states.

The information requested on speed limiters is not available, although I understand that in France new vehicles over 10 tonnes gross vehicle weight must be fitted with speed limiters and that in the Federal Republic of Germany mobile cranes must be so fitted. In the United Kingdom, coaches are required to be fitted with speed limiters over the next two years. The number of speed limiters fitted voluntarily to heavy goods vehicles is not known.

Service Areas (Baby Changing)

Mr. Hinchliffe: To ask the Secretary of State for Transport, if he will take steps to ensure that facilities provided for the changing and feeding of babies at motorway service areas can be used by male as well as female parents or carers.

Mr. Peter Bottomley: At new motorway service areas we require a nursing mothers' room. Operators are not required by their leases to provide such facilities at older motorway service areas. Some already do so voluntarily and others will be encouraged to provide them when other alterations are being made.

Considerations of privacy, in particular for breast feeding, preclude any general sharing of such facilities by men looking after babies. We do not currently propose to require any separate provision for men. If demand builds up for this, we will reconsider the position in consultation with the operators.

Cross-Channel Freight Traffic

Mr. Favell: To ask the Secretary of State for Transport pursuant to his answer to the hon. Member for Stockport, *Official Report*, 20 March, column *399*, whether he is proposing to make any assessment of cross-Channel freight traffic in total and by mode by 1992; and if he will make a statement.

Mr. Portillo: The Department has no plans to make such an assessment.

Passenger Ferries

Sir David Price: To ask the Secretary of State for Transport if, further to his reply of 13 March, *Official Report*, columns *120-1*, he will list the names of the small number of roll-on/roll off passenger ferries built before 1980, where modification is not a realistic proposition and the names of their owners; and when in each case they plan to withdraw them from service.

Mr. Portillo: All 73 pre-1980 ferries in use at the moment comply fully with the current international convention for safety of life at sea (SOLAS). The Sheen report recommended that a higher standard of stability in the damaged condition should be applied to these ships. The majority of the ships which did not comply with this higher standard have been, or will be, modified by their owners to achieve compliance.

The owners have made known the names of the ships for which we understand modification is not a realistic proposition. These are (registered owner's name in brackets):

Darnia—(James Fisher & Sons Ltd.)
Earl Granville—(W & G Industrial Leasing Ltd.)
Earl Harold—(Sealink UK Ltd.)
Tynwald—(Sealink UK Ltd.)
St. Ola—(P & O Ferries Ltd.)
Pride of Canterbury—(P & O European Ferries (Dover) Ltd.)
Pride of Hythe—(P & O European Ferries (Dover) Ltd.)

Initial indications are that the owners will not retain these ships for more than about another three years. Discussions on that continue.

Airline Safety (Departmental Warning)

Mr. Campbell-Savours: To ask the Secretary of State for Transport whether he will publish the full text of the warning and the supplementary circular his Department issued on airline safety following the discovery of a bomb in a radio cassette player in Frankfurt in October 1988.

Mr. Peter Bottomley: No. It is not our practice to publish communications between the Department and the industry about aviation security matters. To do so only benefits terrorists and hinders security.

Thames Line River Services

Mr. Spearing: To ask the Secretary of State for Transport if, pursuant to his answer to the hon. Member for Newham, South, *Official Report*, 16 March, column *284*, he will give the considerations and calculations relating to his decision to provide approximately £400,000 of public support to Thames Line River Services in central London, together with the relevant vote in the current estimates, the expected means of payment and any conditions relating to the grant.

Mr. Portillo: The decision to provide up to £500,000 of grant took into account the benefits to the community of relief of road congestion and the encouragement of development of riverside areas in need of regeneration. The grant will be met from the administration and transport services vote (class VIII, vote 2). Payment of grant is limited to is application to the promotion and improvement of the services, and is conditional upon a private sector contribution of up to £2 million, to be paid on a pro rata basis, and to the provision of appropriate management reports and accounts.

Mr. Spearing: To ask the Secretary of State for Transport what is the estimated or actual number of passengers and passenger miles, respectively, carried by Thames Line River Services in the year 1988, or financial year 1988-89, together with the comparable estimates for the financial year 1989-90; and what is the expected public subsidy, or its range, per passenger and per passenger mile, respectively.

Mr. Portillo: Thames Line estimates that some 138,000 passengers were carried in its first nine months of operation to February 1989. A progressive and substantial increase in patronage is expected during the next three years, but the forecast of the business are commercially confidential.

Sir Keith Bright (Resignation)

Ms. Ruddock: To ask the Secretary of State for Transport if he can now announce the terms on which Sir Keith Bright resigned from London Transport.

Mr. Portillo: The terms are still under discussion.

European Maritime Policy

Mr. Sayeed: To ask the Secretary of State for Transport when he expects to receive the proposals from the Commission of the EEC for a second stage of European maritime policy; what time limit he has set for the production of such proposals; whether such proposals have yet been forwarded by the Commission to the Council; and if he will make representations to the Commission on the need for greater urgency in dealing with this matter.

Mr. Portillo: We continue to press the Commission. We understand that it aims to produce proposals for the June Council of Transport Ministers.

Trunk Roads (Review)

Mr. David Porter: To ask the Secretary of State for Transport if he has completed his review of the trunk road network; and if he is now in a position to further improve roads benefiting Suffolk and Norfolk.

Mr. Peter Bottomley: The review of the trunk road programme is in progress. Possible improvements to trunk roads benefiting Suffolk and Norfolk are being considered along with many other candidates for inclusion on their merits for a share of the resources available. We expect to make an announcement by early summer.

Railway Accident (Warrington)

Mr. Hoyle: To ask the Secretary of State for Transport if he will make it his policy to place in the Library a copy of the detailed report of the accident at Arpley sidings, Warrington, on 27 February, when this has been submitted by the British Railways Board to the railway inspectorate at the Department of Transport.

Mr. Portillo: The railway inspectorate is to hold an inquiry into this accident. The report will be published.

Britannia Bridge, Limehouse

Ms. Gordon: To ask the Secretary of State for Transport who was consulted on the effects on safety of a reversible lane on the Britannia bridge on the Commercial road at Limehouse; and if he will make the documents containing the advice available in the Library.

Mr. Peter Bottomley: The decision that site restrictions and safety considerations rule out the use of a reversible lane at Britannia bridge was based on the professional judgment of the Department's officials.

British Rail (Provincial Services)

Mr. Irvine: To ask the Secretary of State for Transport if he proposes to authorise any further investment in British Rail's provincial services.

Mr. Portillo: We have authorised the purchase by British Rail of another 56 class 158 express vehicles at a cost of about £20 million. They will be built at BREL immediately after the 138 vehicles which we approved in January. The first of all these new vehicles should be entering service by early 1991.

London Assessment Studies

Mr. Corbyn: To ask the Secretary of State for Transport how many visits he has made to any of the route options of the east London assessment study; how many meetings he has had with hon. Members of constituencies affected; and if he will make a statement.

Mr. Peter Bottomley: I have not made any such visits. It is for the consultants to assess their options at this stage. I have had meetings with most hon. Members concerned.

Mr. Corbyn: To ask the Secretary of State for Transport what information his Department has about the use of routes in the east London assessment study area by heavy lorries, commuter cars and public transport; and if he will make a statement on comparative figures for each of the last eight years.

Mr. Peter Bottomley: The information that the hon. Member requests is not available except at disproportionate cost.

The most comprehensive sources of information for the east London assessment study area is the consultants' stage 1 report, copies of which are in the Library.

Figures available for traffic entering central London in the morning peak hours for the following years are:

	Cars	*Heavy goods vehicles*	*Buses/coaches*
1979	128,400	3,300	4,200
1981	129,500	2,750	4,350
1983	124,400	2,450	4,500
1985	127,000	2,000	4,300
1987	123,350	1,900	3,650

Source: DTP.

Similar figures for the numbers of commuters in the morning peak are:

	Cars	British Rail	London Regional Transport rail	London Regional Transport bus	Total including coaches and cycles
	Thousands	Thousands	Thousands	Thousands	Thousands
1980	184	412	305	103	1,031
1981	173	394	336	105	1,037
1982	197	390	283	99	1,013
1983	180	384	323	97	1,026
1984	180	386	351	94	1,049
1985	171	401	364	94	1,069
1986	166	421	381	91	1,093
1987	162	449	403	79	1,125

Sources: British Rail/London Regional Transport.

The figures show that the total number of commuters has increased by 9·1 per cent. since 1980, that the number commuting by car has fallen substantially and that road traffic entering central London in the morning peak has decreased.

Mr. Corbyn: To ask the Secretary of State for Transport how many representations he has received against the public walk road option in the east London assessment study; how many phone calls, have been made to his Department; and if he will make a statement.

Mr. Peter Bottomley: A number of representations, including phone calls, have been received from action groups, amenity groups, residents associations, members of the public and hon. Members about the consultant's options that involve use of the public walk.

Mr. Corbyn: To ask the Secretary of State for Transport what plans he has to announce his intentions with regard to any routes affected by the assessment studies in London.

Mr. Peter Bottomley: It is too soon to say.

Highgate—Finsbury Park (Public Walk)

Mr. Corbyn: To ask the Secretary of State for Transport whether his Department has any plans for a light railway development along the route of the public walk between Highgate and Finsbury Park; and if he will make a statement.

Mr. Portillo: No. A light railway is one of the options being considered by the consultants for the east London assessment study.

Trawlers (Medical Supplies)

Mr. Barry Fields: To ask the Secretary of State for Transport if he will list the medical supplies required by the latest European Economic Community directive for *(a)* a trawler at sea for more than eight hours and *(b)* a trawler at sea for more than 24 hours.

Mr. Portillo: No such directive has been adopted; nor has any proposal for a draft directive yet been made by the Commission to the Council of Ministers.

Lindane Container (Channel)

Mr. Allen: To ask the Secretary of State for Transport when he anticipates the recovery of the Lindane container lost in the Channel.

Mr. Portillo: The commercial container of Lindane was lost in an area of the Channel in which under a bilateral agreement the French authorities are responsible for taking counter-pollution action. They are undertaking an extensive search for the lost container and the Department's marine pollution control unit is maintaining close contact with them. As the container has not yet been located, a time scale for recovery cannot be predicted.

Departmental Mail (Bomb Attack)

Mr. Henderson: To ask the Secretary of State for Transport (1) whether he gave any indication to the Post Office on or before 16 March as to when his Department believed that the letters to airport authorities and Pan American Airlines had been posted; and what representations he made to the Post Office in relation to the Post Office's plans to make a statement refuting allegations that the letters had been lost;

(2) what contact took place between the Post Office and his Department on matters relating to the letter he sent to airport authorities and Pan American Airlines warning them of the threatened bomb attack in the week beginning 12 March; and what assurances were sought by, or given to, the Post Office by his Department on whether a statement would be made on 16 March by his Department on this matter.

Mr. Peter Bottomley *[holding answer 23 March 1989]:* Post Office officials were in touch with those of the Department during the afternoon and evening of 16 March. We made it clear that the circular dated 19 December had not been posted until later and that the Department had no complaints about the way the Post Office had handled it. My right hon. Friend said so that afternoon.

HOME DEPARTMENT

Category A Prisoners

Mr. Moss: To ask the Secretary of State for the Home Department what is the breakdown of category A prisoners in England and Wales under the groupings *(a)* convicted Irish Republican Army terrorists, *(b)* international terrorists, *(c)* murderers, *(d)* armed robbers, *(e)* rapists, *(f)* drug dealers, and *(g)* others (i) in total and (ii) listed by each prison.

Mr. Douglas Hogg: The information readily available centrally is given in the following table. Further figures could be supplied only at disproportionate cost.

Convicted adult male prisoners in category A in prisons in England and Wales on 31 December 1988: by type of offender

	IRA terrorists	*Other terrorists*	*Sex offenders including some murderers*	*Armed robbers and drugs dealers*	*Others (mainly murderers)*	*Totals*
Albany	7	5	27	17	7	63
Birmingham	—	—	—	2	2	4
Bristol	—	—	—	—	2	2
Chelmsford	—	—	—	—	1	1
Coldingley	—	—	—	—	1	1

Wormwood Scrubs	2	—	13	3	8	26
Totals	46	23	139	135	127	470

Mr. Moss: To ask the Secretary of State for the Home Department how many *(a)* successful escapes and *(b)* unsuccessful escape attempts there have been from prisons in England and Wales by category A prisoners in each of the last 10 years.

Mr. Douglas Hogg: During this period, there have been two incidents involving escapes from within prison establishments. In 1980, three unconvicted prisoners who had been provisionally placed in category A escaped from Brixton prison. In 1987, one provisional and one confirmed category A prisoner escaped from Gartree prison in a helicopter. Detailed inquiries were conducted following both incidents and measures were taken to prevent a similar escape in the future.

The other information is not available in the form requested by my hon. Friend. Maximum security prisons have a high level of physical security designed to deter and prevent either an assisted or an unassisted escape attempt. Security measures are constantly under review.

Mr. Livingstone: To ask the Secretary of State for the Home Department what is his policy towards *(a)* parole and *(b)* rehabilitation for category A prisoners.

Mr. Douglas Hogg: No prisoner, whatever his security category, is prevented from having his case considered for release on parole. However since one of the main concerns in considering suitability for parole is the safety of the public, it is unlikely that a prisoner whilst in category A —the highest security category—would be released on licence.

Category A prisoners are offered as full and constructive a regime as is consistent with the requirements of security and there are many opportunities for them to improve, for example, work and social skills and education. The aim, as with all prisoners, is to help them lead law-abiding and useful lives in custody and after release.

Mr. Livingstone: To ask the Secretary of State for the Home Department whether category A prisoners are provided with assistance in drawing up their resettlement plans.

Mr. Douglas Hogg: Yes. Assistance is freely available on request to all prisoners, regardless of security category, from the probation service and welfare organisations.

Prisoner (Statistics)

Mr. Moss: To ask the Secretary of State for the Home Department what are the numbers of category A, B and other prisoners in each prison in England and Wales, listed by prison and by county address.

Mr. Douglas Hogg: The latest information readily available centrally is given in the following table.

Population[1] of adult male sentenced prisoners in prisons and remand centres in England and Wales on 31 December 1988: by security category and prison

Prison or remand centre (County)	*A*	*B*	*C*	*D*	*Not recorded*	*Total population*

[1] The figures are those recorded centrally and are approximate: detailed checking of individual cases would involve disproportionate cost.

Crime (South Wales)

Mr. Alan Williams: To ask the Secretary of State for the Home Department what factors account for the fact that the incidence of crime has risen in south Wales when it has fallen nationally.

Mr. John Patten: In south Wales in 1988, 116,988 offences were recorded compared to 111,642 in 1987. Burglaries fell by 5 per cent., but there were 7,000 more thefts of or from motor vehicles. The south Wales police will be targeting car crime in the coming year. Members of the public can help by taking sensible crime prevention measures.

Prisoners (AIDS)

Mr. Corbett: To ask the Secretary of State for the Home Department what social or medical studies are being made of prisoners identified as HIV positive, with or without symptoms, in Her Majesty's prisons.

Mr. Douglas Hogg: Statistical monitoring of reported cases is undertaken by the directorate of prison medical services for management purposes.

Mr. Corbett: To ask the Secretary of State for the Home Department what training and how frequently prison officers, other staff and prisoners at Her Majesty's prison, Winson Green receive on AIDS-related illnesses; and by whom this is carried out.
